

# Enabling conditions

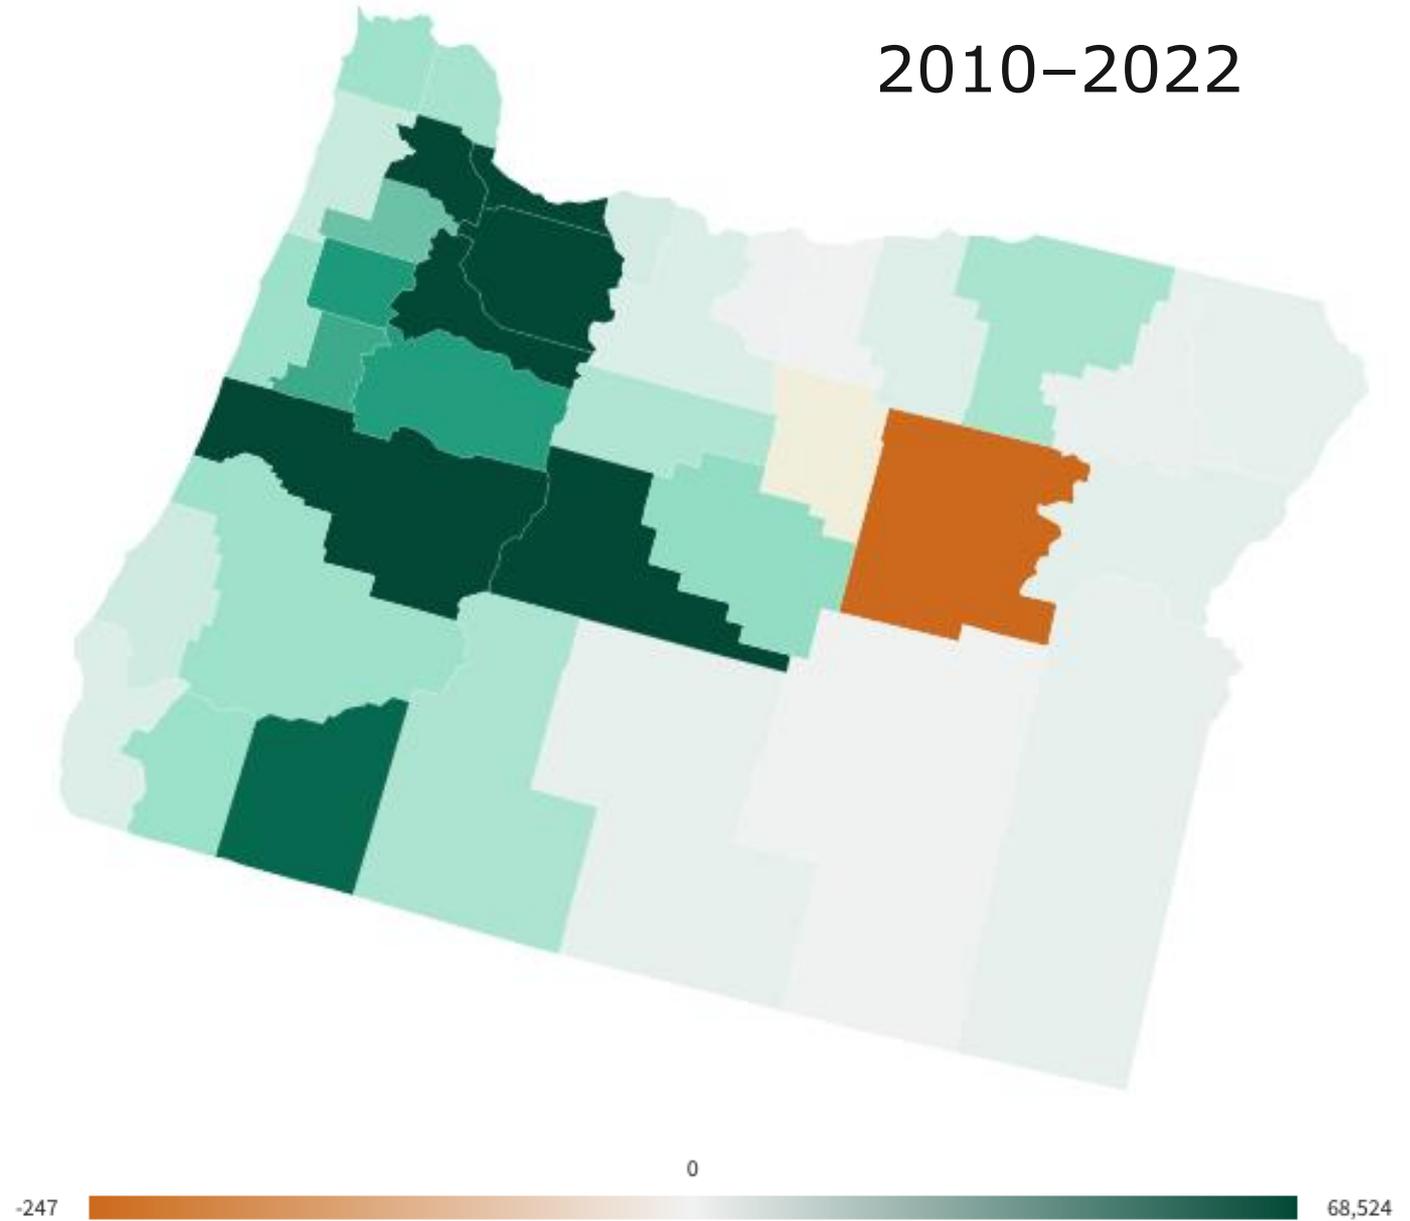

# Causes of Oregon wildfires, 1992-2020

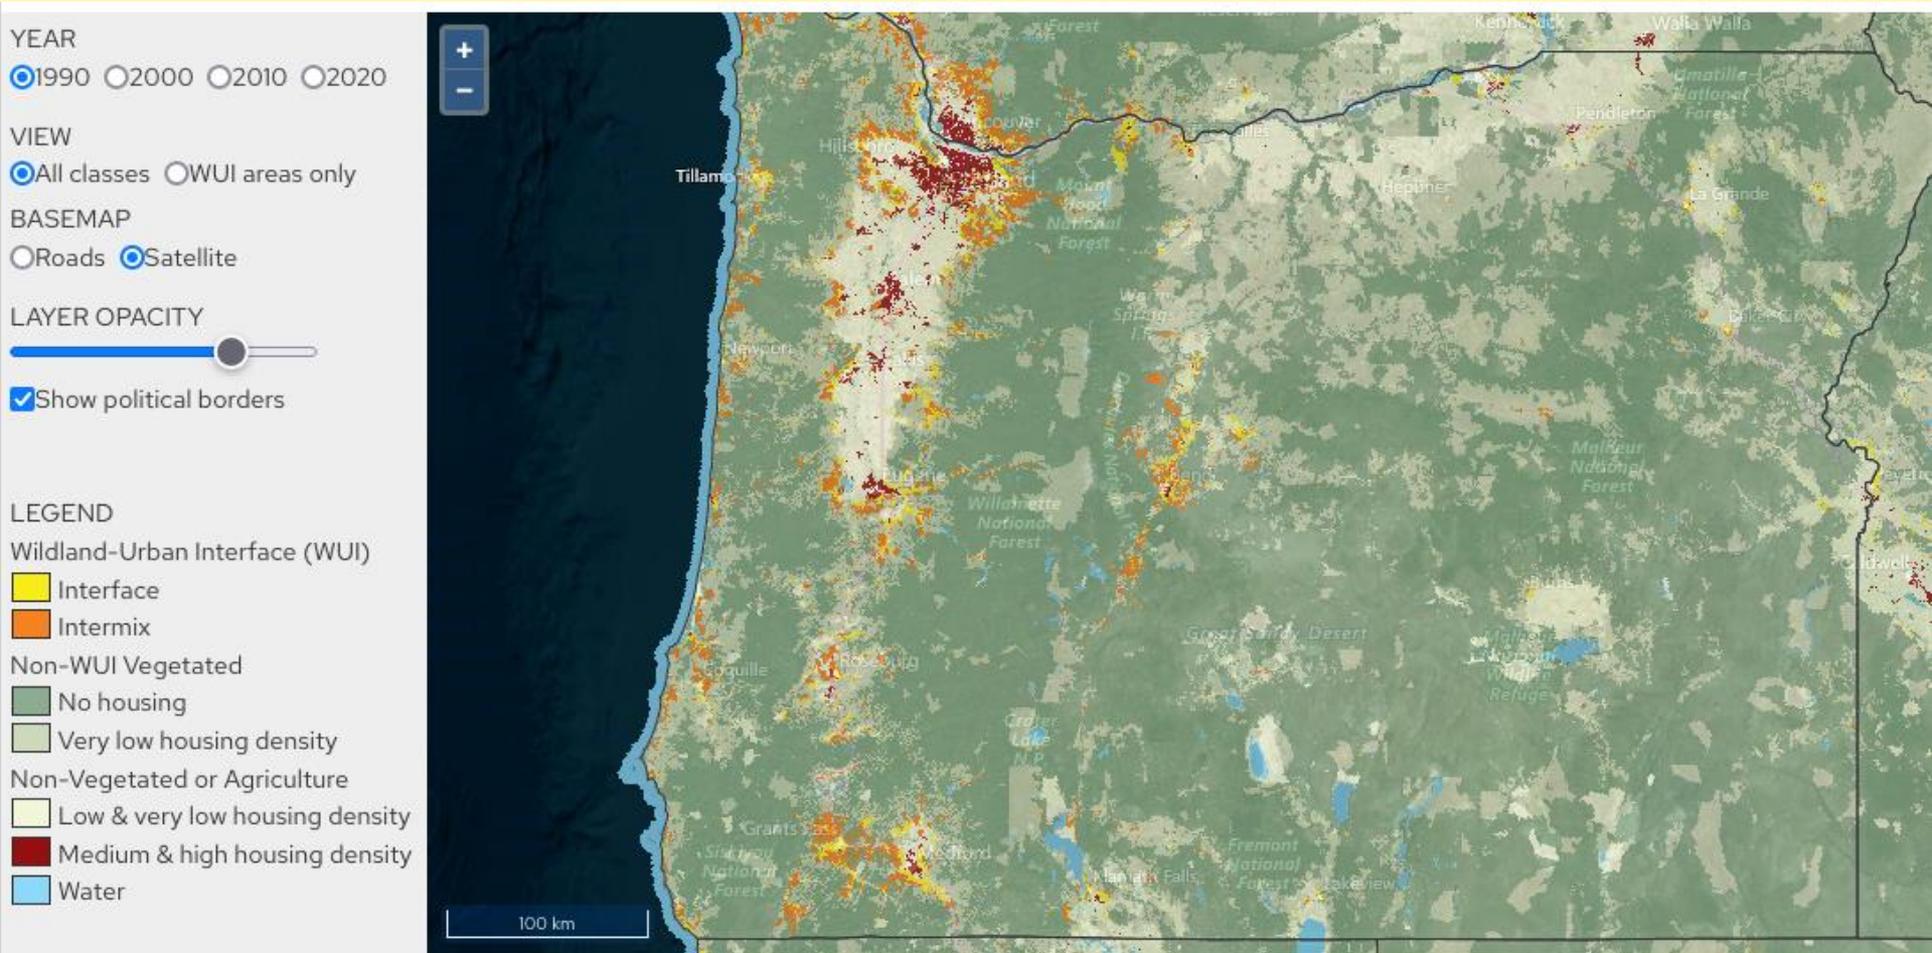

$$I = PAT$$

