Q: There are a few references to a completed analyte list required for ORELAP accreditation under the NELAP 2009 standard, but I can't seem to find said list. The major analytes are somewhat obvious, but I'm looking for a comprehensive list, etc. Is it posted somewhere on the ORELAP website?

A: The regulated analytes for cannabis testing are listed in the OHA regulations OAR 333-007 <https://public.health.oregon.gov/DiseasesConditions/ChronicDisease/MedicalMarijuanaProgram/Pages/legal.aspx#current> ORELAP does not have a specific analyte list because labs may want to do other things besides the regulated lists for various purposes that we don't control. We can accredit you for almost any analyte and test method. ORELAP accredits laboratories for air, water, soil testing as well as cannabis. We don't set analyte lists, those are set in regulations and specific projects that labs work on.
