COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary

Background

COVID-19 Weekly Report data will be finalized every Sunday at 11 p.m. PST, and the report will be published on Wednesday. Please note that the data reported here are continually being updated. For daily up-to-date information, visit the OHA COVID-19 web page: <https://govstatus.egov.com/OR-OHA-COVID-19>.

As of 11 p.m. Sunday, January 9, there have been 478,201 cases of COVID-19 reported to the Oregon Health Authority. Of these, 16,140 (3.4%) are “presumptive” cases—i.e., people with COVID-19-like symptoms and close contact with a confirmed case, but who did not have a confirmatory laboratory test. Though not confirmed, presumptive cases are highly likely to have COVID-19, given their specific symptoms and known exposure. Presumptive cases are encouraged to seek testing to confirm that they do have COVID-19. Presumptive cases who test positive are recategorized as confirmed cases.

These data represent a snapshot of COVID-19 risk factors and clinical and demographic characteristics of cases, and they include data on cases with pending investigations. Not all cases have been interviewed at the time of this report. The data shown in this report come from Oregon’s electronic disease surveillance system for reportable diseases.

During the week of January 2–January 8¹ 136,474 tests for COVID-19 were performed on Oregonians; of these, 15.7% had a positive result.² This figure represents a “test-based” method, whereby all electronic lab reports received by OHA are used to calculate percent positivity.³ Detailed tables of the number of tests and percent positivity can be found online at

<https://public.tableau.com/profile/oregon.health.authority.covid.19#!/vizhome/OregonHealthAuthorityCOVID-19DataDashboard/OregonsCOVID-19ELRsbyCounty>.

¹ This date range aligns with CDC’s “MMWR week.”

² Does not include antibody (serology) tests.

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary

Errata: Due to a technical issue, a previously posted version of this weekly report had excluded some cases. This version of the report corrects this error and updates all figures and tables.

Weekly Report Summary

During Monday, January 3, through Sunday, January 9, 2022, OHA recorded 47,272 new cases of COVID-19 infection—a figure nearly six times that of two weeks ago and nearly three times the previous pandemic-record week of August 23–29, 2021 (16,252 cases). Reported test results jumped from 136,474 to 258,574—an 89% increase, and 51% higher than Oregon's previous high of 170,934 during the week of November 30–December 6, 2020. Test positivity increased from 15.7% to 21.6%. Case counts increased from the previous week's totals in 34 of Oregon's 36 counties.⁴ Of cases with reported ethnicity during the last 3-weeks, the proportion that were Hispanic also increased—from 13% to 17%.

Four hundred eighty-six COVID-19-associated hospitalizations were reported this week—up from 290 last week and the highest number since the week of September 20–26, 2021. One hundred thirteen COVID-19-associated deaths were reported, up from 43 last week, but still lower than what was reported during most weeks of September–December 2021. Of the 478,201 cases reported in Oregon to date, 22,762 (4.8%) have been hospitalized, and 5,779 (1.2%) have died.

COVID-19-associated hospitalization and death rates continue to be strongly associated with advancing age (Table 2). About 4.2% of Oregonians are 80 years of age or older; they have accounted for 13,725 (2.9%) of reported cases, but 3,736 (16%) of reported COVID-19-associated hospitalizations and 2,388 (41%) of reported COVID-19-associated deaths. Persons 70 years of age and older make up 12% of Oregon's population; they have accounted for 37,126 (7.8%) of reported cases but 8,182 (36%) of the reported COVID-19-associated hospitalizations and 3,790 (66%) of the reported COVID-19-associated deaths. At the other end of the age spectrum, persons <20 years of age make up 23% of Oregon's population and have accounted for 92,328 (19%) of the reported cases but only 699 (3.1%) of Oregon's COVID-19 associated hospitalizations and 5 (0.09%) of the COVID-19-associated deaths; no COVID-19

⁴ Harney County dropped from 13 cases to 12; Wheeler County reported 4 cases each week.

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary

deaths in this age group have been reported since the week of September 6–12, 2021. Data on mortality in Oregon, including deaths associated with COVID-19, are available at <https://public.tableau.com/profile/oha.center.for.health.statistics>.

