Senate Bill 90 was passed during the 2019 legislative session, which restricts food service establishments from providing plastic straws to customers unless they are specifically requested. A food service employee can only offer a plastic, single use straw to a customer if they are in/on their vehicle in the drive-thru.

This restriction does not apply to health care facilities or residential care facilities that provide straws to patients or residents.

Convenience stores may make a single-use plastic straw available to consumers in an unattended location provided that the convenience store does not have space in which to store the straws in a location where employees of the store provide service to customers. It is up to the operator to determine where the straws are located and if they have enough space.

Additional information:
- Straws cannot be automatically included in customers food bags in the drive-thru
- Small cocktail straws are included in this restriction
- Facilities may post a sign indicating that a customer needs to ask staff if they would like a straw
- Facilities with online ordering may not use a 'check box' or some other indicator regarding straws. The customer (or delivery service) must request the straws at the time the order is picked up
- Multi-use, smooth and easily cleanable straws like glass or metal would be allowed without any restriction
- Each multi-use straw must be thoroughly hand washed with a small brush, rinsed and sanitized between each use
- Bamboo straws aren’t allowed as they are not smooth and easily cleanable
- Single use biodegradable paper straws are allowed without restriction
- Plant/plastic polymer straws are not allowed

Straws must be requested by customer unless the customer is in their vehicle
