Verify that all your patient's codes were entered correctly in ALERT IIS & your EHR by following this "Data Entry Timeline". Correct your vaccine codes before the time comes when you'll receive a quarterly invoice.

**This invoice is for all the vaccines coded "B" (Billable all ages).**

Using this timeline, running the ALERT Detail Listing report, and making sure your codes are correct will help you anticipate for how many doses and dollars your invoice will be coming around the "Bill Issued" date of this Timeline.

Remember, if you make corrections in ALERT IIS, re-run the ALERT Detail Listing report and check that your changes took place. Make sure the changes to the eligibility code in your EHR (if you use one) were done also. In almost all cases ALERT will not take changes to eligibility codes sent via electronic data exchange, meaning you must update in both.
