

Confined Fire Reporting Procedure

- For confined fires with incident type codes 113-118, the NFIRS-1 **basic module** and the NFIRS-2 **fire module will be required**.
- The NFIRS-3 **structure fire module will not be required** for confined fires with incident type codes 113-118.

Rationale: The NFIRS-1 basic module is required by NFIRS, even for confined fires. In addition, the NFIRS-2 fire module captures key information to inform education and prevention programs and identify faulty products in need of report to the Consumer Product Safety Commission (e.g. area of fire origin, item first ignited, factors contributing to ignition, and equipment involved). The structure fire module does not capture key information and is infrequently utilized; therefore, the structure fire module shall not be required for confined fires with incident type codes 113-118.