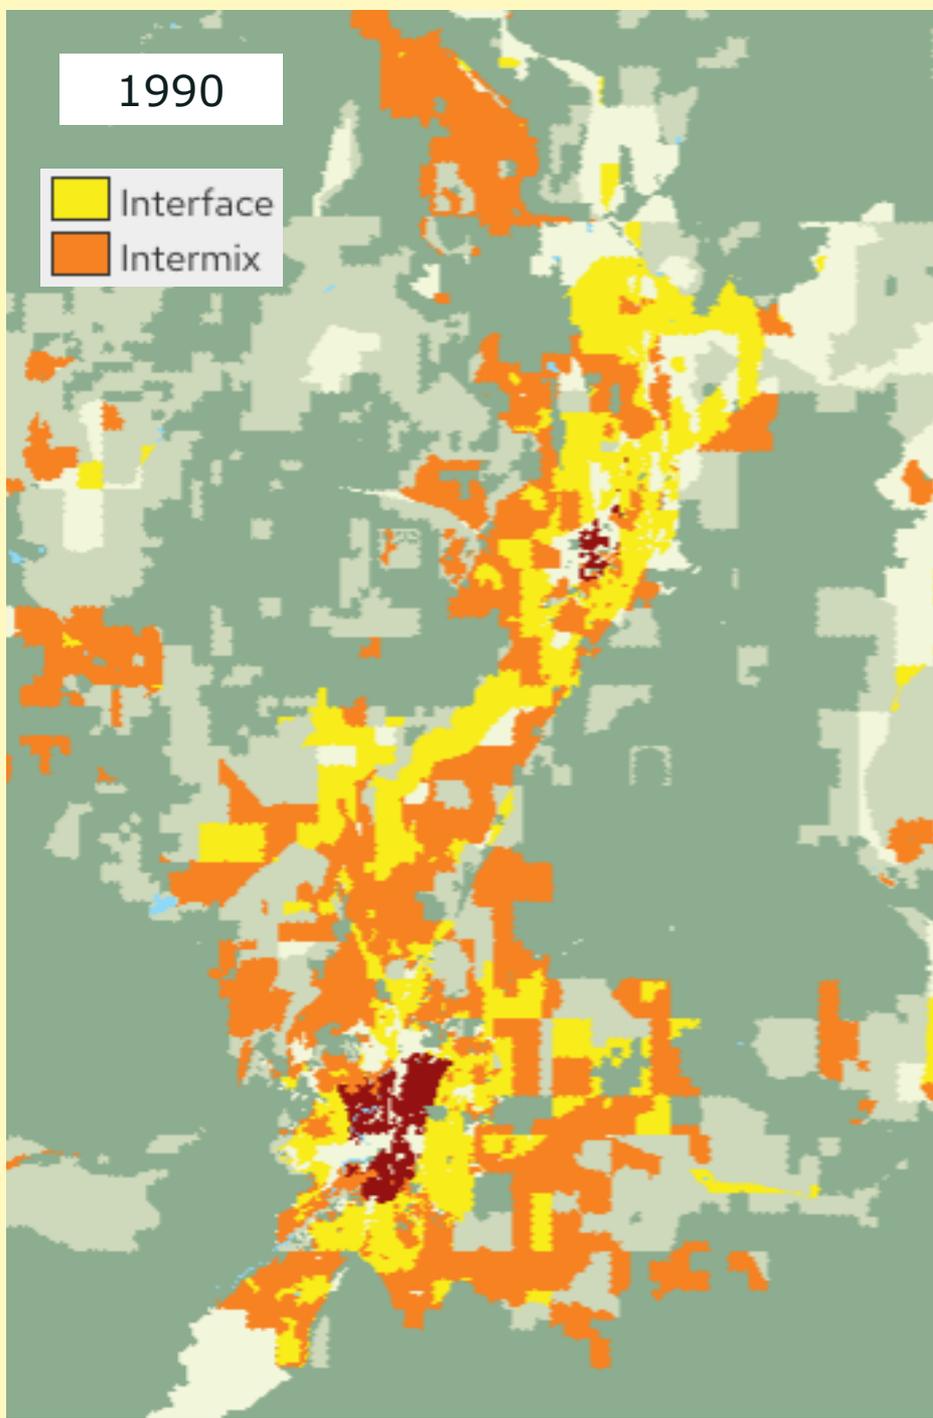

2010–2022

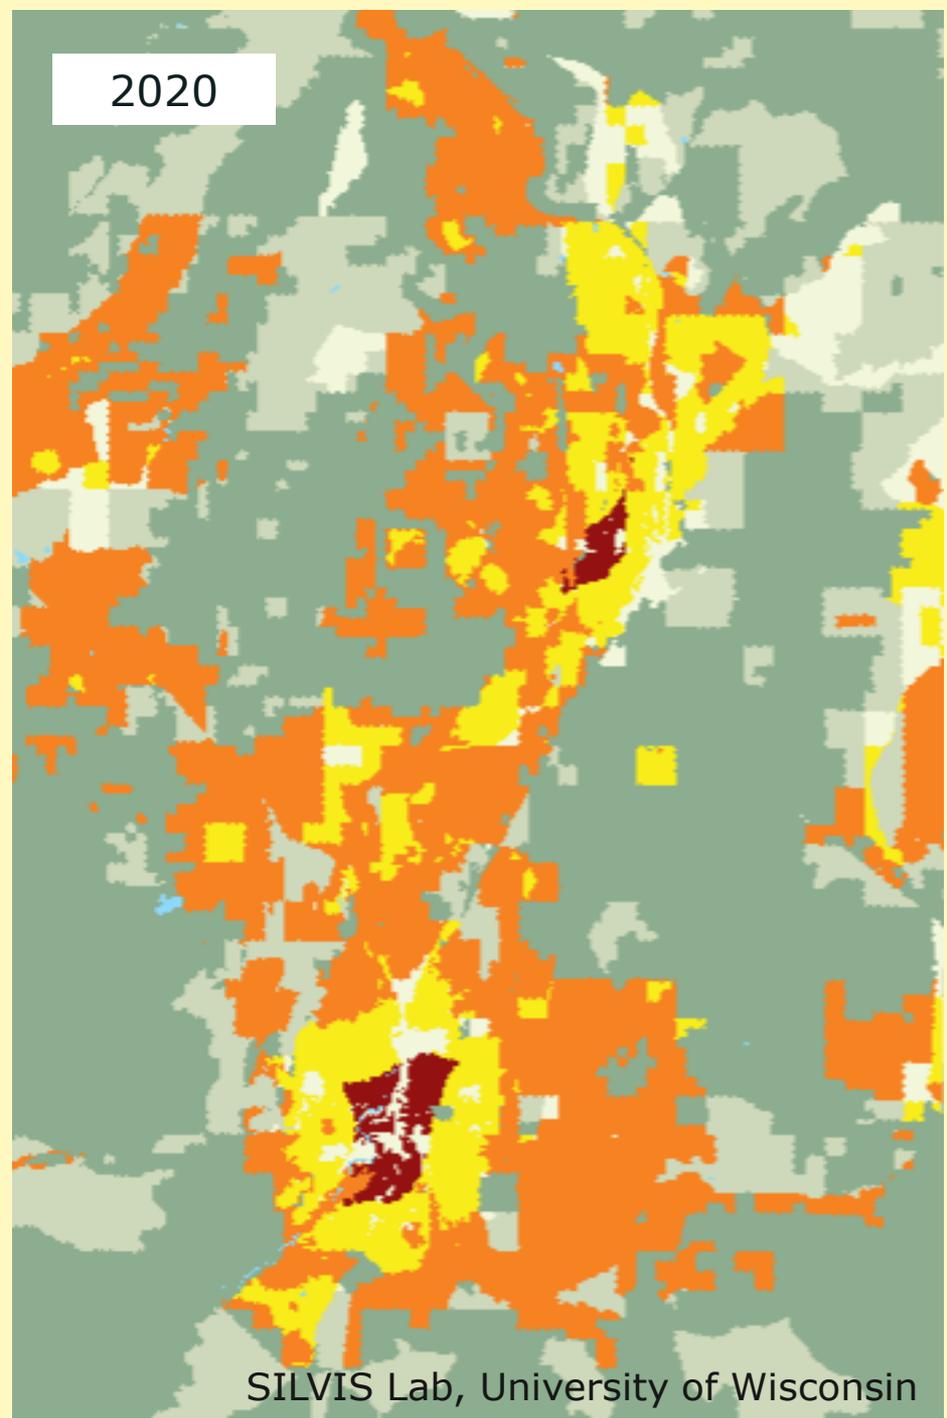

Intermix: housing and vegetation are mixed  
Interface: housing abuts continuous wildland vegetation

