

Quarterly DATA SNAPSHOT

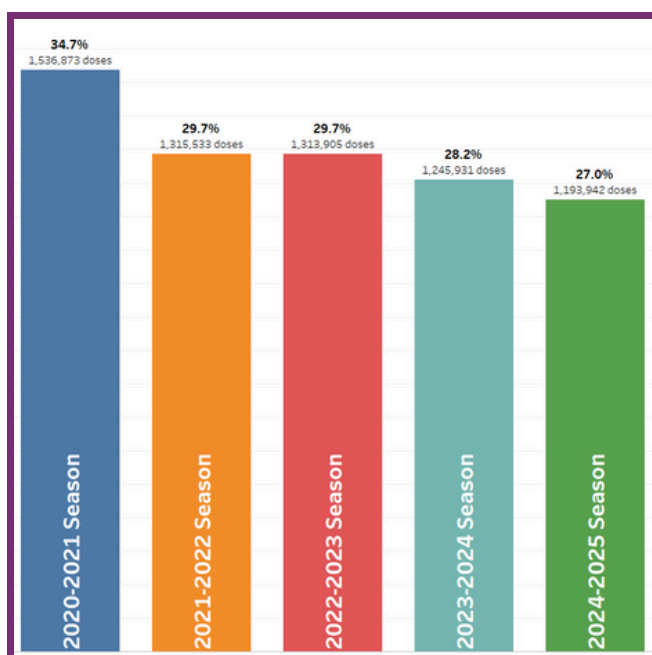

OREGON IMMUNIZATION PROGRAM

Q1, 2025

QUARTER 1 PLANS

We look forward to the exciting plans in store for the first quarter of 2025. The flu dashboard will continue weekly updates, COVID dashboard will continue monthly updates, and both the 2-year-old and adolescent databases will be updated with the new cohort's data. As Exclusion Day approaches, we will also begin preparations for updating school immunization and exemption data. The Data and Epi Team is also continuing work on big projects in the pipeline, including a respiratory immunization dashboard (which will combine COVID, RSV and flu immunizations) as well as a pregnancy immunizations dashboard, both to be launched later in 2025.

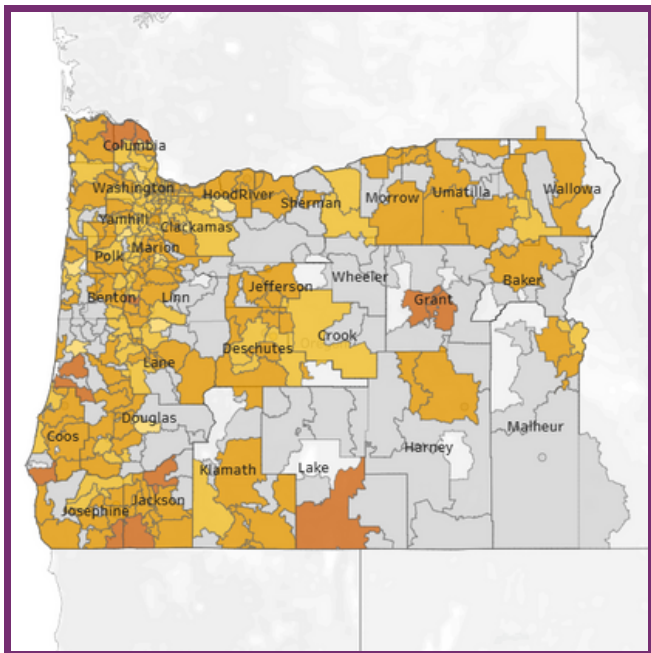

NEW DATA HIGHLIGHTS

24-25 Flu doses falling behind previous years

Currently, 2024-2025 flu season immunizations are falling behind the previous four seasons. On the December 30th data pull, 1,152,034 doses were administered, which is nearly 60k fewer doses than the same point in time last year.

ZIP Code level data now available for 2yo

At the end of 2024, the Early Childhood Immunization visualization was updated to include ZIP Code immunization rates for 2-year-olds. This more granular data complements the already available state and county data, providing a glimpse into variations in coverage within counties.

Oregon Adult Immunization Rates, 2023	
Pneumococcal	37%
Zoster	29%
Tetanus	59%

Adult immunization rates now available

OIP data team continues to trailblaze and released immunization rates for adults. While this snapshot only includes data for 2023, the processes are now in place for annual rate calculation for years to come.