Additional data are available at <https://public.tableau.com/profile/oregon.health.authority.covid.19#!/vizhome/OregonCOVID-19CaseDemographicsandDiseaseSeverityStatewide/DemographicData>.

Clinical Characteristics and risk factors

This section of the report describes the epidemiology of Oregon's COVID-19 cases, including indicators of COVID-19 transmission, common symptoms experienced by COVID-19 cases, and demographic breakdowns for sex, age, race, and ethnicity. Indicators of disease severity, specifically hospitalizations and deaths, are included in the tables.

Epidemiologic links

The figures below show the epidemiologic link of COVID-19 cases. Public health classifies all cases as part of a household, part of an outbreak, part of a cluster, a close contact of another case, or sporadic. Sporadic indicates that a case was not linked to a known source of COVID-19. Lower numbers of sporadic cases suggest lower community spread of COVID-19. Figure 1 focuses on recent cases of COVID-19, and allows for the easy comparison of different types of epidemiologic link. Figure 2 includes all COVID-19 cases, showing the pattern of epidemiologic links since the first cases were identified in Oregon. Figures 3 and 4 show sporadic cases by race, and figures 5 and 6 show sporadic cases by ethnicity. Looking at the data by race and ethnicity helps public health to identify disparities.

Epidemiologic link designations:

- Sporadic:⁵ Cases who do not have known exposure to another case or outbreak.

⁵ Due to the lag between case reporting and case investigation, the proportion of cases categorized as sporadic is high in the most recent week or more; some of these cases will be recategorized after investigation is completed.

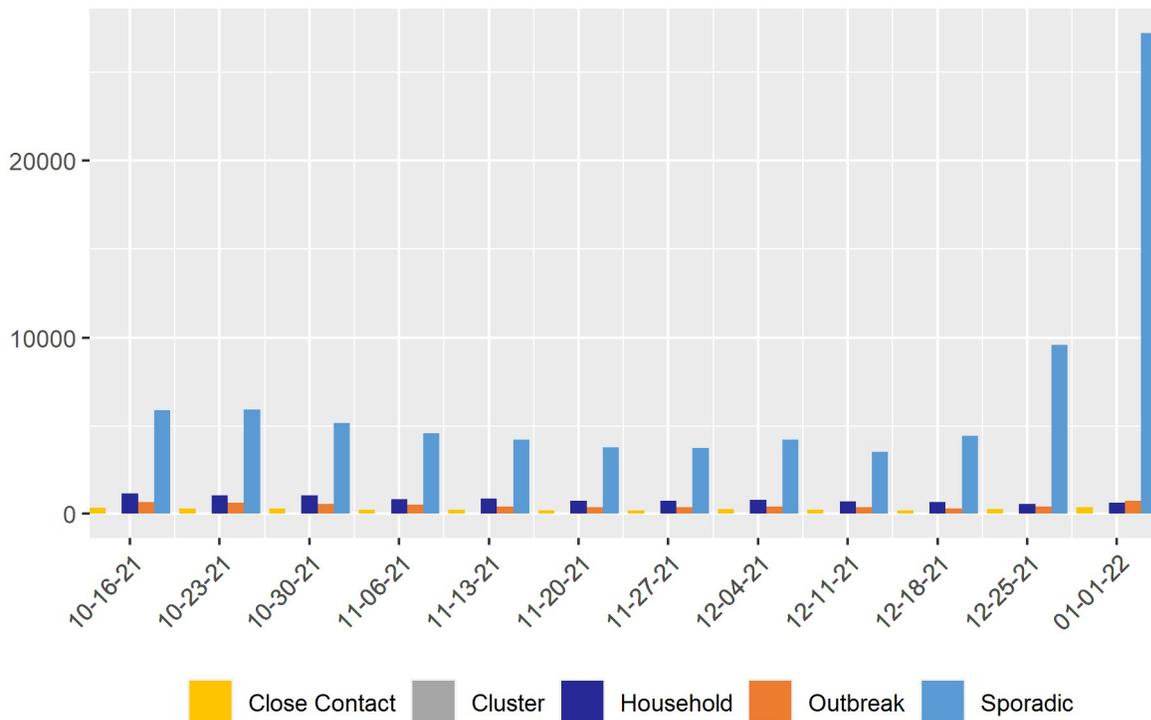

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary

- **Outbreak:** Cases who have a shared, defined exposure with at least one other case. For example, a defined exposure could be an event, a workplace, a congregate facility, etc.
- **Cluster:** Cases who had contact with another case, but the exposure is not well defined. For example, cases from two households who interacted many times prior to illness onset.
- **Household:** Cases who were exposed to another case in their household.
- **Close contact:** Cases who were exposed to another case, not in their household. This designation was added on 7/15/2020.

