Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Gianluca Guaitoli

Dear Tobias Read,

My name is Ashley Grace and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ashley Grace

Dear Tobias Read,

My name is Elizabeth Seltzer and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Elizabeth Seltzer

Dear Tobias Read,

My name is Susan Babbitt and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Susan Babbitt

Dear Tobias Read,

My name is Ray Derrickson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ray Derrickson

Dear Tobias Read,

My name is Anthony Everitt and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Sara Roderer and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Sara Roderer

Dear Tobias Read,

My name is Theodore Beloin and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Theodore Beloin

Dear Tobias Read,

My name is janna piper and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is LAWRENCE LINTNER and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
LAWRENCE LINTNER

Dear Tobias Read,

My name is Marisa and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Marisa Conners

Dear Tobias Read,

My name is judith ackerman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Subject: Please help: Financing Consistent with the IEA Net-Zero 1.5°C

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Charlotta Ball

Hillsboro, OR 97123

You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Marian Csabina

Dear Tobias Read,

My name is Evelyn Pinkerton and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Evelyn Pinkerton

The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jessica Stern

Dear Tobias Read,

My name is Paul Haggard and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Paul Haggard

Subject: vote YES on climate resolutions

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
John Barger

Portland, OR 97206
United States

Dear Tobias Read,

My name is William G Gonzalez and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
William G Gonzalez

Dear Tobias Read,

My name is John Phillips and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
John Phillips

Dear Tobias Read,

My name is Robert Lombardi and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Gary Ivey and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Gary Ivey

Dear Tobias Read,

My name is David Andes and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
David Andes

Dear Tobias Read,

My name is Anna Cruikshank and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Anna Cruikshank

Subject: Will KKR Allow Workers the Freedom to Choose a Union?

This email is from a party external to Treasury. Use care with links and attachments.

Tobias,

Oregon Public Employees Retirement System is an investor with the private equity firm KKR, which recently [acquired a majority stake in Refresco](#), the world's largest independent bottling company. Refresco produces beverages such as BodyArmor Sports Drink for Coca-Cola, Gatorade for Pepsi, Arizona Iced Tea, and Tropicana juices.

This spring, workers at the Refresco bottling plant in New Jersey will be voting on whether they want to join the United Electrical, Radio, and Machine Workers of America union (UE). KKR should ensure that Refresco remains neutral and not interfere with workers' right to a free and fair union election.

In June 2021, a majority of the almost 250 workers at the New Jersey bottling plant voted to join the UE to counter the abusive treatment by supervisors, low wages, minimal benefits, sexual harassment, constant schedule changes, and an unforgiving attendance system that penalized workers for getting sick.

Refresco had hired a notorious union busting law firm that has a long history of trying to prevent workers from organizing. Workers were not intimidated by the aggressive anti-union campaign, and a majority of the workers voted to unionize. However, Refresco refused to recognize and bargain with the union, contesting the results of the election because the polling site opened five minutes late. Refresco dragged out the process through objections, appeals, and requests for extension, until ten months later in April 2022, they got the National Labor Relations Board to order a new election.

KKR should ensure that for this election, Refresco refrain from anti-union practices, such as:

- Requiring workers to attend mandatory "captive audience meetings," where Refresco or its consultants deliver anti-union messages
- Flooding the workplace with anti-union literature, while banning union organizers from communicating with workers at the workplace

- Firing or disciplining union leaders or supporters (The union recently filed an Unfair Labor Practice complaint, alleging that Refresco retaliated against a worker because he supported the union)
- Suggesting that Refresco will close the plant if workers vote for the union
- Having supervisors meet one on one with their direct subordinates to interrogate them about whether they support the union and to deliver anti-union messages

These types of coercive practices make it impossible for workers to freely exercise their right to unionize. Just this month, the [National Labor Relations Board \(NLRB\) General Counsel Jennifer Abruzzo](#) issued a memo that she will ask the Board to find that captive audience meetings are a violation of the law.

We request that as an investor, you ask KKR to ensure that workers at Refresco are given a free choice to have a union.

Thank you,

Jordan Ash

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Arlene Macintosh

Dear Tobias Read,

My name is Shari Johnson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Shari Johnson

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Andrej Béder

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Perry Kendall and I am deeply concerned about our ability to avert climate catastrophe when we fail to do everything in our capacity now. Escalating dreadful counterproductive impacts that avoidably worsens pollution, ecological destruction and extreme weather events is unacceptable for all sentient beings. A livable planet for future generations is mandatory. Your swift, bold, action is a crucial priority demonstrate support for critical climate resolutions this shareholder season.

Shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies refraining lending for new fossil fuel exploration and development. Such resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You may review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and

severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

Create a world of possibility for future generations~ cease rampant use of fossil fuels and support these critical climate votes. Make a livable planet your priority in shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Most sincerely,
Perry Kendall

Dear Tobias Read,

My name is Dominique Byrd and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Dominique Byrd

Dear Tobias Read,

My name is Cheryl Eames and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Cheryl Eames

Dear Tobias Read,

My name is Tom Csuhata and I am a person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to DEMAND that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Dear Tobias Read,

My name is d'Anne MacNeil and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
d'Anne MacNeil

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
marian tracy

Dear Treasurer Read,

Climate change is the most urgent issue of the day. We cannot keep funding fossil fuel production and use. Please vote yes on the "No Expansion" resolutions at the upcoming bank meetings. We need to urge our banks to fund non fossil fuel energy.

Thank you!

Dana McBrien
Salem, OR.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Janet Landfried

Dear Tobias Read,

My name is Annie . and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Annie .

Dear Tobias Read,

My name is William Watts and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Edith Rohde

Dear Tobias Read,

My name is Cinda Flynn and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Cinda Flynn

Dear Tobias Read,

My name is Xiaoying Li and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Xiaoying Li

Dear Tobias Read,

My name is Robin Bucu and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Barry Cutler and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Barry Cutler

Dear Tobias Read,

My name is Laurie LaGoe and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Laurie LaGoe

Dear Tobias Read,

My name is Gregory Olverson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Antonio Fernandez and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Antonio Fernandez

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ken Mauney

Dear Tobias Read,

My name is Laura Vera and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Paula Beneke and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Paula Beneke

For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Brian Russo

Dear Tobias Read,

My name is Larry Benvenuti and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Larry Benvenuti

The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Grace Byrne

Subject: You + Big banks and insurance shareholder meetings this spring.

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Kristen Sartor

Dear Tobias Read,

My name is Stephen a Johnson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Stephen a Johnson

Dear Tobias Read,

My name is Richard Hendricks and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Laura Colston and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Laura Colston

Dear Tobias Read,

My name is Jill Turco and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jill Turco

Dear Tobias Read,

My name is D. Deloff and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is claire cohen and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
claire cohen

Dear Tobias Read,

My name is Garry Kramchak and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Garry Kramchak

Dear Tobias Read,

My name is Melissa Garthwaite and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Melissa Garthwaite

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jody MacDonald

Dear Tobias Read,

My name is Mary Ann Viveros and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Joseph Cusano and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Joseph Cusano

Subject: You + Big banks and insurance shareholder meetings this spring.

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Frances Davis

Terrebonne, OR 97760

Dear Tobias Read,

My name is Jarrett Cloud and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jarrett Cloud

Dear Tobias Read,

My name is Ida Nissen and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ida Nissen

Dear Tobias Read,

My name is Jim Loveland and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Zoe Strassfield and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Zoe Strassfield

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote YES on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Robin Jenkins

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Nancy O

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Satya Vayu

Dear J.p. Morgan Chase Shareholders,

My name is Connor Celce and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Linda Schmoltdt

Dear Tobias Read,

I'm a Florida resident, and I'm a big fan of the sunshine and beautiful flowers—not so much the dealt, costly hurricanes, which climate change only makes worse and more common. My name is Avery Roberts and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Avery Roberts

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Anna Cowen

Dear Treasurer Read —

Two weeks ago, during Passover and on Earth Day, **over 60 Jews and allies gathered in front of Chase Bank in Eugene, Oregon calling on Chase Bank to “move their dough” away from fossil fuels into renewable energy.**

We delivered a letter for Jamie Dimon calling on Chase Bank to live up to their commitments to move away from fossil fuels, rather than continuing to dump hundreds of BILLIONS into the industry that is fueling catastrophic climate impacts for so many around the world — including here in Oregon!

As the chief financial officer for our state, you have a responsibility to protect our state’s residents from the climate crisis and the financial risk that comes from investing in fossil fuels.

And you have the OPPORTUNITY to do so by voting YES on the climate resolutions before Chase and Chubb this spring.

I urge you to vote yes on the “Financing Consistent with the IEA Net-Zero 1.5°C Scenario” and “Absolute Contraction Targets for Financed Greenhouse Gas Emissions” the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world’s most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA’s most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

elden & barbara parchim

Dear Tobias Read,

My name is Eugene Humrighouse and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Eugene Humrighouse

However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Kim Wick

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Richard Barker

Dear Tobias Read,

Please, vote Yes on the “Financing Consistent with the IEA Net-Zero 1.5°C Scenario” and “Absolute Contraction Targets for Financed Greenhouse Gas Emissions” re the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world’s most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA’s most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5° C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2° C and 1.5° C of global warming is colossal. At 2° C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C average global temperature increase will also jeopardize the global economy. It is estimated that limiting warming to 1.5 versus 2° C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5° C.

In addition, continued investment in fossil fuels exposes our state’s funds to substantial financial risk. In order to meet 1.5° C temperature increase targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state’s residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Patt Jones

Dear Tobias Read,

Vote yes on

- the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and
- "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year,

the International Energy Agency (IEA)

- released the world's most comprehensive study
- of what is required to meet the goals of the Paris Agreement.

One of the IEA's most important findings

- is that "there is no need for investment in new fossil fuel supply", if we want to curtail global warming to 1.5°C.

However,

big banks and insurance companies

- continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal.

At 2°C of warming,

- hundreds of millions more people will be impacted by extreme heat,
- sea-level rise,
- crop failure,
- punishing droughts, and
- other extreme weather events.

Exceeding 1.5°C

- will also jeopardize the global economy.

It is estimated that

- limiting warming to 1.5 versus 2°C
- could save \$20 trillion globally by 2100.

This is why nearly every nation in the world

- has agreed to the Paris Agreement goal
- of limiting global warming to 1.5°C.

In addition,
continued investment in fossil fuels
- exposes our state's funds to substantial financial risk.

In order to meet 1.5° targets,
fossil fuel infrastructure built this year
- will have to come off-line
- well before the end of its predicted economic lifespan.

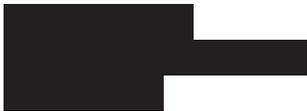

This will
- leave trillions of dollars in stranded assets and
- cause a bubble exposing everyone invested in fossil fuels
- to significant risk.

As the chief financial officer for our state,
you have a responsibility to protect our state's residents
- from the climate crisis and
- the financial risk that comes from investing in fossil fuels.

I urge you to vote YES
- on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Carolynn Kohout

One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Sagen Smith

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

David Covington

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. Subject: AGM inquiry

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Timothy Lippert and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Timothy Lippert

In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Linda Bolduan

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Michael Ryan

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Lynnette Chiotti

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Barbara Hopkins

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Catastrophic wildfires are already destroying homes and businesses in Oregon. Exceeding 1.5°C will further jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100. We cannot afford inaction on climate.

Oregon is now on the forefront of offshore wind. This investment will bring well paying jobs and long term prosperity to Oregon.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Katherine Fredricks

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Diane Luck

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Angela Gusa

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

Linda Gordon

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Tyler Wilcox and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Tyler Wilcox

Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Dina Vistman

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

MICHAEL CARVALHO

Dear Tobias Read,

My name is Timothy Lippert and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Dear Tobias Read,

My name is Diane Gaertner and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Diane Gaertner

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

Amy Roberts

Subject: Please help: Financing Consistent with the IEA Net-Zero 1.5°C

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Amy Roberts

Dear Tobias Read,

My name is x o and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,

x o

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Giovanna Santo

Dear Tobias Read,

My name is Nick Macdonald and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Tobias Read,

My name is Maudie Valero and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Maudie Valero

Subject: Please Combat Sex Trafficking by Targeting Sex Buyers – the REAL PROBLEM

This email is from a party external to Treasury. Use care with links and attachments.

Dear The Honorable Read,

I'm writing to seek your help curbing sex trafficking, prostitution, and all sexual exploitation in our community. Public awareness campaigns—and even victim rescue efforts—are not enough. The only way to shrink the commercial sex trade (thereby reducing multiple related crimes and well documented harm to those exploited), is to target sex buyers.

If men aren't buying sex, pimps and traffickers won't be supplying brothels, alleys, and websites with victims. Right now, groups can help women get out of the sex trade (multiple studies show the vast majority do not want to be there) but twice as many might replace them the next day. You can arrest traffickers, but enterprising predators will fill the void.

If we target the men putting cash in pimps' pockets, the market will dry up.

That's why shrinking consumer-level demand (sex buying behavior) must be a priority for efforts to combat sexual exploitation. Every anti-trafficking initiative should include demand reduction.

I invite you to connect with the National Center on Sexual Exploitation (NCOSE) at public@ncose.com or 202-393-7245. NCOSE can provide support for exactly how to do this.

NCOSE provides training to law enforcement (LE) and prosecutors on how to hold sex buyers accountable successfully. NCOSE tracks demand reduction tactics nationwide—maintaining an interactive database originally funded by the Department of Justice. Research, customized draft legal reform, and talking points to strengthen your advocacy are all available.

Take a look at this critical document outlining reasons to focus on sex buyers and how to do it:
<https://endsexualexploitation.org/wp-content/uploads/How-To-Stop-Sex-Buying-updated-2.8.22.pdf>

Thank you for your attention and please let me know if you agree!

Sincerely,
Malissa May

You can arrest traffickers, but enterprising predators will fill the void.

If we target the men putting cash in pimps' pockets, the market will dry up.

That's why shrinking consumer-level demand (sex buying behavior) must be a priority for efforts to combat sexual exploitation. Every anti-trafficking initiative should include demand reduction.

I invite you to connect with the National Center on Sexual Exploitation (NCOSE) at public@ncose.com or 202-393-7245. NCOSE can provide support for exactly how to do this.

NCOSE provides training to law enforcement (LE) and prosecutors on how to hold sex buyers accountable successfully. NCOSE tracks demand reduction tactics nationwide—maintaining an interactive database originally funded by the Department of Justice. Research, customized draft legal reform, and talking points to strengthen your advocacy are all available.

Take a look at this critical document outlining reasons to focus on sex buyers and how to do it:
<https://endsexualexploitation.org/wp-content/uploads/How-To-Stop-Sex-Buying-updated-2.8.22.pdf>

Thank you for your attention and please let me know if you agree!

Sincerely,
Ross Caughell

Oregon State Treasurer Tobias Read,

Dear Asset Manager,

Bunge Limited, a US-based agribusiness and food company, has received increasing negative attention for its role in driving deforestation, forest fires, and human rights abuses through its soy and palm oil supply chains in Brazil and Indonesia. In Brazil, Bunge's operations in the Cerrado – the world's most biodiverse savannah – have contributed to staggering rates of deforestation. The Cerrado has already lost roughly half of its native vegetation to land clearing at the hands of agribusiness. Of US firms operating in the Brazilian soy industry, Bunge ranks first with nearly 350,000 hectares exposed to deforestation risk. Some 95 percent of Bunge's deforestation risk is concentrated in the Cerrado.

Bunge's operations pose significant material risks to shareholders. Your office should oppose these destructive practices that damage some of the most unique ecosystems in the world, accelerate climate change, contribute to human rights abuses and expose your portfolio to long-term financial risk.

Deforestation is the second largest contributor worldwide to greenhouse gas emissions. Industrial agricultural commodities, including soy and palm oil, are the largest contributors to deforestation worldwide. Additionally, these soft commodity supply chains are routinely involved in gross human rights abuses against local communities and environmental defenders.

A December 2020 report found that nearly 40 percent of sampled mills supplying Bunge's palm oil operations in Indonesia were accused of violating local community land rights,

criminalizing, and attacking defenders or causing serious environmental degradation. The investigation revealed that Bunge's existing policies, systems of oversight and grievance mechanisms were inadequate in terms of meaningful due diligence or remedies for violations.

The company's poor environmental and social performance highlights a serious shortcoming in its overall ability to comply with industry standards and national and international laws across its supply chains. It is the responsibility of shareholders to start holding companies and their Boards of Directors accountable for failing to act on their deforestation commitments.

I join with countless others in calling on shareholders like you to vote against Bunge's Board Chair for failing to implement a 2021 shareholder resolution, which passed by a resounding 98%, pressing the company to halt deforestation. I request that your office also engage with Bunge to ensure the company takes the necessary subsequent steps of developing comprehensive policies and practices, including:

- 1) Full traceability and transparency for direct and indirect suppliers across supply chains.
- 2) Detailed non-compliance protocols with clear terms for suspension/termination of suppliers who perpetuate environmental and human rights abuses.
- And 3) grievance mechanisms that are accessible and responsive to communities and provide remedy for harm.

Sincerely,

Taylor Reed

Dear The Honorable Read,

I'm writing to seek your help curbing sex trafficking, prostitution, and all sexual exploitation in our community. Public awareness campaigns—and even victim rescue efforts—are not enough. The only way to shrink the commercial sex trade (thereby reducing multiple related crimes and well documented harm to those exploited), is to target sex buyers.

If men aren't buying sex, pimps and traffickers won't be supplying brothels, alleys, and websites with victims. Right now, groups can help women get out of the sex trade (multiple studies show the vast majority do not want to be there) but twice as many might replace them the next day. You can arrest traffickers, but enterprising predators will fill the void.

If we target the men putting cash in pimps' pockets, the market will dry up.

That's why shrinking consumer-level demand (sex buying behavior) must be a priority for efforts to combat sexual exploitation. Every anti-trafficking initiative should include demand reduction.

I invite you to connect with the National Center on Sexual Exploitation (NCOSE) at public@ncose.com or 202-393-7245. NCOSE can provide support for exactly how to do this.

NCOSE provides training to law enforcement (LE) and prosecutors on how to hold sex buyers accountable successfully. NCOSE tracks demand reduction tactics nationwide—maintaining an interactive database originally funded by the Department of Justice. Research, customized draft legal reform, and talking points to strengthen your advocacy are all available.

Take a look at this critical document outlining reasons to focus on sex buyers and how to do it:
<https://endsexualexploitation.org/wp-content/uploads/How-To-Stop-Sex-Buying-updated-2.8.22.pdf>

Thank you for your attention and please let me know if you agree!

Sincerely,
janna piper

Oregon State Treasurer Tobias Read,

Dear Asset Manager,

Bunge Limited, a US-based agribusiness and food company, has received increasing negative attention for its role in driving deforestation, forest fires, and human rights abuses through its soy and palm oil supply chains in Brazil and Indonesia. In Brazil, Bunge's operations in the Cerrado – the world's most biodiverse savannah – have contributed to staggering rates of deforestation. The Cerrado has already lost roughly half of its native vegetation to land clearing at the hands of agribusiness. Of US firms operating in the Brazilian soy industry, Bunge ranks first with nearly 350,000 hectares exposed to deforestation risk. Some 95 percent of Bunge's deforestation risk is concentrated in the Cerrado.

Bunge's operations pose significant material risks to shareholders. Your office should oppose these destructive practices that damage some of the most unique ecosystems in the world, accelerate climate change, contribute to human rights abuses and expose your portfolio to long-term financial risk.

Deforestation is the second largest contributor worldwide to greenhouse gas emissions. Industrial agricultural commodities, including soy and palm oil, are the largest contributors to deforestation worldwide. Additionally, these soft commodity supply chains are routinely involved in gross human rights abuses against local communities and environmental defenders.

A December 2020 report found that nearly 40 percent of sampled mills supplying Bunge's palm oil operations in Indonesia were accused of violating local community land rights,

criminalizing, and attacking defenders or causing serious environmental degradation. The investigation revealed that Bunge's existing policies, systems of oversight and grievance mechanisms were inadequate in terms of meaningful due diligence or remedies for violations.

The company's poor environmental and social performance highlights a serious shortcoming in its overall ability to comply with industry standards and national and international laws across its supply chains. It is the responsibility of shareholders to start holding companies and their Boards of Directors accountable for failing to act on their deforestation commitments.

I join with countless others in calling on shareholders like you to vote against Bunge's Board Chair for failing to implement a 2021 shareholder resolution, which passed by a resounding 98%, pressing the company to halt deforestation. I request that your office also engage with Bunge to ensure the company takes the necessary subsequent steps of developing comprehensive policies and practices, including:

- 1) Full traceability and transparency for direct and indirect suppliers across supply chains.
- 2) Detailed non-compliance protocols with clear terms for suspension/termination of suppliers who perpetuate environmental and human rights abuses.
- And 3) grievance mechanisms that are accessible and responsive to communities and provide remedy for harm.

Sincerely,

John Barger

Oregon State Treasurer Tobias Read,

Dear Asset Manager,

Bunge Limited, a US-based agribusiness and food company, has received increasing negative attention for its role in driving deforestation, forest fires, and human rights abuses through its soy and palm oil supply chains in Brazil and Indonesia. In Brazil, Bunge's operations in the Cerrado – the world's most biodiverse savannah – have contributed to staggering rates of deforestation. The Cerrado has already lost roughly half of its native vegetation to land clearing at the hands of agribusiness. Of US firms operating in the Brazilian soy industry, Bunge ranks first with nearly 350,000 hectares exposed to deforestation risk. Some 95 percent of Bunge's deforestation risk is concentrated in the Cerrado.

Bunge's operations pose significant material risks to shareholders. Your office should oppose these destructive practices that damage some of the most unique ecosystems in the world, accelerate climate change, contribute to human rights abuses and expose your portfolio to long-term financial risk.

Deforestation is the second largest contributor worldwide to greenhouse gas emissions. Industrial agricultural commodities, including soy and palm oil, are the largest contributors to deforestation worldwide. Additionally, these soft commodity supply chains are routinely involved in gross human rights abuses against local communities and environmental defenders.

A December 2020 report found that nearly 40 percent of sampled mills supplying Bunge's palm oil operations in Indonesia were accused of violating local community land rights,

criminalizing, and attacking defenders or causing serious environmental degradation. The investigation revealed that Bunge's existing policies, systems of oversight and grievance mechanisms were inadequate in terms of meaningful due diligence or remedies for violations.

The company's poor environmental and social performance highlights a serious shortcoming in its overall ability to comply with industry standards and national and international laws across its supply chains. It is the responsibility of shareholders to start holding companies and their Boards of Directors accountable for failing to act on their deforestation commitments.

I join with countless others in calling on shareholders like you to vote against Bunge's Board Chair for failing to implement a 2021 shareholder resolution, which passed by a resounding 98%, pressing the company to halt deforestation. I request that your office also engage with Bunge to ensure the company takes the necessary subsequent steps of developing comprehensive policies and practices, including:

- 1) Full traceability and transparency for direct and indirect suppliers across supply chains.
- 2) Detailed non-compliance protocols with clear terms for suspension/termination of suppliers who perpetuate environmental and human rights abuses.
- And 3) grievance mechanisms that are accessible and responsive to communities and provide remedy for harm.

Stop destroying rainforest for profit! You & your family can not escape the panic & catastrophe of global warming. Think about that.

Sincerely,

Stephen a Johnson

Deforestation is the second largest contributor worldwide to greenhouse gas emissions. Industrial agricultural commodities, including soy and palm oil, are the largest contributors to deforestation worldwide. Additionally, these soft commodity supply chains are routinely involved in gross human rights abuses against local communities and environmental defenders.

A December 2020 report found that nearly 40 percent of sampled mills supplying Bunge's palm oil operations in Indonesia were accused of violating local community land rights,

criminalizing, and attacking defenders or causing serious environmental degradation. The investigation revealed that Bunge's existing policies, systems of oversight and grievance mechanisms were inadequate in terms of meaningful due diligence or remedies for violations.

The company's poor environmental and social performance highlights a serious shortcoming in its overall ability to comply with industry standards and national and international laws across its supply chains. It is the responsibility of shareholders to start holding companies and their Boards of Directors accountable for failing to act on their deforestation commitments.

I join with countless others in calling on shareholders like you to vote against Bunge's Board Chair for failing to implement a 2021 shareholder resolution, which passed by a resounding 98%, pressing the company to halt deforestation. I request that your office also engage with Bunge to ensure the company takes the necessary subsequent steps of developing comprehensive policies and practices, including:

- 1) Full traceability and transparency for direct and indirect suppliers across supply chains.
- 2) Detailed non-compliance protocols with clear terms for suspension/termination of suppliers who perpetuate environmental and human rights abuses.

And 3) grievance mechanisms that are accessible and responsive to communities and provide remedy for harm.

Sincerely,

Oregon State Treasurer Tobias Read,

Dear Asset Manager,

Bunge Limited, a US-based agribusiness and food company, has received increasing negative attention for its role in driving deforestation, forest fires, and human rights abuses through its soy and palm oil supply chains in Brazil and Indonesia. In Brazil, Bunge's operations in the Cerrado – the world's most biodiverse savannah – have contributed to staggering rates of deforestation. The Cerrado has already lost roughly half of its native vegetation to land clearing at the hands of agribusiness. Of US firms operating in the Brazilian soy industry, Bunge ranks first with nearly 350,000 hectares exposed to deforestation risk. Some 95 percent of Bunge's deforestation risk is concentrated in the Cerrado.

Bunge's operations pose significant material risks to shareholders. Your office should oppose these destructive practices that damage some of the most unique ecosystems in the world, accelerate climate change, contribute to human rights abuses and expose your portfolio to long-term financial risk.

Deforestation is the second largest contributor worldwide to greenhouse gas emissions. Industrial agricultural commodities, including soy and palm oil, are the largest contributors to deforestation worldwide. Additionally, these soft commodity supply chains are routinely involved in gross human rights abuses against local communities and environmental defenders.
