Q: Is there an equipment list that you can give me that would fit or fill all requirements for testing in Oregon for Cannabis and water testing? I would be interested in filling both needs for the state for cannabis and for water.

A: I am sorry but we are not in a position to supply a specific equipment list. There are more than one way to perform some of the analyses, sample preparation and collection, and it depends on how deep you want to get into the industry. We are not in the position to make specific product recommendations either. I would suggest finding a consultant to help you through this.