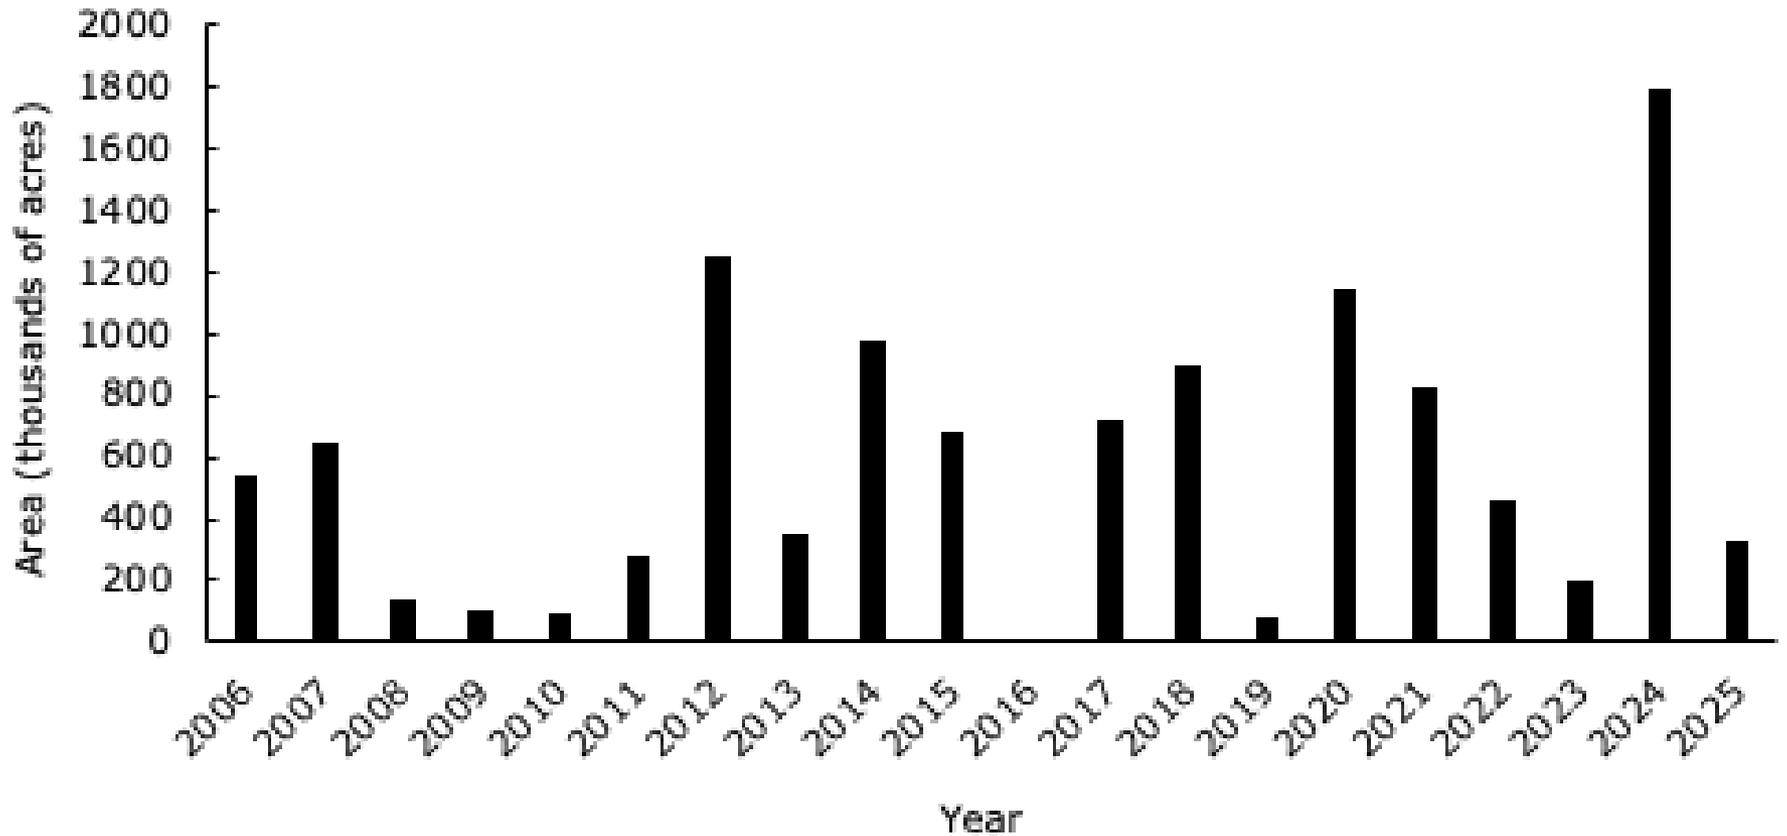

1990

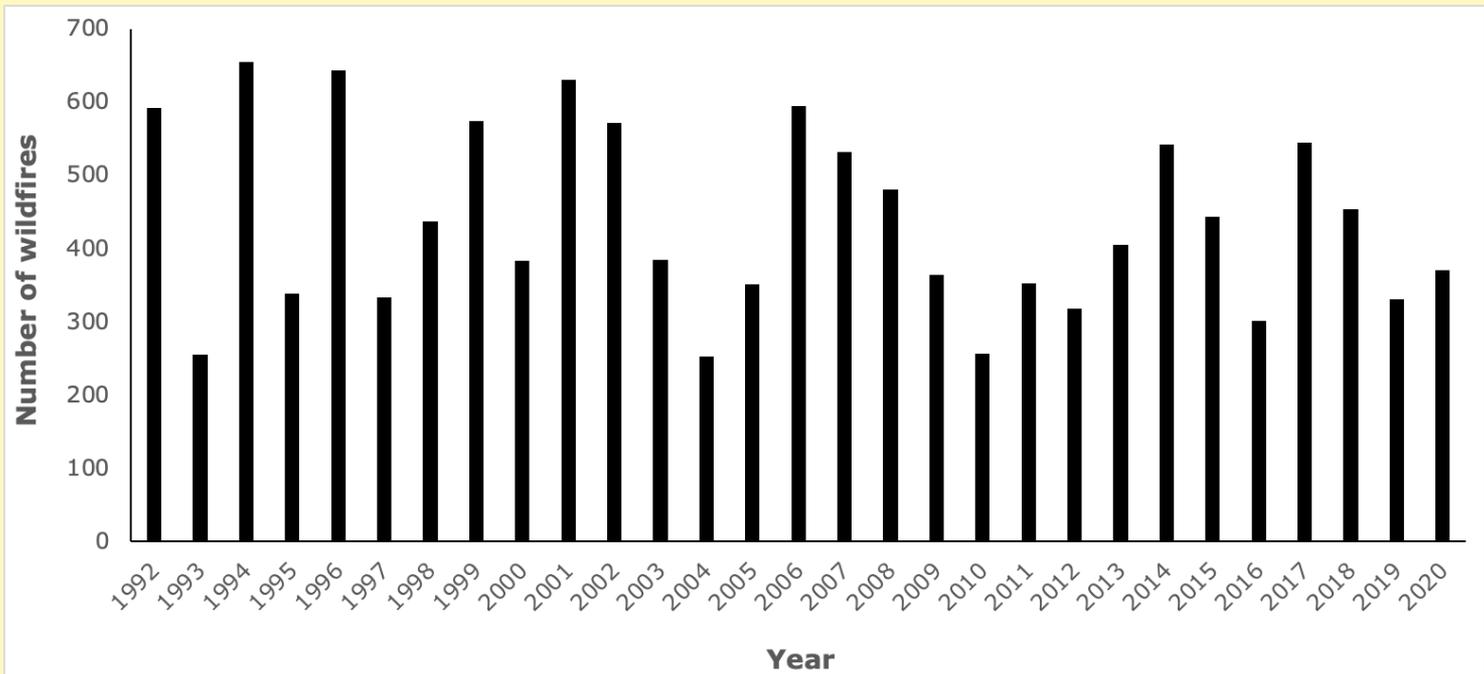

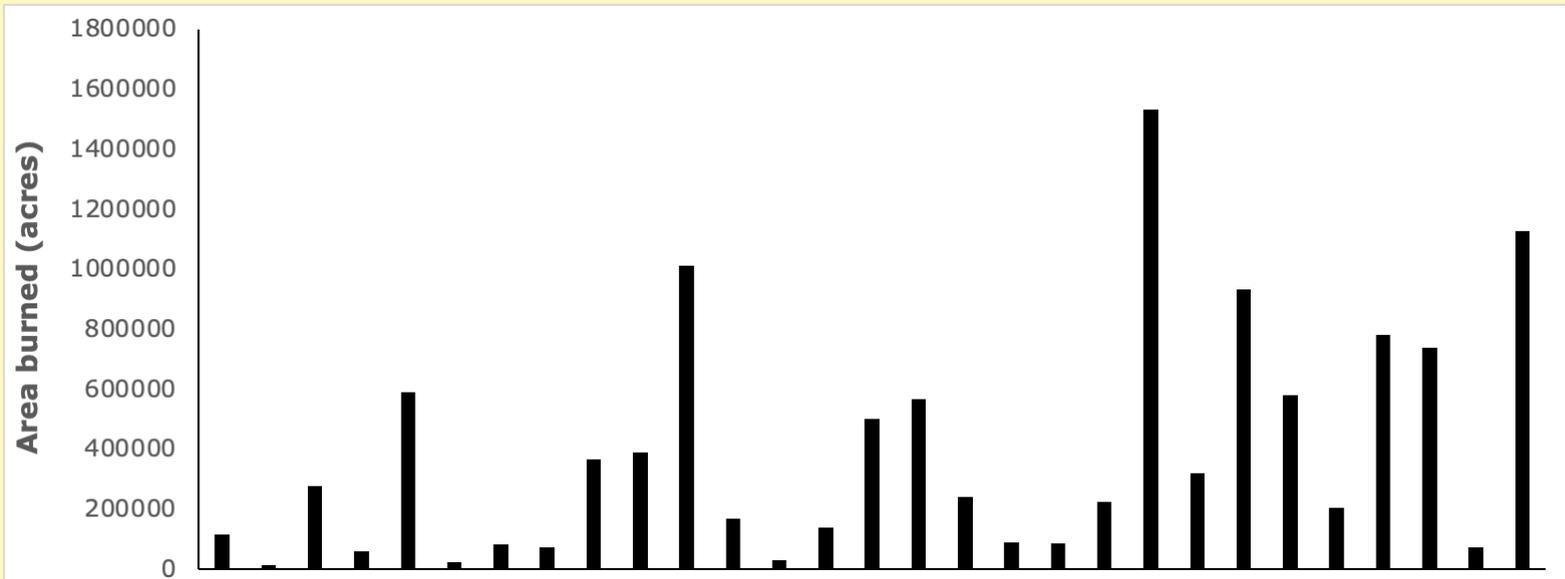

2020

## Approximate area burned in Oregon

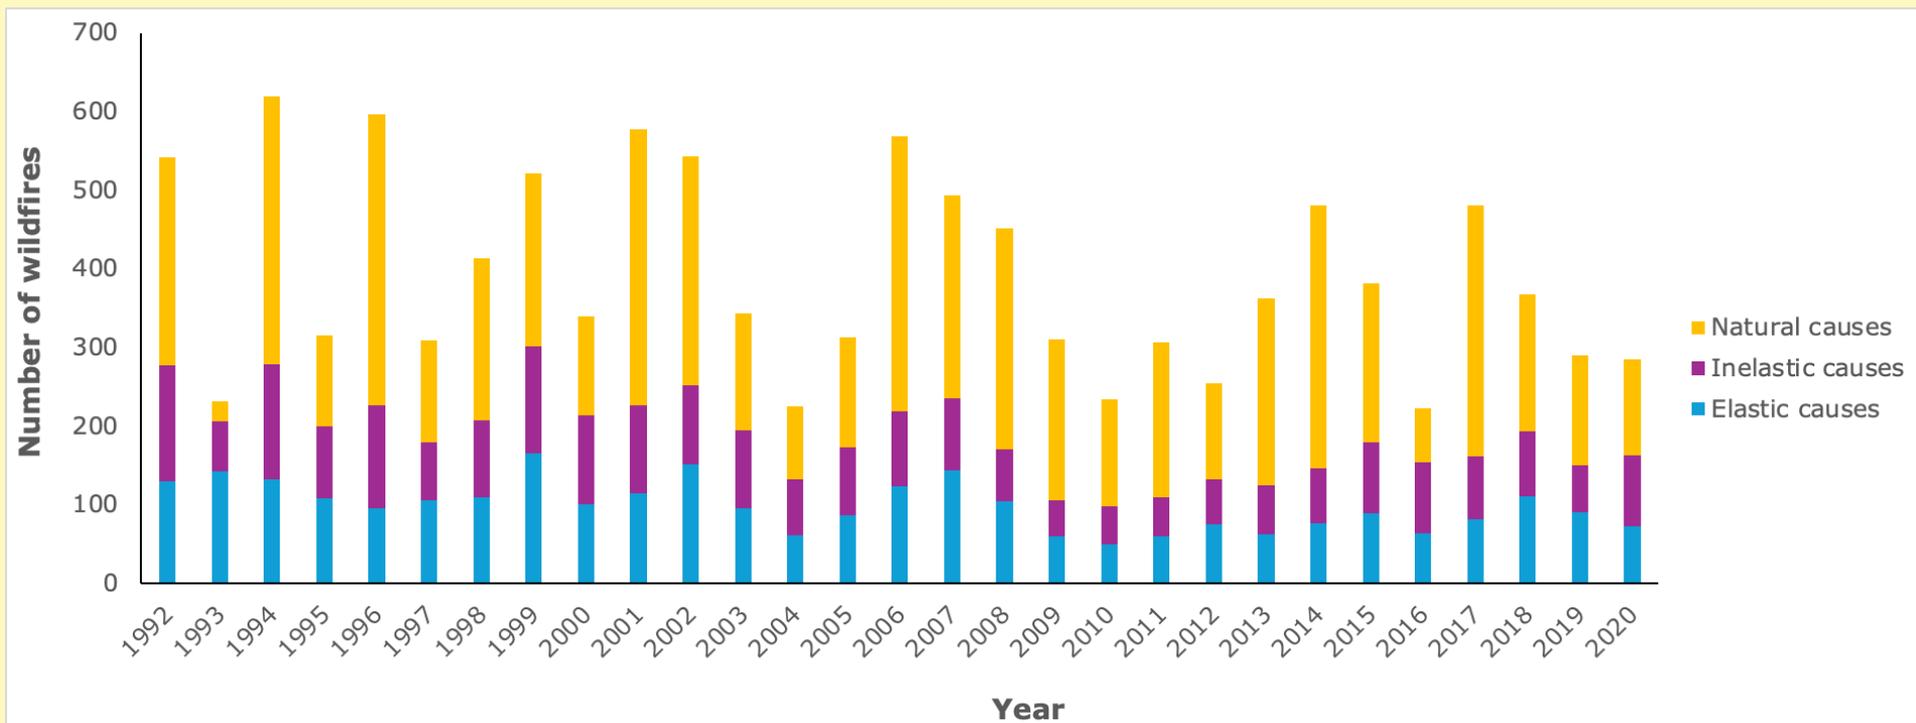

# Causes of wildfires: Fire Program Analysis Fire-Occurrence Database (Short 2022)

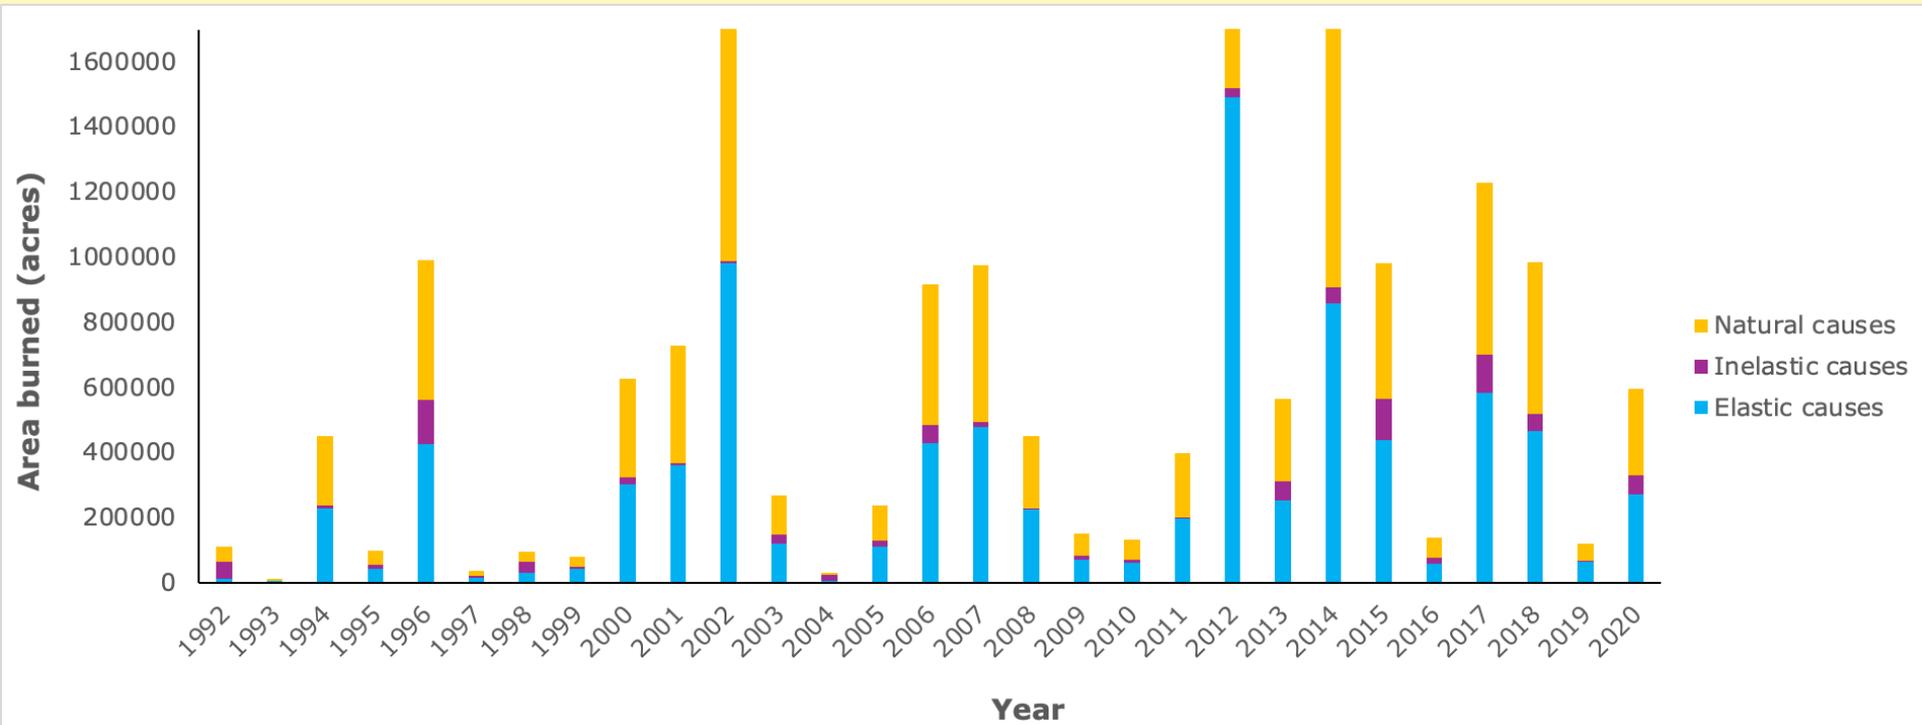

- Inelastic: arson, equipment and vehicle use, misuse of fire by a minor, power systems, railroads, smoking
- Elastic: debris and open burning, firearms and explosives, fireworks, recreation and ceremony

# Number of wildfires in Oregon

# Area burned in Oregon

# Wildfires in the 11 western states, 2000–2021

Josh Edelson / AFP via Getty Images