Figure 6. All sporadic COVID-19 cases by ethnicity and week of onset

Clinical symptoms and reported risk factors

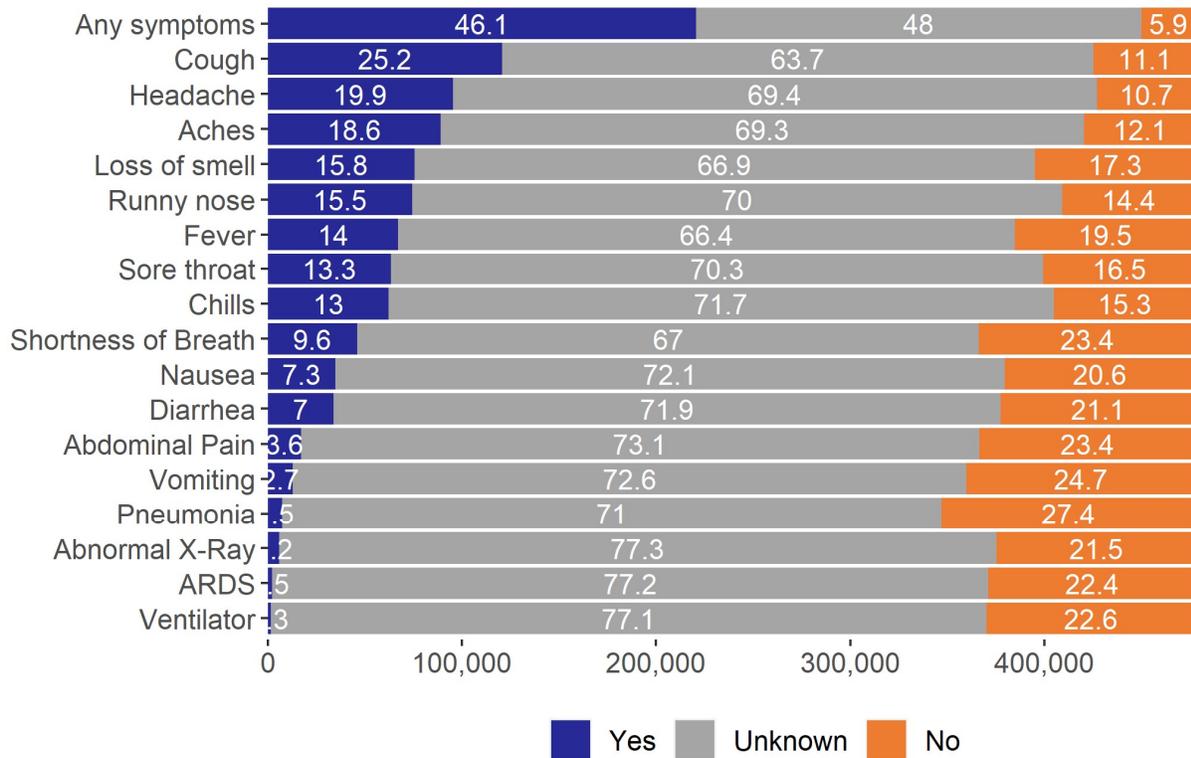

Figure 7 provides information on signs and symptoms from all COVID-19 cases. Of 478,201 cases, 220,540 (46.1%) reported having signs and symptoms of COVID-19. The most commonly reported symptoms are cough (n=120,554, 25.2%) and headache (n=95,317, 19.9%). Figure 8 provides information on the percentage of COVID-19 cases that report symptoms over time. Figure 9 provides information on risk factors from all COVID-19 cases. The most common risk factors are having contact with a known COVID-19 case prior to symptom onset (n=167,748, 35.1%) and having underlying medical conditions (n=318,912, 66.7%). Note that a person may report more than one sign/symptom or risk factor. Where displayed by week in this report, case data are categorized by week of reported symptom onset, not by date of case report. This results in reduced numbers in the most recent week or more due to reporting lags.

