Subject: Oregon Must Stop Funding Global Human Rights Violations

This email is from a party external to Treasury. Use care with links and attachments.

Public Information Director Rachel Wray,

I am writing to you as a concerned citizen and a supporter of Hindus for Human Rights, India Civil Watch International, and Indian American Muslim Council, calling on the Oregon Investment Council to immediately divest from the NSO Group, the Israeli spyware firm.

In 2017, the state of Oregon invested \$233 million in Novalpina, the private equity firm that later acquired a controlling stake in the NSO Group. This makes the state of Oregon's pension fund the largest indirect investor in a company whose Pegasus spyware has targeted hundreds of human rights defenders around the world.

The NSO Group's Pegasus software is capable of breaking into a smartphone, extracting files, and even turning on the microphone and camera without the user's permission. In India, the Hindu nationalist government of Narendra Modi has deployed Pegasus spyware to target dozens of leading human rights defenders, students, lawyers, journalists, and opposition politicians. Forensic investigations have shown that activist Rona Wilson's phone was infected with Pegasus software a year before his arrest in 2018. Following the revelations of the Pegasus Project, the Press Club of India stated that "This is the first time in the history of this country that all pillars of our democracy — judiciary, Parliamentarians, media, executives & ministers — have been spied upon." India's Supreme Court has since ordered an independent inquiry into the Modi government's use of Pegasus.

Here in the United States, the Biden administration blacklisted the NSO Group in November 2021, describing Pegasus as a "tool of repression." Several members of Congress, including Oregon's own Senator Ron Wyden have called on the Treasury and State Departments to

apply sanctions to the NSO Group under the Global Magnitsky Human Rights Accountability Act.

Surveillance technologies such as Pegasus software threaten our shared human rights, no matter where we live. I am appalled that the tax dollars of Oregonians have been invested in a company that has enabled human rights abuses in India and worldwide.

I urge State Treasurer Tobias Read and the Oregon Investment Council to immediately divest pension funds from NSO – a demand that has been made by Senator Wyden as well. The Oregon Investment Council should also implement a “human rights procurement screening” for all its investments, and especially for the public employee pension fund.

This email is from a party external to Treasury. Use care with links and attachments.

Dear Ms. Phillips,

a year or so ago I wrote Governor Brown to insist that she pressure the OST to divest from funding fossil fuel companies. Predictably, I received a diverting message instructing me that she was not able to influence because it wasn't her responsibility; it was the Oregon Treasury that was in charge. I was embarrassed for her and insulted that she thought I could be dismissed with stonewalling.

Well, it must be you I must speak with and ask: what is your ethic? Do you have the power to speak for divesting? Of course you do. But will you? Are you afraid?

I was once told when expressing my distress that I could not accomplish anything alone: "Linore, we've got your back."

It's time for each of us act with integrity and with the knowledge that "all flourishing is mutual." Robin Wall Kimmerer, botanist. We exploit the earth and its gifts with brutality. OST is supporting the brutal extraction and use of fossil fuels.

I can imagine how hard a decision now to divest is because we haven't come to an apocalypse though much of the natural world is degraded and will collapse. Why are we humans so ignorant and careless and indifferent?

Speak up. Our community voices will support your courage.

Ms. Cara Samples, (Congrats on being appointed) NEW OIC Chair,

I want to thank you for taking leadership positions and asking hard questions on topics important to Treasury, Divest Oregon, PERS recipients, and all Oregonians!

Here are some more questions that you might consider:

Ask for a Treasury staff report on what is being done to implement the ESG directive of INV 1201 – and what progress is being made.

Consider a revision to the ESG policy to make it less vague and more useful as a directive to staff.

Continue to question how much the OIC is able to effectively oversee the Oregon State Treasury, and to protect the interests of those whose funds the Treasury manages.

Support divestment of Treasury investments in ALL Russian assets, whether under federal sanction or not.

After all, OIC must act as fiduciaries – to protect the interests of ALL fund beneficiaries, right! Thanks again for taking a stand with these questions.

Sincerely,

Robin Bloomgarden

Chair Samples:

thank you for being a leader regarding investments and climate change. I hope your statements inspire others to follow suit.

also, keep pushing while you have momentum:

-
-
- Ask for a Treasury staff report
 - on what is being done to implement the ESG** directive of [INV 1201](#) – and what progress is being made.
-
-
-
- Consider a revision to the ESG policy to make it less vague and more useful as a directive to staff.
-
-
-
- Continue to question how much the OIC is able to effectively oversee the Oregon State Treasury, and to protect the interests of those whose funds the Treasury manages.
-
-
-
- Support divestment of Treasury investments in ALL Russian assets, whether under federal sanction or not.
-

sometimes it just takes one person to break the logjam and get a movement started.

thanks

This email is from a party external to Treasury. Use care with links and attachments.

From: Kristin Edmark, concerned citizen

Thank you for taking my comment. I speak for myself only and not on behalf of any organization. But people I talk with are worried about climate and feel an urgency to quickly move to fossil-free energy.

First, thank you for decisive action to dispose of assets in Russian companies and Russian government entities that have been sanctioned by the federal government.

Second, I want to thank Oregon Treasury for investing in clean energy companies like the Vestas Wind Systems, First Solar and Orsed. Investments strengthen these companies. Please increase investments in fossil-free energy. Recent articles point to a study showing that 20 companies are responsible for 1/3 of world carbon emissions. <https://www.newshub.co.nz/home/world/2019/10/the-20-companies-responsible-for-a-third-of-all-carbon-emissions.html>. Please help by transitioning Oregon's \$361,765,126 (as of 6/2021) away from these companies to companies which promote carbon free energy. We are in an existential climate crisis killing hundreds of thousands of people globally and causing extinctions. Carbon intensive companies have lagged the market and should be expected to quickly lose value.

| | | | | | |
|------------------|---------------|-------------------|--------------|-----------------------|--------------|
| Saudi Aramco | \$318,544 | BP, UK | \$26,333,202 | Peabody Energy, USA | \$272,221 |
| Chevron USA | \$40,926,429 | Royal Dutch Shell | \$18,679,147 | Conoco Phillips | \$19,944,417 |
| Gazprom | Divesting | Pemex | \$17,710,121 | Abu Dhabi, UAE | \$2,056,684 |
| ExxonMobil | \$125,567,795 | PetroChina | \$11,304,196 | Kuwait Petroleum Corp | \$207,900 |
| Total SA, France | \$24,695,762 | BHP Billiton | \$50,265,587 | Petrobras, Brazil | \$23,483,121 |

Thankfully, these investments are primarily liquid and fiscally and morally responsible to change. A change to fossil free investments does not add significantly to expenses as pointed out in <https://fossilfreeca.org/wp-content/uploads/2022/05/Hyperbole-in-the-Hearings.pdf> "Wilshire and Associates, found that "... for the period up to June 30 2020, all active CalPERS divestment programs have delivered positive performance." "In reality, the trading cost of divesting (selling shares) should not add a huge amount to trading costs that are already in the budget. Fund managers buy and sell shares all the time, and these costs are already covered in the ordinary course of business. With a multi-year timeframe, the trading costs for divesting from restricted companies will not add significantly to expenses."

It frightens me terribly that last meeting OIC announced \$650 million in companies actively participating in fossil fuel expansion, Quantum, NGP, Brookfield, Stonepeak, EQT. These long-term investments last beyond the time we have to transition to clean fuels. As of 6/30/22021 Oregon already had \$2,381,514,000 invested in these same 5 companies.

It has been clear for many years that 1) fossil fuel investments lag the market and decrease profits; 2) climate disaster costs are heavy and increasing; 3) large fossil fuel investment by pensions are putting life on the entire world in peril; 4) climate change poses serious and systemic risks to the U.S. economy and financial system/financial stability; 5) massive pension investment in fossil fuels slows the development of fossil-free energy; 6) most citizens in the US are very worried about climate and do not want their money promoting fossil fuels.

The October 15, 2021 US Government report entitled "A Roadmap to Build a Climate-Resilient Economy" (<https://www.whitehouse.gov/briefing-room/statements-releases/2021/10/15/fact-sheet-biden-administration-roadmap-to-build-an-economy-resilient-to-climate-change-impacts/>) states that "climate change poses serious and systemic risks to the U.S. economy and financial system" and individual's life savings and that "climate is already affecting individuals

and the financial system.” It makes no sense for Oregon to promote that which harms pensions and financial stability.

As said by Antonio Guterres, Secretary General of the UN, “Climate activists are sometimes depicted as dangerous radicals. But the truly dangerous radicals are the countries that are increasing the production of fossil fuels. Investing in new fossil fuels infrastructure is moral and economic madness”. Please increase climate responsible fossil-free investments which thankfully are also more fiscally responsible. Polls are clear that people in Oregon are anxious and worried about climate destruction. My daughter-in-law’s family lost a home in the 2020 Oregon fires.

April 16, 2022
Hello,

In 2017 the Oregon Investment Council invested \$233 million in the private equity firm Berkeley Research Group. The Berkeley Research Group owns the majority of NSO Group, an Israeli company. The customers for NSO Group's "Pegasus" spyware include, among others, authoritarian regimes throughout the world. Those governments have used the Pegasus software to surveill human rights defenders, activists, journalists, and unions.

Oregon PERS' indirect investment in NSO Group amounts to participating in the abuses perpetrated through the Pegasus software. Please find an alternative investment which respects human rights and human dignity.

Thank you.

Chair Samples and members of the Oregon Investment Council

I write as cofacilitator of Southern Oregon Climate Action Now, an organization of over 1500 rural Southern Oregonians who are concerned about the climate crisis and serve to fulfil our mission of promoting awareness and understanding of the science of climate change and its consequences and stimulating individual and collective action to address it through a lens of climate justice.

As a result of Governor Brown's Executive Order, Oregon state agencies are developing programs that will reduce greenhouse gas emissions throughout the state in a substantial downward trajectory with meaningful goals. It is unreasonable, therefore, that these efforts should be undermined by a Treasury that invests in fossil fuel use that will negate Oregon's laudable goals.

I would first like to thank Chair Samples for articulating a series of critical questions / concerns relating to this issue. In particular, I would like to know what is happening in relation to applying Environment, Social and Governance climate justice issues to this effort with more clearly defined principles and policies.

SOCAN has been active in promoting climate action in Oregon for ten years (as of September 2022). With the response of the agencies to EO 20-04, Oregon is clearly on a path to undertaking the state's responsibility towards achieving the targets established by the Intergovernmental Panel on Climate Change. Representing the people of Oregon, the OIC has a responsibility to manage state investments in a manner consistent with the Executive Order. This means maintaining the downward trajectory of emissions rather than negating that trajectory. Time and again we have heard the response that the Treasury has a fiduciary responsibility to Oregonians. In response, I note that my wife and I personally have investments in socially responsible funds that are performing better than average investments. Meanwhile, Southern Oregon Climate Action Now is doing the same with its limited investment funds. If the

goal of Treasury is to behave in a financially responsible manner, it would focus on socially responsible investing. Not only are the annual returns for such investments better, but also ESG investing does not have the potential to result in stranded assets. Oregonians have a social conscience. It is unconscionable that the OIC should not reflect that same conscience in its investing.

Given the policy of divesting from Russian assets (a decision we applaud), the precedent has been set that factors other than pure fiduciary priorities should be considered when making investments on behalf of Oregonians. We urge OIC to extend 'the Russia principle' to fossil fuel investments and plan divestment therefrom.

Respectfully submitted

Good day,

Chair Samples, thank you for your encouraging statements made at the April 20th OIC meeting. I respectfully request that your follow through on the following:

- Obtain a Treasury staff report on the measures being undertaken to implement the ESG directive in INV 1201 and determine what progress is being made,
- Consider revising the ESG policy to make it more precise and therefore more useful to staff,
- Question how much the OIC is able to effectively oversee the State Treasury and protect the interests of those whose funds it manages,
- Support divestment of all Russian investments, even those not under federal sanction.

I look forward to following progress on these issues.

Thank you,
Janice Karpenick

I am writing to you as a concerned citizen and a supporter of Hindus for Human Rights, India Civil Watch International, and Indian American Muslim Council, calling on the Oregon Investment Council to immediately divest from the NSO Group, the Israeli spyware firm.

In 2017, the state of Oregon invested \$233 million in Novalpina, the private equity firm that later acquired a controlling stake in the NSO Group. This makes the state of Oregon's pension fund the largest indirect investor in a company whose Pegasus spyware has targeted hundreds of human rights defenders around the world.

The NSO Group's Pegasus software is capable of breaking into a smartphone, extracting files, and even turning on the microphone and camera without the user's permission. In India, the Hindu nationalist government of Narendra Modi has deployed Pegasus spyware to target dozens of leading human rights defenders, students, lawyers, journalists, and opposition politicians. Forensic investigations have shown that activist Rona Wilson's phone was infected with Pegasus software a year before his arrest in 2018. Following the revelations of the Pegasus Project, the Press Club of India stated that "This is the first time in the history of this country that all pillars of our democracy — judiciary, Parliamentarians, media, executives & ministers — have been spied upon." India's Supreme Court has since ordered an independent inquiry into the Modi government's use of Pegasus.

Here in the United States, the Biden administration blacklisted the NSO Group in November 2021, describing Pegasus as a "tool of repression." Several members of Congress, including Oregon's own Senator Ron Wyden have called on the Treasury and State Departments to

apply sanctions to the NSO Group under the Global Magnitsky Human Rights Accountability Act.

Surveillance technologies such as Pegasus software threaten our shared human rights, no matter where we live. I am appalled that the tax dollars of Oregonians have been invested in a company that has enabled human rights abuses in India and worldwide.

I urge State Treasurer Tobias Read and the Oregon Investment Council to immediately divest pension funds from NSO – a demand that has been made by Senator Wyden as well. The Oregon Investment Council should also implement a “human rights procurement screening” for all its investments, and especially for the public employee pension fund.

Dear Cara Samples:

Thank you so much for your leadership positions on topics important to Divest Oregon.

We will very much appreciate your follow through on the topics you have raised:

-
- A
- Treasury staff report on what is being done to implement the ESG** directive of
- [INV](#)
- [1201](#) – and what progress is being made.
-
-
- Consider
- a revision to the ESG policy to make it less vague and more useful as a directive to staff.
-
-
- Continue
- to question how much the OIC is able to effectively oversee the Oregon State Treasury, and to protect the interests of those whose funds the Treasury manages.
-
-
- Support
- divestment of Treasury investments in ALL Russian assets, whether under federal sanction or not.
-

Sincerely,
Janet M Madill MD

Thank you, Ms. Phillips for forwarding to Chair Samples.

Chair Samples,

I am a member of a household receiving PERS pension (my husband's employer pre-retirement). I am a member of the Divest Oregon Coalition and board member of Church Women United of Lane County.

Thank you for your responsive leadership in addressing the Coalition's demands to decrease the risk of fossil fuel investments of state funds. I especially thank you for supporting the use of the ESG directive in the council's assessments of risk. I ask that the council consider revising the ESG policy to increase specificity so staff are completely clear when applying it.

Dear Chair Samples,

Thank you for taking leadership to ensure we have climate-responsible investments of our public retirement funds in Oregon.

Please ask for a report from Treasury on what is being done to implement the ESG directive of [INV 1201](#) – and what progress is being made, and consider a revision to the ESG policy to make it less vague and more useful as a directive to staff.

It's not clear to me that the OIC is providing adequate oversight to protect the interests of those whose funds the Treasury manages. Please investigate.

And please support divestment of Treasury investments in ALL Russian assets, whether under federal sanction or not. It's the least we can do.

Respectfully,
Debra E McGee

"SEIU 503 is a Union of 72,000 public services workers and care providers in Oregon. We envision a just and vibrant society where everyone is treated with dignity and respect, and where all people can provide for themselves and their families."

Submitted for Public Comment, Oregon Investment Council Meeting on June 1, 2022

Submitted via email on May 24, 2022

Thank you for the opportunity to submit public comment to the Oregon State Treasury (Treasury) and Oregon Investment Council (OIC). We are writing on behalf of the members of Service Employees International Union (SEIU) local 503 which represents over 72,000 workers in our state.

Many of these essential workers, current and retired, are participants in Oregon's Public Employee Retirement System (PERS). We are grateful to Oregon Treasurer Tobias Read, Treasury Staff and the members of the OIC for their professional investment management of PERS assets.

We are writing today to encourage Treasury and the Council to fortify your fiduciary efforts in three areas:

- Diversity, Equity and Inclusion;
- Human Capital Management;
- Climate Risk Management.

As plan participants, it is our view that the effective management of the risk/opportunity profile in these three areas is central to the Council's fiduciary responsibility to prudently invest plan assets on behalf of all beneficiaries. Given PERS is a perpetual and universal investor, strategic management of long-term risk/opportunity factors such as diversity, workforce and climate are central to positioning the fund to ensure the benefits are paid to current retirees, as well as to those who will receive benefits two or three decades from now.

We appreciate that in recent years Treasury and the OIC have taken steps in this direction by incorporating Environmental, Social and Governance language into your Investment Beliefs, and we write to encourage you to continue to move those beliefs into implementation across the portfolio.

To briefly summarize why we've chosen to highlight these three areas:

- 1- **Diversity, Equity, and Inclusion.** We shared more detailed comments and suggestions on this issue in our public comments of March 8, 2022. We reiterate here: recent data from major financial institutions indicates that structural racism is damaging the economy:
 - a. In September 2020, Citibank released a report, "Closing the Racial Inequality Gaps: The Economic Cost of Black Inequality in the US," in which Citi states:

“The analysis in the report that follows shows that if four key racial gaps for Blacks — wages, education, housing, and investment — were closed 20 years ago, \$16 trillion could have been added to the U.S. economy. And if the gaps are closed today, \$5 trillion can be added to U.S. GDP over the next five years.”

(<https://www.citivelocity.com/citigps/closing-the-racial-inequality-gaps/>)

- b. According to a recent report published by Bank of America ([BAC](#)) Global Research, a lack of diversity within American companies comes with a hefty price tag:

“Is it \$70 trillion in foregone economic output? Or \$23 trillion in USD GDP? Or \$172 trillion in lifetime earnings? No matter how you measure it, lack of diversity, equity and inclusion (DEI) limits national economies and reduces GDP,” the report reads.

<https://news.yahoo.com/bof-a-lack-of-diversity-within-companies-is-costing-trillions-213302922.html>

- 2- Human Capital Management: In order to sustain returns for the long term, investors and companies must follow their own rhetoric and value what they often claim are their most valuable asset: their people. Too many times we are seeing companies and those investing in them ignoring the risks to companies and the broader economy of devaluing workers. This reality came into clear focus during the pandemic when many low wage and mistreated workers were suddenly recognized as essential. The failure of companies to value their workforce is a threat to a long-term investor like the OIC. The fund is exposed to this risk in the public equity space, as we see in well documented reports of publicly held companies engaging in wage theft <https://www.kqed.org/news/11913643/most-fast-food-workers-are-victims-of-wage-theft-survey-finds> or refusing to respect workers right to labor representation (<https://www.npr.org/2022/04/24/1094569620/nlrb-sues-starbucks-for-retaliating-against-3-workers-involved-in-unionizing>). These issues are also a risk to the portfolio in the private markets, where there is even less disclosure of companies workforce practices and where companies often rely on a contracted labor force under a different employer for strategic operations. We know the fund has taken steps in its corporate governance work and private fund policy work to begin to address these risks and we encourage you to strengthen your efforts to protect the long-term health of the fund.
- 3- Climate: The facts are clear.
 - According to the National Oceanic and Atmospheric Administration (NOAA) :

The annual rate of increase in atmospheric carbon dioxide over the past 60 years is about 100 times faster than previous natural increases, such as those that occurred at the end of the last ice age 11,000-17,000 years ago. (<https://www.climate.gov/news-features/understanding-climate/climate-change-atmospheric-carbon-dioxide>)

- According to U.N. Secretary-General Antonio Guterres said “We must end fossil fuel pollution and accelerate the renewable energy transition before we incinerate our only home..... “Time is running out.” (https://www.washingtonpost.com/politics/un-floats-plan-to-boost-renewables-as-climate-worries-mount/2022/05/18/b5ed53fa-d680-11ec-be17-286164974c54_story.html)
- And Fatih Birol, the International Energy Association’s Executive Director and one of the world’s foremost energy economists, last year said: “If governments are serious about the climate crisis, there can be no new investments in oil, gas and coal, from now – from this year.” (<https://www.theguardian.com/environment/2021/may/18/no-new-investment-in-fossil-fuels-demands-top-energy-economist>)
- As a result, major financial management firms are noting how diverting investments from fossil fuels improves returns. (<https://ieefa.org/major-investment-advisors-blackrock-and-meketa-provide-a-fiduciary-path-through-the-energy-transition/>)

So, we ask you to undergo a full climate risk audit of the portfolio and then share a public plan of action for how the portfolio will be managed to keep it within the 1.5 C scenario that Paris Climate Accord recommends to protect the future of the planet. To state the obvious, we cannot have a sustainable pension fund on a planet with runaway climate disruption.

We strongly encourage the Council to fortify its fiduciary efforts and proactively incorporate strategies to manage risk and seize opportunity these three areas.

We again thank you for your work and look forward to hearing from the Council on its plans to address these issues.

Sincerely,

President
SEIU Local 503, OPEU

Subject: Public comment for June 1st OIC meeting

This email is from a party external to Treasury. Use care with links and attachments.

Dear Cara Samples,

My family and I are residents of Portland, we live in the Pearl District. We would like the below comments and requests added to the record and addressed at the OIC meeting on June 1st 2022 please.

Firstly, we would like the OIC to hold Oregon State Treasury (OST) accountable for their investments in Fossil Fuels, both directly and indirectly through Private Equity. We would like OIC to ensure they divest. The recent Divest Oregon report "[Risky Business](#)" clearly outlined the environmental damage OST is contributing to. It also outlined the poor returns it is risking yielding from its Fossil Fuel investments.

Secondly, we would like to thank you for comments at the April 20th OIC meeting and would like follow up, on these items, which you referenced at that meeting.

- i) Request a Treasury staff report on what is being done to implement the ESG directive of [INV 1201](#) – and what progress is being made.
- ii) Revise the ESG policy to make it less vague and more useful as a directive to staff.
- iii) Continue to challenge how much the OIC is able to effectively oversee the OST, and to protect the interests of those whose funds the Treasury manages.
- iv) Support divestment of Treasury investments in ALL Russian assets, whether under federal sanction or not.

Thank you.

Mark, Andrea and Alexander Quaid

Subject: thank you!

This email is from a party external to Treasury. Use care with links and attachments.

Dear Chair Samples,

As a PERS member, I am writing to express my appreciation for your leadership in providing transparency about the fossil fuel holdings of that account. For our individual investments, we work very hard to ensure that our holdings align with our values, which are core Oregon values. These are so obvious that it seems absurd to have to mention them, but we believe that we should leave future generations an environment that will sustain civilization as we know it. It is distressing to learn that my PERS retirement funds are partially invested in fossil fuels, with the evidence so clear that the burning of these fuels has led us perilously close to creating a world of perpetual crisis.

I hope that you will do everything in your power to follow through on the commitments you have made, which the group Divest Oregon lists as follows:

-
-
- Mandate a Treasury staff report on what is
 - being done to implement the ESG** directive of [INV](#)
 - [1201](#) – and what progress is being
 - made.

Dear Cara Samples,

I want to tell you how much I appreciate the role you are taking regarding the divestment of Oregon investments as Chair of OIC.

I'm looking forward to a Treasury staff report about implementing the ESG directive of INV 1201 and a revision of the ESG policy so it is a clearer and more specific directive to staff.

I urge you to continue to question the ability of the OIC to oversee the State Treasury, looking out for the interest of workers whose funds are invested.

thanks again for your work,

Kyle Rolnick

Dear Ms. Phillips:

Please find attached to this email a letter to the OIC Chair, Ms. Samples.

Thank you and please let me know if you have any additional questions.

Sincerely,

Valerie Rosenberg

May 24, 2022

Dear Ms. Samples:

I am writing to thank you for your leadership on the Oregon Investment Council (OIC). I appreciate that you are asking some difficult questions that require thoughtful responses.

In particular, I am supportive of further questioning on the part of the OIC to the Oregon State Treasury (OST) regarding safeguarding public interests in fund management. I am a PERS recipient and I want to know that funds for my retirement portfolio are accurately managed and I am also a mother who worries about the future we are leaving for our children. For example, I am concerned that we are investing in fossil fuels which are not only incredibly dangerous to our future health and well-being, but are also funds which are notoriously volatile. In the Risky Business Report written by the Divest Oregon campaign, there is example after example regarding fossil fuel investments and how financially risky they are.

“The war in Ukraine is just one example of how fossil fuel holdings can become worthless. OST lost millions in the Russian fossil fuel industry following war and sanctions. In early March 2022, after ignoring months of warnings, the OST announced its intent to divest Russian assets, including the now-sanctioned major Russian oil company Gazprom, but the OST is now unable to find a buyer.” (Risky Business report, page 11).

Another example in the Risky Business report details the percentage of PERS investment portfolio that is invested in Private Equity funds (26%) which is well above the OIC’s stated target percentage of Private Equity investment which is 14%-21%. (Risky Business report, page 12). In addition to environmental concerns with fossil fuels, Private Equity firms also invest heavily in firms such as Novalpina (owns Pegasus spyware) which would most likely not be in the public’s interest and would not meet ESG goals set by the OIC. Further, Private Equity funds remain secretive and not readily available for public oversight or access.

I would like to know that the OIC is able to effectively oversee the Oregon State Treasury ensuring that our state is investing in funds that are going to be sustainable in the long-term, meet ESG goals and are readily accessible to the public.

Thank you for your interest in safe-guarding our public investments.

Sincerely,

Eugene, OR 97403

Oregon Investment Council
OIC.PublicComments@ost.state.or.us

State Treasurer Read and members of Oregon Investment Council,

I am writing to urge the immediate and complete divestment of state pension funds from Novalpina Capital once suitable alternatives are identified that will not harm pension stability. This issue was brought to the attention of the Oregon AFL-CIO during our biennial convention in March, where delegates unanimously voted to approve a resolution against investment in Novalpina Capital. The resolution made clear the reasons why investment in this firm presents a danger to the human rights of union members, activists and journalists abroad.

As reported in *The Guardian*, Oregon's public pension fund gave its blessing to a 2019 deal by [Novalpina Capital to acquire the NSO Group](#)¹, whose software has targeted journalists, activists, unions, and dissidents around the world. In 2017, the state of Oregon invested \$233 million in Novalpina, the private equity firm that later acquired a controlling stake in the NSO Group, making the state of Oregon's pension fund the largest indirect investor in the company.

While the Oregon Treasury repeatedly stated that it had no role in selecting companies that its private equity investors invest in, new revelations from *The Guardian* show that in 2018, fully aware of the NSO Group's role in enabling human rights violations, a senior official at the pension fund discussed investing in the company "in detail" and expressed "strong support" for the deal.

¹ <https://www.theguardian.com/world/2022/jan/17/oregon-public-pension-fund-gave-blessing-to-nso-group-deal-sources-suggest>

A STRONG VOICE FOR OREGON'S WORKERS

The NSO Group's Pegasus spyware puts the human rights of activists and journalists at risk, including in [India](#)², [Saudi Arabia](#)³, [Palestine](#)⁴, the [United Arab Emirates](#), [Hungary](#)⁵, and other nations by breaking into a smartphone and even activating the microphone and camera without a user's permission. Pegasus spyware has been used to target unions, such as when the Mexican government used Pegasus in 2016 to systematically target [dozens of politically-active teachers and members](#)⁶ of the National Education Workers' Syndicate (SNTE) when the union protested burdensome education reforms.

We encourage you to stand with the Biden administration, who [blacklisted the NSO Group](#)⁷ in November 2021, describing Pegasus as a "tool of repression" along with several members of Congress including Senator Wyden who called for sanctions to the NSO Group. Furthermore, since the U.S. blacklisted the NSO Group, ratings agency Moody's [downgraded NSO to Caa2](#)⁸, eight levels below investment grade, citing low revenue, ongoing lawsuits against the company, and severe risk of default on around \$500 million of debt, making NSO an unsound investment for Oregon PERS.

Additionally, we would like to request a voluntary annual reporting of investment holdings, to the extent possible under current Oregon statute.

Thank you for your consideration on this important matter and we look forward to your response.

Sincerely,

Graham Trainor
President, Oregon AFL-CIO

Re: Divesting of Oregon PERF investment in Chinese surveillance company in KKR Asian Fund III

Dear Mr. Read:

Thank you for providing the opportunity to discuss with your staff our concerns about Oregon's investment in Cue Group, a Chinese surveillance company formed by KKR Asian Fund III entities.

We are calling on Oregon PERF to divest of Cue, because we believe it is fundamentally wrong for public employees' retirement in Oregon to fund any collaboration with China's repressive surveillance state.

My team provided your staff with a February 20, 2022 article by *The Wire China*, confirming that Cue and its CEO's personal company had jointly developed surveillance technology with the Video National Engineering Laboratory Zhuhai Innovation Center, an arm of China's Ministry of Public Security. The Ministry of Public Security is the organ that develops and implements the government's mass surveillance system throughout China.

According to *The Wire China*:

"The fact that KKR had a controlling stake in Cue Group while Cue was openly promoting its connection to the MPS lab is 'a wake up call' to global companies, says Michael Santoro, a corporate ethics expert at the Santa Clara University's Leavey School of Business. If a private equity firm's portfolio company works with China's surveillance apparatus, he says, 'It could hardly be a more direct line between their investment and human rights violations.'"

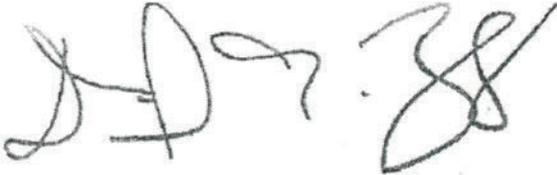

KKR and Cue denied the collaboration to *The Wire*, even though *The Wire* obtained confirmation from the Zhuhai Lab of Cue's collaboration. The article documents how "both KKR and Cue have scrambled to distance themselves from any association with the surveillance industry..."

According to *The Wire* and our information, KKR and Cue removed public references to this collaboration. After publication of *The Wire* article, Cue removed its website post describing its collaboration with the government-run Zhuhai lab and Cue also deleted its website references to public security and military applications of a new autonomous vehicle project. KKR took down an unrelated website of a KKR entity that had contained a filing that listed KKR's indirect subsidiaries, including Cue and two personal companies of Cue's CEO.

These efforts to cover up this collaboration make action by your office even more urgent. We urge you to divest of your investment in Cue (which is held in KKR Asian Fund III) immediately and contribute any profits from Cue to human rights organizations involved with China.

I look forward to your action. I can be reached at 202-264-9741 or dyoung@ufcw.org.

Sincerely,

COVER STORY

The Surveillance Stake

A Chinese company backed by American pension fund money and built by one of world's premier private equity firms publicly touted its ties to China's surveillance apparatus. Is U.S. outbound investment in trouble?

BY KATRINA NORTHROP — FEBRUARY 20, 2022

Illustration by Sam Ward

In March 2020, a town 30 miles northeast of Shanghai's city center was scrambling to respond to the unfolding pandemic. In its effort to control the spread of Covid-19, the town of Shuxin announced that the government would be implementing a new technology in its government buildings: The "CUE All-in-One Machine."

A sleek black device with a camera at eye level, a wide square screen in the middle and two skinny poles connected to wheels at the bottom, the All-in-One Machine uses facial recognition technology and thermal imaging to identify individuals who are walking by and take their temperature. It was produced by [Cue Group](https://cue.group/#/) (<https://cue.group/#/>), a China-based portfolio company held by one of the world's biggest financial services firms, the American private equity giant KKR & Company.

The CUE All-in-One Machine. Credit: Cue Group

But the device's utility goes far beyond pandemic prevention. As Cue's head of new retail products made clear during the 2020 [announcement](https://cue.group/#/newsdetails?id=2020_005) (https://cue.group/#/newsdetails?id=2020_005) in Shuxin, even after Covid-19 subsides, the device could continue to be used to “collect daily passenger flow, record visitors' information, send warnings about abnormal passenger flow, prevent incidents involving many people gathering” and even “recognize specific blacklisted people.”

Why would Cue Group, a digital marketing company that New York-based KKR established in 2017, develop a device with such wide ranging surveillance applications? The answer may be linked, in part, to the Ministry of Public Security (MPS), one of the architects of China's domestic surveillance apparatus.

An investigation by *The Wire* has determined that Cue — a relatively young firm backed by American pension fund money and built by one of America's premier private equity firms — promoted a collaboration with a Chinese government agency known for operating the world's most sophisticated surveillance network, all at a time when critics have alleged that this vast spying and monitoring system was being used to engage in [human rights abuses](https://www.nytimes.com/interactive/2019/11/16/world/asia/china-xinjiang-documents.html) (<https://www.nytimes.com/interactive/2019/11/16/world/asia/china-xinjiang-documents.html>) against Uyghur minorities in the country's far northwest region of Xinjiang.

While it is unclear how the technology developed by American-backed Cue has been deployed in China, both KKR and Cue have scrambled to distance themselves from any association with the surveillance industry, telling *The Wire* this week that Cue remains a digital marketing company. A spokesperson for New York Stock Exchange-listed KKR said the firm was unaware of any collaboration between Cue and China's security forces and noted that KKR had recently reduced its controlling stake in Cue, one of its 16 Chinese portfolio companies, and now has a minority stake. (See KKR's complete statement [here](https://drive.google.com/file/d/1BI2Nz2Jihc4EMpmseGFvNcVOCxHSBoWk/view?usp=sharing) (<https://drive.google.com/file/d/1BI2Nz2Jihc4EMpmseGFvNcVOCxHSBoWk/view?usp=sharing>)).

But Shanghai-based Cue promoted its ties to MPS on its website for nearly two years. This week, after being questioned about its partnership with the [Video National Engineering Laboratory Zhuhai Innovation Center](http://nelivaicz.com.cn/) (<http://nelivaicz.com.cn/>), a government laboratory under MPS, Cue appears to have edited a web page to remove passages touting the collaboration on the All-in-One Machine. In a statement to *The Wire*, Cue said there never was any collaboration with the state lab, even though the Zhuhai lab confirmed in an email to *The Wire* that it had at one time collaborated with Cue and one of its wholly-owned subsidiaries. The lab did not describe the exact nature of the collaboration.

政企同心，携手抗疫 | 开域一体机防疫效果获赞

2020-04-02

为应对新冠疫情，协助政府正常提供公共服务，保障人民出行安全，开域集团与上海市竖新镇政府展开积极合作，率先在镇政府办公大楼部署了开域疫情防控实时监测一体机（以下简称“开域一体机”）。3月25日，镇政府领导和开域集团主要负责人就一体机的防疫部署效果做了实地考察，现场测试了“开域一体机”在无接触快速测温、口罩遮挡下的人脸识别等功能，均取得了突出效果。

开域一体机是由开域集团、珠海中盾之星科技有限公司与视频国家工程实验室(珠海)创新中心共同紧急研发的防疫产品，具有AI智能无接触式测温以及14天迁徙轨迹追踪两大核心功能。支持20人同时测温，快速有效地筛查区域内的发热个体，锁定同行及周围个体，并及时预警。同时，结合开域数据管理平台海量设备信息及行为信息，发现区域中来自疫区的客流，及时报警，以便迅速反应，有效做好防护措施。

After being approached by *The Wire*, Cue Group appears to have removed the highlighted sentence on their website, says: “The CUE All-in-One Machine is an epidemic prevention product jointly and urgently developed by Cue Group, Zhuhai Zhongdun Star Technology [a subsidiary of Cue Group] and the National Video Engineering Laboratory (Zhuhai) Innovation Center.” Source: [Cue Group \(https://cue.group/#/newsdetails?id=2020_005\)](https://cue.group/#/newsdetails?id=2020_005)

The discovery that a KKR-backed firm may have jointly developed a surveillance system with a lab connected to the Ministry of Public Security comes at a challenging time for U.S. companies doing business in China. A growing number of critics have pressured firms to divest or take a stand on China’s human rights violations, especially what some have [described \(https://www.nytimes.com/2021/01/19/us/politics/trump-china-xinjiang.html\)](https://www.nytimes.com/2021/01/19/us/politics/trump-china-xinjiang.html) as a genocide against Uyghurs. A focal point of those efforts has been evidence of China’s [surveillance state \(https://www.nytimes.com/2019/12/17/technology/china-surveillance.html\)](https://www.nytimes.com/2019/12/17/technology/china-surveillance.html) — the vast nets of facial recognition cameras, online monitoring and physical checkpoints that have transformed the [Xinjiang region \(https://www.nytimes.com/2019/05/22/world/asia/china-surveillance-xinjiang.html\)](https://www.nytimes.com/2019/05/22/world/asia/china-surveillance-xinjiang.html) into something akin to a modern day Gulag.

The Trump and Biden administration have each announced a raft of economic sanctions against Chinese companies and government entities for their involvement in human rights violations, and the surveillance industry has been particularly scrutinized. Prominent Chinese firms like [SenseTime \(https://www.ft.com/content/8ee73509-e364-494e-b4c8-ft9a4f675078\)](https://www.ft.com/content/8ee73509-e364-494e-b4c8-ft9a4f675078), [Megvii Technology \(https://www.bloomberg.com/news/articles/2020-04-06/u-s-blacklist-hurt-china-ai-giant-s-sales-ahead-of-ipo-attempt\)](https://www.bloomberg.com/news/articles/2020-04-06/u-s-blacklist-hurt-china-ai-giant-s-sales-ahead-of-ipo-attempt), [iFlytek \(https://asia.nikkei.com/Economy/Trade-war/US-sanctions-8-China-tech-companies-over-role-in-Xinjiang-abuses\)](https://asia.nikkei.com/Economy/Trade-war/US-sanctions-8-China-tech-companies-over-role-in-Xinjiang-abuses) and [Dahua Technology \(https://www.nytimes.com/2019/10/07/us/politics/us-](https://www.nytimes.com/2019/10/07/us/politics/us-)

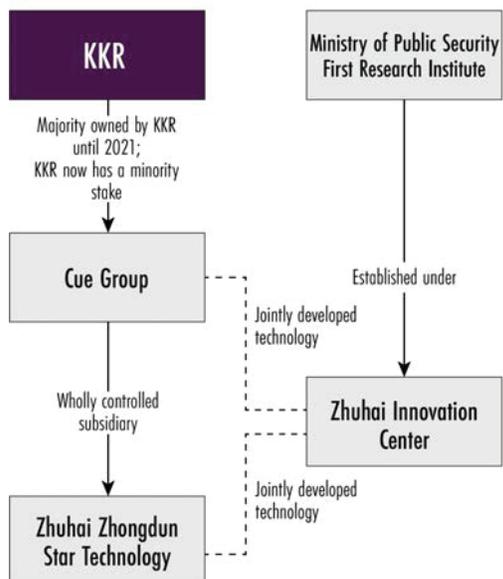

[to-blacklist-28-chinese-entities-over-abuses-in-xinjiang.html](#)) have been blacklisted for providing technology to or collaborating with the Chinese government’s surveillance efforts. Amid both the public scrutiny and well-documented human rights concerns, analysts say that any association with the MPS is a huge red flag for global investors.

The fact that KKR had a controlling stake in Cue Group while Cue was openly promoting its connection to the MPS lab is “a wake up call” to global companies, says [Michael Santoro](#) (<https://www.scu.edu/business/management/faculty/santoro/>), a corporate ethics expert at the Santa Clara University’s Leavey School of Business. If a private equity firm’s portfolio company works with China’s surveillance apparatus, he says, “It could hardly be a more direct line between their investment and human rights violations.”

Cue’s ties to the state lab were first uncovered by researchers working for an American labor union, the [United Food and Commercial Workers International Union](#) (<https://www.ufcw.org/>) (UFCW), which had been scrutinizing the private equity firm because of its deals in the grocery business. *The Wire* undertook its own independent investigation into the case during the past six weeks, reviewing corporate filings in the U.S., Germany, Singapore and China.

Tangled Affiliations

According to Cue’s company statements and the Zhuhai Innovation Center, Cue Group and Zhuhai Zhongdun worked with the Ministry of Public Security affiliated Lab on technology development. Cue Group and KKR deny that there was any collaboration.

Source: Corporate records, news releases, and the Zhuhai Innovation Center website

According to the records, KKR — which is the second largest private equity group in the world with [\\$459 billion](#) (<https://www.kkr.com/kkr-today>) worth of assets under its management — holds a stake in Cue through its KKR Asian Fund III. The limited partners (or investors) in Asian Fund III include some of America’s biggest state pension funds, including the New York State Common Retirement Fund, the California State Teachers’ Retirement System and the Florida State Board of Administration. Courtney Alexander, the researcher who compiled the material on Cue at UFCW, calls this investment “unconscionable for state pension funds.”

While there are no indications that Cue or KKR did anything improper, and while details of the partnership remain unclear, Cue’s effort to build ties with China’s surveillance state comes amid increased calls within the U.S. to better screen outbound investment to China. Currently, Chinese investment in the U.S. is reviewed by the [Committee on Foreign Investment in the United States](#) (<https://home.treasury.gov/policy-issues/international/the-committee-on-foreign-investment-in-the-united-states-cfius>), or CFIUS, but no such mechanism exists for U.S. investment in China. New legislation already in the works to create a kind of “reverse” CFIUS (<https://www.atlanticcouncil.org/blogs/econographics/is-the-us-going-to-screen-outbound-investment/>) could

catch problematic investments in the Chinese surveillance industry, for example, and it is gaining ground.

“There is a lot of momentum behind it,” says [Martijn Rasser](#) (<https://www.cnas.org/people/martijn-rasser>), a senior fellow at the Center for a New American Security (CNAS) and former analyst at the CIA, where he focused on foreign emerging technologies. Cue Group “could become a poster child for exactly why this legislation is of interest in the White House and Congress.”

THE PIVOT

Cue Group's CEO Shi Kan, on board what appears to be company's private jet. *Credit: Cue Group*

In October 2019, when the Zhuhai Innovation Center was unveiled, Cue Group's CEO, Shi Kan, attended the opening ceremony

(<https://tech.chinadaily.com.cn/a/201910/28/WS5db690e7a31099ab995e8371.html>). The Center falls under the Ministry of Public Security's First Research Institute, which develops policing technology for Chinese authorities, and it was established to develop video and A.I. technology for public security applications, according to its website (<http://nelivaicz.com.cn/plus/list.php?tid=1>).

Shi, who is often photographed in a black suit with no tie, is something of a big data evangelist and serial entrepreneur. After graduating from Shanghai Jiaotong University in 2003, he went on to work for Intel in China and VMware, an American cloud computing company, in California, according to his LinkedIn profile. He started his first digital marketing company in 2010, which he later sold (http://quotes.money.163.com/f10/ggm_x_300383_2018017.html) to Beijing Sinnet Technology, a major Chinese tech firm.¹

At 40 years old, Shi seems to have his hands full. He is an executive in approximately 20 Chinese companies, including Cue Group, and he holds a stake of at least 50 percent in 11 other Chinese firms, according to WireScreen. The vast majority of those companies revolve around digital marketing or information technology, and some are linked to KKR holdings.² KKR declined to comment on Shi's other business dealings.

It is unclear how Shi initially got connected with KKR, but in 2017 the American private equity firm combined

In a press account about the unveiling of the Zhuhai Innovation Center, Shi Kan appears to be pictured third from the right.

(<https://www.businesswire.com/news/home/20180320006664/en/KKR-Launches-China%E2%80%99s-First-One-Stop-Digital-Marketing-Company-Cue-Co.>) four separate Chinese digital marketing firms, including one controlled by Shi³, to form Cue and appointed Shi as CEO. According to a profile (<https://finance.ifeng.com/c/7fO751KmDmZ>) of Shi, it was his idea to merge the four companies, saying, "We are definitely not 1+1+1=4, our cooperation is 1+1+1+1 > 40!" Although many Chinese entrepreneurs were focusing on ecommerce at the time, Shi said he saw value in big data and digital marketing. As he described it, he "chose to sell water when everyone else was mining gold."

In a KKR press release (https://media.kkr.com/news-details/?news_id=dbb935a8-1e48-4ba1-9c1f-e62a664bd558&type=1&download=1) about Cue, Paul Yang, the head of KKR Greater China, said, "As China's enterprise services and digital media industry undergo profound changes, we believe Cue has excellent

prospects for growth and the wide-ranging capabilities and expertise to help its clients achieve business success.”

Although KKR declined to comment on when they reduced their stake in Cue, corporate records reviewed by *The Wire* suggest that KKR had a majority stake until six months ago. Other global investment firms involved include California-based [Princeville Capital](https://www.princeville-capital.com/) (<https://www.princeville-capital.com/>), South Korea-based [Anchor Equity Partners](https://www.anchorpe.com/) (<https://www.anchorpe.com/>) and Hong Kong-based [Baring Private Equity Asia](https://www.bpeasia.com/) (<https://www.bpeasia.com/>). According to corporate records reviewed by *The Wire*, Baring and a firm called Super Proton (whose identity is unclear) were given joint control over Cue last year.⁴

KKR and Cue Group executives pose for a picture at a launch event for Cue Group in 2018.

Credit: Cue Group

In its five years of existence, Cue seems to have thrived as a digital marketing company. The company [grew](https://cue.group/#/introduction#introduction) (<https://cue.group/#/introduction#introduction>) to have 2,000 employees in Beijing, Shanghai and Chongqing, as well as in South Korea. In 2019, the company [reportedly](https://www.reuters.com/article/us-cue-ipo/chinese-digital-agency-pushes-on-with-400-million-u-s-ipo-sources-idUSKBN1XI18D) (<https://www.reuters.com/article/us-cue-ipo/chinese-digital-agency-pushes-on-with-400-million-u-s-ipo-sources-idUSKBN1XI18D>) weighed a \$400 million IPO in the U.S., though that stock offering was later canceled. According to its promotional materials, Cue has worked with companies such as Baidu, Huawei and Oppo, providing [services](https://www.linkedin.com/feed/update/urn:li:activity:6831465420952879104/) (<https://www.linkedin.com/feed/update/urn:li:activity:6831465420952879104/>), like digital advertising and mapping out where foot traffic is most concentrated within a retail space.

But using big data to help companies target customers and using big data to help the government target individuals is not that dissimilar. After the Zhuhai Innovation Center opened, one of Shi's other companies, a wholly-owned subsidiary of Cue Group called Zhuhai Zhongdun Star Technology, started a "Safe Campus" project with the lab, according to accounts in the Chinese press. The project was [described](https://tech.chinadaily.com.cn/a/201910/28/WS5db690e7a31099ab995e8371.html) (<https://tech.chinadaily.com.cn/a/201910/28/WS5db690e7a31099ab995e8371.html>), as a tool to monitor school campuses with facial recognition and big data processing, and in press accounts Shi is called a strategic partner in that effort. The Zhuhai Innovation Center confirmed to *The Wire* that the lab had collaborated with Zhuhai Zhongdun, but it did not reference the Safe Campus project and the lab said the collaboration has since ended.

Cue's spokesperson told *The Wire* that neither Cue nor any of its subsidiaries have worked with the Center, and that Cue "has not participated in the 'Safe Campus' project nor received any revenues related to the project."

智慧城市解决方案

采用先进的AI、物联网、云计算及大数据等技术，为不同种类的空间提供数字化管理与监测能力，提高空间的用户体验与运营效率。围绕校园安全风险预警及处理机制为核心任务，搭建联合政府各部门数字化安防智能平台，运用领先的风险模型预警机制，结合安全应急处理方法，全方位及时高效智能化保护学生安全，实现真正平安校园的学习环境。除此之外还全面部署机场数字化、综合安防管理等应用场景。

Cue's website markets a "Smart City" product, which appears to be very similar to the "Safe Campus" project.

Credit: [Cue Group \(https://cue.group/#/digital-technology/\)](https://cue.group/#/digital-technology/)

When the pandemic broke out, Cue Group seems to have turned to projects more closely aligned with Zhuhai Zhongdun and the Zhuhai Innovation Center. In addition to its "All-in-One Machine" — which, according to recent [press releases \(https://baijiahao.baidu.com/s?id=1674273670032829130&wfr=spider&for=pc\)](https://baijiahao.baidu.com/s?id=1674273670032829130&wfr=spider&for=pc), has been deployed in government agencies, businesses, schools, restaurants, shopping malls, train stations and bus stations — Cue's website [markets \(https://cue.group/#/digital-technology/\)](https://cue.group/#/digital-technology/) a "Smart City" product, which appears to be very similar to the "Safe Campus" project and is described as using A.I., cloud computing and big data processing to provide a digital security platform alongside various government departments.

A Cue spokesperson told *The Wire* that the All-in-One Machine was "developed solely by Cue & Company in-house. This product was developed at the onset of the Covid-19 pandemic, at which point Cue & Company felt a keen sense of social responsibility to help develop a product to screen individuals for fever and high temperature to serve communities." When asked why they edited the webpage referring to the collaboration, the Cue spokesperson said, "we have updated it recently to reflect the accurate fact."

KKR also denies that Cue worked with the Zhuhai Innovation Center. "To our knowledge," said a KKR spokesperson, the product was developed in-house. "We further understand the 'all-in-one machine' was developed without any collaboration with the Video National Engineering Laboratory (Zhuhai) Innovation Center."

But the Zhuhai Innovation Center's admission that it worked with Cue and its subsidiary, Zhuhai Zhongdun, is striking. The Center is a joint collaboration between a state security contractor that is wholly owned by MPS's First Research Institute, and the Chinese Academy of Sciences Institute of Automation (CASIA), an academic body that develops mass surveillance technology and, according to a recent [Hoover Institution report \(https://www.hoover.org/research/eyes-wide-open-ethical-risks-research-collaboration-china\)](https://www.hoover.org/research/eyes-wide-open-ethical-risks-research-collaboration-china), collaborates with MPS and the People's Liberation Army.

Moreover, the [lab director](http://www.neliva.com.cn/Index/lists/catid/11.html) (<http://www.neliva.com.cn/Index/lists/catid/11.html>), overseeing the Zhuhai Innovation Center from Beijing is Qiu Baoli, a longtime public security official who once served as deputy director of the public security bureau at the [Xinjiang Production and Construction Corps](https://www.thewirechina.com/2021/10/31/the-corps-of-xinjiang/) (<https://www.thewirechina.com/2021/10/31/the-corps-of-xinjiang/>), which has been sanctioned by the U.S. government for human rights abuses against the Muslim Uyghur population.

“Look at the players integral to this Center,” says Jeffrey Stoff (<https://www.hoover.org/profiles/jeffrey-stoff/>), a former U.S. government official who worked on critical technology protection and recently published a [report](https://www.hoover.org/research/eyes-wide-open-ethical-risks-research-collaboration-china) (<https://www.hoover.org/research/eyes-wide-open-ethical-risks-research-collaboration-china>) with Stanford’s Hoover Institution about CASIA. Given the Center’s acknowledgement of the collaboration, “KKR is directly associating with parts of the state that develop surveillance that is responsible for human rights abuses. Even if the particular technology that [KKR] is investing in is deployed for the notionally benign use of temperature detection and Covid detection, it can be easily diverted to reprehensible applications. That needs to be assumed.”

Cue Group maintains it is still a digital marketing company first and foremost. The All-in-One Machine, the Cue spokesperson said, “is not part of Cue & Company’s core business and will also not be the focus area going forward.”

But as recently as August, Cue Group made a \$15.4 million investment in a Chongqing-based autonomous and electric vehicle startup, according to Pitchbook. Shortly afterwards, the company released a [video](https://www.linkedin.com/company/cuegroup/videos/) (<https://www.linkedin.com/company/cuegroup/videos/>) of a Cue-brand unmanned vehicle — resembling a tiny tank — that “integrated with various A.I. technologies, [and is an] ideal product to utilize in public security, firefighting, military and engineering scenes.” The video depicts a woman tied up with a bag over her head and two men threatening her with a bat; the small Cue vehicle, according to the description, is able to pick up on the body posture of the people in order to understand the dangerous situation.

Cue did not respond to questions about why they invested in the autonomous vehicle company.

Screenshots from a marketing video for a Cue-brand unmanned vehicle that “integrated with various A.I. technologies, [and is an] ideal product to utilize in public security, firefighting, military and engineering scenes.”
Source: LinkedIn (<https://www.linkedin.com/company/cuegroup/videos/>)

Regardless of why Cue decided to pursue the public security and surveillance market, the key question is whether KKR knew about it. Three KKR executives in China sat on Cue Group’s board until last year, according to corporate records. And [Xu Kang](https://www.kkr.com/our-firm/leadership/kang-xu/) (<https://www.kkr.com/our-firm/leadership/kang-xu/>), a director in KKR’s Shanghai office who “played a significant role in KKR’s investments in Cue,” according to KKR’s website, is still on the board of the holding company in Singapore that owns Cue Group, as of the company’s latest filings in November.⁵

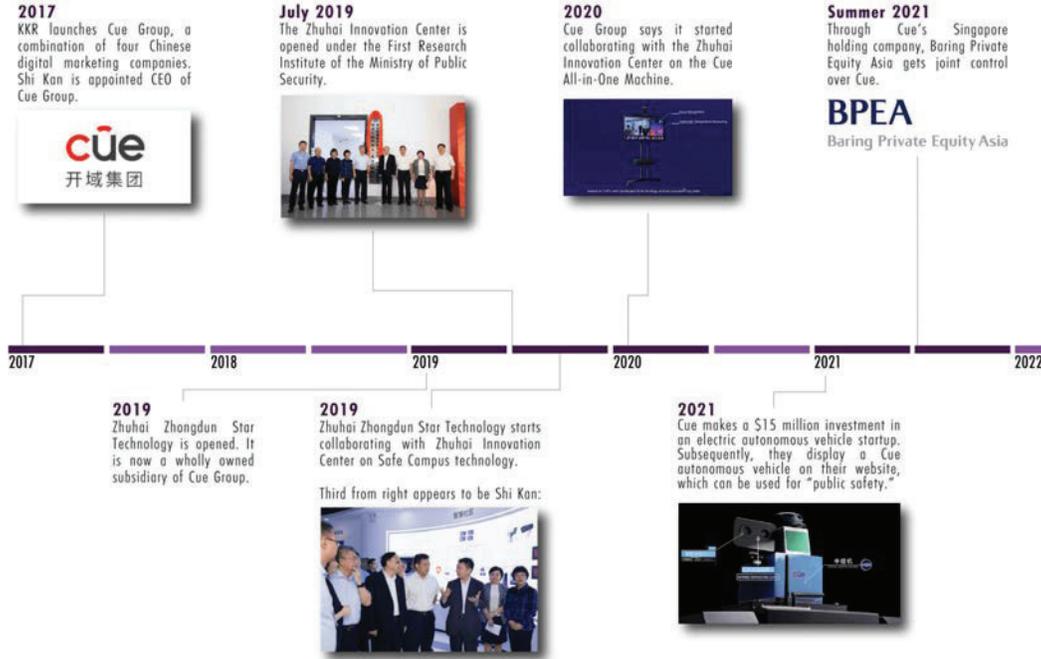

“We employ a rigorous due diligence process prior to making an investment, and have ongoing ESG [environmental, social and governance] and compliance monitoring programs in place to provide oversight of our actively held portfolio companies to identify and address issues in an appropriate manner,” a KKR spokesperson told *The Wire*.

Asked what KKR’s position would be if one of their portfolio companies had indeed collaborated with the Chinese government or an MPS lab, KKR said in a statement: “We were aware a device was developed to protect public health and combat Covid-19. We have no knowledge that the product was used for any other

purpose. We want to make clear that we would not be in favor of the technology of any of our portfolio companies being used in violation of internationally recognized human rights.”

KKR and Cue Group

Cue Group was launched by KKR in 2017. This timeline follows Cue Group’s development and collaborations since then. Cue Group and KKR deny that there was any collaboration with the Zhuhai Innovation Center.

Design by Eliot Chen

THE ‘POSTER CHILD’

The U.S. pension funds that invest in KKR Asian Fund III, which currently has a stake in Cue, include the New York State Common Retirement Fund, the Minnesota State Board of Investment and California State Teachers’ Retirement System, all of which committed \$100 million or more pre-2019.

| U.S. Public Pension Funds Investing in KKR Asian Fund III | Committed Capital (\$ millions) |
|---|---------------------------------|
| Washington State Investment Board | 500 |
| New York State Common Retirement Fund | 285 |
| Oregon Public Employees Retirement System | 250 |
| California State Teachers’ Retirement System | 180 |
| Florida State Board of Administration | 150 |
| Minnesota State Board of Investment | 100 |
| Louisiana State Employees’ Retirement System | 50 |
| Public Safety Personnel Retirement System of the State of Arizona | 40 |

Data: PitchBook, pension fund financial reports

Every pension fund that *The Wire* reached out to either declined to comment or did not respond to requests for comment. The one exception was the Washington State Investment Board, which committed \$500

(<https://www.sib.wa.gov/financial/pdfs/quarterly/ir063021.pdf>) million to KKR Asian Fund III in 2018.

“We are certainly aware of the privacy questions tied to the use of personal recognition technologies,” Chris Phillips, the director of public affairs for the fund told *The Wire*, “These are long term commitments. The nature of private equity funds is that you can’t sell out of them without potentially incurring substantial losses.”

This fiduciary obligation to maximize profit often constrains pension funds, says [Michael Posner](https://www.stern.nyu.edu/faculty/bio/michael-posner) (<https://www.stern.nyu.edu/faculty/bio/michael-posner>), a professor of ethics and finance at New York University’s Stern School of Business and served during the Obama administration as an assistant secretary of state for the Bureau of Democracy, Human Rights and Labor. “But that doesn’t mean they can’t have conversations about their values,” he says. “American companies and investors should not be directly involved in helping the Chinese state undermine the rights of their own citizens.”

This is easier said than done, however, especially when it comes to China’s byzantine and rather opaque business environment. Industries as diverse as apparel and solar technology have been struggling to figure out how to keep their supply chains out of Xinjiang, which has been the target of sanctions. Meanwhile, despite efforts to block the sale to China of U.S. DNA equipment that might be used to target minorities, the Chinese authorities have found ways to [purchase](https://www.nytimes.com/2021/06/11/business/china-dna-xinjiang-american.html) (<https://www.nytimes.com/2021/06/11/business/china-dna-xinjiang-american.html>). goods made by companies like Thermo Fisher. [Emily Weinstein](https://cset.georgetown.edu/staff/emily-weinstein/) (<https://cset.georgetown.edu/staff/emily-weinstein/>), a research analyst at Georgetown’s Center for Security and Emerging Technology, says that while no U.S. company should be associated with a lab controlled by MPS First Research Institute, “figuring this out requires a significant amount of due diligence and Chinese language skills.”

KKR, of course, is a sophisticated operation. The company, which rose to fame as a leveraged buyout firm in the 1980s, and whose activities were chronicled in the best-seller “[Barbarians at the Gate](https://www.harpercollins.com/products/barbarians-at-the-gate-bryan-burroughjohn-helyar?variant=32206878539810)” (<https://www.harpercollins.com/products/barbarians-at-the-gate-bryan-burroughjohn-helyar?variant=32206878539810>),” entered the China market in 2007. The firm has a large operation on the ground and has made deals with the state-owned investment banking giant [C.I.C.C.](https://www.nytimes.com/2010/02/24/business/global/24yuan.html) (<https://www.nytimes.com/2010/02/24/business/global/24yuan.html>), the Chinese appliance maker [Haier](https://www.reuters.com/article/us-kkr-haier/kkr-buys-stake-in-appliance-maker-in-biggest-china-deal-idUSBRE98T0D520130930) (<https://www.reuters.com/article/us-kkr-haier/kkr-buys-stake-in-appliance-maker-in-biggest-china-deal-idUSBRE98T0D520130930>), grocery app [Xingsheng Youxuan](https://www.reuters.com/article/us-xingsheng-youxuan-fundraising/chinese-grocery-app-xingsheng-youxuan-raises-2-billion-in-new-funding-round-sources-idUSKBN2AJ0GX) (<https://www.reuters.com/article/us-xingsheng-youxuan-fundraising/chinese-grocery-app-xingsheng-youxuan-raises-2-billion-in-new-funding-round-sources-idUSKBN2AJ0GX>) and [Bytedance](https://www.reuters.com/article/china-bytedance-fundraising/sequoia-and-kkr-lead-bytedance-funding-round-that-values-it-at-180-billion-sources-idUSKBN28L1AL) (<https://www.reuters.com/article/china-bytedance-fundraising/sequoia-and-kkr-lead-bytedance-funding-round-that-values-it-at-180-billion-sources-idUSKBN28L1AL>), the Chinese owner of the popular social media app TikTok. KKR has raised four Asia funds, the latest of which totalled [\\$15 billion dollars](https://www.businesswire.com/news/home/20210405005419/en/KKR-Closes-US15-Billion-Asian-Fund-IV) (<https://www.businesswire.com/news/home/20210405005419/en/KKR-Closes-US15-Billion-Asian-Fund-IV>). — the largest private equity fund dedicated to Asia ever.

Critics, however, say that outbound U.S. investment to China still enjoys relative anonymity, with little accountability to human rights or national security interests. To ensure that American money doesn’t support problematic companies and industries, momentum is [building](https://www.wsj.com/articles/panel-urges-restricting-u-s-investment-in-china-over-security-concerns-11637163001) (<https://www.wsj.com/articles/panel-urges-restricting-u-s-investment-in-china-over-security-concerns-11637163001>) in Washington for U.S. legislation barring or screening outbound investment into sensitive sectors in China.

Currently, the U.S. government’s main tool to control outbound investment is to put companies on the Treasury Department’s investment [blacklist](https://home.treasury.gov/policy-issues/financial-sanctions/consolidated-sanctions-list/ns-cmic-list) (<https://home.treasury.gov/policy-issues/financial-sanctions/consolidated-sanctions-list/ns-cmic-list>). But this list only impacts publicly traded securities, and it is reactive: the specific entity must already be known to be involved in human rights abuses or activities contrary to U.S. national security interests. SenseTime, for instance, was [placed](https://fortune.com/2019/10/08/china-ai-us-entity-list/) (<https://fortune.com/2019/10/08/china-ai-us-entity-list/>) on the U.S. Entity List in 2019 for its involvement in human rights abuses against Uyghurs, barring U.S. exports to the company. But American firms like Fidelity, Qualcomm and Silver Lake continued to put [millions of dollars](https://www.buzzfeednews.com/article/ryanmac/us-money-funding-facial-recognition-sensetime-megvii) (<https://www.buzzfeednews.com/article/ryanmac/us-money-funding-facial-recognition-sensetime-megvii>) into the company. In 2021, the same year SenseTime went [public](https://www.buzzfeednews.com/article/ryanmac/us-money-funding-facial-recognition-sensetime-megvii)

(<https://www.reuters.com/technology/sensetime-shares-open-up-16-hong-kong-debut-2021-12-30/>), the company was added (<https://www.nytimes.com/2021/12/13/business/china-sensetime-hong-kong-ipo.html>) to the Treasury list.

There are very few government tools that could block firms like KKR from pouring money into a private company like Cue.

“There is a concern that the existing tools we have are not sufficient,” says [Charlie Vest](https://rhg.com/team/charlie-vest/) (<https://rhg.com/team/charlie-vest/>), a senior analyst at Rhodium Group. “Proponents of [new legislation] say the U.S. government does not have adequate visibility on the transactions that go on between the U.S. and China.”

There is a concern that the existing tools we have are not sufficient... Proponents of [new legislation] say the U.S. government does not have adequate visibility on the transactions that go on between the U.S. and China.

— *Charlie Vest, a senior analyst at Rhodium Group*

In 2020, U.S. foreign direct investment in China amounted to \$8.7 billion (<https://www.us-china-investment.org/fdi-data>), which was the lowest level since 2004, according to Rhodium Group. The decline was due to the pandemic, geopolitical dynamics and the U.S. government’s own policies. But this summer, Jake Sullivan, Biden’s national security advisor, said (<https://www.whitehouse.gov/nsc/briefing-room/2021/07/13/remarks-by-national-security-advisor-jake-sullivan-at-the-national-security-commission-on-artificial-intelligence-global-emerging-technology-summit/>) more restrictions could be useful. Current outbound U.S. investment flows, he said, can “circumvent the spirit of export controls or otherwise enhance the technological capacity of our competitors in ways that harm our national security.”

It is still unclear what, exactly, an outbound investment screening process would look like, but the America Competes Act (<https://www.npr.org/2022/02/04/1078226282/u-s-house-passes-china-competition-bill>), which just passed the House and is aimed at bolstering U.S. competitiveness with China, includes a provision (<https://www.wiley.law/alert-America-COMPETES-Act-Would-Stand-Up-a-Committee-to-Review-Certain-Outbound-Investment-and-Offshoring-Transactions>) for screening in critical industries. It proposes creating an inter-agency committee, akin to the Committee on Foreign Investment in the United States (CFIUS), which would be led by the United States Trade Representative.

But the Senate version of the Competes Act does not include (<https://www.politico.com/news/2022/01/25/house-china-bill-trade-title-00001366>) the review process, so it remains to be seen how much support the provision really has. It is also unclear what types of investments would be covered under the review, but experts say the surveillance industry could be included.

There is not a lot of precedent to work from. Very few countries have outbound investment controls, says [Kevin Wolf](https://www.akingump.com/en/lawyers-advisors/kevin-j-wolf.html) (<https://www.akingump.com/en/lawyers-advisors/kevin-j-wolf.html>), a former official at the Commerce Department’s Bureau of Industry and Security, which controls the Entity List. “Historically it has not been a regulated area,” says Wolf, who is now a partner at Akin Gump Strauss Hauer & Feld LLP. “If a decision is made to impose outbound investment controls, then how are you going to decide what is covered? What agencies are going to do this? There aren’t bodies and staff that know how to do this.”

There are also considerable downsides to imposing such an extensive bureaucratic review; according to a recent Rhodium Group [study \(https://rhg.com/research/tws-outbound/\)](https://rhg.com/research/tws-outbound/), an outbound screening process would affect over 40 percent of U.S. investment into China.

Moreover, even if an investment screening process had been in place in 2017, it seems unlikely it would have prevented or stopped KKR from investing in Cue Group. Cue, after all, was a digital marketing firm, not a surveillance company. It only started broadcasting its collaboration with China's surveillance apparatus in 2020, three years after KKR's initial investment.

Cue's pivot, analysts say, illustrates one of the unique challenges of investing in China: from a business perspective, it often makes sense for Chinese firms to work with the government. This is especially true since the pandemic, which formed a natural alliance between China's big data companies and government surveillance. Chinese tech behemoths like Alibaba and Tencent, for example, have developed [Covid health code apps \(https://www.nytimes.com/2020/03/01/business/china-coronavirus-surveillance.html\)](https://www.nytimes.com/2020/03/01/business/china-coronavirus-surveillance.html) for the government by using GPS tracking.

In China today, surveillance "is where the money is," says CNAS's Rasser. "If you look at how much the Chinese state is pouring into this, this is where the revenue growth is."

Chinese firms also benefit from working with the government on A.I.-related work because it allows them to access large amounts of data. [David Yang \(https://economics.harvard.edu/people/david-yang\)](https://economics.harvard.edu/people/david-yang), an economist at Harvard University, recently published a [paper \(http://davidyang.com/pdfs/ai_draft.pdf\)](http://davidyang.com/pdfs/ai_draft.pdf) showing how Chinese A.I. companies that received contracts from the government — and got access to data as a result — were more likely to create innovative and successful commercial products.

"A.I. requires a lot of data to make it accurate enough to be commercially viable," says Yang. "By working with public security, for example, the government gets the aid of the A.I. technology that they don't have themselves, and the firm gets access to the data."

KKR's co-founder Henry Kravis speaking on a *Fortune* panel in Guangzhou in 2017. Credit: *Fortune* (<https://www.youtube.com/watch?v=pDxHKuZd0sM>)

While these calculations might make sense for Chinese companies, including Cue, when American investors and pension funds are involved, the moral costs are expected to outweigh the financial benefits.

It's not always clear that they do. At a 2017 event in Guangzhou, Henry Kravis, the co-founder of KKR, said that when the firm started in China, it considered one thing: what was needed.

“In those days, everything was needed,” he explained (<https://www.youtube.com/watch?v=pDxHKuZd0sM>). “For example, one of the things that the government needed very badly was to improve food safety and security. The second thing they needed was improvement in the environment and water safety. So we said, ok, let’s look and see what we can do.”

Once the Chinese government needed surveillance technologies, it seems Cue Group saw what it could do.

This email is from a party external to Treasury. Use care with links and attachments.

Dear Chair Samples,

I live in NE Portland. As a family physician and a grandfather, community health is crucial for me. Uppermost now for health, we need rapid action on developing a low-carbon electrical grid and electrification of homes and transportation.

I have reviewed OIC's INV 1201 statement. I am pleased that ESG is prominently supported. However, since OIC is responsible for influencing the investment of our Treasury, the people's money, I urge development of a much more specific statement. This should include divestment from entities profiting from or financing carbon-polluting industries. We must not be using the people's fiscal power to contribute to the destruction of hope for future generations. Instead, we should be contributing to and profiting from the vibrant and promising enterprises that are building our future- ie, low-carbon fuels, regenerative agriculture, carbon-sequestration, healthier forests, and healthier homes.

I appeal to you to do more than you think you can to invest in a livable future for all Oregonians! We all need to be innovative and persistent to overcome the crisis we are in. You have the power to make a real difference!

Sincerely,
Joseph Stenger MD

Subject: Statement from Amnesty International Group 48 for public comment

This email is from a party external to Treasury. Use care with links and attachments.

Hi,

Please make sure this statement from Group 48, the Portland, OR chapter of Amnesty International, reaches Treasurer Read and members of the Oregon Investment Council and is entered into the minutes of the OIC's June meeting as public comment. Thank you.

The Portland, Oregon chapter of Amnesty International, known as Group 48, is deeply concerned about Oregon PERS investment in the NSO Group, the Israeli spyware firm that makes Pegasus software. As you know by now from the extensive media coverage in the New York Times, Washington Post, the British Guardian, and elsewhere, NSO Group has sold this software to authoritarian governments which have used it to surveil human rights activists, political dissidents, journalists, diplomats, and government officials.

Moreover, the export licenses for these sales were approved at the highest levels of Israel's Ministry of Defense. Amnesty International recently concluded that the Israeli government is intentionally perpetuating a regime of apartheid, a crime against humanity. Amnesty's report documented the extensive surveillance of Palestinians in violation of their human rights to privacy. Indeed, many of the founders of the NSO Group are former members of an elite military intelligence unit that helped develop these unlawful techniques of surveillance.

Furthermore, Amnesty has urged the immediate release from prison of the Palestinian-French human rights attorney Salah Hammouri who is suing the NSO Group for using Pegasus software to spy on his activities.

Spokespersons for the Oregon Investment Council maintain that it cannot get involved in "politics" and have a fiduciary duty to get the best possible return on its pension fund investments for public employees. In the case of your NSO investment, you have failed this fiduciary duty. Moody's credit rating now lists NSO Group as eight levels below investment grade. The NSO Group has been blacklisted by the Biden administration, meaning that U.S. technology companies are prohibited from doing business with NSO, and NSO is facing lawsuits from Apple, Facebook, and Microsoft for its hacking activities. The company could face bankruptcy, meaning the total loss of the \$165 million that OIC has already extended to the private equity fund that controls NSO.

The UN Guiding Principles on Business and Human rights state that companies and investors have a responsibility to respect human rights. This includes the responsibility to conduct due diligence before and following an investment, to ensure that the investment does not have a negative impact on human rights. Did Oregon PERS conduct any such due diligence in advance of making their investment in the NSO Group? Has Oregon PERS conducted any follow-up due diligence, especially given NSO Group's surveillance of human rights activists, political dissidents, journalists, diplomats and government officials? If not, why was no such due diligence conducted? If so, what were the findings of this due diligence, and what steps has Oregon PERS taken to address the human rights implications of this investment?

Subject: Union response to OIC re NSO Group for public comment

This email is from a party external to Treasury. Use care with links and attachments.

<https://www.theguardian.com/us-news/2022/mar/31/us-unions-pension-funds-investment-nso-group>

Dear Oregon Investment Council,

As Oregon taxpayers, many of whom are union members and beneficiaries in the public employee retirement system, we are writing to express our strong objection to the Oregon public pension fund's investment in Novalpina Capital Fund 1, now managed by Berkeley Research Group, with a majority stake in NSO Group. On Saturday, March 20th, delegates to the 2022 Oregon AFL-CIO Convention in Portland unanimously approved a resolution to advocate for state divestment from NSO Group, the company that created Pegasus spyware.* The Oregon AFL-CIO Convention is a biennial gathering of labor leaders from across the state representing over 40 affiliate unions. As has been widely reported, NSO Group provides surveillance technology to authoritarian regimes, enabling grave human rights abuses. Therefore, Oregon's investment in the Berkeley Research Group is highly unethical.

The Israeli government and police have used Pegasus to surveil Palestinian activists, human rights organizations, and Israeli citizens. The Israeli government holds authority to approve and deny sales of Pegasus and as the New York Times has put it, Israel has "reaped diplomatic gains around the world from NSO's Pegasus spyware." Oregon's investment in NSO Group also severely jeopardizes the security of unions abroad. In 2016, the Mexican government used Pegasus spyware to possibly target dozens of politically-active teachers and members of the National Education Workers' Syndicate (SNTE) when the union protested oppressive education reforms. Authoritarian governments are eager to employ extremely repressive measures against protestors and opposition leaders, and NSO Group's spyware facilitates this. By investing in Berkeley Research Group, and by extension, NSO Group, Oregon shares complicity in violent anti-union operations such as those employed against the protesting school teachers of SNTE.

Because Oregon public sector union members are primary beneficiaries of the Public Employees Retirement System, we ask that the Oregon Investment Council take the following actions:

1.

- 2.
3. Immediately divest state pension funds from Berkeley Research Group, ending our state's
4. partnership with the firm, and, by extension, NSO Group.
- 5.

- 2.
- 3.
4. Implement a human rights screening for all future state investments, and especially
5. for the public employee pension fund.
- 6.

A partnership between Oregon and NSO Group should have never existed to begin with, and we demand that the Oregon State Treasury and Oregon Investment Council address this issue immediately. Thank you for your attention.

DemilitarizePortland2Palestine coalition

*Text of Oregon AFL-CIO resolution:

RESOLVED that the Oregon AFL-CIO send a letter to the State Treasurer and the Oregon Investment Council requesting immediate and complete divestment of state pension funds from Novalpina Capital once suitable alternatives are identified that will not harm pension stability

RESOLVED that the Oregon AFL-CIO will encourage the implementation of a human rights screening for all future investments, and be it further

RESOLVED that the Oregon AFL-CIO will advocate for legislation, and to strengthen existing state laws to protect human rights at home and abroad, as related to Oregon's financial investments; and

RESOLVED that the Oregon AFL-CIO will forward to the National AFL-CIO, the Northwest Oregon Labor Council and Chapters of the Oregon AFL-CIO a copy of this resolution

RESOLVED that the Oregon AFL-CIO will advocate for qualified public sector union members to be appointed to the Oregon Investment Council; and

RESOLVED that the Oregon AFL-CIO will provide support for initiatives or legislation in the coming years that would require annual Oregon Treasury investment reporting in an accessible format online which would support investment transparency; and now be it finally

RESOLVED that the Oregon AFL-CIO send a letter to the State Treasurer and the Oregon Investment Council requesting voluntary annual reporting of investment holdings, to the extent possible under current Oregon statute.

Subject: Thank you -- and looking to your leadership for next steps

This email is from a party external to Treasury. Use care with links and attachments.

Dear Chair Samples,

Thank you for the leadership stance you have taken on encouraging OIC to invest responsibly. As a member of Divest Oregon and a PERS account holder, I am especially heartened by the issues you have raised around the implementation of the ESG directive and divestment of holdings in ALL Russian assets. At this perilous moment in our planet's history, your leadership is consequential.

I encourage you to continue raising these important issues, and I specifically hope that you will follow through on the following:

1. Ask Treasury staff to report on current progress implementing the ESG directive of INV 1201
2. Consider revising the ESG policy to provide more specific guidance to staff
3. Support divestment of Treasury investments in ALL Russian assets, not just assets under federal sanction
4. Continue to examine the degree to which the OIC is able to effectively oversee the Oregon State Treasury and safeguard the interests of all of the people whose funds the Treasury manages.

Thank you for your leadership.

Warmly,
Chris Tebben

Subject: Thank you to OIC Chairperson Samples

This email is from a party external to Treasury. Use care with links and attachments.

Dear OIC Chairperson Samples,

Thank you for your service on OIC and your leadership position on topics important to Divest Oregon. I want to particularly encourage you to require the Oregon Treasury to report on what is being done to implement the ESG directive of INV 1201, and have this staff report out be done at every OIC meeting, as a standing agenda item. What are the measurable goals, timelines, and achievement of the ESG work at Treasury?

I also want you to require the Oregon treasury to expand the ESG policy to make it more useful for the OIC, staff, external fund managers, and PERS members. To say that data collection aligns to measuring and monitoring risk and returns is very basic. What is being collected, how is risk measured, and what strategies are being implemented for the proactive ESG transition?

I look forward to seeing the impact of your leadership.

Sincerely yours,

Nancy Yuill
PERS member
Divest Oregon coalition member

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Parisa Chammlou and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Parisa Chamblou

Subject: vote YES on climate resolutions

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" and "Absolute Contraction Targets for Financed Greenhouse Gas Emissions" the Chase and Chubb shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before Chase and Chubb this spring.

Sincerely,

John Barger

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Glenn Koehrsen

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Stacey Carlisle

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

Joyce Green

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

Sarah Deumling

Subject: Vote Charles Noski off of the board

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

I am writing today to draw your attention to a critical Director Vote this shareholder season: Chairman Charles H. Noski at Wells Fargo.

I am urging investors to vote against the re-election of Charles H. Noski for failing to implement plans at Wells Fargo that are consistent with limiting global warming to 1.5°C. Under Noski's leadership, Wells Fargo has re-established itself as the world's third largest financier of fossil fuels over the last five years, and as such, it has become a main funder of fracking, toxic oil pipelines like Line 3, and loaned billions to coal, oil and gas companies.

As a major investor in Wells Fargo, you are in a unique position to drive action on climate now. We do not have time for delay or vague transition promises anymore. Voting with corporate management to maintain business-as-usual is an active choice against climate action.

If major investors like you refuse to vote for climate action this shareholder season, you will be actively working against progress, science, and the interests of your own clients and beneficiaries.

People all over the world are calling on you to oppose the re-election of Charles H. Noski so that you can match your votes with the urgency of the climate crisis. We are watching for your bold action and leadership.

Thank you,

Sincerely,
Alyssa Fire

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

John Thielking

The most Criminal Official of Oregon late A.G. Dave Frohnmayer had deleted and removed all the record from Lane County that shows I'd changed my name to Nadia Sindi then he lift my old name Faika M. Sindi and changed the first letter of my name made it Saika Findi!! and trapped me with a Criminal record since 1987!!

It had happened when late A.G. Frohnmayer was Oregon A.G.

Late Oregon A.G. Dave Frohn-mayer and Both D.A. Doug Harclerod, Alex Gardner with the Lane County Sheriff, trapped me in a criminal record since 1987. They have changed first letter in my first name to "S" So I couldn't expunge it!!

https://gcc02.safelinks.protection.outlook.com/?url=http%3A%2F%2Fpetitions.moveon.org%2Fsign%2Fjustice-for-nadia-sindi%25E2%2580%25A6&data=04%7C01%7Coregon.treasurer%40ost.state.or.us%7C3cdd1788f3c246f8f14d08da1ddc92cc%7C9123ae20585d446aab650dad4c7c1d5%7C0%7C0%7C637855131672917467%7CUnknown%7CTWFpbGZsb3d8eyJWljojMC4wLjAwMDAiLCJQIjoiV2luMzliLCJBTiI6Ik1haWwiLCJXVCI6Mn0%3D%7C2000&data=HRC%2BCZxtjLCZl%2Fn7nAX4vg%2BVNtNfp9vvUKsPDvDH6QM%3D&reserved=0

My life with Liberal Klans in Oregon!

Arab/Muslim Americans are treated less than animals! We are called Sand N...

We are being prosecuted in a daily basis! High tech lynching, institutionally racism! Especially for Arab women!!

Oregon late A.G. Dave Frohnmayer had my SS# blocked & prevented me from getting employed, made me homeless and jobless!

Dave Frohnmayer was the one who started & initiated the fraud of Foreclosed-houses & taking over our homes!

His bank robber Rep. Bob Ackerman, Doug McCool, UO Prof. Margaret Hallock. Hired Scarlet Lee/Barnhart Associates. Forged my family's signature. Gave our fully paid Condo to the thief Broker Bob Ogle, his mom Karen Ogle was working in the USA Consulate in Jeddah, Saudi Arabia. She administered the power of attorney to have my sister signature, added her son to the deed. Sold without my signature!

Bob Ackerman had never responded to the Summon from the Court, and the sheriff never served me or arrested him either!!

This is what kind of criminal government we have in Oregon!!

Arrest Rep. Bob Ackerman, Doug McCool, Broker Bob Ogle, his mom Karen Ogle, Scarlet Lee/Barnhart Associates, UO Prof. Margaret Hallock, Wells Fargo

Both D.A. Doug Harclerod, Alex Gardner told me they have NO JURISDICTION on Frohnmayer! Oregon criminal Officials are complicit with these crimes against me!

Both EPD, Lane County Sheriff Dept. and the FBI had been told to step down from investigating the bank robber Rep. Bob Ackerman & the rest of Lane County Criminal Officials are complicit with him!!

I ran five times for public offices! Voter Fraud & Sedition by Lane County government to protect & cover up for the two criminals Frohnmayer & Ackerman!!

Oregon government is complicit with their crimes!!

Dave Frohnmayr was going to kill me by sending some fabricated story after he called the manager where I used to live to tell her he was waiting for him to pick him up from the Airport! Then Frohnmayr sent me a team of Doctors for Mental health to Evaluate me!

Thank you,

In solidarity,

Nadia Sindi

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

Teresa Grote

Dear Tobias Read,

It is a sad commentary when the government does not represent the interests of its citizens. This has become normalized over the past 2 decades in Oregon.

Dear Tobias Read,

My name is Erika Luchterhand and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Erika Luchterhand

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
David Flint

Dear Tobias Read,

My name is Janice Dannhauser and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Karin Bucklin and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Karin Bucklin

Dear Tobias Read,

My name is arianna dutter and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
arianna dutter

Dear Tobias Read,

My name is William Meneese and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Sally Woodard and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Sally Woodard

Dear Tobias Read,

My name is Laura Chinofsky and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Laura Chinofsky

Dear Tobias Read,

My name is Clay Davis and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Lori Bryant and I am a person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season. It is far past time to move from fossil fuels to more sustainable energies. We are smart enough to do this!

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and

severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Lori Bryant

Dear Tobias Read,

My name is Michael Lewandowski and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Michael Lewandowski

Dear Tobias Read,

My name is Susan Gage and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Susan Gage

Dear Tobias Read,

My name is Jean Stephenson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Anne Ackley and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Anne Ackley

Subject: You + Big banks and insurance shareholder meetings this spring.

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Stephanie Tidwell

Subject: Oregon Must Stop Funding Global Human Rights Violations

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Oregon State Treasurer Tobias Read,

I am writing to you as a concerned citizen and a supporter of Hindus for Human Rights, India Civil Watch International, and Indian American Muslim Council, calling on the Oregon Investment Council to immediately divest from the NSO Group, the Israeli spyware firm.

In 2017, the state of Oregon invested \$233 million in Novalpina, the private equity firm that later acquired a controlling stake in the NSO Group. This makes the state of Oregon's pension fund the largest indirect investor in a company whose Pegasus spyware has targeted hundreds of human rights defenders around the world.

The NSO Group's Pegasus software is capable of breaking into a smartphone, extracting files, and even turning on the microphone and camera without the user's permission. In India, the Hindu nationalist government of Narendra Modi has deployed Pegasus spyware to target dozens of leading human rights defenders, students, lawyers, journalists, and opposition politicians. Forensic investigations have shown that activist Rona Wilson's phone was infected with Pegasus software a year before his arrest in 2018. Following the revelations of the Pegasus Project, the Press Club of India stated that "This is the first time in the history of this country that all pillars of our democracy — judiciary, Parliamentarians, media, executives & ministers — have been spied upon." India's Supreme Court has since ordered an independent inquiry into the Modi government's use of Pegasus.

Here in the United States, the Biden administration blacklisted the NSO Group in November 2021, describing Pegasus as a "tool of repression." Several members of Congress, including Oregon's own Senator Ron Wyden have called on the Treasury and State Departments to

apply sanctions to the NSO Group under the Global Magnitsky Human Rights Accountability Act.

Surveillance technologies such as Pegasus software threaten our shared human rights, no matter where we live. I am appalled that the tax dollars of Oregonians have been invested in a company that has enabled human rights abuses in India and worldwide.

I urge State Treasurer Tobias Read and the Oregon Investment Council to immediately divest pension funds from NSO – a demand that has been made by Senator Wyden as well. The Oregon Investment Council should also implement a “human rights procurement screening” for all its investments, and especially for the public employee pension fund.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Page Fortna

Oregon State Treasurer Tobias Read,

I am writing to you as a concerned citizen and a supporter of Hindus for Human Rights, India Civil Watch International, and Indian American Muslim Council, calling on the Oregon Investment Council to immediately divest from the NSO Group, the Israeli spyware firm.

In 2017, the state of Oregon invested \$233 million in Novalpina, the private equity firm that later acquired a controlling stake in the NSO Group. This makes the state of Oregon's pension fund the largest indirect investor in a company whose Pegasus spyware has targeted hundreds of human rights defenders around the world.

The NSO Group's Pegasus software is capable of breaking into a smartphone, extracting files, and even turning on the microphone and camera without the user's permission. In India, the Hindu nationalist government of Narendra Modi has deployed Pegasus spyware to target dozens of leading human rights defenders, students, lawyers, journalists, and opposition politicians. Forensic investigations have shown that activist Rona Wilson's phone was infected with Pegasus software a year before his arrest in 2018. Following the revelations of the Pegasus Project, the Press Club of India stated that "This is the first time in the history of this country that all pillars of our democracy — judiciary, Parliamentarians, media, executives & ministers — have been spied upon." India's Supreme Court has since ordered an independent inquiry into the Modi government's use of Pegasus.

Here in the United States, the Biden administration blacklisted the NSO Group in November 2021, describing Pegasus as a "tool of repression." Several members of Congress, including Oregon's own Senator Ron Wyden have called on the Treasury and State Departments to

apply sanctions to the NSO Group under the Global Magnitsky Human Rights Accountability Act.

Surveillance technologies such as Pegasus software threaten our shared human rights, no matter where we live. I am appalled that the tax dollars of Oregonians have been invested in a company that has enabled human rights abuses in India and worldwide.

I urge State Treasurer Tobias Read and the Oregon Investment Council to immediately divest pension funds from NSO – a demand that has been made by Senator Wyden as well. The Oregon Investment Council should also implement a “human rights procurement screening” for all its investments, and especially for the public employee pension fund.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,

However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Lori Voakes

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Our future - yours, mine, all of us - depends on smart, appropriate, timely action. Please do not delay.

Thank you,

In solidarity,

Julia Rush

State Treasurer Tobias Read,

Our pension fund is invested in dirty coal, oil and gas companies which are fueling the climate crisis. These investments are not only risking our climate, they are increasingly financially risky. Our pension fund would be better off investing in climate solutions and divesting from fossil fuels. More than 1300 other institutions with assets over \$14 trillion including large pension funds have committed to some form of divestment. It's time for our pension fund to join them.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
David Burkett

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Paul Owens

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Madeleine Landis

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Daniel Kuperus

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Susan Richards and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Susan Richards

For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Helen Hays

Dear Tobias Read,

My name is Mark Levin and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Mark Levin

The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Nancy Schulman

Dear Tobias Read,

Dear Treasurer Read, members of the Oregon Investment Council, and Director Olineck,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- Disclose the Oregon Treasury fossil fuel holdings by November 2021 -- COP26 (2021 UN Climate Change Conference)
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

Sincerely,
Charles Hung

Eugene, OR 97403

Dear Tobias Read,

My name is Tara Kerr and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Tara Kerr

I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Robbie Rieder

Dear Tobias Read,

I am deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I urge you to support critical climate resolutions this shareholder season. It is the only fiscally responsible and moral choice.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Olivia di Khetaa and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season. I am very ill from and endangered by toxic petrochemical exposure. Please support the transition to clean energy and a fossil free future.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and

severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Olivia di Khetaa

Dear Tobias Read,

My name is patoue riboton and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
patoue riboton

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Vyonne Jenks

Dear Tobias Read,

My name is I c and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Kellie M and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kellie M

Dear Tobias Read,

My name is Nathaniel Feyma and I am a person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Nathaniel Feyma

Dear Tobias Read,

My name is Judy McKinney and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Brian Russo and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Brian Russo

Dear Tobias Read,

My name is Linda Granato and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Linda Granato

Dear Tobias Read,

My name is John Wiles and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Ardyth Gilbertson and I am a grandmother & public health nurse deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season. We have a heavy poluter in our county now, that continues to flout air, land & water requirements... and people are already getting sick here (in under two years of operation)!

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ardyth Gilbertson

Dear Tobias Read,

My name is gary bushey and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
gary bushey

Dear Tobias Read,

My name is Bryant Belli and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Julia Cranmer and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Julia Cranmer

Dear Tobias Read,

My name is Lindsay Reeve and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Lindsay Reeve

Dear Tobias Read,

My name is Terrance Keep and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Terrance Keep

I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Marissa Marvelli

Dear Tobias Read,

My name is Bertha Guzior and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Bertha Guzior

Dear Tobias Read,

My name is d carr and I am deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
d carr

Dear Tobias Read,

My name is dk anestos and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

Dear Tobias Read,

My name is Daniel Lipson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Daniel Lipson

Dear Tobias Read,

My name is Etelle Higonnet and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Etelle Higonnet

Dear Tobias Read,

My name is Kar Lang and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

Dear Tobias Read,

My name is Risa Wallach and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Risa Wallach

Dear Tobias Read,

My name is Mary Finnie and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Mary Finnie

Dear Tobias Read,

My name is Stephen Brace and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Peter Wood and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Peter Wood

Dear Tobias Read,

My name is Kate Ruland and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kate Ruland

Dear Tobias Read,

My name is Bruce Ross and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Bruce Ross

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Stephan Donovan

Dear Tobias Read,

My name is Michael Hubbard and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

Dear Tobias Read,

My name is Sean Shannon and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Sean Shannon

Dear Tobias Read,

My name is Diana Saxon and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Diana Saxon

Dear Tobias Read,

My name is Judith Ford and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is David Sealander and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
David Sealander

Dear Tobias Read,

My name is Kristin Toscano and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kristin Toscano

Dear Tobias Read,

My name is Monica Hymer and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Allister Layne and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Allister Layne

Dear Tobias Read,

My name is Samuel McIntyre and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Samuel McIntyre

Dear Tobias Read,

My name is Tom Richter and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Heather Ruckman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Heather Ruckman

Subject: Oregon Must Stop Funding Global Human Rights Violations

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Oregon State Treasurer Tobias Read,

I am writing to you as a concerned citizen and a supporter of Hindus for Human Rights, India Civil Watch International, and Indian American Muslim Council, calling on the Oregon Investment Council to immediately divest from the NSO Group, the Israeli spyware firm.

In 2017, the state of Oregon invested \$233 million in Novalpina, the private equity firm that later acquired a controlling stake in the NSO Group. This makes the state of Oregon's pension fund the largest indirect investor in a company whose Pegasus spyware has targeted hundreds of human rights defenders around the world.

The NSO Group's Pegasus software is capable of breaking into a smartphone, extracting files, and even turning on the microphone and camera without the user's permission. In India, the Hindu nationalist government of Narendra Modi has deployed Pegasus spyware to target dozens of leading human rights defenders, students, lawyers, journalists, and opposition politicians. Forensic investigations have shown that activist Rona Wilson's phone was infected with Pegasus software a year before his arrest in 2018. Following the revelations of the Pegasus Project, the Press Club of India stated that "This is the first time in the history of this country that all pillars of our democracy — judiciary, Parliamentarians, media, executives & ministers — have been spied upon." India's Supreme Court has since ordered an independent inquiry into the Modi government's use of Pegasus.

Here in the United States, the Biden administration blacklisted the NSO Group in November 2021, describing Pegasus as a "tool of repression." Several members of Congress, including Oregon's own Senator Ron Wyden have called on the Treasury and State Departments to

apply sanctions to the NSO Group under the Global Magnitsky Human Rights Accountability Act.

Surveillance technologies such as Pegasus software threaten our shared human rights, no matter where we live. I am appalled that the tax dollars of Oregonians have been invested in a company that has enabled human rights abuses in India and worldwide.

I urge State Treasurer Tobias Read and the Oregon Investment Council to immediately divest pension funds from NSO – a demand that has been made by Senator Wyden as well. The Oregon Investment Council should also implement a “human rights procurement screening” for all its investments, and especially for the public employee pension fund.

Dear Tobias Read,

My name is Susan Friedwald and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Dear Tobias Read,

My name is Bill DeLuccia and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Bill DeLuccia

Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
N D

Dear Tobias Read,

My name is Jon Pitt and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jon Pitt

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Heather Borman

Dear Tobias Read,

My name is Sharyn Furman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

Dear Tobias Read,

My name is Claudia Leff and I am a citizen deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Claudia Leff

Dear Tobias Read,

My name is Jean Wiant and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jean Wiant

Dear Tobias Read,

My name is cathy rupp and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Climate change, like numerous other issues (gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

Sincerely,
James Klein

Dear Tobias Read,

My name is Pamela Sullivan and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Pamela Sullivan

Dear Tobias Read,

My name is Jonathan Rittenhouse and I am a person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious. Our entire lives will be drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jonathan Rittenhouse

Dear Tobias Read,

My name is Lorraine Wilson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Lorraine Wilson
