

School Metrics Data

Oregon public health officials have developed evidence-based metrics to help school boards and school districts make decisions about how they can safely reopen schools. OHA is working closely with the Oregon Department of Education (ODE) on its Ready Schools, Safe Learners guidance for public and private K-12 schools for the 2020-21 school year.

For a school to return to in-person instruction through ODE's On-Site or Hybrid instructional models, the metrics below, which consider local as well as statewide conditions, must be met:

Metrics

- For a school district that draws substantial numbers of students or staff from multiple counties, the case rate and test positivity rate should be considered in each of those counties.
- Schools must be in a county that is no longer in baseline phase to consider in-person instructional models.

County Metrics - metrics to be met three weeks in a row:

- » Case rate: ≤ 10 cases per 100,000 population in the preceding 7 days
- » Test positivity: $\leq 5\%$ in the preceding 7 days

- and -

State Metric - metric to be met three weeks in a row

- » Test positivity: $\leq 5\%$ in the preceding 7 days

For more information on the metrics and on the exceptions to these metrics, visit <https://sharesystems.dhsoha.state.or.us/DHSForms/Served/le3220.pdf>

Weekly Monitoring Periods From Aug. 2 – Oct. 24

This table is based on data pulled at 12:01 AM on October 26, 2020. For case counts and case rates, cases are assigned to a week based on their true case date, which is the date when public health first identified them as a confirmed or presumptive COVID-19 case. For percent positivity in testing, persons tested are assigned to a week based on their specimen collection date. All data are provisional and subject to change.

County	Week of Data Date	Case Count	Cases per 100,000	Test Positivity

Weekly Monitoring Periods From Aug. 2 – Oct. 24

This table is based on data pulled at 12:01 AM on October 26, 2020. For case counts and case rates, cases are assigned to a week based on their true case date, which is the date when public health first identified them as a confirmed or presumptive COVID-19 case. For percent positivity in testing, persons tested are assigned to a week based on their specimen collection date. All data are provisional and subject to change.