Oregon's Weekly Surveillance Summary

Figure 9. Reported risk factors among all COVID-19 cases

Risk factor definitions:

- Congregate living situations include, but are not limited to, long-term care facilities, group homes, prisons, and shelters. Data include people with confirmed cases who live or work in congregate living situations.
- Direct patient care is only asked if a case is a healthcare worker or volunteer. The denominator is the number of healthcare workers or volunteers.
- Underlying medical conditions include cardiovascular disease, chronic liver disease, chronic lung disease, chronic renal disease, current or former smoker, diabetes mellitus, immunocompromised condition, neurologic and neurodevelopmental conditions, obesity, or other chronic diseases.

Demographics

The following tables and figures show the demographic characteristics for all COVID-19 cases. The tables show case counts, case rates, and indicators of severity by sex, age,

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary

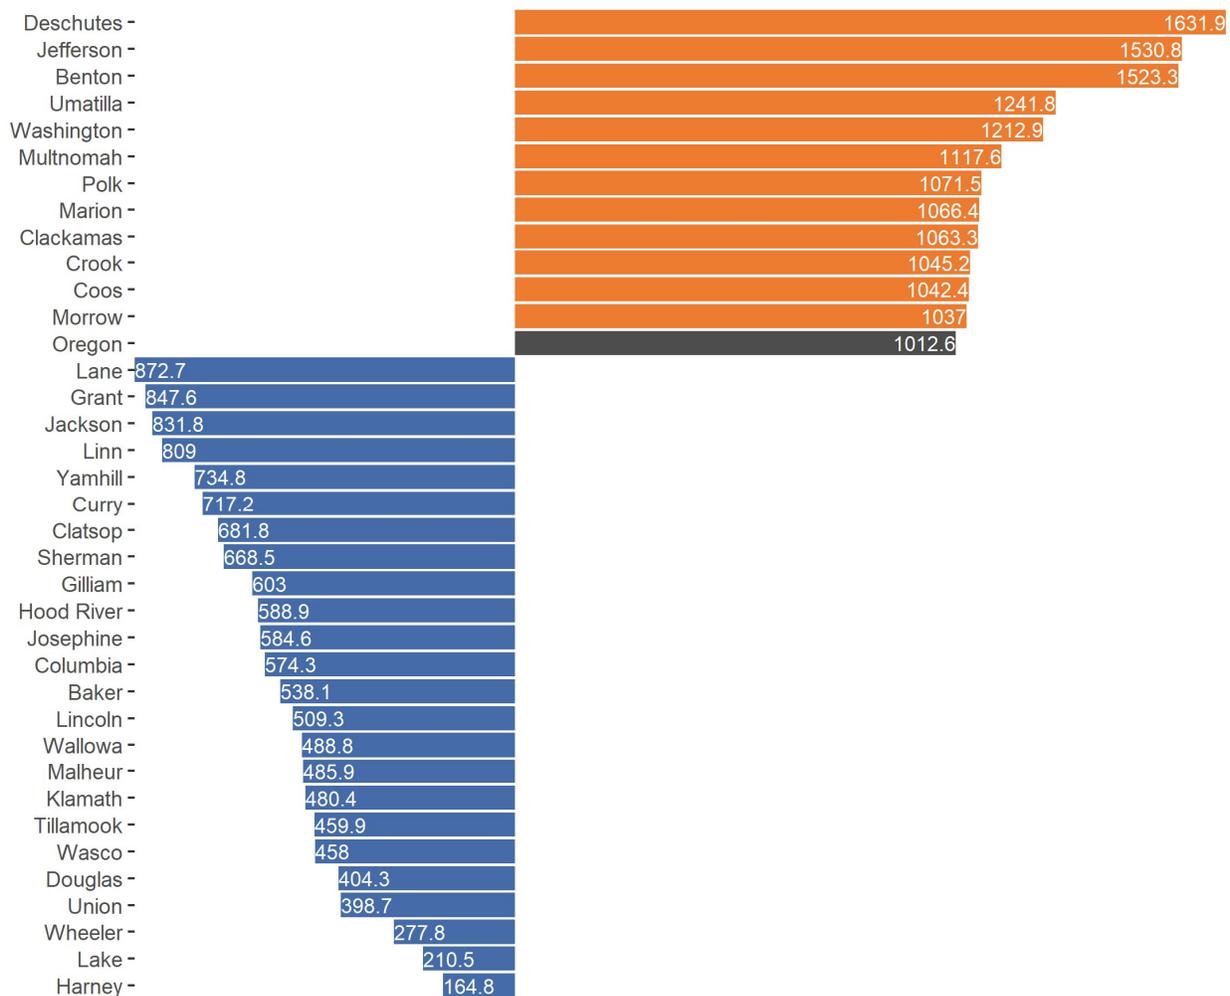

race and ethnicity. The figures show cases over time, by week of onset, for sex, age, race, and ethnicity. Figure 10 displays case rates by county, in comparison to the case rate for all of Oregon.

Geography

The following figure shows case rates by county for the most recently completed MMWR week, which is currently January 2 to January 8, 2021. Cases are displayed using the date that the case became known to public health.

Figure 10. Case rates per 100,000 population, by county

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary

1. Counties that had case rates above the case rate for the state are displayed in orange. Counties that had case rates below the case rate for the state are displayed in blue.
2. Counties that had zero cases in the time period displayed appear on the list, but do not have a bar to display.

Sex

Table 1. Severity and rates of COVID-19 by sex

Sex	Cases	% of total cases	Cases per 100,000	Hospitalized	% Hospitalized	Deaths	Case fatality
