

## Oregon Radon Awareness Program Indoor Radon Test Results Summary

Free test kits are available for residents in zip codes with asterisks or with "No Data Available".

This table summarizes test results of indoor air for radon that test kit manufacturers have voluntarily provided to the Oregon Radon Awareness Program. The risk level for elevated indoor radon within each zip code was determined through a classification system that considers four factors: the number of single-family residential locations with a test result, the maximum test result value, the average test result value, and the percent of locations with a test result that was greater than or equal to 4 picocuries per liter (pCi/L) within the zip code. A detailed explanation of the risk level classification system can be found in our Radon Risk Level Assignment report.

ZIP Code	City	Total Number of Locations Tested	Risk of Elevated Radon	Maximum Result (pCi/L)	Average Result (pCi/L)	Percent of Locations with Result $\geq$ 4 pCi/L
