

Oregon SBHC Key Performance Measures Guidance Document

Optional Measure: Adolescent HPV Immunizations (Effective 7/1/2021)

Measure Description

The percentage of SBHC clients 13-17 years of age who had:

- Completion of two or three doses human papillomavirus vaccine (HPV)
 The number of doses required for HPV completion is determined by the age of initiation: 2 doses if initiated prior to the 15th birthday, 3 doses if initiated after the 15th birthday.

In order to select this KPM, an SBHC must see a minimum of 20 eligible clients during the past school year.

Eligible Population

All SBHC clients seen for any reason (including physical, mental, dental health visits) either in-person or telehealth during the measurement school year (July 1 – June 30) who turned 13 through 17 years of age.

Method of Data Collection

SBHCs who choose this measure will submit a patient demographic file to the SBHC SPO of all 13 to 17-year-old patients seen at the SBHC during the measurement school year. The Immunization Program will run these patients through ALERT IIS to pull their records for each of the measure vaccines. Results of the ALERT registry will be calculated by the Oregon Immunization Program and provided to the SBHC State Program Office (SPO) and back to the participating SBHCs. Rates will be calculated for HPV initiation and HPV completion.

Submission of patient demographic file will be through a HIPAA-compliant method.

Measure Specifications

Denominator:	Eligible population must contain at least 20 clients seen at the SBHC during the previous service year.
Numerator:	Unique counts of SBHC clients who were 13 to 17 years old during the measurement school year (July 1 – June 30) and were up to date on their HPV vaccine.
State Benchmark:	Given the impact of COVID-19, KPM benchmarks are eliminated for school year 2021-2022.

FAQ

Why do I need to submit patient names in order to participate in this measure?

Because the immunization may have happened outside of the SBHC, we need to access the full immunization history of the patient. The only way to do this in ALERT is to match patient records based on demographic information, particularly if the SBHC is not linked to that patient in ALERT. Data submission is secure and HIPAA-compliant, and ALERT results will not be shared outside of the SBHC, SPO and Immunization program.

What if a parent/client refuses consent for the immunization? Will that show up in ALERT?

ALERT does not reflect vaccine refusal or school exemption records (HPV is not school required).
