

Oregon School Health Services

School Nurses and School-Based Health Centers are partners in providing comprehensive health services at school and work together to build a health safety net for Oregon students.

School Nurses

The Oregon School Nurses Association defines school nursing as a “specialized practice of professional nursing that advances the well-being, academic success, life-long achievement and health of students.” School nurses serve the entire school population through health promotion and disease prevention, providing case management for chronic and acute student health conditions; providing health education and teaching; coordinating mandated screening including vision and hearing; teacher and staff training and communication; delegation of specific nursing tasks that are performed in the school setting; promoting safety and providing mental health services; advocacy for inclusion of all students according to their ability to participate; and coordination with other local and state agencies regarding communicable disease and immunization mandates. School nurses link educators, families, and health care providers to improve health and promote academic success.

School-Based Health Centers

School-Based Health Centers (SBHCs) are public health primary care clinics that are located in a school building or on school campus. They diagnose and treat acute and chronic illnesses and injuries. Other services include prescriptions, immunizations, well-child checks and sports physicals, as well as health screenings, age appropriate reproductive health services and promotion of healthy behaviors. SBHCs are staffed by nurse practitioners, physician assistants, physicians, nurses, mental health professionals and health assistants. SBHCs collaborate with parents, youth advisory councils, local providers and community partners to provide health services that benefit students and the school community. Students and their parents appreciate missing less class time for health care needs. SBHCs bring youth-centered medical care to the school so school nurses and staff can refer students quickly for the care they need, regardless of their ability to pay.

Many students have physical and mental health issues, as shown in responses to the Oregon Healthy Teens Survey. These health issues can interfere with young people’s ability to attend school and learn. School-Based Health Centers and school nurses can play an essential role in meeting the health care needs of students so that they can thrive in all activities.

Oregon Student Health Status (2013 Oregon Healthy Teens Survey)

Health Care Issue	8th grade	11th grade
Unmet physical health care need in past year	27%	29%
Unmet mental health care need in past year	14%	15%
Self-reported overweight or obese	29%	31%
Seriously considered suicide in past year	16%	14%
Felt harassed at school in past 30 days	35%	23%
Used alcohol in the past 30 days	14%	31%
Used cigarettes in the past 30 days	4%	9%
Used marijuana in the past 30 days	10%	21%
Video, computer or screen time 5 hours or more a day for anything other than school work	16%	14%