- People within wildfire perimeters: +185%
- Home and structure losses: +246%
- Demographic, social, economic factors affect exposure, preparedness, recovery

# Overall Vulnerability

## Socioeconomic Status

**Below 150% Poverty**

**Unemployed**

**Housing Cost Burden**

**No High School Diploma**

**No Health Insurance**

## Household Characteristics

**Aged 65 & Older**

**Aged 17 & Younger**

**Civilian with a Disability**

**Single-Parent Households**

**English Language Proficiency**

## Racial & Ethnic Minority Status

**Hispanic or Latino (of any race)**

**Black or African American, Not Hispanic or Latino**

**Asian, Not Hispanic or Latino**

**American Indian or Alaska Native, Not Hispanic or Latino**

**Native Hawaiian or Pacific Islander, Not Hispanic or Latino**

**Two or More Races, Not Hispanic or Latino**

**Other Races, Not Hispanic or Latino**

## Housing Type & Transportation

**Multi-Unit Structures**

**Mobile Homes**

**Crowding**

**No Vehicle**

**Group Quarters**

# Exposure of the socially vulnerable increased

Increase in SVI

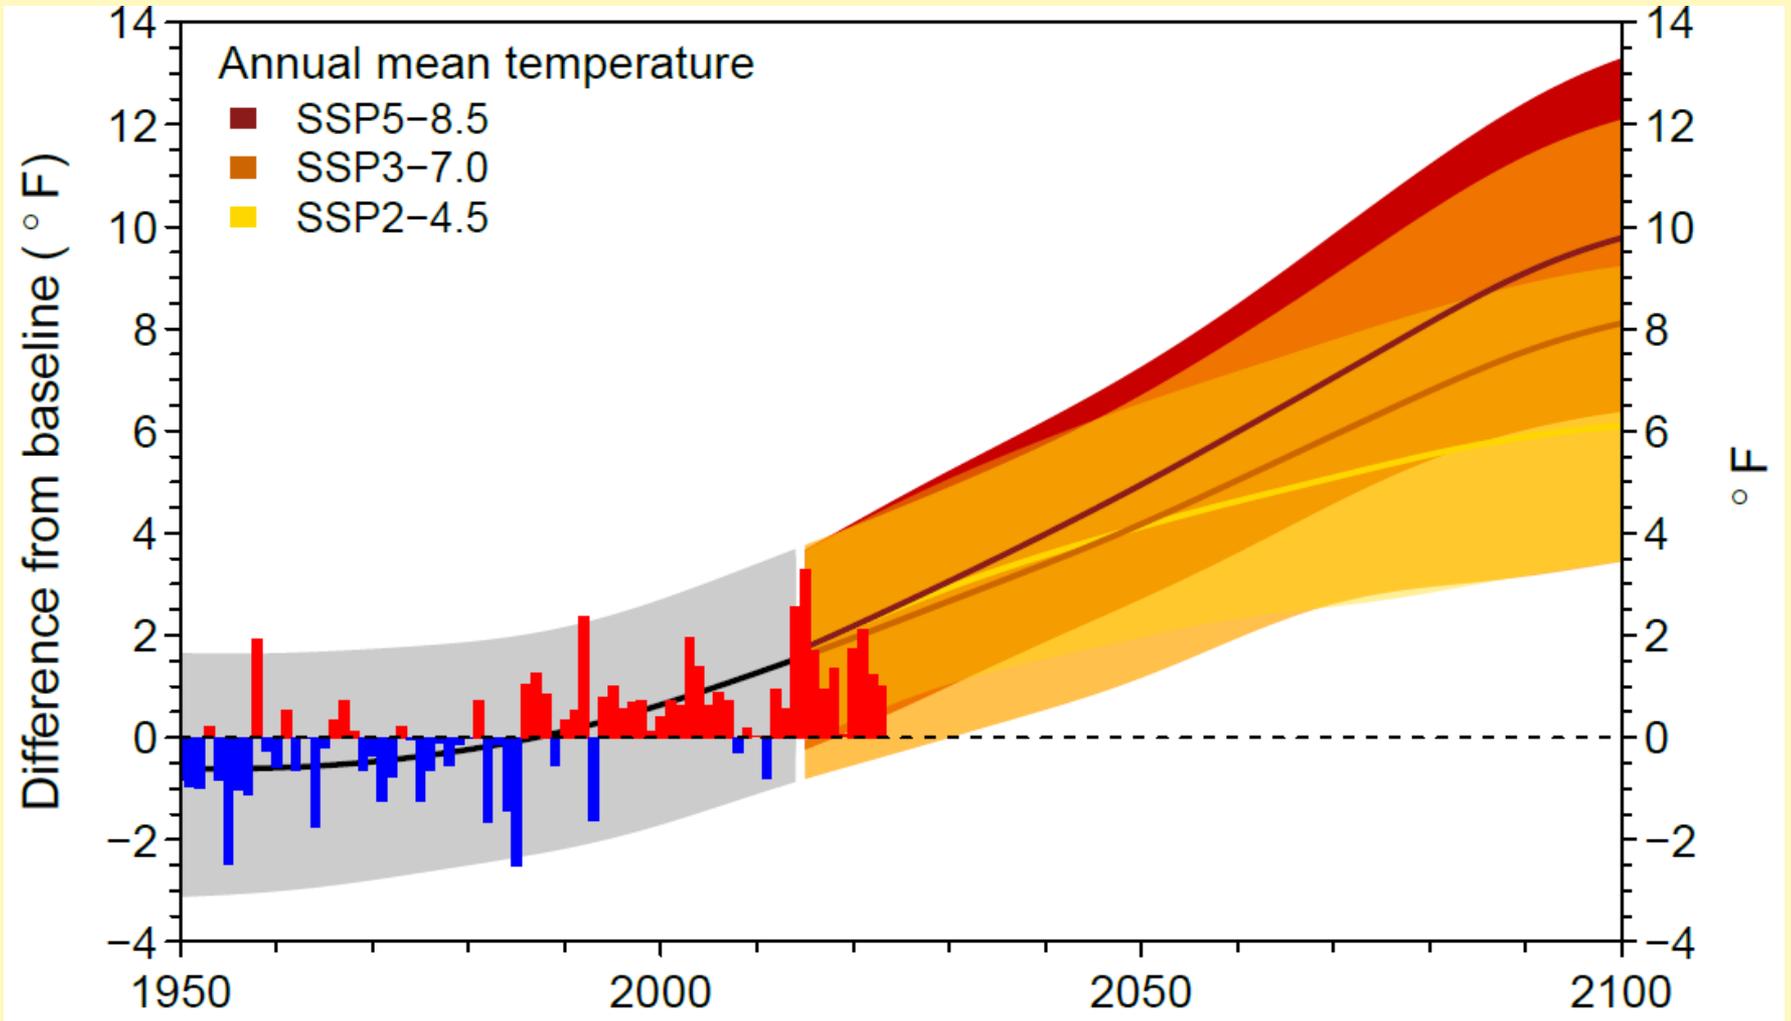

Increase in area burned in areas with high vulnerability; consistent SVI in burned areas

