

How to clear your internet cache

Here are instructions on how to clear your cache for common browsers. Keep in mind that clearing your cache and cookies erases your settings for websites. Here are some examples:

- If you opted to have sites remember your username and password, they will be cleared from your browser's memory when you clear cookies, and you will have to sign in again.
- Websites might load a little slower because all of the images and content pieces have to be loaded from scratch.

Firefox

Go to **Tools > Clear Recent History**. Choose the time range “Everything” and the items you wish to clear (including “Cache”) and click **Clear Now**.

Internet Explorer 6

Go to **Tools > Internet Options > General**. Click **Delete Files**. Check the box next to **Delete all offline content** In the window that opens and click **OK**.

Internet Explorer 7 and 8

Go to **Tools > Internet Options > General**. Under **Browsing history** click **Delete**. Choose which items you wish to delete and click the Delete button next to each item to delete it.

Internet Explorer 9

Go to **Tools > Safety > Delete browsing history**. Then un-check the box for **Preserve Favorites website data**, select the options for **Temporary Internet Files** and **Cookies** and click **Delete**.

Internet Explorer 10 and 11

Go to **Tools> Internet Options**. Under **Browsing history** click **Delete**. Select the **Temporary Internet files and web site files** and **Cookies and web site data boxes**. Click **Delete**. Click **OK**.

Safari

Go to Settings and then go to **Safari > Empty Cache**. Click **Empty** in the window that opens to clear the cache.

Opera

Go to **Tools > Delete Private Data**. Choose which items you wish to delete and click **Delete**.

Chrome

Go to **Tools > Clear Browsing Data**. Select the items you want to delete, choose the period for which you want to delete them and click **Clear Browsing Data**.
