

13:18:40 From Participant: Sorry, these numbers are ...per 100,000?
13:19:49 From Participant: will we be able to see these slides later?
13:20:37 From Kerry Lionadh (OHA): Yes, per 100,000
13:21:14 From Participant: Totally our concern addressed on this slide, is it flu... or is it COVID?
13:23:13 From Participant: Is this data Oregon, or COVID in general?
(fatality)
13:27:27 From Erin Corrigan (OHA): Also, those who are vaccinated are much less likely to have bad outcomes/hospitalization from flu.
13:29:29 From Participant: I agree, Erin. We need to really highlight the reduction in illness severity when questions about the "why bother" side of low vaccine efficacy come up.
13:30:29 From Participant: How does the FluMist compare to the shot in the last couple of years? (I was interrupted so sorry if this was already addressed)
13:30:40 From Participant: Dr. Cieslak -- can you give info on when you recommend vaccination for flu begin? Should we be rushing our plans to get folks early:
13:30:40 From Participant: A pediatric colleague is very concerned about using flu mist this year because of the expected post vaccination symptoms, mimicking COVID. Can you weigh in please
13:30:43 From Participant: are we gonna be able to have these slides to share with other staff?
13:32:09 From Participant: I also want to know about the concern of using flumist with covid
13:33:38 From Participant : will they be adding COVID to the FluBites?
13:33:57 From Participant : is there a greater risk to vaccinators who are giving flumist to patients?
13:34:48 From Participant: the thoughts of tracing flu patients as well as covid patients until cleared sounds daunting
13:34:58 From Erin Corrigan (OHA): The recommendation I saw for administering FluMist is to wear gloves in addition to mask and eye protection, but that was the only difference.
13:36:23 From Participant : There is no known risk to providers administering Flumist or other live vaccines. The risk is that you are touching their face during a COVID issue.
13:38:07 From Mimi Luther (OHA): Sure appreciate your occ health input on FluMist - many thanks.
13:40:07 From Paul Cieslak (OHA): Awesome!

13:43:59 From Participant : i work in peds, and we were wondering how well drive thru would work for our population. they are very wiggly and we wonder about safety
13:44:28 From Participant : when I do COVID testing on peds, we generally have the parents sit with the kiddos on their lap
13:44:46 From Participant : Could we get copies of your scripts/job sheets?
13:44:56 From Participant : Any limitations on age for drive thru? And do you have people wait somewhere?

13:45:15 From Mimi Luther (OHA): We will make sure to ask Dr. Bob to make them available through our VFC Help Desk.

13:45:17 From Participant: There is a great CPP webinar featuring a pediatrician who has been doing drive thru flu clinics for 18 years. They feel it's easier and safer having kids in car seats.

13:45:58 From Participant : Would love to see that! It's a question my providers have as well.

13:46:38 From Participant: Here's the link:
<https://register.gotowebinar.com/recording/7940175305793668877>

13:46:29 From Paul Cieslak (OHA): I think Dr. Bob's military experience has equipped him well for this kind of effort!

13:48:07 From Participant: Did the state provide high dose flu vaccine too?

13:48:29 From Participant : Great question re high dose flu vaccine

13:48:36 From Participant : There has been an increase in education around preventing shoulder injuries, how do you accomplish proper technique while people are in their cars of different heights?

13:49:03 From Mimi Luther : that is a very common question I'm getting from nurses [re: injuries].

13:48:58 From Participant: When you promoted the event, did you ask people to leave pets home?

13:49:17 From Participant: What is "dwell time"?

13:49:19 From Jenne McKibben (OHA): Do you have kids stay in their car seat?

13:49:34 From Participant: I wonder if nursing students will be available this year since many colleges are remote only and deferring clinicals to later

13:50:21 From Participant: kids can move all over the place in the car seat, they kind of buck their legs unless held down snugly

13:50:32 From Participant: Most of the children were placed on the parent's lap. Some stayed in the car seat but that is harder to do.

13:50:35 From Participant: @Bob - do the clients print out their Dispense Assist paper or do you use the electronic version for your records? And how do you associate shot info with client (lot#, etc)?

