

Products Subcommittee Recommendations for 11/17/21 PAB Meeting

For Consideration:

1. Permit solvents methanol, ethanol, water and acetic acid for psilocybin extraction (10/28)
2. Permit ingestible and transmucosal delivery methods of psilocybin products (10/28)

Note: The question of allowable additives that may affect onset or otherwise attenuate or potentiate client experience was discussed at 10/27 PAB, but not resolved.

Previously Approved: These recommendations are listed for reference only.

- Limit species to P. Cubensis
- Allow production of fruiting bodies and mycelium
- Permit extracts as allowable psilocybin product.
- Prohibit use of dung and woodchips as cultivation substrate
- Prohibit manufacture of psilocybin by chemical synthesis.
- Allow manufacturers to combine psilocybin with food products.
- Prohibit combining psilocybin with cannabis or beverage alcohol.
- Direct OHA to reevaluate all Products Subcommittee recommendations beginning in January 2024 and at regular 12-month intervals thereafter.
