

Off-site Vaccination Clinic Temperature Log for Refrigerator- Fahrenheit

Monitor temperatures closely!

- 1. Write your initials below in "Staff Initials," and note the time in "Exact Time."
- 2. Record the min/max temperatures of the vaccine after transport to off-site clinic.
- 3. Record vaccine temperatures every hour during the clinic by putting an X in the row that corresponds with the storage unit temperature.
- 4. At the end of the day record the min/max temperatures reached.
- 5. Record min/max temps again after returning vaccine to main clinic.
- 6. If any out-of-range temps, see instructions to the right.

Date of Clinic:	Clinic Hours:
Facility Name:	
Off-site Clinic Location:	

Take action if temp is out of range—too warm (above 46°F) or too cold (below 36°F).

- 1. Relocate the vaccines to proper conditions as quickly as possible. Label the vaccines "Do Not Use". Do not discard vaccines unless directed to by the Manufacturer (COVID-19 Vaccine) or the Oregon Immunization Program (all other vaccines).
- 2. Record the out-of-range temps in the "Action" area on the bottom of the log.
- 3. **For COVID-19 vaccine, call the manufacturer**. For other vaccines call the OIP Helpdesk at 971-673-4832 to determine vaccine viability and next steps.
- 4. Document the action taken on the "Vaccine Storage Troubleshooting Record"