13:51:30 From Participant: We had people come in with paper printed copies and already in dispense assist. Each was given a bar code to match with vaccine entry

13:51:46 From Participant: I would also love to hear about how you promote and see the materials you use.

13:53:13 From Participant: Can the driver get vaccinated? What about possible reactions?

13:53:38 From Participant : @Bob -- what changes do you foresee to help avoid COVID risk to your vaccinators? Touching the cars, etc...

13:56:52 From Participant: Do you have an adjacent parking lot for dwell time?

13:56:57 From Participant: He said he'll 'send out' copies of his scripts and job sheets - so probably I assume we'd set those the same way we'd get copies of this presentation? Namely contact VFC helpdesk @ 971-673-4832 VFC.help@state.or.us

13:57:25 From Participant : I think "dwell time" is meant to refer to how long a client took to get through the whole clinic.

13:57:44 From Participant: How are you storing the vaccine during the drive

thru?

13:57:46 From Amy Kost (OHA): yes, scripts and job sheets will be available through VFC helpdesk @ 971-673-4832 VFC.help@state.or.us

13:58:40 From Participant : How are lot numbers/etc. documented? What if patient requests confirmation of receiving the vaccine, did you provide this?

13:58:47 From Participant : We have portable units that plug in on site. LogTag temp loggers are monitored hourly thru the event.

13:58:48 From Participant : Are vaccines documented in ALERT?

13:59:00 From Participant : All vaccines were entered into Alert.

14:01:39 From Participant: What are your portable units like? Are they like the dorm fridges?

14:01:48 From Participant : Can we get specifics on units used in your materials?

14:02:21 From Participant: That would be incredibly helpful!

14:02:44 From Mimi Luther (OHA): Please never ever use dorm style fridges for vaccine storage!

14:03:08 From Participant: Mimi - why?

14:03:09 From Mimi Luther (OHA): There are some great new portable units that do not require electricity or battery.

14:03:14 From Participant: We have 2 Engel units that are both electric and DC powered. We also have 1 large cooler that stores quite a bit of vaccine that is powered the same.

14:03:26 From Mimi Luther (OHA): google phase change materiel vaccine storage

14:03:43 From Participant: We will be able to get the power point presentation?

14:04:48 From Participant: Mimi - can you send a link that shows where we can access these new portable units?

14:05:50 From Mimi Luther : Here are a few:

<https://www.vericormed.com/pcm/>

14:05:54 From Participant : It the Fluzone for people who have allergies to eggs

14:06:35 From Participant : there is not enough egg component to cause anaphylaxis

14:06:43 From Mimi Luther :

https://www.googleadservices.com/pagead/aclk?sa=L&ai=DChcSEwj0oMLMipnrAhVeIK0GHXizDLMYABABGgJwdg&ohost=www.google.com&cid=CAESQOD2Hwa66hxkrqVPmNNtDwru4wPKC71A540H5LCENaVuWdJ0EAFLLDdP4BYIzNPAVJmcMifAkolRdo6sPqD0r9w&sig=AOD64_0WH1Ioy9b7uyreH-gkkKNjuafUWw&q&adurl&ved=2ahUKEwilv7jMipnrAhU0HDQIHQebD74Q0Qx6BAGNEAE

14:06:48 From Participant: Flucelvax is egg free

14:07:27 From Mimi Luther : We will be providing one to every local public health authority and all tribal government and related clinics.

14:07:38 From Participant: Sandy can we order that through alert

14:07:57 From Participant: Again, there is not enough egg in the vaccine to cause anaphylaxis. The CDC does not recommend against using regular IIV4 for people with egg allergies.

14:08:16 From Amy Kost (OHA): CDC info on flu vaccine and egg allergy:

<https://www.cdc.gov/flu/prevent/egg-allergies.htm>

14:08:48 From Participant : Matthew we still have patients that will have use the vaccine, Im just looking for options

14:09:38 From Participant: Flublok and flucelvax are great egg-free options.

14:10:23 From Participant : do we have to wait until our normal ordering window to draw down or just as soon as they are available?

