

13:40:26 From Albert Koroloff : Thank you for your comments. We are asking non-committee members to please send questions and comments directly to: Oregon.imm@dhsosha.state.or.us Someone will respond to you shortly.

13:40:56 From Mimi Luther : PHD.Communications@dhsosha.state.or.us

13:52:38 From Stacy : Welcome to the Immunization School/Children's Facility/College Law Advisory Committee meeting.

14:18:23 From JamesSt : required immunizations in 1986 vs now, are not the same correct?

14:18:49 From Paul Cieslak : Right -- quite a few vaccines have been developed since then.

14:19:57 From JamesSt : so rates would be apples to oranges at this point in with regard to exemption rates

14:20:30 From Stan Gotshall : I'm concerned about the accuracy of the Vaccine Education module and have found several misleading statistics and inaccuracies in it. Who is responsible for that module?

14:21:29 From Albert Koroloff : Stan, we can ask Stacy this question at the end of her presentation.

14:21:40 From Stan Gotshall : Thanks

14:24:29 From Albert Koroloff : Sorry Stan, I was mistaken. We are not taking general questions during this meeting. We are asking non-committee members to please send questions and comments directly to: Oregon.imm@dhsosha.state.or.us

14:25:23 From Paul Cieslak : Send us the stats you're concerned about, and we'll review the data presented in the module.

14:27:30 From Stan Gotshall : Okay. I submitted it as a "public comment" for this meeting on Monday and included my concerns. I also gave it to the IPAT committee meeting back in February but had never heard anything back.

14:30:06 From Leti Ayala : Will this power point be shared?

14:32:31 From Albert Koroloff : Leti, we re recording this meeting. For more information on how to view it later, please contact us at:Oregon.imm@dhsosha.state.or.us

14:32:31 From Tina Cox (she/her) : Could we see the strategies again.

14:32:58 From Bob Snee : According to OHA's death statistics, the # of infant deaths under the age of one during the first half of 2020, were 43% below the 10 year average. Will OHA be conducting a study to determine if the drop in immunization rates during this period was in any way related?

14:33:41 From Sasha Grenier to Jenne McKibben(Privately) : Just FYI that I keep getting kicked off the internet, but continue to be on the phone if you don't see my name

14:34:21 From Jenne McKibben to Sasha Grenier (she/her)(Privately) : Thank you Sasha.

14:34:33 From Mimi Luther : Hi all - if you are not a committee member, please do not use this chat box. You are invited to send questions and input to our agency at Oregon.imm@dhsosha.state.or.us

14:34:39 From Jenne McKibben to Sasha Grenier (she/her)(Privately) : Sorry for the connectivity issues.

14:36:49 From Sasha Grenier (she/her) to Jenne McKibben(Privately) : Thanks. We just arrived and are visiting my mom to help with childcare and her internet, we're realizing, is not going to work for our work needs! Oof.

14:37:59 From Jenne McKibben to Sasha Grenier (she/her) (Privately)
: oh bummer...good luck. :)

14:39:46 From Mark Bajorek (he/him) : For PSU, students off campus
are not needing to fill the measles requirement.

14:42:08 From suzannem : In Salem at our practice, the only
questions have been about when we will have flu shots.

14:42:10 From Sara Stearns : ORAEYC is hearing the same- not feeling
the pressure to get them done during the summer months (preschool)

14:42:34 From Sasha Grenier (she/her) : We (at ODE) are also getting
questions about immunization requirements. I echo Corinna's message
about the importance of both preventative health measures and access to
education.

14:42:48 From Sara Stearns : knowing that their child are staying
home for the time being

14:49:43 From Sasha Grenier (she/her) : Yes! Nevermind. I'll just
chat

14:51:13 From Sasha Grenier (she/her) : Sorry. So yes, this has a
real geographic difference. Each school district has to plan for every
scenario, in distance and in person. In theory, districts will be
learning in person one week and transition to CDL a few weeks later.

14:52:04 From Sasha Grenier (she/her) : (Comprehensive distance
learning)

14:53:07 From Leti Ayala : Even if the date does not change it is
important to be flexible and not continue to exclude students.

14:57:48 From suzannem : The other risk of pushing back the date is
that the unintended message is that the immunizations are not really
important and if this led to a decrease in rate of immunization, it
would increase risk of disease in the future.

15:00:01 From Sasha Grenier (she/her) : Mallory, can you repeat the
last question you asked?

15:10:27 From Ann Loeffler : As part of our Metro Regional vaccine
project, a few of us checked in with our local pediatric practice
consortium and they emphasized two things: 1) they have capacity to
see kids and give vaccines!! 2) They need kids to also be seen in
their medical homes rather than bypassing their pediatric / family
medicine practices to get vaccines "creatively."

15:11:17 From Jamie Smith - MESD : Good reminder Dr. Loeffler.
Thanks!

15:12:29 From Ann Loeffler : these kids and families have lots of
needs!

15:13:20 From kimberly bartholomew : Are the practices reaching out
to families individually at this time?

15:14:02 From Ann Loeffler : absolutely - they are using the recall
methods available through Alert. Having said that, this is a select
group of families who are cared for in private pediatric practices

15:18:32 From Corinna Brower : While respecting well-visit and
importance of care home - As a parent working from home I would
sincerely appreciate those school-parking lot services. Very hard to
balance work/life and keep up on my own families needs.

15:21:21 From kimberly bartholomew : I love the school parking lot
imm clinic idea. Important to serve the community. Set up clinics
early and offer flu shots as well as required vaccinations.

15:25:12 From Sasha Grenier (she/her) : I

15:25:15 From Sasha Grenier (she/her) : would like to

15:25:45 From Ann Occhi : I'd like to help with this
15:26:20 From Corinna Brower : I am interested as well
15:26:43 From Breeauna Sagdal NW Observer : would it be possible to
look into equity with regard to genetic factors for injury
15:27:34 From Breeauna Sagdal NW Observer : for example there's a
730% higher injury rate of AA boys for mmr