Female	241,932	50.6	11,185.4	10,664	4.4	2,563	1.1
Male	225,601	47.2	10,716.7	11,933	5.3	3,179	1.4
Non-Binary	50	0.0		0	0.0	0	0.0

Age-adjustment

Tables 5 and 6 show the ratio of age-adjusted rates of COVID-19 for cases, hospitalizations, and deaths by race and ethnicity. Each table compares the rates of cases, hospitalizations, and deaths between each group and a reference group and accounts for differences in population distributions in each group.

Table 5. Ratio of age-adjusted rates for cases, hospitalizations, and deaths by race

Age-adjusted rate ratios of cases, hospitalizations, and deaths, compared to white persons.

Race	Cases	Hospitalizations	Deaths
> 1 race	0.4	0.8	1.0
American Indian/Alaska Native	2.0	2.7	2.8
Asian	0.9	0.9	0.8
Black	1.9	3.1	2.2
Pacific Islander	1.6	4.8	4.8
White	1.0	1.0	1.0

1. During the case investigation, people are asked to self-report their race, ethnicity, tribal affiliation, country of origin, or ancestry.
2. U.S. Census Bureau; American Community Survey, 2019 American Community Survey 5-Year Estimates.
3. Persons for which race information was not available were not included in these estimates. The number of persons with race data unavailable can be found in Table 3.

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary

Table 6. Ratio of age-adjusted rates for cases, hospitalizations, and deaths by ethnicity

Age-adjusted rate ratios of cases, hospitalizations, and deaths, compared to non-Hispanic.

Ethnicity	Cases	Hospitalizations	Deaths
Hispanic	1.7	2.3	2.1
Non-Hispanic	1.0	1.0	1.0

1. During the case investigation, people are asked to self-report their race, ethnicity, tribal affiliation, country of origin, or ancestry.
2. U.S. Census Bureau; American Community Survey, 2019 American Community Survey 5-Year Estimates.
3. Persons for which ethnicity information was not available were not included in these estimates. The number of persons with ethnicity data unavailable can be found in Table 4.