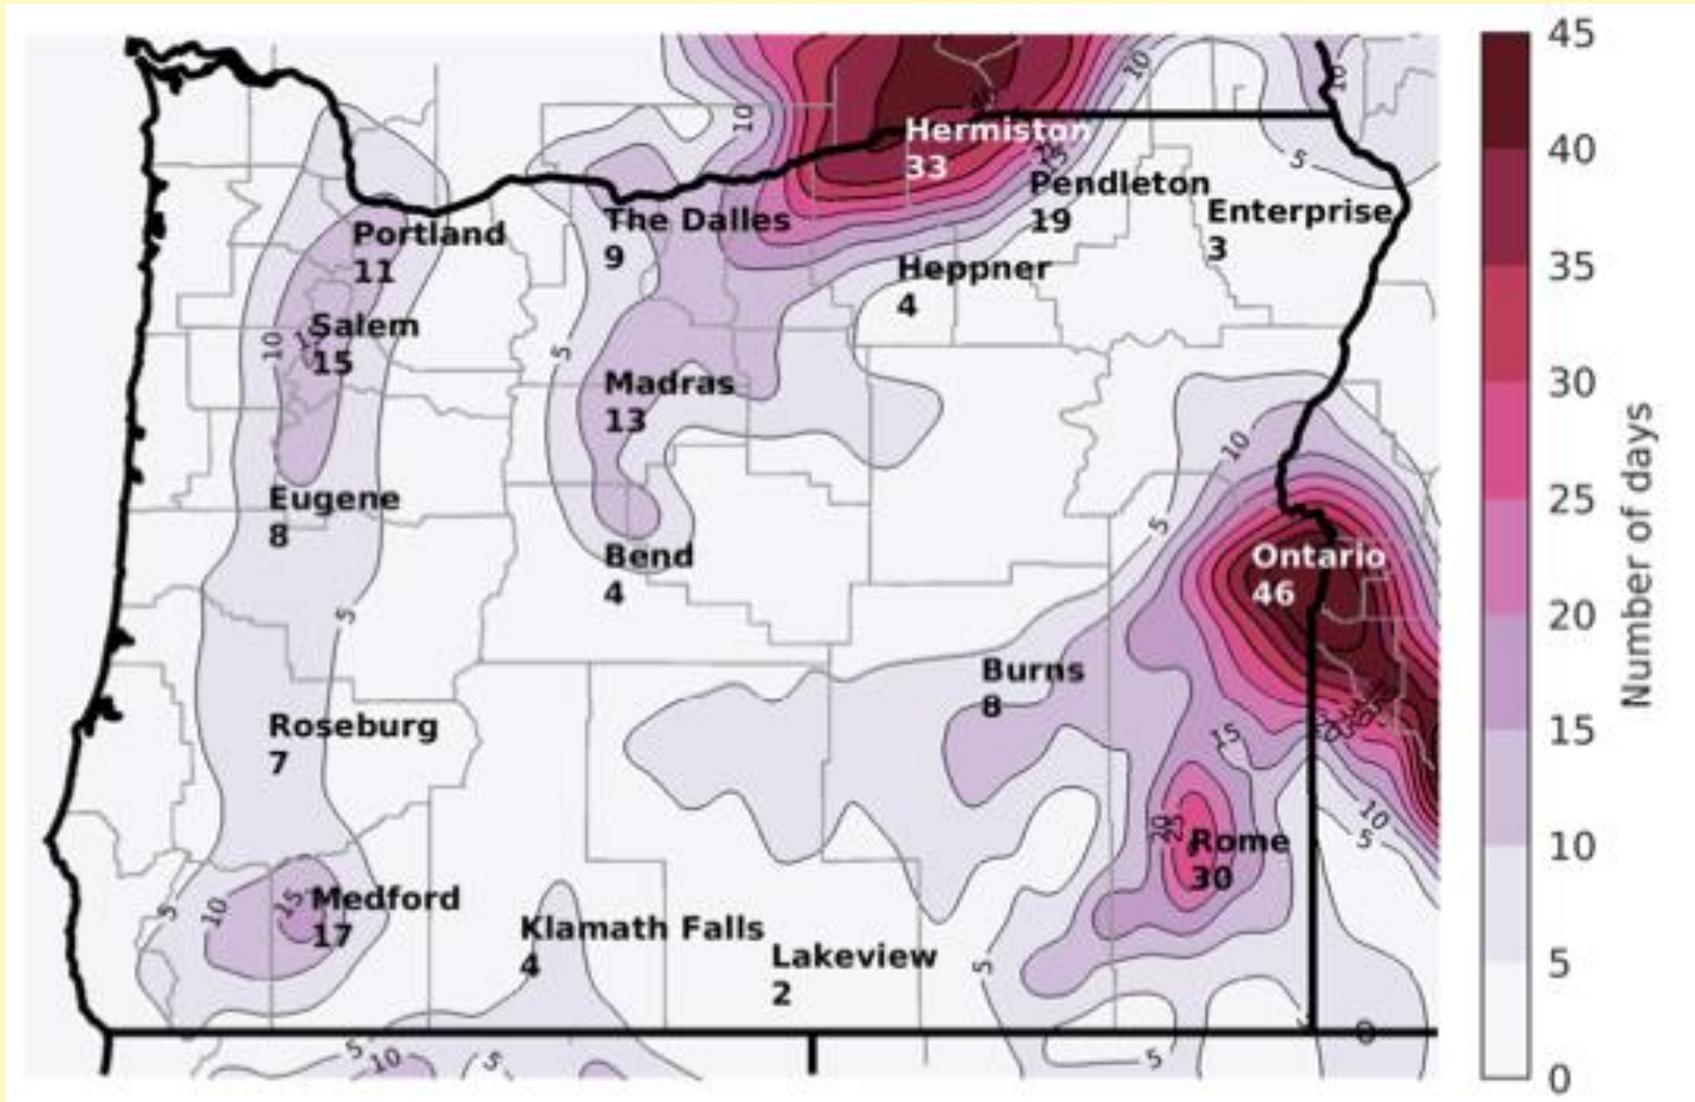

Extreme heat

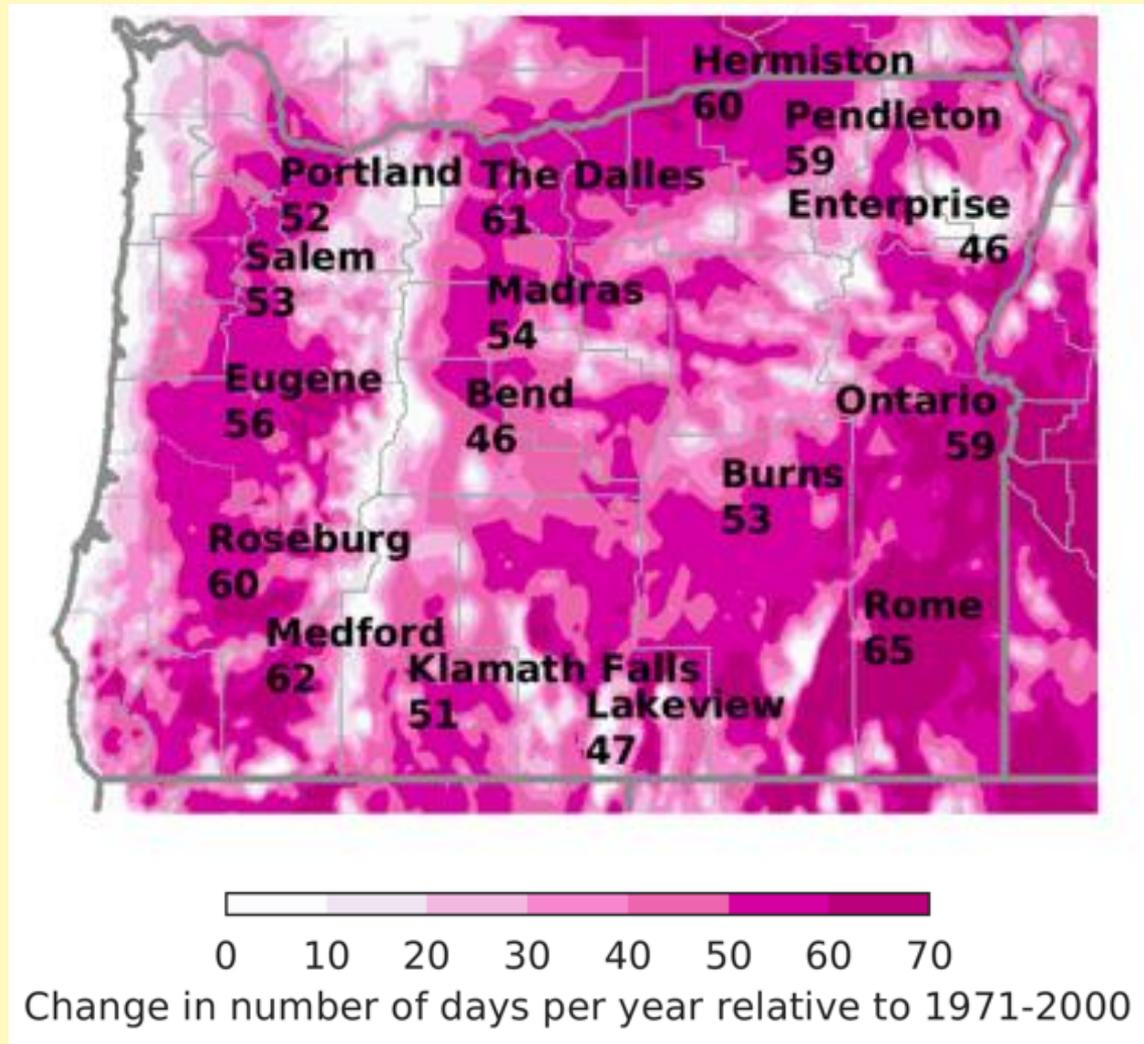

# Oregon temperature trends

# Average annual number of days with heat index 90°F or above, 1990–2020

# Projected extreme heat index, 2070–2099

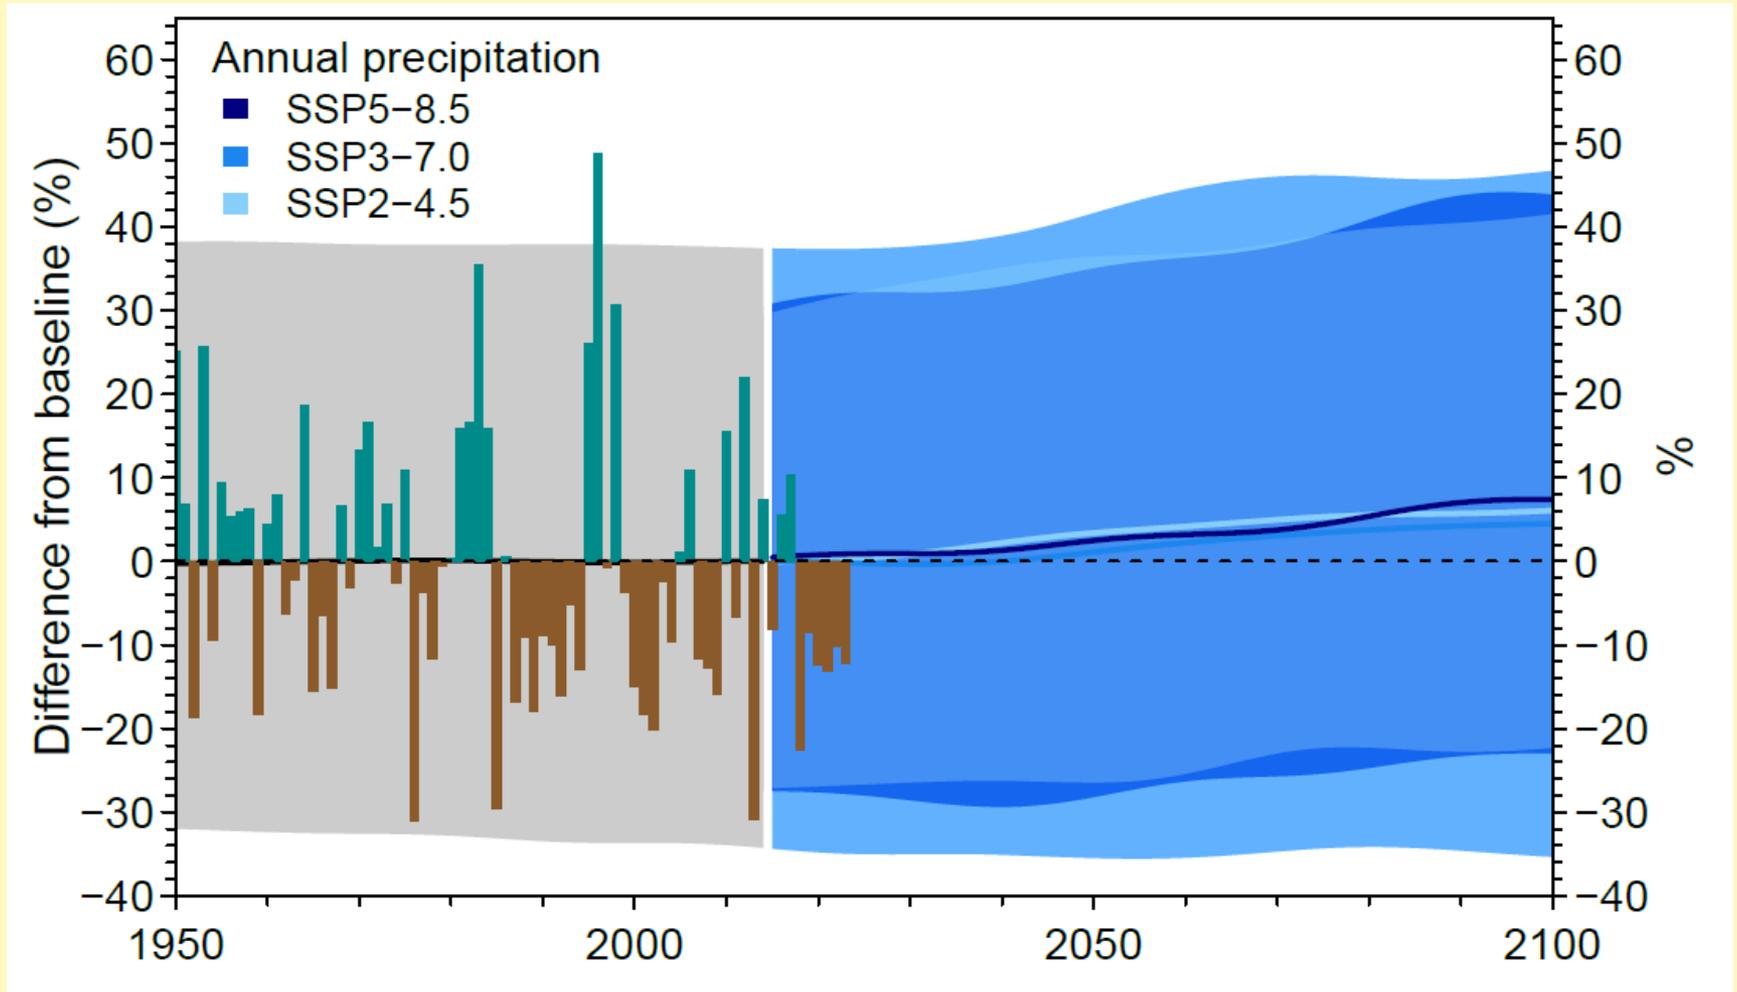

**Aridity**

# Drought: insufficient water to meet needs

- Different definitions: physical metrics versus effects
