Oregon and SW Washington, Seasons 2021–2024

Percent Positivity RSV by Week and Region, PCR and Ag Combined,
Oregon and SW Washington, 2023-2024 Season

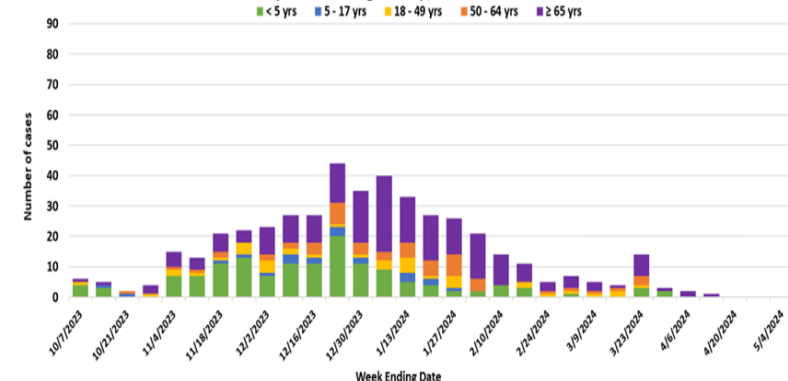

2023-2024 RSV surveillance in Oregon began on October 1, 2023. On November 11, 2023, Oregon met criteria for RSV season onset. **Oregon met criteria for season offset on March 30, 2024.** As defined by CDC, the RSV season onset is the first of 2 consecutive weeks during which the mean percentage of specimens testing positive for RSV antigen is $\geq 10\%$ or the mean percentage of specimens testing positive for RSV by PCR is $\geq 3\%$, whichever occurs first. 24 laboratories in Oregon and southwest Washington participate in sentinel laboratory surveillance by reporting the numbers of RSV tests conducted and the number positive.

457 residents of the Portland Tri-County area have been hospitalized with RSV to date this season; of these, 140 (31%) have been children < 5 years old, and 201 (44%) have been adults ≥ 65 years old. RSV-associated hospitalizations and rates reflect data from the Respiratory Syncytial Virus Hospitalization Surveillance Network (RSV-NET). In Oregon, RSV-NET conducts population-based RSV surveillance in Clackamas, Multnomah, and Washington counties. For more information regarding Oregon RSV surveillance,

Oregon and SW Washington, 2023-2024 Season

2023-2024 RSV surveillance in Oregon began on October 1, 2023. On November 11, 2023, Oregon met criteria for RSV season onset. As defined by CDC, the RSV season onset is the first of 2 consecutive weeks during which the mean percentage of specimens testing positive for RSV antigen is $\geq 10\%$ or the mean percentage of specimens testing positive for RSV by PCR is $\geq 3\%$, whichever occurs first. 24 laboratories in Oregon and southwest Washington participate in sentinel laboratory surveillance by reporting the numbers of RSV tests conducted and the number positive.

382 residents of the Portland Tri-County area have been hospitalized with RSV to date this season; of these, 125 (33%) have been children < 5 years old, and 156 (41%) have been adults ≥ 65 years old. RSV-associated hospitalizations and rates reflect data from the Respiratory Syncytial Virus Hospitalization Surveillance Network (RSV-NET). In Oregon, RSV-NET conducts population-based RSV surveillance in Clackamas, Multnomah, and Washington counties. For more information regarding Oregon RSV surveillance, please see: www.oregon.gov/rsvdata

Percent Positivity RSV by Week and Region, PCR and Ag Combined, Oregon and SW Washington, 2023-2024 Season

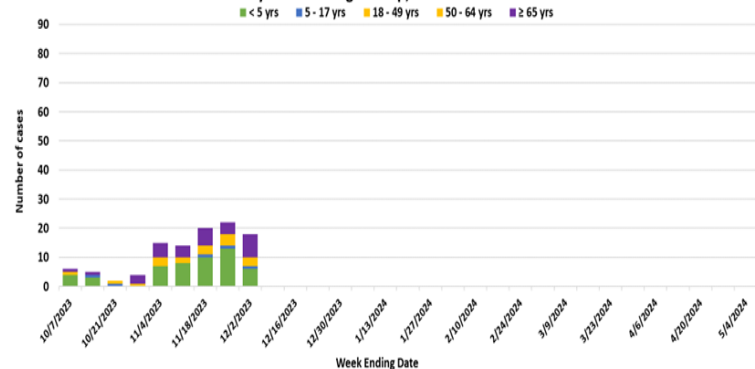

2023-2024 RSV surveillance in Oregon began on October 1, 2023. On November 11, 2023, Oregon met criteria for RSV season onset. As defined by CDC, the RSV season onset is the first of 2 consecutive weeks during which the mean percentage of specimens testing positive for RSV antigen is $\geq 10\%$ or the mean percentage of specimens testing positive for RSV by PCR is $\geq 3\%$, whichever occurs first. 24 laboratories in Oregon and southwest Washington participate in sentinel laboratory surveillance by reporting the numbers of RSV tests conducted and the number positive.

RSV-associated hospitalizations and rates reflect data from the Respiratory Syncytial Virus Hospitalization Surveillance Network (RSV-NET). In Oregon, RSV-NET conducts population-based RSV surveillance in Clackamas, Multnomah, and Washington counties. For more information regarding Oregon RSV surveillance, please see: www.oregon.gov/rsvdata
