## ARIAS Release Notes: 07.24.2020

### What's new:

#### Adjusted the Duplicate Contact Pop-up

- We've adjusted the logic behind the pop-up window identifying potential duplicates. This function is now more specific and should greatly reduce the frequency of the pop-ups in certain situations.

#### Added two new monitoring statuses to support additional scenarios.

- "Identified not to be a contact"
- "Out of state"
- Note: Selecting these will automatically deactivate the Contact upon saving.

Monitoring Status	Monitoring   v
🔒 Last Assessment Date	--Select--
	Monitoring
	Completed Monitoring
	Opted Out
Address	Lost to Follow-up
Address: Street 1	Transferred to Opera
Address: Street 2	Marked for deduplication
Address: City	Identified not to be a contact
	Out of state

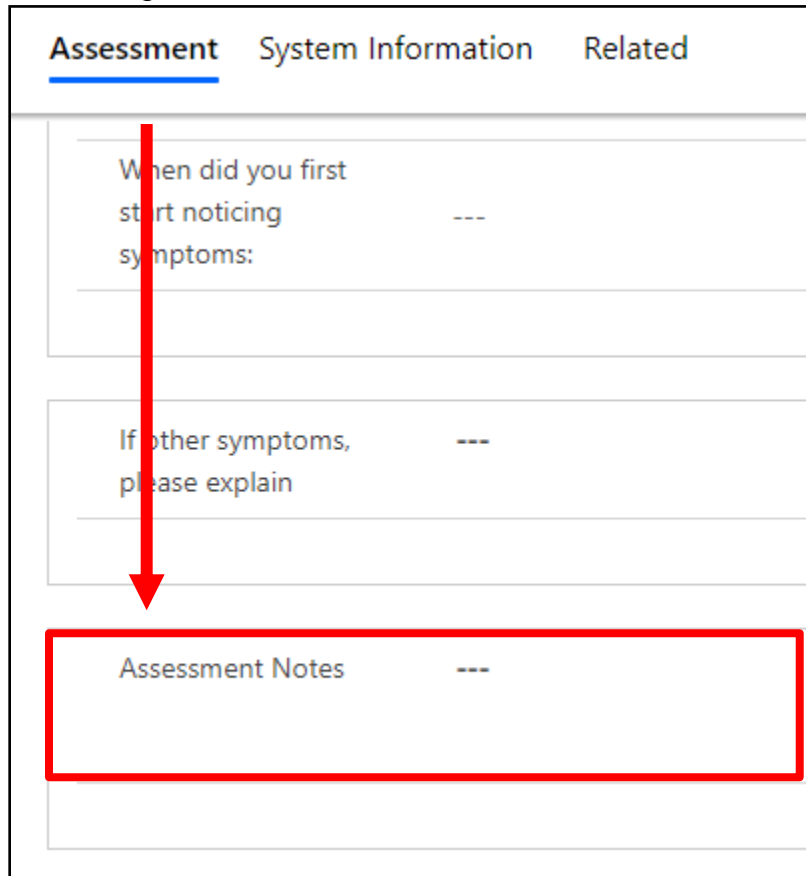

Added "None" symptom response to Assessment list views

- We're working on a variety of changes to elevate Assessment information. In this release, we've included adding the "None" checkbox option to the lists.

Added Assessments Notes to the bottom of the Assessment screen

- Note: The Assessment Notes only appear for ARIS users. These do not appear in the public-facing contact portal used by the automated monitoring function.

<u>Assessment</u>	System Information	Related
When did you first start noticing symptoms:	---	
If other symptoms, please explain	---	
Assessment Notes	---	

Added an indicator if an unsupported language is selected for automated monitoring.

- To further clarify if an unsupported language is selected for automated monitoring, we've added a new indicator that will appear if an unsupported language is selected. Users can click on it to show the prompt and optionally select English as a default.
- Note: If an unsupported language is selected, the automated message will default to English text.
- Note: This will be updated as we add additional languages in future releases.

The screenshot shows the 'Test Contact' profile page. The 'System Information' tab is active. The 'Details' section on the right shows 'Automated Monitoring' set to 'Yes' and 'Email / Text Language (English and Spanish supported)' set to 'Korean'. A red arrow points to a lightbulb icon next to the language field, which is highlighted with a red box.

This is a close-up of the language selection prompt. It shows the 'Email / Text Language (English and Spanish supported)' field set to 'Korean'. Below it, a red-bordered box contains a 'Recommendation' section with the text: 'Language not supported for automatic email/text. Clicking the Apply button will set the language to English.' and an 'Apply' button.

Added Case Status to the Reference Fields box on the Contact screen

- View and Edit rights are limited to the same users that can see “Outbreak Related” and “Outbreak ID” content.

The screenshot shows the 'Test Contact' screen with the following fields in the 'Reference Fields' section:

Field Name	Value
Case ID	516427
Person ID	1116842
Contact ID	362806
Contact Person ID	1140387
Outbreak ID	---
Outbreak Related	---
Case Status	---
Initial Owner	---

Corrected "Transferred to Orpheus" to "Transferred to Opera" under Monitoring Status

### Bug Fixes:

No bug fixes were identified in this release
