Details within key content areas for local opioid overdose reversal medication protocols

- 1. District policy and local practices
 - Consider how medication and/or emergency response is addressed in:
 - Board policy
 - Related ARs
 - Local protocols, procedures, practices
 - What changes or clarifications could ensure naloxone is available?

2. Training requirements

- Designated trainer or source of training
 - Who trains or where can training be accessed?
 - Examples: school nurse; community partners; OHA website; School-based Health Center teams
 - Trainer contact information
 - *Note:* Providing chest compressions with rescue breathing (CPR) is a component of the OHA training protocols to respond to opioid overdose and administer naloxone/Narcan.
 - For the RN to determine whether teaching chest compressions with rescue breathing is within their individual scope of practice, utilize <u>Board's Scope of Practice Decision</u> <u>Making-Framework</u>.
 - Only a certified CPR trainer can provide CPR certification cards.
- Designated staff person to be trained
 - Who gets trained? Consider options such as:
 - all staff during start-of-year in-service
 - staff who are already CPR trained such as health educators, physical education teachers and athletic coaches
 - staff who are already designated to respond to other medical emergencies
 - staff whose role places them near areas where students might overdose
- Frequency of training about opioids/naloxone administration
 - ODE rule states training must be completed every 3 years
 - District could offer and/or require training more often
- Type of training to be utilized
 - OHA training protocol is named in ODE rule
 - Training in accordance with OHA protocol may include slides, videos, other formats; see Opioid Overdose training materials on <u>OHA's Lifesaving Treatment Protocol page</u>
- Possession and administration of naloxone.
 - School districts may adopt policies that permit administration of naloxone by designated, trained school personnel (OAR 581-021-0037)
- Any person or entity, having once lawfully obtained naloxone may possess, distribute or administer it for the purpose of reversing opioid overdose (OAR 855-019-0460).
- 3. Storage
 - Location

Details within key content areas for local opioid overdose reversal medication protocols	
	 Research shows that these may be the best locations for a naloxone kit: Somewhere accessible in the event of an emergency (e.g., NOT in a locked cabinet) Near the AED kit Near the restroom(s) In the same location as the first-aid equipment/kit By the fire extinguisher On buses
•	Temperature
	 Follow the manufacturer's instructions for storing naloxone. If instructions are not available, the Centers for Disease Control & Prevention (CDC) recommends keeping naloxone in the original box or storage container, protected from light, and stored at room temperature (59-77°F or 15- 25°C) until ready for use.
•	Staff access
	• If naloxone is stored in a secured area, who has access?
	 If naloxone is stored in an accessible location, who verifies it is in place, and how often? If staff are designated to carry naloxone during school hours or special activities, how is school stock signed out and returned?
	• Will school-stocked naloxone be accessible for after-hours events on campus or outside?
	• Will school-stocked naloxone ever leave the campus, such as on field trips or Outdoor School?
•	Maintaining school stock
	• Who orders/obtains the school-stocked naloxone? (See section below 'Process for schools to obtain naloxone.')
	Naloxone must be discarded prior to the expiration date on the label and replaced with a new product. Prescriptions in Oregon expire after 3 years.
	keeping and information sharingDistrict requirements for entry into a student's file; how long records are kept. See ODE Student RecordKeeping and PrivacyWho is notified of an emergency medical event?Who maintains records to track when school-stocked naloxone needs to be replaced?
5. Action	steps
	Designated staff should be prepared to take action, including:
	• <u>Recognize</u> signs of opioid overdose
	• <u>Respond</u> to emergency; call 911; initiate site-specific emergency response
	• <u>Reverse</u> an opioid overdose; administer naloxone/Narcan
	• <u>Refer</u> to higher-level care and follow-up support
	• See Opioid Overdose training materials on <u>OHA's Lifesaving Treatment Protocol page</u> .
•	Clarify site-specific details for each action step:
	• <u>Who</u> is trained to recognize overdose?
	• <u>Who</u> responds during an emergency?

Details within key content areas for local opioid overdose reversal medication protocols

- <u>Where</u> is the school's naloxone/Narcan located?
- <u>What</u> local referrals and follow-up supports are available? etc.

6. Follow-up, referrals, and other support.

- Anticipate case-by-case considerations. Identify local resources in advance.
- Consider support and follow-up services for the individual
 - Immediate medical support
 - Social-emotional support
 - Continuing support in the form of school evaluation and health/mental health services and/or referrals to community providers.
- Consider support and follow-up services for witnesses and others in the school community
 - Social-emotional support
 - Communication to students and families including relevant community resources
- Continuing education and community-building. (See Education and Awareness section above.)
