RH Access Fund

Visit Reimbursement Rates & FAQs

What is included in the reimbursement rates?

- See [RH Reimbursement Rate Components](#) for a breakdown of the services, labs and procedures that are included in the three bundled rates.

How do we determine which visit type to select?

- Providers may use judgment to determine appropriate visit type based on either the nature of the visit, or time. Example visit types are neither exclusive nor exhaustive.
- Consider the amount and complexity of labs ordered. If the cost of labs will be higher than is typical for the visit, consider billing the RH Access Fund at a higher visit level.
 - Example: a client presenting for a birth control method start who has never received the recommended STI labs. In addition to providing birth control services you also perform STI screening as indicated per national standards (HIV, Hep C, Hep B, syphilis). This would qualify as a high-level visit.
- Clearly document in the chart notes what was included in the visit so that an RH Program audit will support the selected visit type. If choosing to bill by time, you must document how much time was spent on the visit as well as what activities were included in that total time.

What is billing by time, and why would I do that?

- If billing according to the nature of the visit would result in a lower reimbursement rate than billing by time, you may instead bill by time. This can be useful when a visit goes above and beyond the time normally required for that visit type.
- To calculate the time to be used for billing, use the total time spent on the client's visit, including reviewing the chart before the visit, actual time spent with client, any time spent charting, and any time spent in coordinating care or referrals for the client on the day of the client's visit. In order to bill by time, you must document in the medical record how much time was spent on the visit as well as what activities were included in that total time.
- For providers accustomed to billing by time: the above time guidelines for billing a moderate level visit correspond to the guidelines for billing an E/M code 99203/99213. The time guidelines for billing a high level visit correspond to a 99204/99214.

What is an established client?

- For the purposes of billing by time, an established client is a client seen in your agency within the last three years.

Visit Reimbursement Rates & FAQs

Are there restrictions on visit types that RNs can bill for?

- No. Any provider type may bill for any visit type, and reimbursement rates are the same regardless of the provider type.

When should we mark the Language Assistance box on the CVR (Medical Service 45)?

- Language Assistance should be marked whenever the clinic is providing any form of language assistance services. This may include bilingual staff or provider, an in-person interpreter or phone- or video-based interpretation services, whether or not they are registered with the Oregon Health Authority's Health Care Interpreter Program.

Are Telehealth visits covered?

- Yes, visits conducted by telephone and/or video are covered and reimbursed at the same rates as in-person visits.
- Mark Medical Service 45-Telehealth Visit whenever a visit is being conducted by telephone and/or video.

Do we have to use modifiers for the T1015 code (U1, U2, U3)?

- Some agencies have requested codes that could be used in their own systems to crosswalk to the new reimbursement rates. We suggest continuing to use the T1015 to indicate a family planning visit and adding modifiers (U1, U2, and U3) to indicate the level of service.
- These modifiers are not included on CVRs. On the CVR you will use the Purpose of Visit field only.
