

☐ **Smoke Alarms have an expiration date**, and must be replaced 10 years after they were manufactured.

☐ **Smoke Alarms are required** on every level of your home, including the basement, and within 21 feet of bedroom doors.

Smoke Alarms are an important part of your family's Fire Safety Plan.
Make sure everyone knows what to do when they hear the alarm.

SMOKE ALARMS
What you need to know

- ☐ **Smoke Alarms are designed** to detect smoke and alert you to a fire inside your home, giving you more time to escape.

- ☐ **Smoke Alarms should be tested** every month by pushing the test button. A smoke alarm that doesn't work, can't help you.

- ☐ **Smoke Alarms make a short chirping sound** when their batteries are low, and three long beeps when there is smoke in the air.

- ☐ **Smoke Alarms can be silenced** by pushing the test button to quiet a nuisance alarm for up to 15 seconds.