- Different time periods
- Regardless of metric: more frequent, longer, more severe drought

# Oregon precipitation trends

Baseline: 1950-2014

Less precipitation falling as snow

# Snow drought

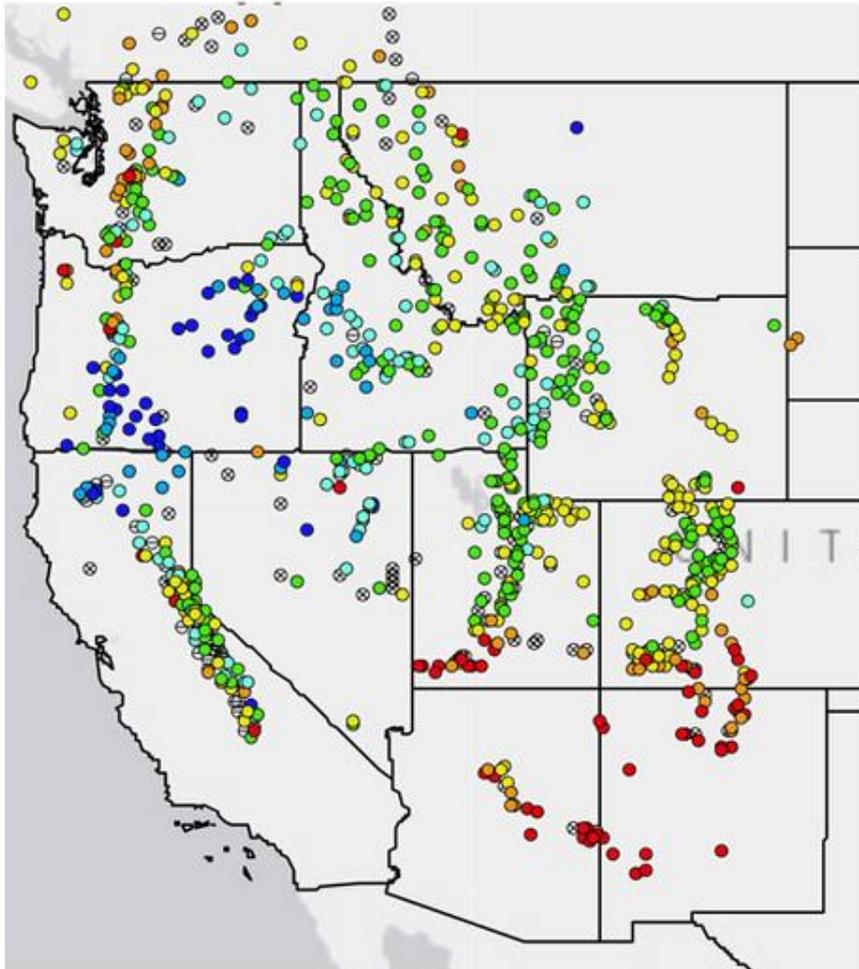

- Abnormally low snowpack on a given date
- **Dry:** little precipitation
- **Warm:** high temperature

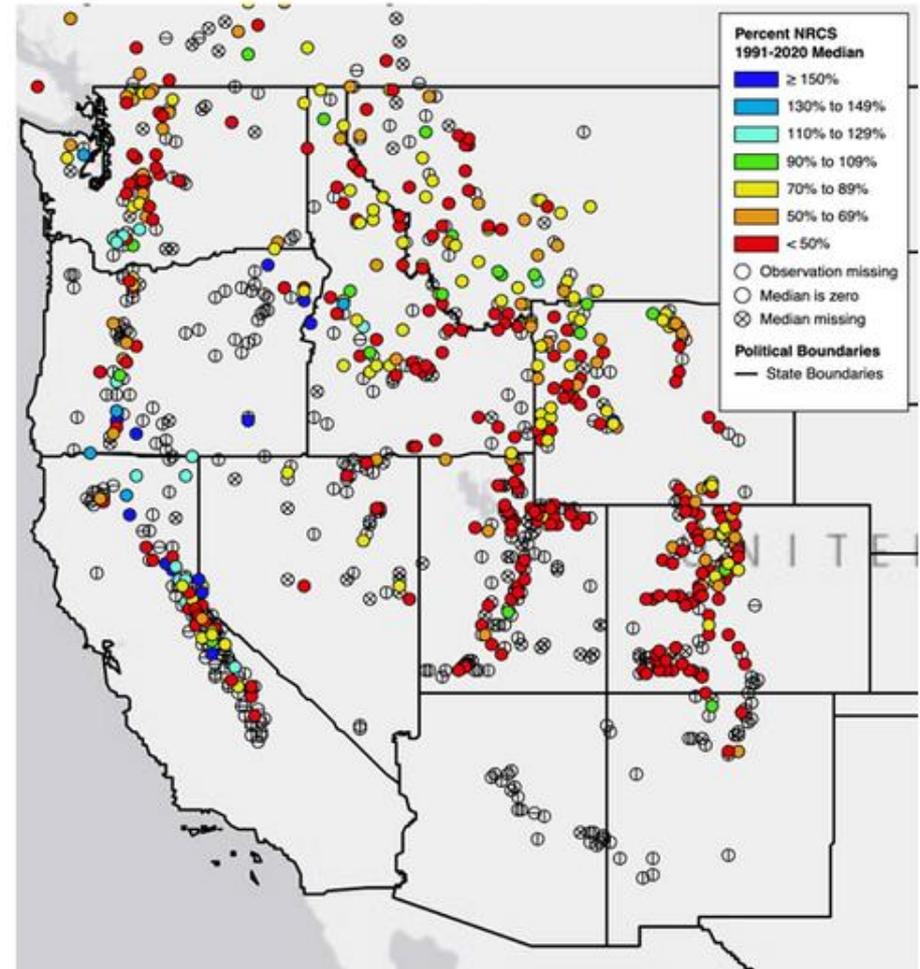

# Decoupling of winter and spring conditions

Snow Water Equivalent as a Percent of the 1991–2020 Median

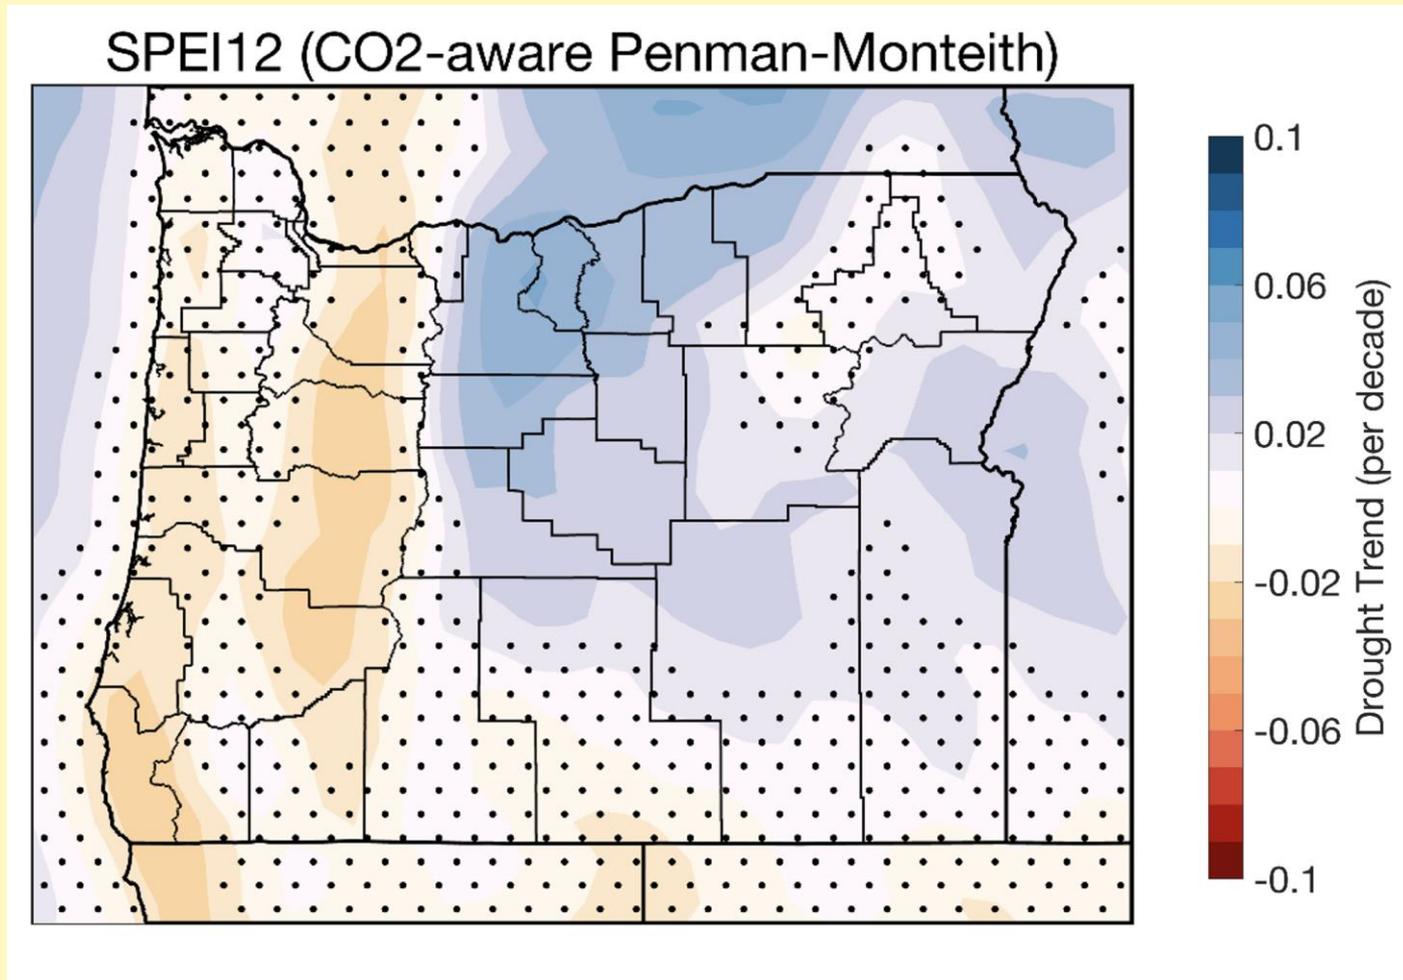

Water Year 2025 Peak

May 13, 2025

# Drought trend, 1950–2099

Stippling: not statistically significant

# Compounded effects of heat and aridity

Pierre Markuse

- Dry air makes vegetation drier and easier to ignite
- More overnight and high-elevation fire activity
- Changes in wind speeds are minimal, and more likely in winter

# Ecosystem change

NEWS IN PHOTOS

# Chameleon Wishes Environment Would Occasionally Adapt To Him

Yesterday 8:00am •

# Vegetation removal

- Not effective for wind-driven wildfires
- Can be effective in some ecosystems . . . with considerable, regular maintenance
- Prescribed fire has some promise, although there are obstacles

# Wildfire preparedness

## Top 5 Recommendations

Based on over 100,000 home evaluations across the Western U.S. in 2023 & 2024

1

Remove Vegetation  
in Zone 0

2

Replace Vents to  
Prevent Ember Entry

3

Remove Attached  
Combustible Fence/Gate

4

Limb or Cut Back  
Overhanging Trees

5

Remove  
Combustible Mulch

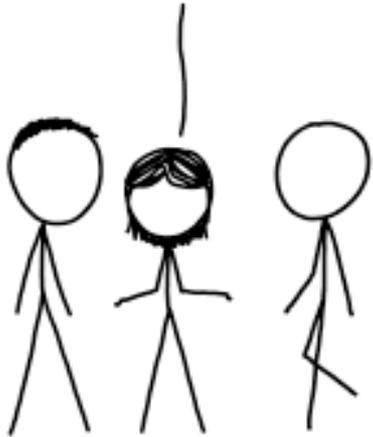

# Stresses on health care systems

- Surges due to heat or smoke reduce capacity to provide other care
- Needs lag behind smoke
- An 11-day stretch of unhealthy air quality is likely to create substantial strain on Oregon's hospitals

Associated Press / Gerald Herbert

OUR FIELD HAS BEEN STRUGGLING WITH THIS PROBLEM FOR YEARS.

STRUGGLE NO MORE!  
I'M HERE TO SOLVE  
IT WITH *ALGORITHMS!*

SIX MONTHS LATER:

WOW, THIS PROBLEM  
IS REALLY HARD.

*YOU DON'T SAY!*