14:10:38 From Participant: Erin can we order the Flublok or Flucelvax through alert

14:11:02 From Participant : Do we know how COVID vaccine is going to be distributed? Is it going to go through the state - and all of it or just the Medicaid/VFC/public clinic supply?

14:11:23 From Participant : Then why is the egg question even asked?

14:11:49 From Participant : If our clinic is set to auto-submit to ALERT as Private, can we get help adjusting to '0' or do it manually after?

14:13:51 From Participant : General question: many are advocating for temperature taking as part of the screening process for a drive thru flu clinic. Thoughts? Recommendations?

14:15:09 From Nadine Gartner (Boost Oregon: Boost Oregon has FREE flu fact sheets for parents in English, Spanish, Russian & Ukrainian. If you'd like a stack, please email me - nadine@boostoregon.org

14:15:34 From Mimi Luther (OHA): Nadine! Many thanks.

14:16:07 From Amy Kost (OHA): To request flu pool doses please contact the VFC help desk VFC.help@state.or.us

14:18:06 From Participant: Nadine - are the Boost Oregon fact sheets available online somewhere?

14:18:59 From Nadine Gartner (Boost Oregon): They will be on our website - we want to build a flu-specific page. www.boostoregon.org

14:19:25 From Nadine Gartner (Boost Oregon): I'm also happy to email PDFs of the fact sheets for folks to post on their websites and email to others

14:20:41 From Participant : Thanks Nadine. Greatly appreciated.

14:20:56 From Participant : Can a COVID positive person receive a flu vaccine?

14:20:57 From Participant : How do you recommend ordering vaccines for mass drive through vaccination?

14:22:00 From Participant : And the Covid vaccine will be free?

14:22:55 From Participant : So COVID vaccine could be given to anyone at no cost or just the target groups?

14:23:09 From Participant : @Erin - Thanks for this great information! When you say that flu vaccine is plentiful, is that also true for the available doses of seniors' flu vaccines (the over 65 version)

14:25:04 From Participant : I thought there was talk last year of having one flu dose for all, 6mo+. Are we still using the low dose this year?

14:25:20 From Participant: Is the CARES flu vaccine its own supply of vaccine, separate from flu pool?

14:25:46 From Participant : The adult IIV4 was approved for pediatric use in 2019; they cost the same as the old low dose.

14:26:03 From Dr. Bob Brunader: We never want to run out, so we order about twice what we think we will use at the drive thru, and then work with our local fire departments to administer the rest.

14:26:03 From Amy Kost : Here's the link for requesting flu pool vaccine.

We currently have one type of vaccine - .5 ml

Flulaval<https://app.smartsheet.com/b/form/2dbcaed23bdb488aa65d0b7aa1edcea5>

14:26:38 From Mimi Luther (OHA): Check with distributors re: high dose flu.

14:26:49 From Mimi Luther (OHA) : Like FFF, McKesson, etc.

14:27:51 From Participant : For high-dose fluzone, look at Sanofi direct (Vaccineshoppe) as well.

14:28:49 From Participant : FLuad for 65+ we will have doses available for late nov early dec delivery. We are producing more to help with increased demand

14:29:15 From Participant: Since so many positive COVIDs are asymptomatic

14:29:24 From Participant: I am curious about that as well. Typically providers do not vaccinate acutely ill patients until they have recovered.

14:30:29 From Participant :

<https://www.cdc.gov/flu/season/faq-flu-season-2020-2021.htm> This like discusses giving flu with suspected or confirmed covid

14:30:45 From Participant : can flu testing and COVID testing be completed from the same swab or do the have to be separate swabs?

14:31:09 From Participant : What is the earlies flu vaccine can be given?

14:31:15 From Participant : Erin, did you say CARES Flu Project would be coded as S or O?

14:31:39 From Participant : In the drive through clinic this year, will you be taking temps of everyone I the car?

14:32:08 From Participant: thanks for all the great info from everyone

14:32:25 From Participant : Great sessions! Thank you

14:32:59 From Participant: Thank you for all the great information and resources!

14:34:57 From Nick Chew (OHA) : Thanks everyone for attending!

14:34:59 From Participant: Thank you!

14:35:01 From Participant: Thank you! Do these more often!

14:35:09 From Participant : Thanks!!
