This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Linda Guthrie

Dear Tobias Read:

My name is Joe Pfister and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Dear Tobias Read,

My name is Catherine Sims and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Catherine Sims

Dear Tobias Read,

My name is Debbie Jensen and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Debbie Jensen

Dear Tobias Read,

My name is Liz Lundquist and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Liz Lundquist

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Hugh Ballem

Dear Tobias Read,

My name is Sandi Williams and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

Dear Tobias Read,

My name is Melodi Willis and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Melodi Willis

Dear Tobias Read,

My name is Bonnie Stoeckl and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Bonnie Stoeckl

Dear Tobias Read,

My name is Rev. Paul Bern and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Nancy Wineland

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Terri Coleman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Terri Coleman

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
MARYGAIL SULLIVAN

Dear Tobias Read,

My name is Tod Boyer and I am deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Tod Boyer

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Grace Cruz and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Grace Cruz

Dear Tobias Read,

My name is Marie Travis and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Emery Kiefer

Dear Tobias Read,

My name is Tony Alberico and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Tony Alberico

Subject: Please help: Financing Consistent with the IEA Net-Zero 1.5°C

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Carmen Barroso barroso

Portland, OR 97219

Dear Tobias Read,

My name is x o and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,

x o

Dear Tobias Read,

I am deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on my children and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As the parent of persons who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Paula Jackson

Dear Tobias Read,

My name is James DeGrave and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Liana Lang and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Liana Lang

Dear Tobias Read,

My name is Harold Watson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Harold Watson

Dear Tobias Read,

My name is Dennis Vecchiarello and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Subject: You + Big banks and insurance shareholder meetings this spring.

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
MARILYN MOOSHIE

Dear Tobias Read,

My name is Susan Courtney and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Susan Courtney

For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Theodore Beloin

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Patricia Browning

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Stephen Gilbert and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Stephen Gilbert

Subject: Oregon Must Stop Funding Global Human Rights Violations

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Oregon State Treasurer Tobias Read,

I am writing to you as a concerned citizen and a supporter of Hindus for Human Rights, India Civil Watch International, and Indian American Muslim Council, calling on the Oregon Investment Council to immediately divest from the NSO Group, the Israeli spyware firm.

In 2017, the state of Oregon invested \$233 million in Novalpina, the private equity firm that later acquired a controlling stake in the NSO Group. This makes the state of Oregon's pension fund the largest indirect investor in a company whose Pegasus spyware has targeted hundreds of human rights defenders around the world.

The NSO Group's Pegasus software is capable of breaking into a smartphone, extracting files, and even turning on the microphone and camera without the user's permission. In India, the Hindu nationalist government of Narendra Modi has deployed Pegasus spyware to target dozens of leading human rights defenders, students, lawyers, journalists, and opposition politicians. Forensic investigations have shown that activist Rona Wilson's phone was infected with Pegasus software a year before his arrest in 2018. Following the revelations of the Pegasus Project, the Press Club of India stated that "This is the first time in the history of this country that all pillars of our democracy — judiciary, Parliamentarians, media, executives & ministers — have been spied upon." India's Supreme Court has since ordered an independent inquiry into the Modi government's use of Pegasus.

Here in the United States, the Biden administration blacklisted the NSO Group in November 2021, describing Pegasus as a "tool of repression." Several members of Congress, including Oregon's own Senator Ron Wyden have called on the Treasury and State Departments to

apply sanctions to the NSO Group under the Global Magnitsky Human Rights Accountability Act.

Surveillance technologies such as Pegasus software threaten our shared human rights, no matter where we live. I am appalled that the tax dollars of Oregonians have been invested in a company that has enabled human rights abuses in India and worldwide.

I urge State Treasurer Tobias Read and the Oregon Investment Council to immediately divest pension funds from NSO – a demand that has been made by Senator Wyden as well. The Oregon Investment Council should also implement a “human rights procurement screening” for all its investments, and especially for the public employee pension fund.

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Tony Wise

Dear Tobias Read,

My name is maryann campanella and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

Dear Tobias Read,

My name is MAEVE BARNUM and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
MAEVE BARNUM

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Emma Weibel

The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Tobey Thatcher

Subject: Please vote YES on the climate resolutions this spring!

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Kris N.

Portland, OR 97213

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Ashley Tupper and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ashley Tupper

Dear Tobias Read,

My name is Kanwaldeep Sekhon and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Subject: Please help: Financing Consistent with the IEA Net-Zero 1.5°C

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Glenn Koehrsen

As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Terry Tedesco

Dear Tobias Read,

My name is James Ford and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Anita Albertson

Dear Tobias Read,

My name is Laurie Azzoto and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Laurie Azzoto

The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Rosemary Tann

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario"
- at bank and insurance shareholder meetings this spring.

Last year,
the International Energy Agency (IEA) released the world's most comprehensive study
- of what is required to meet the goals of the Paris Agreement.

One of the IEA's most important findings is that
- "there is no need for investment in new fossil fuel supply"
- if we want to curtail global warming to 1.5°C.

However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal.
At 2°C of warming,
- hundreds of millions more people will be impacted by extreme heat,
- sea-level rise,
- crop failure,
- punishing droughts, and
- other extreme weather events.

Exceeding 1.5°C will also
- jeopardize the global economy.
It's estimated that
- limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world
- has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition,
continued investment
- in fossil fuels
exposes our state's funds to substantial financial risk.

In order to meet 1.5° targets,

fossil fuel infrastructure built this year

- will have to come off-line
- well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels
- to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from

- the climate crisis and
- the financial risk

that comes from investing in fossil fuels.

I urge you to vote YES on the climate resolutions

- before major banks and insurance companies this spring.

Sincerely,
Carolynn Kohout

Dear Tobias Read,

My name is ann gilson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
ann gilson

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Kathleen Ruiz

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Lisa Gentry and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Dear Tobias Read,

My name is Linda Watters and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Linda Watters

Dear Tobias Read,

My name is Grace Byrne and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." Subject: vote YES on climate resolutions

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
russell archer

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Peter Miller

Tobias Read,

My name is Geno T and I am extremely alarmed (as you should be) about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather will have on me and future generations. You must support critical climate resolutions this shareholder season.

All use of all fossil fuels must end as soon as possible if humanity is going to survive on the planet - it's as simple as that. You're in a position to have some influence on this goal. The more you allow the old normal to continue, the more death and devastation you're enabling in the distant and not-so-distant future.

This year, shareholders have filed climate resolutions at the six largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Geno T

Dear Tobias Read,

My name is Sandy Dumke and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Sandy Dumke

Dear Tobias Read,

My name is Thomas Holman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Thomas Holman

Dear Tobias Read,

My name is Kristin Smith and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kristin Smith

Dear Tobias Read,

My name is Felicity Hohenshelt and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Felicity Hohenshelt

Dear Tobias Read,

My name is Mark Hayduke Grenard and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

Dear Tobias Read,

My name is Kristen Swanson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kristen Swanson

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Kristen Swanson

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is doug franklin and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
doug franklin

Dear Tobias Read,

My name is jody berman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Christine Taylor

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Larry Weingart and I am a retired person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

Pathway changes by 2050 or sooner doesn't do anything right now, which makes these intentions meaningless. For any change to be effective, it must begin immediately all over the world. I don't expect you to actually do anything about this. No one will. Our world is f***ed.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their meaningless promises.

This issue is serious to us as our lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a retired person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Larry Weingart

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Barry Oaks

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Laurie LaGoe and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Laurie LaGoe

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

Hailey S

Dear Tobias Read,

My name is Elizabeth Seltzer and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Elizabeth Seltzer

Dear Tobias Read,

My name is Greg Brown and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Haley K and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Haley K

Dear Tobias Read,

My name is Maria Rua and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Maria Rua

Dear Tobias Read,

My name is Leslie Smith and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Dear Tobias Read,

My name is gabriele holland and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
gabriele holland

Dear Tobias Read,

My name is Yadira Diaz and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Yadira Diaz

Dear Tobias Read,

My name is Maria Gomez Murphy and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Annita Bowman

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Gina Gallo and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Gina Gallo

Dear Tobias Read,

My name is Johnny Ffiles and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Johnny Ffiles

I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Patricia Auer

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm urging you to vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

Last summer it was 116°F in the shade on my front porch here in Portland: INTOLERABLE! The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Judith Eda

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
GAIL LUNDE

Dear Tobias Read,

My name is Brenda Nieland and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

Dear Tobias Read,

My name is Phillip Hope and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Phillip Hope

Subject: Please help: Financing Consistent with the IEA Net-Zero 1.5°C

Follow Up Flag: Follow up
Flag Status: Flagged

Categories: Red Category

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Eileene Gillson

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Christina Viljoen and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Christina Viljoen

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Linda Hendrix

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Xiaoying Li and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Xiaoying Li

Dear Tobias Read,

My name is Erika Gonzalez and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Erika Gonzalez

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ms. Erin Noelle

Dear Tobias Read,

My name is Susan Castelli-Hill and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Susan Castelli-Hill

Dear Tobias Read,

My name is Nicholas Ribeiro and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Nicholas Ribeiro

Dear Tobias Read,

My name is Nicola Giorgio and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Shawn Troxell and I am a 61 year old woman deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Shawn Troxell

Dear Tobias Read,

My name is Lynn Buehler and I am a person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Lynn Buehler

Dear Tobias Read,

My name is Amber Rogers and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. Subject: vote YES on climate resolutions

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Mandy Buffington

As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
April Lasiter

Dear Tobias Read,

My name is Dale Kohler and I am deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious. Youths' entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Stephen a Johnson

Dear Tobias Read,

My name is Patricia Rowell and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Patricia Rowell

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Stephen a Johnson

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Marilyn Jean

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Liana Runcie and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Liana Runcie

Dear Tobias Read,

My name is Barbara Brandom and I am a parent and grandparent deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season. There is no time to lose. We must stop all investment in gas & oil infrastructure and move to green energy sources, other than hydrogen, as quickly as possible. Our futures and that of Ukraine depend on this.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Jaci Wilkins

Dear Tobias Read,

Say no to fossil fuel investments of any kind. DIVEST. There is no future for any of us if you continue this sort of mayhem.

My name is Mark Miller and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Mark Miller

One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
William Koch

Subject: AGM inquiry

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Melissa Reisland and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Melissa Reiland

Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Kristy Giles

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Martha Dragovich

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Ben Horner-Johnson

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion. Furthermore, the war in Ukraine is driving a perverse incentive towards short-term quick fixes involving domestic oil rather than long-term investment in renewable energy.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100. Furthermore, renewable energy can far more easily equal independent energy than fossil fuels. To invest in fossil fuels is to vote for even more wars in decades to come.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Philip Traynof

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring. It is the most fiscally forward-looking decision available to us as we face a future that depends on the decisions we make today.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Cynthia Bernett and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Cynthia Bernett

Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Stephen Funk

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

Subject: Constituent letters: Vote YES on climate shareholder resolutions at major U.S. banks

This email is from a party external to Treasury. Use care with links and attachments.

Dear Treasurer Reed,

Attached is a document with OR residents that recently signed on to the following statement asking you to vote in favor of the [shareholder resolutions](#) asking major U.S. banks to make their financing practices consistent with their own climate commitments. Four of these banks (Citi, Wells Fargo Bank of America, and Goldman Sachs) hold their annual general meetings next week, and two more (JPMorgan Chase and Morgan Stanley) will hold theirs next month:

Last year, the International Energy Agency made clear that in order to limit warming to 1.5 degrees C by 2050, "there is no need for investment in new fossil fuel supply" effective immediately. Despite clear warnings, banks have continued to pour billions of dollars into new fossil fuel exploration and development. The destructive impacts of fossil fuels stretch far beyond damage to ecosystems and communities. Exceeding the global warming limit of 1.5 degrees C will also have devastating impacts on the global economy and the financial system. Experts predict that under current emission trajectories, we stand to lose ten percent of total global economic value by 2050. Conversely, achieving the climate goals of the Paris Agreement could save \$20 trillion globally by the end of the century. We already see the impacts of climate change in our state and know that it will only get worse if we don't take bold action now.

So far, banks have failed to adequately manage key investor risks from new fossil fuel development. This is disproportionately a U.S. problem: in the years since the Paris Agreement, the four largest American banks have been the largest funders of fossil fuels in the world by a wide margin. By continuing to pour money into fossil expansion, banks are increasing the amount of potential stranded assets on their balance sheets, and exposing customers and investors to massive regulatory and litigation risks which could lose billions and even destabilize the entire financial system.

All six of the top U.S. banks -- JPMorgan Chase, Citigroup, Wells Fargo, Bank of America, Morgan Stanley, and Goldman Sachs -- have committed to achieve net-zero financed emissions by 2050 and joined the Net Zero Banking Alliance. However, none of these banks have disclosed plans to actually achieve these commitments, and not one has adopted a policy to stop financing for new fossil fuel expansion, which undermines their stated climate goals.

Climate-conscious investors have filed resolutions at all six major U.S. banks requesting that each bank adopt a policy by the end of 2022 committing to proactive measures to ensure that the company's lending and underwriting do not contribute to new fossil fuel supplies inconsistent with fulfilling the IEA's Net Zero Emissions by 2050 Roadmap.

As our State Treasurer, you can represent our state and help hold big banks accountable for their climate impacts. By voting for this resolution, you are ensuring that our savings are protected from climate-related risks, and using your influence to represent the best interests of our state.

As a State Treasurer, you can help influence the behavior of massive corporations and turn the tide on climate change. The shareholder engagement process is an essential tool in fighting the climate crisis. With your leadership, we can ensure that the world's largest banks in particular are facilitating the necessary transition to clean, low-carbon energy, instead of continuing to finance destructive fossil fuels. This shareholder season, I hope we can count on your continued support and leadership. Please vote YES on these resolutions at all six major U.S. banks.

Thank you for your time and attention to this important matter.

Sincerely,
Ben

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Amy Roberts and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Amy Roberts

Dear Tobias Read,

My name is Alexa Spiegel and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Alexa Spiegel

Dear Ms. Samples, Ms. Enand, Mr. Russell and Treasurer Read,

[Risky Business: Oregon Treasury's Fossil Fuel Problem](#) is a report from [Divest Oregon: Reinvest in a Fossil Free Future](#); our grassroots statewide coalition that now has 90 organizational members. The report is part of our ongoing campaign to point out the risks of funding the fossil fuel industry. We hope it will invigorate your oversight function as a member of the Council that "oversees the investment and allocation of all State of Oregon trust funds." We have distributed it to Treasury staff, the Short-Term Fund Board, the PERS Board and the SAIF Board.

Given our many communications with you, the questions highlighted by the report will be familiar. They have yet to be answered by the Treasury and you:

-
-
- Why is ongoing investment in the fossil fuel industry wise given the massive market shift and geopolitical risks, increasing due to climate change?
-
-
-
- How, specifically, are you evaluating and addressing contemporary climate risks to Treasury investments?
-
-
-
- Why hasn't the climate risk assessment you commissioned been released to the public, with redactions as necessary given the contracts you have entered into with private equity firms?
-
-
-
- How are you able to accurately monitor and evaluate private equity investments when they are shielded from scrutiny by contractual terms or statute?
-

Our report has received extensive media coverage, as we assume you have noticed. Here is a sampling, with more in the works:

▪

Divest Oregon is asking the Treasury to shift the investments for Oregonians and PERS beneficiaries into enhancing our future in clear recognition of the climate and financial risks already at our door. Instead, it appears the Treasury's investments are contributing to our destruction, literally – and we look to you to do something about that.

We encourage you, Ms. Samples, Ms. Enand, and Mr. Russell, to ask tough questions and create sustainable pathways forward. If you are selling all Russian holdings, no matter if there are sanctions, which we applaud, we know you can do similarly for fossil fuel investments.

We thank you for your service.

Jenifer Schramm and Susan Palmiter
Co-leads Divest Oregon: Reinvest in a Fossil-Free Future

Subject: Please help: Financing Consistent with the IEA Net-Zero 1.5°C

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Stephen Oder

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

Ryan Hassan

Dear Tobias Read,

My name is John Rhoades and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
John Rhoades

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and

severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
April Griffith

Mr. Treasurer Read,

I am concerned about the ways in which public funds managed
- by the Oregon Treasury
are being invested.

The fossil fuel industry
- is a financially risky investment
- whose product harms the climate.

I join with the Divest Oregon campaign
- to demand the following things:

- 1- Immediately: No NEW investments in fossil fuels
- since they pose
- a financial,
- health, and
- climate risk to Oregonians.
- 2- By 2026: Transparently
- phase out all CURRENT fossil fuel investments and
- move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

SEIU Local 503/99 (Homecare)
OregonSaves Investor
CAPE Senate District 15 Rep.
SEIU 503 Climate Justice Committee member Carolynn Kohout

Dear Tobias Read,

My name is Kathryn Coutcher and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kathryn Coutcher

Dear Tobias Read,

My name is Ansula Press and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its

impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ansula Press

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Esther Garvett

Dear Tobias Read,

My name is Greg Brown and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change.
