Safe sleep for babies

Facts about SIDS (Sudden Infant Death Syndrome)

• In Oregon, about 40 babies die in their sleep every year.
• The most important thing you can do for your baby’s health is to quit smoking. For help, contact the Oregon Tobacco Quit Line at 1-800-784-8669 or online at www.quitnow.net/oregon.
• Breastfeeding reduces your baby’s risk of SIDS.

Some parents choose to sleep with their baby. It can be unsafe to sleep with your baby if:

• Your baby is less than 12 weeks old.
• Your bed has pillows, quilts, or comforters.
• You share the bed with pets or other children.
• You or your partner:
  » Smokes;
  » Has taken drugs, alcohol, or medications that make you sleepy;
  » Are very tired or suffer from extreme exhaustion.

To make sure your baby is as safe as possible:

• Put your baby to sleep on his or her back.
• Make sure no one smokes around your baby.
• Breastfeed your baby.
• Put your baby to sleep in the room where you sleep.
• Remove soft fluffy bedding, pillows, stuffed toys and bumper pads from your baby’s sleep area.

• Avoid placing your baby to sleep on soft things like couches or upholstered chairs, waterbeds, beanbag chairs, quilts or comforters.
• Talk with grandparents and other caregivers about this safe sleep information.

Safe cribs:

• Do not use older cribs that do not meet current safety standards.
• Check often for missing, loose or broken hardware.
• Mattress should be firm and fit tightly in the space.
• Do not put a baby monitor in the crib.
• Do not place crib near cords from lamps, blinds or drapes.
• Space between crib slats should be no more than 2-3/8 inches.
• Crib should not have corner posts or cutouts in the headboard or footboard.
• Move the child from a crib to a bed before the child is 35 inches tall.

Five new federal requirements:
As of June 28, 2011, all cribs sold in the United States must meet new federal requirements for overall crib safety (see the graphic below):

- Traditional drop-side cribs cannot be made or sold; immobilizers and repair kits are not allowed;
- Wood slats must be made of stronger woods to prevent breakage;
- Crib hardware must have anti-loosening devices to keep it from coming loose or falling off;
- Mattress supports must be more durable; and
- Safety testing must be more rigorous.
