MEDICAL MARIJUANA INFORMATION BULLETIN 2018-01

Subject: Grow Site, Dispensary and Processor Election Form and Tracking Update

Election Form Update

The Oregon Medical Marijuana Program (OMMP) will be treating dispensaries, processing sites, and growers at grow sites who did not submit an election form as a decision by them to remain registered with the OMMP.

Note: If you are responsible for tracking using either the Cannabis Tracking System (CTS) or the OMMP's Oregon Medical Marijuana Online System (OMMOS), and you do not track, your registration with the OMMP will be revoked.

Tracking and Reporting Update

All OMMP registered growers, dispensaries and processors must be aware of tracking and reporting changes happening in 2018. The Cannabis Tracking System (CTS) will be implemented no later than July 1, 2018. Until that occurs, tracking and reporting in the OMMP's Oregon Medical Marijuana Online System (OMMOS) is still required.

Dispensaries and Processors remaining with OMMP will be required to use the Oregon Liquor Commission Control's (OLCC) Cannabis Tracking System (CTS) once it is available. Tracking in OMMOS is required until CTS implemented.

Qualifying growers (grow sites) will be required to track transfers and inventory either through the OLCC's Cannabis Tracking System (CTS) **or** the monthly reporting system through the OMMP's Oregon Medical Marijuana Online System (OMMOS), unless a grow site is exempt from tracking.

For a grower to be exempt from either tracking system all items must be true:

- 1) You are a patient only growing for yourself at your residence; **AND**
- 2) There are no more than 12 mature plants and 24 immature plants being grown at the grow site; **AND**
- 3) You are not transferring to a medical processor or dispensary.

Who is required to use the Oregon Medical Marijuana Online System (OMMOS)

If you meet any of the following criteria, you are required to report monthly into OMMOS:

- 1) You are a patient growing for yourself at your residence, where there are no more than 12 mature plants at the grow site, and you **ARE** transferring to a medical processor or dispensary;

- 2) You are a patient growing for yourself at a grow site that is NOT your residence and there are no more than 12 mature plants at the grow site;
- 3) You are a grower designated to grow for a patient other than yourself at a grow site where there are no more than 12 mature plants and there is also a patient growing for him or herself at the grow site; OR
- 4) Your facility is either a dispensary, processing site, or grow site that indicated through the election form process that your facility will transition to OLCC and you have submitted an application to OLCC before January 1, 2018. You must continue to use the OMMP's monthly tracking system until your license is acted upon by OLCC.

If you meet any of the OMMOS reporting criteria above and have not yet created an online account, please sign up for an account at: <https://ommpsystem.oregon.gov>.

Tracking and reporting your inventory and transfers is required every month. If you are required to track in OMMOS and do not adhere to the required monthly reporting, your OMMP registration will be revoked.

Who is required to use the Cannabis Tracking System (CTS):

- 1) Everyone growing at a grow site where there are more than 12 mature plants.
- 2) Any grower designated to grow for a patient at a grow site where there are no patients growing for themselves, no matter the number of plants at the site. (The program will notify you if you fall into this category.).
- 3) All Dispensaries and Processing sites remaining with OMMP.

OMMP understands that our registrants have numerous questions about CTS, such as how to register to use CTS, when to pay for the use of CTS and how to get trained to use CTS. We ask that growers, dispensaries, and processors be patient through this process. OMMP will provide updates when they are available through our website, letters sent by mail, and our email listserv.
