

Met & Unmet Needs of People Living with HIV in Oregon Part A Region

2015 – 2016

What Kind of Data are Collected by MMP?

- MMP gathers data from face-to-face interviews and medical records
- From June 2015—May 2017, 263 Part A region people living with HIV participated in MMP

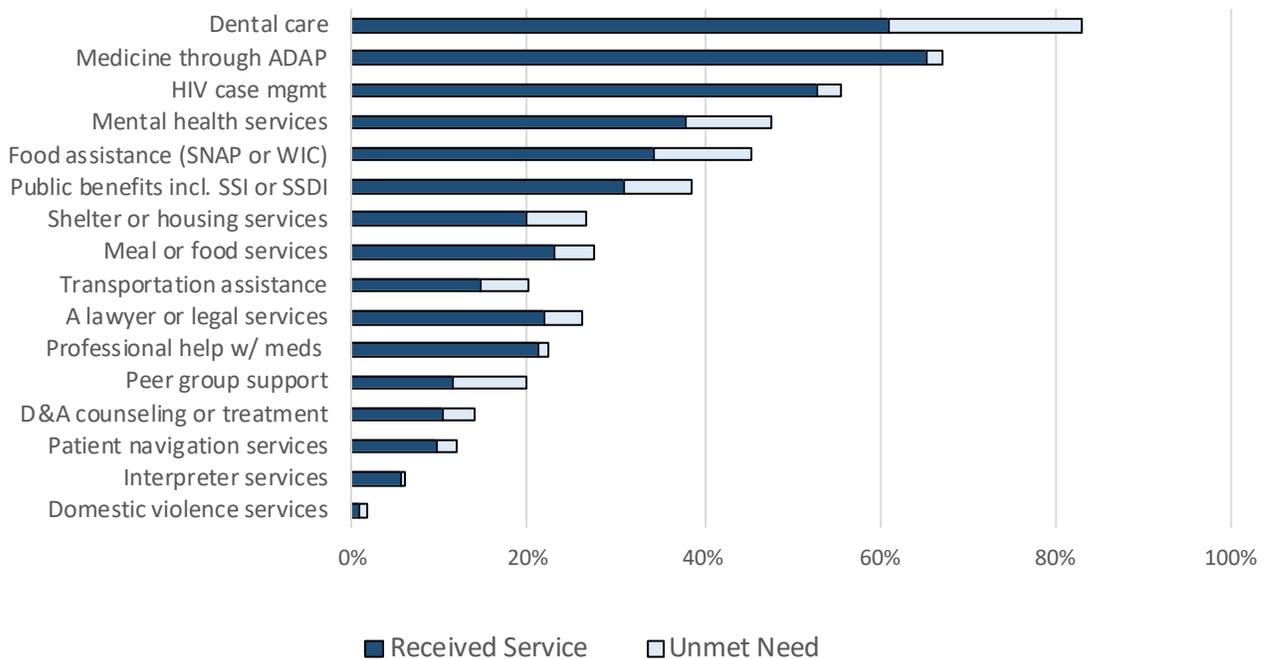

Who Receives Care in Oregon Part A region?

- 90% identify as male
- 62% identify as gay, 9% bisexual
- 51% ages 20-49
- 72% have some college education or higher
- 49% are employed or self-employed
- 9% were homeless in the 12 months
- 30% at or below federal poverty line

Are People Living with HIV Getting the Services They Need?

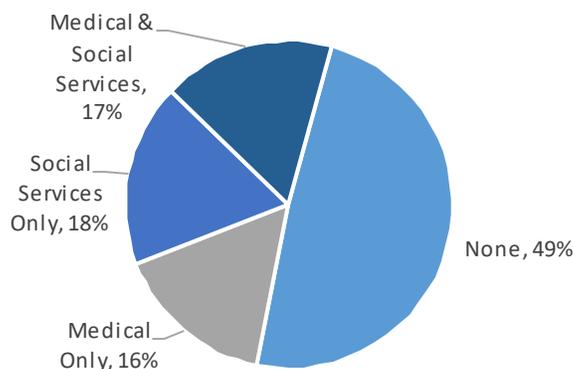

MMP asks participants about their medical & social service needs across 16 service categories. Participants are first asked if they received a specific service. If they did not receive that service, they are asked if they needed the service. Participants who needed but did not receive a service are asked the main reason why they were unable to get that service.

Needs & Gaps In Services
MMP Part A region June 2015 - May 2017

What Kind of Needs Went Unmet?

Over half of the Part A region MMP participants reported at least one unmet medical need (including dental care and HIV case management) or social services need (including public benefits and transportation assistance).
