

## Potential Sources of Radon Measurement Devices

\*\*\*DRAFT\*\*\*

---

The following is a list of manufacturers of short and long-term radon measurement devices. This list should be used for informational purposes only and is not intended to be an endorsement by the Oregon Health Authority of particular companies. These organizations are not the only sources of such devices.

School staff intending to measure school sites for elevated radon under ORS 332.166-167 are advised to first read OHA's *Testing for Elevated Radon in Oregon Schools: A Protocol and Plan*. [Review at [healthoregon.org/radon](http://healthoregon.org/radon).] Specifically, two sections of the Protocol, *Appendix D: Step-by-step guide for planning radon testing in Oregon schools* and *Quality assurance procedures for a school radon measurement program* can be used to determine how many measurement devices are needed for initial testing.

Staff might then contact companies about pricing. Most companies provide discount pricing for bulk purchasing on test kits. Some have discounts for school testing. Companies should also be asked about their experience with the specific needs of school testing efforts.

For further information on radon, contact us at:
