REVIEW & APPROVAL OF MINUTES
State of Oregon
Office of the State Treasurer
16290 SW Upper Boones Ferry Road
Tigard, Oregon 97224
OREGON INVESTMENT COUNCIL
March 9, 2022
Meeting Minutes

Members Present: John Russell, Cara Samples, Monica Enand, Tobias Read, Kevin Olineck

Staff Present: Rex Kim, John Hershey, Michael Langdon, David Randall, Karl Cheng, Ben Mahon, Tony Breault, Geoff Nolan

Consultants Present: Allan Emkin, Christy Fields, Mika Malone, Colin Bebee, Paola Nealon, David Glickman (Meketa Investment Group, Inc.); Kristen Doyle, Stephen Cummings (Aon Investments); Tom Martin, David Fann (Aksia/TorreyCove Capital Partners LLC)

PERS Present: Heather Case, Michiru Farney (PERS Board)

Legal Counsel Present: Steven Marlowe (Department of Justice)

Before proceeding with the OIC meeting, Chief Investment Officer Rex Kim provided a disclosure pertaining to the virtual set-up of this OIC meeting, informing those in attendance (virtual and in person) of the guidelines in which this meeting will proceed.

The March 9, 2022 OIC meeting was called to order at 9:01 am by John Russell, OIC Vice Chair.

I. 9:01 am Review and Approval of Minutes

MOTION: Vice-Chair Russell asked for approval of the January 26, 2022 OIC regular meeting minutes. Treasurer Read moved approval at 9:01 am, and Member Enand seconded the motion which then passed by a 4/0 vote.
II. **9:02 am Committee Reports**

**Private Equity Committee:**
- February 14: Francisco Partners VII & Francisco Partners Agility III, $300M
- February 14: Veritas Capital Partners VIII, $250M
- February 14: Vista Equity Partners VIII, $250M

**Real Estate Committee:**
None

**Opportunity Committee:**
None

**Alternatives Portfolio Committee:**
- February 23: Caxton Global Investments (USA) LLC, $250M
- February 23: Davidson Kempner Institutional Partners, L.P., $250M
- February 23: Hudson Bay Fund, L.P., $250M

III. **9:03 am OPERF Benchmarking**

Mika Malone, Managing Principal/Consultant, Paola Nealon, Managing Principal/Consultant, and Allan Emkin, Managing Principal/Consultant, Meketa Investment Group, and Kristin Doyle, Partner, AON presented phase 2 of the OPERF Benchmarking review. They discussed the total fund policy benchmark, individual asset class benchmarks, and a recommendation to add a passive market benchmark or reference portfolio at the total fund level. They believe that a 70/30 stocks/bonds portfolio would currently be the proper reference portfolio.

**Motion:** Vice Chair Russell asked if there was a motion to add the reference portfolio. Treasurer Read moved to accept the recommendation. Member Enand seconded the motion, which passed by a 4/0 vote.

IV. **10:09 am OPERF Q4 Performance Review**

Allen Emkin, Managing Principal/Consultant and Paola Nealon, Managing Principal/Consultant, Meketa Investment Group presented the OPERF Q4 Performance Review. Topics included general performance, asset allocations, and return drivers for the quarter and the year overall.

V. **10:21 am OPERF Real Estate Portfolio Annual Review**

Anthony Breault, Senior Investment Officer, Real Estate, Christy Fields, Managing Principal/Consultant, Meketa Investment Group, Austin Carmichael, Investment Officer and Chris Ebersole, Investment Officer, Real Estate presented the annual review of the OPERF Real Estate Portfolio. Topics included portfolio composition, market commentary, return drivers, debt metrics, new commitments, risk strategies, property diversification, and ESG factors.

VI. **11:03 am OPERF Real Assets Portfolio Annual Review**

Ben Mahon, Senior Investment Officer, Alternatives, and Thomas Martin, Head of PE & RA Research, Akasia/TorreyCove discussed the OPERF Real Assets Portfolio annual review. Topics included the strategic role of the portfolio, positioning, risk metrics, performance, pacing plan, and 2022 priorities.
VII. 11:38 am Asset Allocation & NAV Updates
Rex Kim, Chief Investment Officer presented the asset allocation and NAV updates.

VIII. 11:40 pm Calendar – Future Agenda Items
Rex Kim presented the forward calendar.

IX. 11:42 am Open Discussion
Vice Chair Russell remarked on the quality of public comments. OIC Members and Rex Kim discussed return to in-person meetings. Vice Chair Russell also voiced his views about the topic of divestiture.

X. 11:47 am Public Comments

Vice-Chair Russell adjourned the meeting at 11:48 am.

Respectfully submitted,
Aadrial Phillips
Executive Support Specialist

TAIL RISK HEDGING EDUCATION
TAB 4
OPERF RISK SURVEY
Asset-Liability Study: Risk and Implementation Survey Results

Oregon Investment Council

April 20, 2022
Introduction

→ This report presents the responses to the 2022 Risk and Implementation Survey.

→ Results are separated for each question: 1) Council and 2) Staff.
  • Total responses: five OIC members and ten Staff.
  • We have highlighted areas of agreement and disagreement between the two groups.

→ Additional dialogue during the presentation will enhance the takeaways and utility of the exercise.

→ The results of the survey serve as a foundation for the asset-liability modeling process. They begin to frame the inputs (e.g., classes and constraints) and output goals (e.g., key metrics and characteristics) of the process.

Key Takeaways

→ For the vast majority of topics, there is a high level of consensus within each of the respective groups (i.e., within the OIC and within Staff).
  • Furthermore, the OIC and Staff share similar viewpoints on most considerations.

→ The results support the current trajectory of the OIC/OPERF. There is nothing in the results that suggests a material deviation from the current strategic allocation and risk posture is desired.

→ Primary objectives:
  • Maintain consistent progress on funded ratio.
  • Avoid major drawdowns and focus on corresponding implications of negative net cash-flow.
Key Takeaways (continued)

→ As it relates to existing and potential classes, the following apply:
  • Continue a focus on illiquid strategies and examine all strategies based on net-of-fee results.
  • Subject to asset-liability model output, Risk Parity and Opportunistic investments may still serve a purpose within OPERF.
  • Exploring the incorporation of equity hedging strategies (e.g., long volatility or tail risk) is desired.
  • While the Diversifying Strategies class is viewed as valuable, there needs to be further refinement as to what can and cannot be included in the class.

→ As a reminder, a similar survey was conducted in 2021.
  • Generally speaking, the 2021 and 2022 results were congruent.
  • Primary differences (all marginal):
    – A more consistent view on risk tolerance across questions in 2022.
    – Improved understanding of risk factor exposures and portfolio functions.
    – Decrease in the desire to look “different” compared to peers.
    – Additional support for tactical allocation decisions.
1. Please rank the following objectives in order of importance with 1 being most important and 5 being least important.

- Achieving a final funding ratio of at least 100% by the end of the funding period (primarily focused on an end goal)
- Maintaining consistent progress towards improving the current funding ratio (primarily focused on an intermediate-term goal)
- Minimizing major total portfolio declines (greater than -15% in a fiscal year)
- Outperform the median public pension fund over periods of 5-to-10 years
- Limit the need for plan sponsor (i.e., State of Oregon) contribution level increases

There was a low-to-moderate level of consensus as it relates to the objectives. Maintaining consistent funding progress was the primary area of agreement.

Moreover, the OIC does not appear to be overly concerned about peer performance.
1. Please rank the following objectives in order of importance with 1 being most important and 5 being least important.

- Achieving a final funding ratio of at least 100% by the end of the funding period (primarily focused on an end goal)
- Maintaining consistent progress towards improving the current funding ratio (primarily focused on an intermediate-term goal)
- Minimizing major total portfolio declines (greater than -15% in a fiscal year)
- Outperform the median public pension fund over periods of 5-to-10 years
- Limit the need for plan sponsor (i.e., State of Oregon) contribution level increases

→ Staff and OIC generally shared similar objectives.

→ In part due to a larger sample size, the Staff responses indicate more consensus in the objectives. Staff is focused on funding progress, avoiding major drawdowns, and is not overly concerned about peers.
2. To achieve long-term goals, should OIC be taking more, less, or the same amount of investment risk in the portfolio?

The vast majority of respondents believe OPERF is taking enough risk necessary to achieve long-term goals.

→ Staff and OIC are aligned with respect to perspectives on the amount of risk in the portfolio.
3. What is considered to be a bad but not necessarily a catastrophic year to the respondent?

- OIC is aligned with respect to single-year downside risk.
- 80% of OIC respondents believe that a decline of -12% to -16% would be considered bad but not necessarily catastrophic.
- On average, the OIC’s selections indicate a preference to not lose two years of actuarially assumed returns in a single year.
- Staff and OIC are generally aligned with respect to downside risk tolerance, although Staff exhibits a modestly higher risk tolerance as 30% of respondents selected the -16% to -20% range.
4. As an OIC member, I am most concerned with which of the following macroeconomic issues (and its impact on OPERF) over the next 2-5 years?

- Poor economic growth
- High inflation
- Rising interest rates
- Geopolitical conflict

→ Poor economic growth and geopolitical conflict were the primary concerns of the OIC.

→ 2-5 years is an intermediate period, and these results reflect the primary risk factor in the portfolio (i.e., economic growth risk) as well as current worldwide events.

→ Staff is primarily concerned with the impacts of poor economic growth on OPERF. As it relates to geopolitical conflict, only 10% of the Staff respondents selected this option as the primary concern.
5. Which of the following outcomes is of the greatest concern over the next 10 years?

→ Similar to question #1 (ranking objectives), the OIC is largely concerned with funded ratio progress and material downside risks over a relatively long period of 10 years.

→ Interestingly, one OIC member is concerned about peer relative performance over this timeframe.

→ Staff and OIC are aligned as both groups are largely focused on maintaining funding progress. 60% of Staff respondents are concerned about a stagnant or declining funded ratio.

→ Of note, there is a degree of commonality among each of the selections by Staff as they are related and/or directly impact the funded ratio. This was intentional as there are different ways of viewing the issue.
6. What is the minimum funded ratio that the respondent is willing to accept in a market crisis scenario (i.e., very rapid deterioration in economic conditions)?

Current = ~85% (with side accounts)

→ 80% of OIC respondents do not want to see the funded ratio drop below 65% (or higher) during a market crisis.

→ Of note, OPERF experienced a roughly 30% drop in funded ratio during the Global Financial Crisis.

→ Staff’s responses can be grouped into two camps: 1) 60-65% and 2) 70-75%.

→ Staff and OIC are generally aligned as it relates to funded ratio decline (i.e., weighted average funded ratio decline preferences are nearly identical).
The Diversifying Strategies class can provide stability in funded ratio level over time.

There is a high level of consensus among the OIC as it relates to the utility of the Diversifying Strategies class. Similar to the OIC, Staff indicated a high level of consensus that the Diversifying Strategies class can improve the stability of the funded ratio over time.
While the OIC agrees that the Diversifying Strategies class is of value, 60% of OIC respondents do not agree that it is straight-forward to understand what can and cannot be included in the class.

From Meketa’s experience, this is a common perspective as it relates to this type of functional class.

While there is slightly more agreement from Staff compared to the OIC, Staff’s understanding is still mixed as it relates to what can and cannot be included in the Diversifying Strategies class.
9. The cash-flow position of the Fund (e.g., net positive contributions or net negative benefit payments) is an important consideration when constructing an investment portfolio.

→ All OIC respondents strongly agreed that OPERF’s cash-flow position was an important consideration in constructing the investment portfolio.

→ Similar to the OIC, the vast majority of Staff respondents strongly agreed that OPERF’s cash-flow position was an important consideration in constructing the investment portfolio.
10. Shifting asset allocation away from policy (i.e., tactical allocations) from time-to-time adds value.

→ 80% of OIC respondents believe tactical positioning can add value, with the remaining 20% of respondents disagreeing.
→ Similar to the OIC, 80% of Staff believe that tactical positioning can add value. Of the disagreeing 20%, one respondent strongly disagreed.
11. Different strategies and/or asset classes may be interchangeable if they share similar risk factor exposures and portfolio functions.

→ OIC respondents were split 60/40 when asked whether different strategies offering similar factor exposures should or could be interchangeable.

→ Similar to the OIC, Staff respondents were split 60/40 when asked whether different strategies offering similar factor exposures should or could be interchangeable.
Opportunistic investments have the potential to add value. All OIC respondents either agreed or strongly agreed in the value add behind opportunistic investments. Similar to the OIC, all Staff respondents either agreed or strongly agreed in the value add behind opportunistic investments.
High fee strategies are worthwhile if they produce high net-of-fee returns (e.g., a strategy with a 1% management fee and a 9% expected net-of-fee return is preferred to a strategy with a 20 basis point management fee and an 8.0% expected net-of-fee return).

→ 80% of the OIC believe that net-of-fee risk-adjusted results should be the primary determinant of investment success for a given strategy.

→ With an even higher level of conviction than the OIC, 70% of Staff strongly agree and 20% agree that net-of-fee risk-adjusted results should be the primary determinant of investment success.
14. Illiquid strategies typically return more than similar-risk, liquid strategies (e.g., private equity typically returns more than public equity on a risk-adjusted basis).

→ All OIC members strongly agree or agree that illiquidity risk is worthwhile.

→ There is slightly less agreement among Staff (compared to the OIC) in the value of illiquidity risk, but the vast majority of Staff agree illiquidity risk is worthwhile.
15. Producing a return pattern that is different than peers is important (given the same long-term return).

→ 80% of OIC respondents do not believe that producing a return pattern different than peers is particularly important.

→ This implies that the OIC does not place a lot of value on being “different” than peer funds.

→ Similar to the OIC, Staff does not believe that producing a return pattern different than peers is particularly important.
16. Strategies that are designed to hedge equity risk (e.g., insurance-like long volatility or tail risk strategies, etc.) can enhance the risk/return profile of OPERF.

→ The OIC believes that employing equity hedging strategies can enhance the risk/return profile of OPERF.

→ While the vast majority of Staff also believe that equity hedging strategies may be worthwhile, 20% of Staff do not agree in its potential utility.
→ The OIC believes that long-only, multi-asset class strategies, such as Risk Parity, can enhance the risk/return profile of OPERF.

→ While the majority of Staff also agree with the OIC that long-only, multi-asset class strategies may be valuable, 20% of Staff respondents disagree with this statement.
Conclusion

→ These survey results serve as a foundational guide for the asset-liability modelling process. The preferences and viewpoints of the OIC will be built into the model and its corresponding output.

→ The results support the current trajectory of the OIC/OPERF. There is nothing in the results that suggests a material deviation from the current strategic allocation and risk posture is desired.

→ Primary objectives:
  • Maintain consistent progress on funded ratio.
  • Avoid major drawdowns and focus on corresponding implications of negative net cash-flow.

→ As it relates to existing and potential classes, the following apply:
  • Continue a focus on illiquid strategies and examine all strategies based on net-of-fee results.
  • Subject to asset-liability model output, Risk Parity and Opportunistic investments may still serve a purpose within OPERF.
  • Exploring the incorporation of equity hedging strategies (e.g., long volatility or tail risk) is desired.
  • While the Diversifying Strategies class is viewed as valuable, there needs to be further refinement as to what can and cannot be included in the class.

→ Next Steps
  • Discussion of asset classes for modeling and corresponding capital market assumptions.
Objectives - Council

1. Please rank the following objectives in order of importance with 1 being most important and 5 being least important.

Achieving a final funding ratio of at least 100% by the end of the funding period (primarily focused on an end goal)

   - A stagnant or declining funded ratio: 6
Risk Mitigation - Staff

6. What is the minimum funded ratio that the respondent is willing to accept in a market crisis scenario (i.e., very rapid deterioration in economic conditions)?
   Current = ~85% (with side accounts)
   - 55%: 0
   - 60%: 4
   - 65%: 1
   - 70%: 4
   - 75%: 1

7. The Diversifying Strategies class can provide stability in funded ratio levels over time.
   - Strongly Agree: 3
   - Agree: 7
   - Disagree: 0
   - Strongly Disagree: 0

8. It is straightforward to understand what can and cannot be included in the OPERF's Diversifying Strategies class.
   - Strongly Agree: 0
   - Agree: 5
   - Disagree: 5
   - Strongly Disagree: 0

9. The cash-flow position of the Fund (e.g., net positive contributions or net negative benefit payments) is an important consideration when constructing an investment portfolio.
   - Strongly Agree: 8
   - Agree: 2
   - Disagree: 0
   - Strongly Disagree: 0
10. Shifting asset allocation away from policy (i.e., tactical allocations) from time-to-time adds value.
   - Strongly Agree: 1
   - Agree: 7
   - Disagree: 1
   - Strongly Disagree: 1

11. Different strategies and/or asset classes may be interchangeable if they share similar risk factor exposures and portfolio functions.
   - Strongly Agree: 2
   - Agree: 4
   - Disagree: 4
   - Strongly Disagree: 1

12. Opportunistic investments have the potential to add value.
   - Strongly Agree: 4
   - Agree: 6
   - Disagree: 0
   - Strongly Disagree: 0

13. High fee strategies are worthwhile if they produce high net-of-fee returns. (e.g., a strategy with a 1% management fee and a 9% expected net-of-fee return is preferred to a strategy with a 20 basis point management fee and an 8.0% expected net-of-fee return).
   - Strongly Agree: 7
   - Agree: 2
   - Disagree: 1
   - Strongly Disagree: 0

14. Illiquid strategies typically return more than similar-risk, liquid strategies (e.g., private equity typically returns more than public equity on a risk-adjusted basis).
   - Strongly Agree: 2
   - Agree: 7
   - Disagree: 1
   - Strongly Disagree: 0

15. Producing a return pattern that is different than peers is important (given the same long-term return).
   - Strongly Agree: 0
   - Agree: 0
   - Disagree: 8
   - Strongly Disagree: 2
16. Strategies that are designed to hedge equity risk (e.g., insurance-like long volatility or tail risk strategies, etc.) can enhance the risk/return profile of OPERF.

   - Strongly Agree: 2
   - Agree: 6
   - Disagree: 2
   - Strongly Disagree: 0

17. Long-only, multi-asset class strategies (e.g., Risk Parity) can enhance the risk/return profile of OPERF.

   - Strongly Agree: 1
   - Agree: 7
   - Disagree: 2
   - Strongly Disagree: 0

OPERF LIQUIDITY
Table of Contents

- Overview
- Liquidity Analysis
- Conclusions
- Appendix
Overview

Background

- The liquidity analysis for Oregon Public Employees Retirement Fund (OPERF) is performed under the Current Policy
  - Intended as a stress-testing model, incorporating the profile of the liabilities as well as expected future contributions
  - Uses different scenarios for economic environments and other relevant events
  - Shows how the portfolio’s liquidity profile could evolve with a given investment strategy

- We categorized investments by liquidity into five buckets
  - **Liquid (Risk-Reducing Assets):** less than 3 months needed for return of capital (e.g., publicly traded securities)
  - **Liquid (Return-Seeking Assets):** less than 3 months needed for return of capital (e.g., publicly traded securities)
  - **Quasi-Liquid:** Typical lock-up of 3–12 months. Conservatively, we assumed a 1-year lock-up in most economic environments, 2 years in a Recession scenario, and 3 years in a Dark Skies scenario (e.g., many hedge funds, open-end real estate)
  - **Illiquid:** Potential lock-up of 5–10 years, depending on economic environment (e.g., closed-end real estate)
  - **Illiquid:** Potential lock-up of 10+ years (e.g., typical private equity)

- This is intended to be a conservative approximation of the actual liquidity properties of the assets

- Not surprisingly, varying economic scenarios would lead OPERF’s percentage allocation to alternative assets to differ from its targets due to liquidity differences in asset classes

46.9% in Illiquid + Quasi-Liquid Assets
Overview
Economic Scenarios

- **Base Case Scenario**
  - Markets perform consistent with our Capital Market Assumptions (~50th percentile)

- **Recession Scenario**
  - Somewhat pessimistic outlook for the markets (~95th percentile)
  - Return-seeking assets decline in the first two years with a modest rebound in later years

- **Dark Skies Scenario**
  - Very pessimistic outlook for markets (~99th percentile)
  - Return-seeking assets decline significantly
  - The value of public equities declines approximately 50% over three years, without an immediate rebound
Liquidity Analysis
Summary of Results | Current Policy

Note: Year 0 represents a starting point of December 31, 2021
Conclusions

- OPERF has sufficient liquidity in the modeled Base Case (50% percentile) and Recession (~95th percentile) economic scenarios

- In a Dark Skies (~99th percentile) economic scenario, the Plan’s assets are projected to be 100% illiquid by Year 6 which would compromise plan operations and force selling on the secondary market
  - OPERF’s liquidity is strained due to the combined impact of asset returns, biennium rate setting, and employer contribution rate collars that slow the replenishing of Plan assets
  - In this scenario, the OIC may want to pare back future commitments to stay closer to the target allocations. However, the allocation would still be significantly different from the target allocation.

- This analysis is highly sensitive to the assumed contributions
  - If OPERF receives less contributions than assumed, especially in a Dark Skies environment, then illiquid and quasi-liquid investments drift even further from target and the potential for liquidity issues increases

Liquidity Profile
Background
Modeling Parameters – Degrees of Illiquidity

- We categorized investments by liquidity into five buckets
  - **Liquid (Risk-Reducing Assets)**: less than 3 months needed for return of capital (e.g., publicly traded securities)
  - **Liquid (Return-Seeking Assets)**: less than 3 months needed for return of capital (e.g., publicly traded securities)
  - **Quasi-Liquid**: Typical lock-up of 3–12 months. Conservatively, we assumed a 1-year lock-up in most economic environments, 2 years in a Recession scenario, and 3 years in a Dark Skies scenario (e.g., many hedge funds, open-end real estate)
  - **Illiquid**: Potential lock-up of 5–10 years, depending on economic environment (e.g., closed-end real estate)
  - **Illiquid**: Potential lock-up of 10+ years (e.g., typical private equity)

- This is intended to be a **conservative** approximation of the actual liquidity properties of the assets

- We started with the target asset allocations, then see how the actual allocations would change in different economic scenarios, continuing new commitments to private assets, as expected.

**Assumptions**
- Asset-liability information based on projections provided by the plan actuary as of December 31, 2019 which were synced to the results of the December 31, 2020 actuarial valuation report
- Asset experience through December 31, 2021 included in this analysis
- The plan’s contribution policy is estimated based on our understanding of the methodology used by the plan actuary
- Assumes the portfolio starts at the target asset allocation levels for illiquid assets, maintaining close to the portfolio targets over the next 10 years
Liquidity Analysis: Base Case Economic Scenario
Current Policy

- The exhibit below shows the projected liquidity lock-up of the Current Policy allocation in the Base Case economic scenario, assuming commitments are continued as expected.

Liquidity Analysis: Recession Economic Scenario
Current Policy

- The exhibit below shows the projected liquidity lock-up of the Current Policy allocation in the Recession economic scenario, assuming commitments are continued as expected.

Key Takeaways:
- Commitments to illiquid alternatives are maintained at the steady state level, but recessionary markets cause the total portfolio to shrink.
- Total illiquid and quasi-liquid assets are projected to reach as high as 63% of the Plan due to the shrinking market value of the total Plan in this scenario.
- There would not be a concern with the ability to pay benefits.
- The OIC may need to redeem some quasi-liquid assets to stay close to its target allocation (47% illiquid assets).

Note: Year 0 represents a starting point of December 31, 2021.

Liquidity Analysis: Dark Skies Economic Scenario
Current Policy

- The exhibit below shows the projected liquidity lock-up of the Current Policy allocation in the Dark Skies economic scenario, assuming commitments are continued as expected.

Key Takeaways:
- Commitments to illiquid alternatives are maintained at the steady state level, but subpar markets cause the total portfolio to shrink.
- Total illiquid and quasi-liquid assets are projected to reach as high as 100% of the Plan due to the shrinking market value of the total Plan in this scenario.
- In this scenario, the OIC may want to pare back future commitments to stay closer to the target allocations. However, the allocation would still be significantly different from the target allocation (47% illiquid assets).

Note: Year 0 represents a starting point of December 31, 2021.

Recession Scenario

Description

The US economy slips back into recession in 2022

- A resurgence of covid-19 infections driven by new variants and low vaccine take up necessitates further lockdown measures, as existing vaccines prove less effective and it takes time to develop, test and distribute updated vaccines.

- The global economy experiences a deep recession, as containment measures weigh heavily on economic activity.

- The US experiences a deep recession in 2022 and into 2023.

- Inflation turns negative in 2022. However, the period of deflation is short lived and inflation starts to rise in later years as the economy begins to recover.

- Treasury yields fall while TIPS yields remain at low levels as the US enters recession. Yields rise in later years as a recovery gets underway. Corporate spreads rise significantly due to the poor economic situation and increased risks of downgrades or defaults.

- Most risk assets make losses in the first two years but rebound in later years as the economy recovers.

Dark Skies Scenario
Description

A deep recession followed by a longer period of stagnant growth

- The effects of the pandemic worsen as new mutations of the virus create persistent disruption to the global economy. New restrictions and regional lockdowns are required to stem infections, hampering economic activity.

- Economic weakness in developed and emerging market economies and severe levels of financial distress (due to high debt levels and political crisis) lead to a global recession followed by stagnation.

- The US experiences a protracted deep recession.

- Inflation is pushed into negative territory in 2022 and remains there in 2023, while continued sluggish growth over the following years means that inflation stays close to zero.

- Treasury yields fall and remain at low levels as the US enters recession. Corporate spreads rise significantly due to the poor economic situation and increased risks of downgrades or defaults.

- Risk assets make losses in the first few years. There is no pronounced bounce in growth and the economic situation remains poor for a long time, which weighs on returns in later years.

Appendix

- Actuarial Assumptions and Methods
Actuarial Assumptions and Methods

- Actuarial projections were provided last year by the plan actuary as of December 31, 2019
  - These projections will synced to the December 31, 2020 actuarial valuation with necessary scaling factors applied throughout the period
- Actuarial assumptions:
  - Valuation Rate of Interest = 6.90%
  - Inflation = 2.40%
  - Payroll Growth = 3.40%
  - Actuarial Value of Assets: market value of assets without any smoothing
    - For purposes of this analysis, assets do not include side accounts and do not assume additional contributions to side account reserves
  - All other assumptions as documented in the Actuarial Valuation Report as of December 31, 2020 unless noted otherwise
- Contribution policy reflects the following:
  - Biennium rate setting process
  - Actuarially Determined Contribution Calculation = Normal Cost plus a level percent amortization of the unfunded liability using a 3.40% salary scale
    - New amortization bases are established each year, creating a layered 20-year amortization base (22 years for the fresh start December 31, 2019 valuation)
  - Employer contributions are offset by side account transfers
  - Final employer contribution is subject to collars, limiting the amount by which rates can change
- Actual asset performance through December 31, 2021 was incorporated into the analysis
Appendix

- Capital Market Assumptions
Capital Market Assumption Methodology

- The Aon Asset Model and Economic Scenario Generator (ESG) creates 5,000 simulations of key economic variables and total returns.
- We believe the model is complete and consistent. All the major markets and asset classes are modeled within a consistent framework allowing for the interactions between them to be properly taken into account.
- It is arbitrage free and captures the fact that extreme market events do occur more frequently than would be predicted by simpler statistical models.
- The ESG models the full yield curve as this allows for accurate treatment of liabilities and realistic modeling of the future distribution of interest rates and inflation. This allows us to assess the sensitivities of assets and liabilities to changes in interest and inflation rates.
- The model is calibrated to Aon's globally-consistent Capital Market assumptions every quarter.
- Nominal and real government interest rates are projected using an extended two factor Black-Karasinski model and a 2 factor Vasicek model respectively. The models are mean reverting starting with current yield curves and reverting towards our long-term fair values over the very long-term.
- Credit spreads are modeled stochastically using a Markov based model to determine the probabilities of transition between various credit rating and default, and a stochastic parameter reflecting the level of risk aversion in the market.
- Return seeking assets (including equities) are modeled using an individual asset class model with its own returns and volatilities but no correlations to other asset classes, and exposure to 6 other economic models to gain the correct correlation structures between returns for each asset class.

Aon Investments’ Capital Market Assumptions
Explanation of Capital Market Assumptions—Q1 2022

The following capital market assumptions were developed by Aon's Global Asset Allocation Team and represent the long-term capital market outlook (i.e., 10 years) based on data at the end of the fourth quarter of 2021. The assumptions were developed using a building block approach, reflecting observable inflation and interest rate information available in the fixed income markets as well as Consensus Economics forecasts. Our long-term assumptions for other asset classes are based on historical results, current market characteristics, and our professional judgment.

Inflation – Expected Level (2.4%)
Based on Consensus Economics long-term estimates and our near-term economic outlook, we expect U.S. consumer price inflation to be approximately 2.4% during the next 10 years.

Real Returns for Asset Classes

Fixed Income
- **Cash (-0.9%)** – Over the long run, we expect the real yield on cash and money market instruments to produce a real return of -0.9% in a moderate to high-inflationary environment.
- **TIPS (-1.2%)** – We expect intermediate duration Treasury Inflation-Protected Securities to produce a real return of about -1.2%.
- **Core Fixed Income (i.e., Market Duration) (-0.4%)** – We expect intermediate duration Treasuries to produce a real return of about -0.8%. We estimate the fair value credit spread (credit risk premium - expected losses from defaults and downgrades) to be 0.4%, resulting in a long-term real return of -0.4%.
- **Core Plus Bonds (-0.2%)** – Modeled as 20% 5 duration gov’t bonds real return of -0.8% and 80% 5 duration corporate bonds real return of -0.1%.
Aon Investments’ Capital Market Assumptions
Explanation of Capital Market Assumptions—Q1 2022

- **Long Duration Bonds – Government and Credit (0.2%)** – We expect Treasuries with a duration comparable to the Long Government Credit Index to produce a real return of -0.2%. We estimate the fair value credit spread (credit risk premium - expected losses from defaults and downgrades) to be 0.2%, resulting in an expected real return of 0.2%.

- **Long Duration Bonds – Credit (0.3%)** – We expect Treasuries with a duration comparable to the Long Credit Index to produce a real return of -0.2%. We estimate the fair value credit spread (credit risk premium - expected losses from defaults and downgrades) to be 0.5%, resulting in an expected real return of 0.3%.

- **Long Duration Bonds – Government (-0.2%)** – We expect Treasuries with a duration of ~12 years to produce a real return of -0.2% during the next 10 years.

- **High Yield Bonds (0.7%)** – We expect intermediate duration Treasuries to produce a real return of about -0.8%. We estimate the fair value credit spread (credit risk premium - expected losses from defaults and downgrades) to be 1.5%, resulting in an expected real return of 0.7%.

- **Bank Loans (1.8%)** – We expect LIBOR to produce a real return of about -0.6%. We estimate the fair value credit spread (credit risk premium - expected losses from defaults) to be 2.4%, resulting in an expected real return of 1.8%.

- **Non-US Developed Bonds: 50% Hedged (-0.7%)** – We forecast real returns for non-US developed market bonds to be -0.7% over a 10-year period after adjusting for a 50% currency hedge. We assume a blend of one-third investment grade corporate bonds and two-thirds government bonds. We also produce assumptions for 0% hedged and 100% hedged non-US developed bonds.

- **Emerging Market Bonds (Sovereign; USD) (1.5%)** – We forecast real returns for emerging market sovereign bonds denominated in US dollars to be 1.5% over a 10-year period.

- **Emerging Market Bonds (Corporate; USD) (1.0%)** – We forecast real returns for emerging market corporate bonds denominated in US dollars to be 1.0% over a 10-year period.

- **Emerging Market Bonds (Sovereign; Local) (2.5%)** – We forecast real returns for emerging market sovereign bonds denominated in local currency to be 2.5% over a 10-year period.
Aon Investments’ Capital Market Assumptions
Explanation of Capital Market Assumptions—Q1 2022

- **Multi Asset Credit (MAC) (2.3%)** – We assume real returns from beta exposure to high yield, bank loans and emerging market debt to add 1.5% plus 0.8% from alpha (net of fees) over a 10-year period.

- **Private Debt-Direct Lending (4.2%)** – The base building block is bank loans 1.8% + spread 2.4% (net of management fees and performance incentives). There is 100% leverage included in the assumption with the cost of financing at LIBOR +1.8%.

### Equities

- **Large Cap U.S. Equity (3.1%)** – This assumption is based on our 10-year outlook for large cap U.S. company dividends and real earnings growth. Adjustments are made for valuations as needed.

- **Small Cap U.S. Equity (3.3%)** – Adding a 0.2% return premium for small cap U.S. equity over large cap U.S. equity results in an expected real return of 3.3%. This return premium is theoretically justified by the higher risk inherent in small cap U.S. equity versus large cap U.S. equity, and is also justified by historical data. In recent years, higher small cap valuations relative to large cap equity has reduced the small cap premium.

- **Global Equity (Developed & Emerging Markets) (3.9%)** – We employ a building block process similar to the U.S. equity model using the developed and emerging markets that comprise the MSCI All-Country World Index. Our roll-up model produces an expected real return of 3.9% for global equity.

- **International (Non-U.S.) Equity, Developed Markets (4.1%)** – We employ a building block process similar to the U.S. equity model using the non-U.S. developed equity markets that comprise the MSCI EAFE Index.

- **Emerging Market Stocks (4.7%)** - We employ a building block process similar to the U.S. equity model using the non-U.S. emerging equity markets that comprise the MSCI Emerging Markets Index.

- **Equity Risk Insurance Premium Strategies-High Beta (2.3%)** – We expect real returns from 50% equity + 50% cash of 1.4% plus 0.9% insurance risk premium over the next 10 years.
Aon Investments’ Capital Market Assumptions
Explanation of Capital Market Assumptions—Q1 2022

Alternative Asset Classes

- **Hedge Fund-of-Funds Universe (0.7%)** – The generic category “hedge funds” encompasses a wide range of strategies accessed through “fund-of-funds” vehicles. We also assume the *median* manager is selected and also allow for the additional costs associated with Fund-of-Funds management. A top-tier portfolio of funds (hedge fund-of-funds buy-list) could add an additional 1.2% in return at similar volatility based on alpha, lower fees and better risk management.

- **Hedge Fund-of-Funds Buy List (2.0%)** – The generic category of top-tier “hedge funds” encompasses a wide range of strategies accessed through “fund-of-funds” vehicles. We assume additional costs associated with Funds-of-Funds management. To use this category the funds must be buy rated or we advise on manager selection.

- **Broad Hedge Funds Universe (2.1%)** – Represents a diversified portfolio of direct hedge fund investments. This investment will tend to be less diversified than a typical “fund-of-funds” strategy as there will be fewer underlying managers and will not include the extra layer of fees found in a Fund-of-Funds structure.

- **Broad Hedge Funds Buy List (3.3%)** – Represents a diversified portfolio of top-tier direct hedge fund investments. This investment will tend to be less diversified than a typical “fund-of-funds” strategy as there will be fewer underlying managers and will not include the extra layer of fees found in a Fund-of-Funds structure. To use this category the funds must be buy rated or we advise on manager selection.

- **Core Real Estate (3.1%)** – Our real return assumption for core real estate is based a gross income of about 3.4%, management fees of roughly 1%, 25% leverage and future capital appreciation near the rate of inflation during the next 10 years. We assume a portfolio of equity real estate holdings that is diversified by property and by geographic region.

- **Non-Core Real Estate (5.0%)** – Core real estate is levered approximately 100% as the base building block for this assumption. We subtract financing costs for the leverage and 2% management costs. We also assume nominal alpha of 3%. We assume a 50/50 mix of value-add and opportunistic investments.
Aon Investments’ Capital Market Assumptions
Explanation of Capital Market Assumptions—Q1 2022

- **U.S. REITs (2.9%)** – Our real return assumption for U.S. REITs is based on income of about 2.6% and future capital appreciation near the rate of inflation during the next 10 years. REITs are a sub-set of U.S. small/mid cap equity universe.

- **Commodities (1.7%)** – Our commodity assumption is for a diversified portfolio of commodity futures contracts. Commodity futures returns are composed of three parts: spot price appreciation, collateral return, and roll return (positive or negative change implied by the shape of the future curve). We believe that spot prices will converge with CPI over the long run (i.e., 2.4%). Collateral is assumed to be LIBOR cash (-0.6%). Also, we believe the roll effect will be near zero, resulting in a real return of about 1.7% for commodities.

- **Private Equity (6.0%)** – Our private equity assumption reflects a diversified fund of funds with exposure to buyouts, venture capital, distressed debt, and mezzanine debt.

- **Infrastructure (4.9%)** – Our infrastructure assumption is formulated using a cash flow based approach that projects cash flows (on a diversified portfolio of assets) over a 10 year period. Income and capital growth as well as gearing levels, debt costs and terms, relevant tax and management expenses are all taken into consideration. Our approach produces an expected real return of 4.9% for infrastructure.

- **Equity Risk Insurance Premium Strategies-Low Beta (1.6%)** – We assume real returns from cash -0.9% + 2.5% alpha.

- **Alternative Risk Premia (ARP) (3.3%)** – Real LIBOR -0.6% plus 3.9% alpha (net of fees)

- **eLDI (0.9%)** – Combination of various long credit strategies (1/6 real estate debt, 1/3 securitized debt, 1/6 CMOs, 1/3 private placements)

- **Closed-End Real Assets (5.7%)** – Combination of 50% Non-Core Real Estate and 50% Infrastructure.
Volatility / Correlation Assumptions

Assumed volatilities are formulated with reference to implied volatilities priced into option contracts of various terms, as well as with regard to historical volatility levels. For asset classes which are not marked to market (for example real estate), we “de-smooth” historical returns before calculating volatilities. Importantly, we consider expected volatility trends in the future – in recent years we assumed the re-emergence of an economic cycle and a loss of confidence in central bankers would lead to an increase in volatility. Correlation assumptions are generally similar to actual historical results; however, we do make adjustments to reflect our forward-looking views as well as current market fundamentals.
Appendix

- 2021 Horizon Survey Results
2021 Horizon Survey Results

- **What is the Horizon Survey?**
  - Since 2010, Horizon Actuarial Services, LLC has conducted a capital market assumption survey of investment firms to aid in determining reasonable assumptions for a pension plan’s expected return on assets
    - While Aon does not seek to change our approach based on how we stack up to peers, it is a helpful double-check to make sure we are not too far off from others in the industry

- **How does Aon compare to the 2021 survey results?**
  - Aon Investments’ 2021 10-year forecast assumptions (as of March 31, 2021)
    - **Equities**: approximately middle of the pack for U.S. and Non-U.S. equities
    - **Fixed Income**: approximately middle of the pack relative to the survey’s median level; higher for U.S. Treasuries
    - **Alternatives**: approximately middle of the pack relative to the survey’s median level; higher for Commodities and Private Debt

**Notes (Aon Investments' Forecasts):**

Aon Investments’ Forecasts are for Q2 2021

- US Equity - Small/Mid Cap forecasts represents Aon Investments’ forecasts for US Small Cap
- US Fixed Income - Long Duration forecasts represents Aon Investments’ forecasts for Long Duration Credit
- Non-US Fixed Income - Developed forecasts represents Aon Investments’ forecasts for Non-US Fixed Income - Developed (50% Hedged)
- Non-US Fixed Income - Emerging forecasts represents Aon Investments’ forecasts for Emerging Market Bonds - Sovereign USD
- Real Estate forecasts represents Aon Investments’ forecasts for Core Real Estate
- Hedge Fund forecasts represents Aon Investments’ forecasts for Direct Hedge Funds (Universe)
Leading Methodologies & Reasons for Differences

**Leading Methodologies**

- Building Block
- Global Capital Asset Pricing Model (Global CAPM)
- Surveys
- Historical data (as a guide to future)
- Black-Litterman (combination of building block and CAPM)

**Reasons for Differences**

- Methodology
- Time Horizon
- Arithmetic vs. Geometric forecasts*
- Alpha (active management)*
- Inflation
- Investment Fees*
- Asset class definition

*While some firms in the Horizon survey responded with arithmetic forecasts, the results have been converted to geometric forecasts for comparison purposes. Additionally, the return expectations included in the Horizon survey are generally market returns that do not reflect active management. Returns for asset classes where passive investments are not available (e.g., hedge funds and private equity) are net of fees.
Appendix

- About This Material
About This Material

This material includes a summary of calculations and consulting related to the finances of the Oregon Public Employees Retirement Fund (OPERF). The following variables have been addressed:

- Contributions, Liquidity, Net Outflow

This analysis is intended to assist the Investment Committee with a review of the associated issues and options, and its use may not be appropriate for other purposes. This analysis has been prepared solely for the benefit of the Investment Committee. Any further dissemination of this report is not allowed without the written consent of Aon Investments USA Inc.

Our calculations were generally based on the methodologies identified in the actuary’s valuation report for OPERF. We believe the methodology used in these calculations conforms to the applicable standards identified in the report.

Models are used to develop alternative scenarios based on the underlying valuation model and project financial results under those scenarios. The models were developed by experts outside and within Aon. Where outside models were used, the models were reviewed by experts within Aon. The models were selected as appropriate for these projections by the undersigned.

Experience different than anticipated could have a material impact on the ultimate costs of the benefits. In addition, changes in plan provisions or applicable laws could have a significant impact on cost. Actual experience may differ from our modeling assumptions.

Our calculations were based on data provided by the plan actuary. The actuarial assumptions and methods and plan provisions reflected in these projections are the same as those used for the 2020 actuarial valuation for OPERF as noted in the actuarial reports, except where noted in this report. Unless specifically noted, our calculations do not reflect any other changes or events after December 31, 2020. Reflecting events after December 31, 2020 would impact the results of the projection.

In conducting these projections, we have relied on plan design, demographic and financial information provided by other parties, including the plan’s actuary and plan sponsor. While we cannot verify the accuracy of all of the information, the supplied information was reviewed for consistency and reasonableness. As a result of this review, we have no reason to doubt the substantial accuracy or completeness of the information and believe that it has produced appropriate results.

These projections have been conducted in accordance with generally accepted actuarial principles and practices, including applicable Actuarial Standards of Practice as issued by the Actuarial Standards Board. The undersigned actuary is familiar with the near-term and long-term aspects of pension valuations and meet the Qualification Standards of the American Academy of Actuaries necessary to render the actuarial opinions contained herein. All sections of this report are considered an integral part of the actuarial opinions.

To our knowledge, no colleague of Aon Investments USA Inc. providing services to OPERF has any direct financial interest or indirect material interest in OPERF. Thus, we believe there is no relationship existing that might affect our capacity to prepare and certify this report for OPERF.

OPERF Liquidity

April 20, 2022
Objectives for OPERF’s Asset Allocation

• The OIC strives to balance several objectives for OPERF using the asset allocation:
  • Generate a sufficiently high return to meet the PERS Board’s assumed actuarial rate of return;
  • Moderate the riskiness of OPERF such that several market drawdowns are not catastrophic; and
  • Meet the liquidity needs of the Fund, specifically the net beneficiary payments and capital calls.
OPERF’s Liquid and Illiquid Assets

• The OIC has allocated OPERF among eight asset class portfolios that can be broadly categorized into “Liquid” and “Illiquid” Assets.

• Liquid Assets are those that can be liquidated quickly – in “normal” market conditions – but also include “semi-liquid” assets such as the Diversifying Strategies Portfolio and certain mandates in the Public Equity and Fixed Income Portfolios.

• Illiquid Assets cannot be liquidated quickly. Additionally, without regular “marks” of the investments, the “book market” volatilities likely understate the “economic” volatilities.
  • OPERF’s Private Equity Portfolio “held up” better than the Public Equity Portfolio through the Great Financial Crisis but it also drew more from OPERF’s liquidity in that period.
  • The cash flow characteristics of Illiquid Assets are “procyclical” with the economic cycle.
OPERF Physical Allocation Over Time

- Public Equity, Fixed Income, Risk Parity, Cash, and *Diversifying Strategies*
- The riskier the allocation, the greater the return & the potential drawdown in a market crisis

- Private Equity, Real Estate, Real Assets, and Opportunity
- Based on OPERF’s realized experience, cash flows are *procyclical*
- The greater the allocation, the greater the return & the potential demand on liquidity

Liquid

AA Trend
Liquidity Coverage Ratio

- Apply a scenario similar to Aon’s “Dark Skies”: assume a sharp market sell-off of the liquid portion of OPERF with no recovery for eight years, i.e., a “L-shaped” recovery.

- The Liquidity Coverage Ratio (LCR) is the ratio of post-shock liquid assets plus expected eight-year cash inflows divided by expected eight-year cash outflows or:

\[
\text{Liquid Assets} \times (1 + \text{Shock Return}) + \text{Distributions} + \text{Employer Contributions} + \text{Gross Benefit Payments} + \text{Capital Calls}
\]
LCR Assumptions

- **Liquid Assets** of $51.9B as of 2021-12
- **Shock Return**
  - Apply returns from 2007-10 to 2009-02
  - Shock Return = -29%
- **Employer Contributions** estimated† to be $25.0B for the next eight years
- **Gross Benefit Payments** estimated‡ to be $51.9B for the next eight years
- **Illiquid Distributions** and **Capital Calls** estimated* to be $85.1B and $50.3B respectively for the next eight years

*Source: Bloomberg
†Milliman
‡Staff and OIC Consultants
LCR Estimates

- Using the assumptions from the previous slide, \( \text{LCR}_0 = 1.44 \), i.e., the sum of post-shock liquid assets plus expected cash inflows would be 144% of the expected cash outflows.

- If distributions decline, reflecting the procyclical nature of private market cash flows such that they equal the contributions, \( \text{LCR}_1 = 1.10 \).
LCR Takeaways

LCR encapsulates several asset allocation considerations:

• Increasing private market allocations would decrease liquid assets thereby lowering LCR;
• Increasing the riskiness of liquid assets would magnify the shock return thereby lowering LCR; and
• It could be a useful metric to compare the liquidity implications of different asset allocations.

**LEGEND: OIC INVESTMENT AND MANAGEMENT BELIEFS**

1. **THE OIC SETS POLICY AND IS ULTIMATELY RESPONSIBLE FOR THE INVESTMENT PROGRAM**
   - A. Investment management is dichotomous -- part art and part science.
   - B. The OIC is a policy-setting council that largely delegates investment management activities to the OST and qualified external fiduciaries.
   - C. The OIC is vested with the authority to set and monitor portfolio risk. Both short-term and long-term risks are critical.
   - D. To exploit market inefficiencies, the OIC should be long term, contrarian, innovative, and opportunistic in its investment approach.

2. **ASSET ALLOCATION DRIVES RISK AND RETURN**
   - A. Asset allocation is the OIC’s primary policy tool for managing the investment program’s long-term risk/return profile.
   - B. Portfolio construction, including diversification and correlation considerations, is essential to maximizing risk-adjusted returns.

3. **THE EQUITY RISK PREMIUM WILL BE REWARDED**
   - A. Over the long-term, equity-oriented investments provide reliable return premiums relative to risk-free investments.

4. **PRIVATE MARKET INVESTMENTS CAN ADD SIGNIFICANT VALUE AND REPRESENT A CORE OIC/OST COMPETENCY**
   - A. The OIC can capitalize on its status as a true, long-term investor by making meaningful allocations to illiquid, private market investments.
   - B. Dispersion in private market investment returns is wide; accordingly, top-quartile manager selection, diversification across vintage year, strategy type, and geography, and careful attention to costs are paramount.

5. **CAPITAL MARKETS HAVE INEFFICIENCIES THAT CAN BE EXPLOITED**
   - A. Inefficiencies that can be exploited by active management may exist in certain segments of the capital markets.
   - B. Passive investment management in public markets will outperform the median active manager in those markets over time.

6. **COSTS DIRECTLY IMPACT INVESTMENT RETURNS AND SHOULD BE MONITORED AND MANAGED CAREFULLY**
   - A. All fees, expenses, commissions, and transaction costs should be diligently monitored and managed in order to maximize net investment returns.
   - B. External incentive structures should be carefully evaluated to ensure proper alignment with investment program objectives.

7. **FAIR AND EFFICIENT CAPITAL MARKETS ARE ESSENTIAL FOR THE LONG-TERM INVESTMENT SUCCESS**
   - A. The OIC recognizes that the quality of regulation and corporate governance can affect the long-term value of its investments.
   - B. The OIC also recognizes that voting rights have economic value.

8. **THE INTEGRATION OF ENVIRONMENTAL, SOCIAL AND GOVERNANCE (ESG) FACTORS, SIMILAR TO OTHER INVESTMENT FACTORS, MAY HAVE A BENEFICIAL IMPACT ON THE ECONOMIC OUTCOME OF AN INVESTMENT AND AID IN THE ASSESSMENT OF RISKS ASSOCIATED WITH THAT INVESTMENT**
   - A. The consideration of ESG factors within the investment decision-making framework is important in understanding the near-term and long-term impacts of investment decisions.
   - B. Over time, there has been an evolution of multi-factor, or more holistic approaches, to identify opportunities and remediate risks, in a large globally-diversified investment portfolio.

9. **DIVERSITY, IN ALL ASPECTS, IS ACCRETIVE TO MEETING OIC OBJECTIVES**
   - A. By embracing and enhancing diversity and inclusion efforts, the OIC ensures that the investment program will be exposed to and informed by a wide range of perspectives, ideas and opinions.
Portfolio Overview

Strategic Role

➢ Portfolio background
  ▪ Alternatives Portfolio (inclusive of Real Assets and Diversifying Strategies) approved at the January 2011 OIC meeting; Portfolio bifurcated into its component parts in June 2021.
  ▪ Target allocation for Diversifying Strategies has increased three times since its inception (most recently in 2019), growing from an initial 1.0% target to its current 7.5% target.
  ▪ Fair market value = $3.5 billion (3.7% of OPERF) vs. target of $7.1 billion (7.5% of OPERF).

➢ Portfolio objectives
  ▪ Participate in attractive long-term investment opportunities.
  ▪ Diversify the overall OPERF investment portfolio through differentiated (i.e., less correlated) returns.
  ▪ Seek diversified hedge fund manager and strategy exposures.
  ▪ Performance objective: HFRI Fund of Funds Conservative Index.

Net Asset Class Exposure

Source: Albourne, State Street. Data as of February 28, 2022. $ in millions.
¹Data from Albourne Risk Analyst Assessment with multi-strategy look-through.
Portfolio Overview

Executive Summary

➤ **Performance boosted by equity value exposures (over trailing year, at least)**
   - Diversifying Strategies Portfolio returned 13.7% over the past year, increasing the Portfolio's since inception return to 2.4%.
   - For the trailing year, contributors were broad based with every strategy group and individual fund realizing positive performance.
   - With a strong rebound from the equity value factor, Alternative Risk Premia funds enjoyed a solid year (1-year return = 27.0%), although longer-term performance remains muted (since inception = 2.3%).

➤ **Project Pathfinder proceeding to plan**
   - With key objectives of increasing manager and strategy diversification in focus, continue to advance Phase One through concurrent workstreams, concentrating initially on rebalancing the CTA portfolio as well as adding global macro and multi-strategy funds.
     • Have received approval for five (out of a contemplated nine) new Phase One managers, totaling $1.25 billion in commitments thus far.
     • Active diligence efforts underway on three additional funds.
   - Pivot to Phase Two beginning in second half of 2022.

➤ **Albourne onboarding and integration largely complete**
   - Utilizing full slate of due diligence and monitoring resources.

   D. Results
   E. 2022 Preview

3. Appendix
2021 was a fast-paced year with many developments across many fronts. The economic recovery theme narrative remained generally buoyant, supported by quantitative easing, low interest rates and the broader Monetary Policy 3. As economies reopened, inflation surged, and alongside new COVID variants, supply chain disruptions threatened the growth outlook, and in turn created stagflation worries. Government bond markets were quite volatile driven by inflationary and rate hike speculations. Finally, China’s relations with the US and the West remained topical and a series of regulatory reforms in the world’s second largest economy affected a range of industries.

Meme Stocks: In January 2021 a surge of retail investors in certain popular positions, the so called ‘meme stocks’, caught markets by surprise, with reports surfacing of significant de-grossing from certain hedge funds.

Volatility in Government Bond Markets: In February 2021, there was a sell-off in global government bond markets driven by improving expectations for economic recovery and reflation. The speed and extent of the interest rate moves at the end of February, caused sizeable dislocations in Fixed Income Relative Value relationships. 10-year US Treasury note yields had increased by as much as 23bps MTD as of 11 January.

Factor Moves: 1Q 2021 saw the outperformance of Value versus Growth in both the Developed and EM space particularly in March. Value performance was led by strong performance in the Energy, Financials, Industrials and Materials space over February 2021.

Delta Variant: In May, the Delta variant, gradually elevated concerns and brought some periodic volatility, including significant supply chain disruptions. However, equity markets remained resilient, buoyed by the broader economic recovery theme. In July, the US and European equity markets faced a short-lived drawdown, driven by the Delta variant threatening the broad economic recovery theme.

Factor Moves: In June, there was a factor rotation with Growth outperforming Value in the US markets. This was driven in large part by the Fed’s communication post FOMC which led to a sharp sell-off in economic cyclical stocks and commodities.

China Real Estate: Asian and global markets saw significant moves in September sparked by a liquidity crisis suffered by Chinese property developer, Evergrande. The regulation over property developers’ capital adequacy and banks’ property sector exposures have exacerbated the liquidity crunch for developers.

Omicron Variant: The emergence of the Omicron variant in November, resulted a broad selloff in equities. Commodity prices fell, led by a sharp pullback in oil prices towards month-end. In December, markets appeared to recover from the initial shock, supported by reports of the milder severity of Omicron compared to previous strains alongside positive vaccine and antiviral drug news.

Past performance is not indicative of future results
Multi-strategy and Relative Value funds have been notable beneficiaries of flows over the past year. Long/Short remains positive but less compared to last year. Distressed and GAA have seen the largest outflows as a dearth of opportunity, and a question mark over the relevance of GAA strategies seem to have discouraged allocations.
**Project Pathfinder Update**

**Portfolio Evolution**

- **Portfolio composition over time**
  - The Diversifying Strategies allocation has increased three times since inception, with each increase taking place early in the respective build-out of the allocation.
  - Staff considers three distinct periods of Portfolio construction evolution:
    - DSP 1.0: sole focus on Alternatives Risk Premia. “Putting our beach towels down,” establishing strategic partnership with AQR.
    - DSP 2.0: focused on expanding manager roster; established anchor relationships in Managed Futures and Global Macro/Other sectors.
    - DSP 3.0: following allocation increase, initiated Project Pathfinder to evaluate roles and objectives of the Portfolio and to identify the tactical steps required to move the current portfolio in the long-term direction.
Project Pathfinder Update

Timeline

Vision (complete)
- DSP allocation increased from 5.0% to 7.5% April 2019
- Consultant RFP issued July 2020
- Albourne selected as first dedicated DSP consultant October 2020
- Project Pathfinder initiated, DSP 3.0 vision formalized first quarter 2021

Plan (complete)
- Albourne onboarding/integration throughout 2021
- Current portfolio review, mock portfolios created
- Policy “cell division” June 2021
- Benchmark change from CPI + 4% to HFRI FOF Conservative Index June 2021

Execute (ongoing)
- Phase 1: address key vulnerabilities, adding new managers and strategy types (first approval in December 2021)
- Phase 2: continue to add more strategies, working towards Absolute Return orientation
**Project Pathfinder Update**

**Refining DSP Objectives**

- **Objective:** to provide OPERF with additional risk-mitigating characteristics as a complement to the fixed income portfolio
  - DSP designed to be an Absolute Return portfolio, consisting primarily of market neutral and directional strategies that provide a return stream that is expected to have a low correlation to equity markets. Due to some of the strategies historically exhibiting left tail exposure or directional managers being positioned with long exposure to equities, long volatility strategies will be utilized to dampen left tail and short convexity exposures.

- **Reflected in asset allocation framework:**

  ![Reference Portfolio Table]

  From June 2, 2021, asset allocation review
**Project Pathfinder Update**

**DSP 3.0 Vision**

- **Two phase implementation:**
  - Phase One: address key vulnerabilities by increasing the number of managers and strategies, establishing anchor relationships in relative value, event driven, and global macro strategy groups as well as expanding the CTA portfolio to 4 managers, equally weighted.
  - Phase Two: continue to add more strategies (specialist relative value, equity long/short, tail hedge, etc.), working towards Absolute Return orientation.
  - *While subject to change*, using the contemplated Phase One and Phase Two portfolios, potential strategy allocations and manager counts look as follows:

*Data from Albourne Risk Analyst Assessment with multi-strategy look-through.*
2021 Review

Priorities

● **DSP 3.0 evaluation**
  - Through “Project Pathfinder,” look to make substantial progress towards finalizing DSP 3.0 vision and plan.
    - *Albourne onboarding/integration occurred throughout 2021, with DSP 3.0 vision and plan formalized in first half of the year.*
    - *Review of current portfolio and creation of Phase One and Two mock portfolios completed.*

● **Monitoring and risk management**
  - Continue to pursue enhancements to monitoring and risk management efforts, specifically onboarding and leveraging Albourne’s capabilities.
  - Further formalize ESG and D&I integration across the broader Alternatives Program.
    - *Made significant progress across monitoring, risk management, and ESG efforts; continue to refine and integrate.*
    - *Creation of Capital Market Leadership committee, providing a forum for on-going monitoring and sharing of best practices.*

● **Conduct research reviews of areas of interest**
  - Continue equity value (and general factor) research.
    - *Completed.*
2021 Review
Approvals

- **Phase One of Project Pathfinder in execution mode**
  - During 2021/Q1 **2022**, OIC/OST authorized $1.25 billion in investments across five investments.
    - All five investments represent new relationships.
  - Approvals helped to continue refinement to strategy and development of anchor positions.
    - Identified anchor relationships in relative value, event driven, and global macro strategy groups.
    - Expanded CTA portfolio to 4 managers, rebalanced to be equally weighted.
  - No shortage of deal flow! Steady stream of new managers, strategies, and structures.

Investment Process, cont.

- **2021 Alternatives Portfolio meeting activity**
  - Began formally tracking meeting count in 2016.
  - Scale, brand, and open door policy leveraged to foster deal flow.
    - E.g., among U.S. defined benefit plans, OPERF ranks (by assets) in the top 5 in infrastructure, the top 10 in energy and commodities, and the top 20 in hedge funds*.
  - Over 4,400 notes and other correspondence deposited in research management system.
  - After screening approximately 500 opportunities, held initial meetings (in-person or telephonic) with 137 distinct prospective managers/investments.
  - “Deep dives” on 15 opportunities.
  - Ultimately sought approval for 7 investments.

*Source: P&I. Market values as of September 30, 2021.
Appendix

Albourne Super-Strategy Buckets

- **Macro/directional**
  - Generally refers to strategies that are more directional in nature, although they can shift opportunistically between having a directional bias and a non-directional bias. Typically investing at the asset class level (e.g., fixed income, currencies, equities and commodities) rather than individual company securities.
  - Strategy examples: global macro, CTA.

- **Relative value**
  - Seek returns by capitalizing on the mispricing of related securities or financial instruments, generally avoid taking a directional bias with regard to the price movement of securities/markets.
  - Strategy examples: fundamental equity market neutral, convertible arbitrage.

- **Event driven**
  - Focus on identifying and analyzing securities that can benefit from the occurrence of an extraordinary transaction or event (e.g., restructurings, takeovers, mergers, spin-offs, bankruptcy, etc.).
  - Strategy examples: merger arbitrage, distressed investing.

- **Equity long/short**
  - Maintain some level of market exposure (either net long or net short); however, the level of market exposure may vary over time.
TAB 7

COMMON SCHOOL FUND

INVESTMENT POLICY STATEMENT
Investment Policies Review
Policy Update Project

John Hershey
Director of Investments
Agenda

- Review
- Initial Efforts
- Pivot
- Aon best practices – presented by Aon
- Key Issues
- Draft IPS
- Next Steps
Review

- Provided an update to the OIC in December 2021
- Initial objective was to consolidate 48 investment policies, 26 appendices, over 170 pages into seven standalone documents (an Investment Policy Statement (IPS) and Guidelines Statement for each of the major Funds (OPERF, CSF, and SAIF, and another for all of the internally managed Funds)
Initial efforts

- Started with the Common School Fund IPS
  - First draft
    - Approximately 35 pages, up from five pages for the current CSF INV 901
    - Sourced from > 10 existing documents
  - Problems encountered
    - Very rugged brute force approach resulted in a disjointed document (policy) that was difficult to follow
    - After the January OIC meeting, the working group met and decided to pivot and change the objective to a more streamlined IPS
Pivot

- Asked Aon in January to provide a best practices “template”
- Have since been working to build off their template for Oregon and CSF specific needs
- Now have a more approachable document to consider
  - 11 pages, up from five and down from the first draft’s 35 pages and sourced from two documents rather than > 10
  - The trade off is fewer existing policies have been consolidated
    - Further work will necessitate consolidating a number of general (those that apply to all funds, including OPERF and SAIF) OIC administrative and compliance policies such as INV 210 (Consulting Contracts) and INV 212 (Sudan and Iran Divestiture) into a single new document
Key issues for OIC Review and Discussion

- Most of the draft changes relate to the new template (new table of contents, sections) all intended to make the policy document flow in a logical and easy to follow fashion.

- One area of focus for the OIC should be on Section II (Roles and Responsibilities)
  - Currently the language is sourced from existing OIC policies (in particular INV 1202 (Statement of Funds Governance) and INV 1203 (Statement of Investment Objectives and Policy Framework for the Oregon Public Employee Retirement Fund) and the current CSF INV 901), in addition to Aon’s best practices format and language.
  - The OIC should consider a discussion regarding the CSF’s governance model as it relates to best practices.
Next steps

- This presentation is meant to be informational and does not call for an immediate action item.
- In addition to OIC review, Legal review of the draft will be required.
- There is an upcoming CSF asset allocation study that will be reviewed with the OIC at the July OIC meeting.
- It is anticipated that any changes in allocation will require a change to policy as asset allocation is one of the more important determinates of risk and return.
- It is further anticipated that an action item regarding these changes to existing policy will be on the July OIC Agenda.
Oregon Investment Council

Common School Fund (CSF) Policy Update
IPS: Effective Governance Tool

“A successful and effective IPS articulates the organization's long-term investment objectives and outlines policies and procedures to help achieve those goals.”

- **Written documentation is critical** in order to demonstrate that you acted prudently. Hard to prove your conduct or process if it is not documented.
  - A well-written, comprehensive IPS is the best form of documentation as it clearly articulates who is responsible for which roles, including forms of delegation, defines the purpose and objective of the asset pool, and provides clear guidelines for ongoing monitoring and execution.
  - IPS is one of the critical elements of the “Documentation of Process”, an important component of demonstrating that you acted prudently.
  - An IPS also ensures continuity by providing a framework for decision-making which is particularly important when personnel changes occur.

- **Roles/Responsibilities Section of the IPS:**
  - Special attention should be made to the *Roles and Responsibilities* section of the IPS, specifically with regard to the levels of delegation that may exist.
  - To be prudent, when delegating the following generally applies:
    - Duty of prudence in selecting qualified professionals
    - Duty to specify the scope of the delegation
    - Duty to monitor the professionals to ensure the delegation is carried consistent with the delegation, and that the delegation continues to be prudent.

- Description of the role or fundamental purpose of the CSF  
- Scope and purpose of the IPS  
- Fiduciary language | Added – See section I. Introduction and Purpose |
| **Roles and Responsibilities**  | The Department of State Lands has ultimate fiduciary responsibility, however many ongoing responsibilities delegated to others need to be clearly articulated. | The five roles that are not included in the IPS  
- Department of State Lands  
- OIC  
- External Investment Advisors  
- Custodian  
- Investment Managers  
The following role is described in the document  
- OST Staff | Added – See section II. Roles and Responsibilities |
| **Investment Objectives**       | Clearly stated investment objectives will help establish appropriate asset allocation guidelines and other policies.  
Investment objectives are also important when reviewing the investment results. | Investment Objective is not fully outlined  
Example: The CSF should preserve and enhance the real (inflation-adjusted) market value of CSF’s assets over the long-term, net of annual spending and expenses. | Added – See section III. Investment Objectives |

A: STRATEGY TARGETS & RANGE ...............................................................................................................
I. INTRODUCTION AND PURPOSE

Introduction:

The purpose of the Investment Policy Statement (IPS) is to assist the Oregon Investment Council ("OIC" or "Council") in effectively supervising, monitoring, and evaluating the investments of the Common School Fund ("CSF" or the "Fund"). The OIC formulates policies for the investment and reinvestment of funds under the control and administration of the Department of State Land's Board ("the "State Land Board" or "SLB"). It is the intention of the SLB and the OIC that the CSF's investments be managed in accordance with this Investment Policy Statement.

The SLB has determined that the CSF should be viewed as a perpetual fund managed to benefit both present and future beneficiaries of Oregon's Department of Education.

The investment portfolio should preserve and enhance the real or inflation-adjusted market value of the Fund's assets over the long-term, net of annual spending and expenses. To achieve this objective, the SLB has adopted a long-term investment horizon such that short-term spending needs and market volatility will be monitored and balanced with the long-term real return objective.

The investment of assets must be made in accordance with the standards put forth in the Uniform Prudent Management of Institutional Funds Act (UPMIFA) as adapted by Oregon. UPMIFA requires fiduciaries to apply the standard of prudence with reasonable care and skill "to any investment as part of the total portfolio and overall investment strategy, rather than to individual investments." All investment actions and decisions must be based solely on the overarching long term interests of the CSF.

This IPS applies to all investable assets of the CSF. All assets available for investment will be invested through an investment portfolio approved by the OIC as delegated by the SLB. Separate account, mutual fund and/or commingled investment vehicles that may include, but are not limited to equities, fixed income, private equity, private credit, real assets, and alternative investments.

Authority:

ORS Chapters 273, 293 and 327. Article VIII of the Oregon Constitution.

Purpose:

The purpose of this IPS is to define the investment objectives, policies and procedures established by the OIC to support the Fund's mission. This IPS will serve as a framework, with sufficient flexibility in order to be practical, for the management and review of the Fund and intended to:

- Identify roles and responsibilities;
- Establish investment objectives;
- Outline the annual spending policy approved by the SLB. Establish long-term asset allocation targets; and
- Establish guidelines to monitor the performance in comparison to stated objectives.

Additionally, this IPS serves as a guide and general framework within which the Fund's assets are managed in achieving the near-term and long-term objectives of those assets. The OIC also recognizes that from time to time, short-term market fluctuations and dynamics could make it impossible to precisely reflect all aspects of this policy at all times. This IPS is established to accommodate these short-term fluctuations, which should not necessitate IPS adjustments. It is expected that this IPS be reviewed periodically to ensure alignment with forward-looking market expectations and industry best thinking and best practices.
II. ROLES AND RESPONSIBILITIES  

State Land Board  
The State Land Board has ultimate fiduciary responsibility for the Fund. The SLB must ensure that appropriate policies governing the management of the investable assets are in place and being effectively implemented. Pursuant to ORS 293.701 the OIC has the responsibility to oversee the investment activities of the Fund on behalf of the SLB.  

Oregon Investment Council  
The Oregon Investment Council has the responsibility to ensure that all investments are managed in a manner that is consistent with the policies and objectives of the Fund.  
The Council retains direct approval of the following determinations:  

- Establish the IPS for the management of the Fund  
- In conjunction with OST staff, work with the SLB and DSL staff to ensure the Fund’s asset allocation policy comports with the SLB’s goals for the Fund. Moreover, the OIC shall not make asset allocation changes without considering input from the SLB or DSL staff.  
- Develop investment goals that are consistent with the financial needs of the CSF and the appropriate asset allocation consistent with meeting those objectives  
- Total fund investment objectives and asset class benchmarks;  
- Investment policies, including target asset allocation policies;  
- Asset allocation re-balancing policies;  
- Asset class strategies and any structural tilts;  
- Active management exposure within each asset class;  
- Manager structure within each asset class; and,  
- Before approving or amending policy decisions, the Council seeks advice, guidance and recommendations from OST staff, Council-retained investment consultants, investment managers and other experts or sources as considered prudent by the Council.  
- Recommend spending policy guidelines to the Department of State Land’s Board.  

OIC functions include, but are not limited to:  

- Coordination with the Department of State Lands, Department of Education, and other agencies, on matters of joint concern;  
- Approval of its due-diligence processes;  
- Periodically review and evaluate investment results;  
- Receipt and review of periodic reports from OST staff, consultants, investment managers and other experts;  
  - General policy and governance on matters resulting from these reviews;  
- Response to legislative and or regulatory action that impacts its policies;  
- Coordination with the Oregon Department of Justice on its representation with respect to litigation and general protocols concerning the Fund;  
- Coordination with the Treasurer with respect to the Fund, including but not limited to OST staffing plans, incentive compensation and the budget for all investment activities under the purview of the OIC;  
- Approving all major personal service and consulting contracts related to investment activities under the purview of the OIC; and  
- Select, monitor and terminate custodian, consultants, and other service providers involved with servicing all or parts of the Portfolio.  

The OIC may, at its discretion, delegate the execution of above responsibilities, in full or in part, to external parties with appropriate expertise to assist the OIC in discharging its obligations. Other
specialists may be employed by the OIC from time to time, on an as-needed basis, to ensure its responsibilities in providing oversight of Fund assets are prudently executed.

Oregon State Treasury Staff

The Council has delegated to the **Oregon State Treasury ("OST" or "Treasury") staff** the following investment management and implementation decisions with the approval from the Chief Investment Officer ("CIO") and quarterly notification to the OIC:

- Manage day-to-day investment activities of the Fund to ensure sufficient cash flow to meet the CSF’s distribution needs;
- OST staff in conjunction with the OIC’s general consultant will perform formal asset allocation reviews at least every three years to ensure that the Fund is positioned properly;
- Work with the Council-retained investment consultants to compile information on the investment return and performance for the OIC review;
- Interface with OIC to ensure necessary action items are brought to OIC and that OIC decisions are implemented;
- Re-balancing of total fund, asset class and manager exposures to ensure assets are within the total fund, asset class strategy and manager structure guidelines approved by the Council;
- Recommending retaining investment managers within each asset class. Before recommending a manager change, Treasury staff will satisfy the Council that the manager change is supported by a satisfactory level of analysis and due diligence;
- Retain an external manager in any of the asset classes that has been approved by the OIC on behalf of the Oregon Public Employees Retirement Fund ("OPERF");
- Terminating investment managers;
- Convert any public equity long-only implementation to a 130/30 strategy, provided such implementation does not change the mandate's role within the Fund's Global Equity Portfolio; and
- Preparing, negotiating and executing investment manager mandates, guidelines and fee agreements;
- Overseeing individual investment managers to ensure their portfolios comply with their respective portfolio mandates and guidelines;
- Providing oversight of the master custodian to ensure that the Fund’s rights to pursue securities class action litigation are appropriately protected; and
- In making the above decisions, Treasury staff shall seek as needed the advice, guidance and recommendations from Council-retained investment consultants, investment managers and other experts and sources as considered prudent by Treasury staff.

Investment Consultant

The Investment Consultant’s responsibilities may include but are not limited to:

- Assist the OIC and OST staff with manager selection, retention and termination;
- Assist the OIC and OST staff with rebalancing and implementation of this IPS, as approved;
- Assist the OIC with the development of investment policies, guidelines and objectives;
- Prepare and present performance measurement analysis and quarterly reports;
- Attend OIC meetings;
- Provide research/education on related issues and investment opportunities; and
- Work with the OST to ensure sufficient cash flow availability to meet the CSF’s needs.

Investment Professionals

Investment decisions delegated to investment professionals include:

- The buying and selling of individual securities and/or other investments by qualified investment managers authorized under the portfolio management guidelines approved by the Council; and
The voting of shareholder proxies by qualified independent third-party proxy agent that accompany the securities and/or investments held by the Fund with oversight by Treasury staff and in accordance with Council voting guidelines.

Custodian

Custodian’s responsibilities include:

- Provide security safekeeping, collection of income, settlement of trades, collections of proceeds of maturing securities, and daily investment of cash; and
- Provide monthly reports detailing investment holdings and transactions to OST staff.

III. INVESTMENT OBJECTIVES

The primary objective of the CSF is to generate a real rate of return, above an appropriate inflation rate (i.e. the Consumer Price Index or CPI) and over time, that is sufficient to support, in perpetuity, the mission of the CSF and its spending needs. It is particularly important to preserve the value of the assets in real terms (i.e. inflation adjusted) to maintain its purchasing power without eroding the principal corpus of the Fund over long-term periods. Thus, the long-term return objective will account for inflation, administrative expenses, other planned withdrawals, and annual spend as appropriate.

Spending Policy

The State Land Board is responsible for approving the spending policy for the Common School Fund per the Common School Fund Distribution Rate Policy. Before approving a change to the spending policy, the State Land Board generally seeks advice, guidance and recommendations from the OIC, OST staff, and Council-retained investment consultants. The OIC recognizes the dual funding role of the Fund in supporting both current and future spending needs (i.e. provide a stable and predictable stream of funds versus maintain purchasing power of the Fund over time). It is the responsibility of the SLB and OIC to maintain this intergenerational equity and balance needs between current and future beneficiaries. Unless prohibited by contribution restrictions or law, dividends and interest income, capital gains and principal may be used for spending purposes to the extent such payments do not exceed the annual spending amount determined by the spending rate and formula below.

The target spending rate and formula will be reviewed at least annually in light of evolving trends with respect to the investment return of the Fund, capital market expectations, funding needs of the CSF, and other resources available to the CSF. Based on these considerations, the spending policy will be adjusted as appropriate.

Unless otherwise directed and/or approved by the State Land Board, the annual target spending rate shall be 3.5% of the Portfolio’s trailing three-year average market value.

Proposed or actual spending in any given fiscal year that would lead the Fund’s market value to dip below its corpus shall be monitored by OST staff and reported to the OIC in a timely manner.

In addition to the CSF’s annual spending policy used to fund Oregon’s Department of Education, the CSF makes an annual distribution to the Oregon Public Employees Retirement System (PERS) to provide funding for the state school districts’ unfunded liability fund per ORS 238.299 and Chapter 105, Oregon Laws 2018 through year 2027. The annual distribution is the lesser of (1) the total Unclaimed Property Net Investment Earnings (Losses), and (2) the Net Inflow of Unclaimed Property less investment expenses and operating expenses. The annual distribution is zero if there are investment losses for that year.

Time Horizon
The OIC acknowledges that fluctuating rates of return characterize the securities markets, particularly during short-term time periods. Accordingly, the OIC views interim fluctuations with an appropriate perspective, given the long-term perpetual objectives. Long-term investment objectives are to be evaluated over a minimum long-term horizon, defined as rolling ten-year periods.

**Diversification**

The OIC believes that the likelihood of realization of the investment objectives is enhanced through diversification. The OIC will aim to diversify assets among portfolio roles and strategies to maintain acceptable risk levels and enhance long-term investment return opportunities.

**Risk**

Risk refers to the uncertainty and the prospective loss due to an activity or an exposure. With respect to the CSF, that is expressed principally as investment risk, i.e., a permanent impairment to the Fund’s value that could reduce its ability to meet and sustain spending requirements, but it could also be exhibited in operations and liquidity management. At the same time, given the relationship between risk and return, taking too little risk could lead to the Fund underperforming its return objective. Given the need to take an appropriate amount, risk is considered throughout the investment process, from asset allocation to manager selection to performance evaluation.

A. **Risk Standards and Metrics**

Staff will monitor investment risk of the Fund on ex ante and ex post bases to evaluate whether appropriate amount of risk is being taken efficiently, i.e., to be properly compensated and commensurately to the return objectives of the Fund. Risk evolves over time, dictated by changing macroeconomic environments and shifting mix of investments in the portfolio. Staff will therefore apply various tools and approaches over different time horizons to analyze the Fund’s investment risk. Staff will also consider total risk, i.e., the variation of total returns, at various levels of the Fund, and active risk, i.e., the variation of relative returns versus a benchmark, at the manager and asset class levels for the public market investments.

Staff will use realized returns to evaluate ex post tracking error but will typically rely on a risk model to estimate ex ante risk. Most commercial risk models make simplifying assumptions to improve reliability and sensibility, but they are ultimately assumptions that will never fully capture all outcomes, such as extreme losses in a drawdown. Nevertheless, the output of such models can be useful, particularly in the context of other analyses undertaken by staff.

B. **Liquidity**

Liquidity risk is defined as that element of total risk comes from the unpredictability of the cost and time duration necessary to convert existing investment positions to cash. The cash flows of the CSF include, but are not limited to:

- A spending rate as a percentage of net asset value set by the State Land Board from the Fund to Oregon’s Department of Education;
- Agency expenses;
- Unclaimed property receipts that flow into the Fund; and
- Private market capital calls and distributions.

In combination with the illiquidity of private market investments and rebalancing requirements (see “Rebalancing Guidelines”), staff will consider the liquidity of the assets and cash flow requirements when recommending an asset allocation to the OIC and managing the Fund investments.

C. **Foreign-Exchange Risk Management**
The CSF makes distributions to Oregon’s Department of Education in U.S. dollars, yet, for diversification purpose, a portion of the Fund’s assets is invested outside the U.S. and denominated in foreign currencies. The translation of foreign-denominated investments back to the U.S. dollar provides incremental volatility of return to CSF’s total, overall risk. Furthermore, there is little economic basis or empirical evidence to support a positive, long-term return expectation in connection with these foreign currency exposures. In other words, unmanaged foreign currency exposure is a source of uncompensated risk.

Staff will manage this risk by taking into consideration the magnitude of exposures, operational requirements, and portfolio construction. Implementation could take the form of: requiring the underlying investment managers to implement currency hedging; retaining a third-party currency manager or managers to hedge the currencies; or leaving the currency exposures unhedged if the incremental risk is small and not material relative to other considerations.

**IV. ASSET ALLOCATION GUIDELINES**

Given the perpetual nature of the CSF, asset allocation will be the most important determinant of long-term success. The target allocation balances the need to satisfy the long-term return objective and to minimize total investment risk. The target allocation is based on long-term capital market assumptions (expected returns, risk, and correlations) of asset classes and over time should provide an expected return equal to or greater than the primary objective of the Fund, while avoiding undue risk concentrations in any single role or strategy; thus, reducing risk at the total portfolio level. To achieve these goals, the asset allocation will be set with the target percentages and within the ranges provided in Appendix A.

Formal asset allocation reviews will be performed at least every three years to ensure that the Fund is positioned properly. These reviews will be performed by OST staff in conjunction with the OIC's general consultant.

**Rebalancing Guidelines**

The OIC recognizes that rapid unanticipated market shifts or changes in economic conditions may lead to wide deviations from the target allocation and approved ranges. Generally, these divergences are of a short-term or tactical nature in response to fluctuating market environments. There may be short-term deviations from the target due to illiquidity of private market investments.

Execution of the rebalancing may be implemented through any combination of actions: a) purchase and sale of funds/securities; or b) allocation of normal cash flows (e.g., distributions to cover the CSF’s spending needs). Investments will be liquidated (and funded) in a manner that allows for orderly transition of asset allocation in the most efficient means possible.

A breach of any of the established asset allocation ranges triggers a review and possible rebalancing back to established targets with due consideration given to the liquidity of the affected investments, all anticipated transaction costs and the current portfolio structure within each asset class. Given the nature of private assets, the amount and timing of the cash flows cannot be precisely known, and it will take time to build out the portfolio to the long-term policy target levels. Accordingly, at any particular time, the actual allocation to Private Equity, Real Estate, and Alternatives may be above or below the long-term target allocation.

OST staff will review the asset allocation on a monthly basis and rebalance to within the target asset allocation range at least quarterly if necessary.

**V. STRATEGIC ROLE GUIDELINES**

This section outlines the strategic investment guidelines for each portfolio role, which shall serve as a framework for evaluating asset allocation choices across asset classes and investment strategies to
achieve the Fund’s objectives. While certain strategies and investment securities may demonstrate risk and return characteristics at different time periods that could fulfill more than one portfolio role, it is the strategic nature of those investments that shall dictate the primary purpose they serve in the Portfolio.

Global Equity Investments
The strategic role of publicly traded equity securities is to serve as the Fund’s primary return-seeking investments to generate long-term asset growth. Return over time is primarily driven by equity risk beta. The Fund’s Global Equity portfolio also provides liquidity necessary to meet its cash distribution obligations.

Fixed Income Investments
The strategic role of fixed income securities is to diversify the Fund in general and its allocation to equity securities in particular. The Fixed Income portfolio provides liquidity necessary to meet its cash distribution obligations. The fixed income allocation shall consist primarily of U.S. investment grade fixed income securities represented within the benchmark index. It may also allow for non-benchmark sectors, including, but not limited to, developed and emerging markets international securities, inflation-linked bonds, as well as below investment grade securities.

Private Equity Investments
The strategic role of private equity investments is to enhance return and diversification opportunities for the Fund. While potentially more volatile than public equity, private equity provides a diversification benefit and the opportunity to achieve higher returns. Diversification in the Fund’s Private Equity portfolio may be accomplished by investing across different fund types and strategies including venture capital, leverage buyout, mezzanine debt, distressed debt, sector funds, secondaries, and fund-of-funds.

Real Estate Investments
The strategic role of real estate investments is to enhance return and diversification opportunities for the Fund while providing some inflation protection. Diversification in real estate may be accomplished through exposure to a variety of real estate debt and equity investment strategies, property types (i.e., office, industrial, retail, multifamily, hospitality, etc.), geographic location, and various stages of a property life-cycle.

Alternative Investments
The strategic role of alternative investments is to enhance long-term return and diversification opportunities for the Fund. A lower correlation between the returns of alternative investments and other Fund assets is expected, and alternative investments are therefore expected to provide an added measure of diversification to overall Fund returns. Diversification in alternative investments may be achieved through exposure to a variety of possible alternative investment assets and strategies, including, but not limited to, infrastructure, natural resources, and other diversifying strategies.

VI. PERFORMANCE MEASUREMENT AND EVALUATION

Total Portfolio Performance:

The principal goal of the Fund is to maximize the likelihood of achieving and/or exceeding the Investment Objectives stated in this IPS over the long-term.

The primary benchmark for evaluating performance of the Fund will be a weighted benchmark consisting of broad market indices for the underlying strategies combined according to the strategy allocation targets as described in Appendix A. Total Portfolio performance will be evaluated on a net-of-fee basis relative to the representative weighted benchmark over various trailing time periods, as applicable.

A portion of the Fund’s assets will be committed to Private Equity, Real Estate, and Alternative assets. Given the nature of these investments, the amount and timing of the cash flows cannot be precisely known, and it will take time to build out the portfolio to the long-term policy target levels. Accordingly, at
any particular time, the actual allocation to Private Equity, Real Estate, and Alternatives may be below the long-term target allocation. In such an event, for policy benchmark measurement purposes, any shortfall in the target allocation to Private Equity will be deployed to the Global Equity asset class; any shortfall to Real Estate and Alternatives will be deployed 50% to the Global Equity asset class and 50% to the Fixed Income asset class. As constituted, this “float adjusted” benchmark will also be referred to as the Interim Policy Benchmark. The composition of the Interim Policy Benchmark will be adjusted over time to reflect the invested balances in Private Equity, Real Estate, and Alternatives and is expected gradually to converge to the Policy Benchmark.

**Strategy Performance:**

Performance for the underlying asset classes will be compared with the risk and return of an appropriate market index (as described in Appendix A), on a net-of-fee basis over various trailing time periods.

**Review and Reporting:**

**OST/OIC Reviews.** OST staff will continuously review asset allocations and investment performance, and present their review and conclusions to the OIC on no less than an annual basis. These reviews will focus on the continued appropriateness of existing policy, compliance with guidelines and performance relative to Fund objectives. A formal process shall be established allowing DSL staff to meet with OIC’s general consultant on an annual basis to discuss investment management and asset allocation issues. In addition, DSL staff will have the opportunity to address the OIC annually to discuss the State Land Board’s particular views regarding Fund performance and related management issues.

**Presentation to State Land Board.** OST staff will arrange for and lead a formal review of the Fund at a meeting of the State Land Board on at least an annual basis. OST and DSL staff will coordinate in advance of each meeting to develop an agenda.

The foregoing IPS was adopted by the Council to be effective as of ______,2022

* Total Portfolio Index will be a weighted benchmark consisting of market indices for each strategy combined according to the strategy allocation targets as described above.

** The sum of Strategy “Min” and “Max” within each Portfolio Role (Global Equity, Private Equity, Fixed Income, Real Estate, Alternatives, and Cash) will not equal "Min" and "Max" for each Role.
INTRODUCTION & OVERVIEW

Summary Policy Statement

The Oregon Investment Council ("OIC") formulates policies for the investment and reinvestment of funds under the control and administration of the Department of State Lands ("DSL"), known as the Common School Fund (the "Fund"). This policy provides guidance to Oregon State Treasury ("OST") staff and advisors regarding approved asset classes, asset allocation, and reporting requirements for the Fund.

Purpose and Goals

The investment objective for the Fund is to maximize risk-adjusted return, while remaining consistent with Fund goals as established by DSL's board (the "State Land Board"). The OIC has approved the following asset classes to meet the Fund's investment objective: 1) Global Equity; 2) Private Equity; 3) Fixed Income; 4) Real Estate; 5) Alternatives; and 6) Cash (each as defined below). This policy will outline the strategic role of each asset class and provide further guidance to OST staff on the investment program.

Applicability

Classified represented, management service, and unclassified executive service staff.

POLICY PROVISIONS

Policy Statements

A. Asset Allocation

Recognizing the general objectives and operating philosophy of the Fund, the OIC has approved the following asset classes and target ranges:

1. **Global Equity.** Domestic and international investments that represent a direct ownership of, or interest in, a corporation, and the shares of which are traded in public securities markets.
2. **Fixed Income.** Investments in loans and other debt. This asset class may include mortgage-backed, asset-backed and structured securities.
3. **Private Equity.** Investments in privately-held companies or corporations including buyouts and venture capital. Fund of funds investing and purchases of secondary interests may also be included in this category.
4. **Alternatives.** Investments will be diversified through exposure to a variety of alternative investment assets and strategies, including infrastructure, natural resources, and other diversifying strategies.
5. **Real Estate.** Investments will be diversified through exposure to a variety of real estate investment strategies, including core, value add, and opportunistic.
6. **Cash.** Cash and cash equivalents are defined as cash held in OST's Oregon Short Term Fund.

7. OST staff shall monitor the Fund's actual asset allocations relative to OIC-established targets on a monthly basis. A sustained and material deviation outside of the approved ranges shall trigger a rebalancing back towards established targets with due consideration given to any liquidity constraints and/or potential transactions costs. Whenever possible, the Fund's cash flows will be used to rebalance between asset classes. Alternative investments will receive special consideration and staff will receive additional flexibility in building out this asset class given its still-nascent status.

8. OST will work with the State Land Board and DSL staff to ensure the Fund's asset allocation policy comports with the State Land Board's goals for the Fund. Moreover, the OIC shall not make asset allocation changes without considering input from the State Land Board or DSL staff.

9. Formal asset allocation reviews will be performed at least every 3 years to ensure that the Fund is positioned properly. These reviews will be performed by OST staff in conjunction with the OIC's general consultant.

B. Global Equity Investments
The strategic role of publicly-traded equity securities is to provide one of the highest expected returns among approved asset classes for the Fund. The Fund's Global Equity portfolio also provides liquidity necessary to meet its cash distribution obligations.

1. The Fund's Global Equity portfolio is structured on a global basis, seeking to loosely replicate the country and market capitalization characteristics of the MSCI ACWI Investable Market Index (MSCI ACWI IMI Net).

2. OST staff will seek to enhance returns through selective active management, provided such actively managed strategies demonstrate empirical efficacy relative to factor exposures and net of all fees and transactions costs.

3. Benchmarks assigned to all non-U.S. strategies should be unhedged. Managers may be permitted to hedge currency exposures, and in cases where currency represents an explicit element of a manager's stated investment approach, may take active currency positions.

4. Proxies associated with separately managed accounts will be voted by OST's third-party proxy voting agent.

C. Fixed Income Investments
The strategic role of fixed income securities is to diversify the Fund in general and its allocation to equity securities in particular. The Fixed Income portfolio provides liquidity necessary to meet its cash distribution obligations.

1. The Fund's Fixed Income portfolio is structured as a well-diversified bond portfolio.

2. The benchmark is the Bloomberg Barclays U.S. Aggregate Bond Index (the "Benchmark").

3. Actively-managed strategies are expected to outperform stated benchmarks on an after-fee and risk adjusted basis, over a 3-5 year market cycle while remaining within reasonable risk parameters.

D. Private Equity Investments
The strategic role of private equity investments is to enhance return and diversification opportunities for the Fund. While potentially more volatile than public equity, private equity provides a diversification benefit and the opportunity to achieve higher returns.

1. The Fund's Private Equity portfolio will include investments with a select group of large, established and historically successful private equity partners and will generally be accessed through limited partnership interests.

2. Diversification in the Fund's Private Equity portfolio may be accomplished through any of the following: investment style or strategy; geographic focus; sector allocation; and capitalization.

3. Partnership agreements shall conform to current industry standards and shall be subject to legal sufficiency approval by and through OST legal counsel.
4. The Fund's Private Equity portfolio is expected to achieve total returns greater than the Russell 3000 + 300 basis points, net of fees, over a three- to five-year investment cycle.

E. Real Estate Investments

The strategic role of real estate investments is to enhance return and diversification opportunities for the Fund.

1. Diversification in real estate may be accomplished through exposure to a variety of real estate debt and equity investment strategies, property types (i.e., office, industrial, retail, multifamily, hospitality, etc.), geographic location, and various stages of a property life-cycle from development to stabilized.

2. The Fund's Real Estate portfolio is expected to achieve total returns greater than the NCREIF Fund Index - Open-End Diversified Core Equity (NFI-ODCE), net of fees.

F. Alternative Investments

The strategic role of alternative investments is to enhance long-term return and diversification opportunities for the Fund. A lower correlation between the returns of alternative investments and other Fund assets is expected, and alternative investments are therefore expected to provide an added measure of diversification to overall Fund returns.

1. Diversification in alternative investments may be achieved through exposure to a variety of possible alternative investment assets and strategies, including, but not limited to, infrastructure, natural resources, and other diversifying strategies.

2. The Fund's Alternatives portfolio is expected to achieve total returns greater than the Consumer Price Index for All Urban Consumers ("CPI") plus 400 basis points, net of fees.

G. OST Staff Authority

With approval from the Chief Investment Officer ("CIO") and quarterly notification to the OIC, OST staff may:

1. Terminate "at will" any public equity or fixed income manager or mandate according to the terms of its contract with, and on behalf of, the OIC;

2. Rebalance between and among managers within the Fund's Global Equity or Fixed Income portfolios. The aggregate, structural characteristics of the portfolio will be considered during such rebalancings;

3. Rebalance between and among open-end core real estate funds within the Real Estate Portfolio. The aggregate, structural characteristics of the portfolio will be considered during such rebalancings;

4. Convert any public equity long-only implementation to a 130/30 strategy, provided such implementation does not change the mandate's role within the Fund's Global Equity Portfolio; and

5. Retain an external manager in any of the five asset classes that has been approved by the OIC on behalf of the Oregon Public Employees Retirement Fund ("OPERF").

H. Compliance. The OST Compliance program will a) monitor and evaluate portfolios and asset classes and determine compliance with OST policies and contractual obligations; b) identify instances of non-compliance and develop and execute appropriate resolution strategies; c) provide relevant compliance information and reports to OST management and the Fund, as appropriate; and d) when applicable, verify resolution by the appropriate individual or manager within the appropriate time frame.

I. Review and Reporting

1. OST/OIC Reviews. OST staff will continuously review asset allocations and investment performance, and present their review and conclusions to the OIC on no less than an annual basis. These reviews will focus on the continued appropriateness of existing policy, compliance with guidelines and performance relative to Fund objectives. A formal process shall be established allowing DSL staff to meet with OIC's general consultant on an annual basis to discuss investment management and asset allocation issues. In addition, DSL staff will have the opportunity to address the OIC annually to discuss the State Land Board's particular views regarding Fund performance and related management issues.

2. Presentation to State Land Board. OST staff will arrange for and lead a formal review of the Fund at a meeting of the State Land Board on at least an annual basis. OST and DSL staff will coordinate in advance of each meeting to develop an agenda.
Exceptions
None.

Failure to Comply
Failure to comply with this policy may be cause for disciplinary action up to and including dismissal.