Follow-up

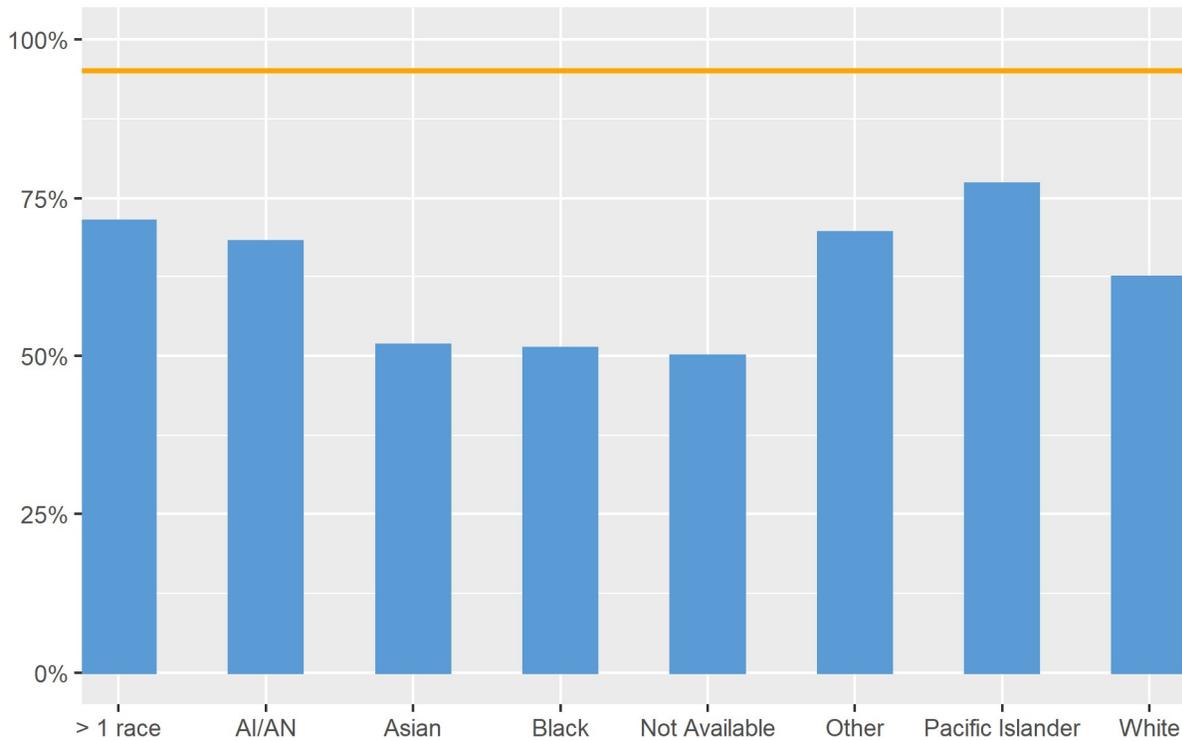

Figure 22 shows the percentage of cases that were called within 24 hours of being reported to public health by race. Figure 23 shows the percentage of cases that were called within 24 hours of being reported to public health by ethnicity. Figure 24 shows the percentage of cases that were interviewed, by race. Figure 25 shows the percentage of cases that were interviewed, by ethnicity. Race and ethnicity data are collected when cases are interviewed. Race and ethnicity data for cases that were not interviewed are abstracted from laboratory reports and medical records if it is available. The orange line in figures 22 and 23 represents the state metric for timely follow up for all cases: 95%.

People with Intellectual and Developmental Disabilities

As of September 26, 2021 OHA is aware of 1,407 people with intellectual or developmental disabilities who have had COVID-19 to date. This includes individuals who live in congregate settings and in family or individual homes. To date, there are 41 deaths among people with intellectual or developmental disabilities. This number is from conducting a match between the ODHS Office of Developmental Disabilities Services client list and the Oregon COVID-19 case database. OHA will update this number on a quarterly basis.

Additional information about the ODDS program and COVID-19 can be found here: <https://www.oregon.gov/dhs/SENIORS-DISABILITIES/DD/ODDS%20Resource%20Library/ODDS-Residential-COVID-19-Report.pdf>.

ODDS data is based on self-reports from providers and case management entities and therefore may differ from testing data received from the Oregon Health Authority.

Weekly COVID-19 Hospitalizations (HOSCAP)

OHA is publishing data on the number of COVID-19 hospitalizations by hospital in the prior week; data are from HOSCAP. Maps and tables containing the 7-day average of hospitalizations by region and hospital are available online at: <https://public.tableau.com/app/profile/oregon.health.authority.covid.19/viz/OregonCOVID-19HospitalCapacity/HospitalizationbyFacility>.

Information on Oregon's current hospital bed capacity by region is available online at: <https://public.tableau.com/app/profile/oregon.health.authority.covid.19/viz/OregonCOVID-19HospitalCapacity/BedAvailabilitybyRegion>.

ZIP code

OHA is publishing data on cases at the ZIP code level, available online at:
