In the State of Oregon, psilocybin services include a preparation session, administration session, and integration session. You should receive this informed consent form prior to or during your preparation session. During the preparation session, your facilitator will review and discuss this form with you. Please make sure you read and understand every section because you must sign the form before the administration session begins. If you do not understand any part of this document, please ask your facilitator for clarification before signing.

I have been informed of and understand the following:

(Please initial each item below)

1. ____ *I have reviewed the Psilocybin Services ~~Client Rights and Responsibilities~~ ~~Client Bill of Rights~~, my facilitator has explained it to me, and I understand my rights as a client.*
2. ____ *I understand that psilocybin services do not require medical diagnosis or referral and that psilocybin services are not a medical or clinical treatment.*
3. ____ *I understand that psilocybin has not been approved by the Food and Drug Administration and the federal government currently classifies psilocybin as a Schedule I controlled substance under the Controlled Substances Act.*
 - a. *Federal law prohibits the manufacture, distribution, and possession of psilocybin even in cities and states that have adopted laws to allow its possession or use.*
 - b. *Despite its federal Schedule I status, research suggests that psilocybin is very unlikely to be addictive. Additionally, research and other information suggests that psilocybin may improve symptoms of depression, anxiety, end of life distress, various forms of trauma, and problematic substance use.*
4. ____ *I understand that the risks, benefits, and drug interactions of psilocybin are not fully understood, and individual results may vary.*
5. ____ *I understand that some people have found psilocybin administration sessions to be challenging or uncomfortable. Common potential side effects include nausea, mild headache, fatigue, anxiety, confusion, increased blood pressure, elevated heart rate, paranoia, perceptual changes, altered thought patterns, reduced inhibitions, recovery of repressed memories and past traumas, and altered perception of time and one's surroundings. If they occur, these side effects are usually mild and temporary but could include long-term distress, worsening psychiatric symptoms and cardiovascular effects.*
