Dear Tobias Read,

My name is Veronica Bourassa and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Veronica Bourassa

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement.

This, like numerous other issues (climate change, gun safety, immigration reform, prison reform, education reform, short-term lending regulation, healthcare reform, banking regulation, opioid regulation) remains a vexing problem primarily due to corporations' ability to curry favor with elected officials. The corrupting influence of money in our political system is undermining our democratic traditions and discouraging Americans from voting and/or running for office. This ominous development may well end our experiment in representative democracy unless we alter this decades-long trend. For the sake of the republic, we must amend the US Constitution to state that corporations are not people (and do not have constitutional rights) and money is not speech (and thus can be regulated by state and/or federal campaign finance laws). Short of accomplishing this, no other reform of significance will be achieved. The moneyed interests will turn any reform to their benefit, often at the expense of the nation as a whole.

Thank you for your attention, and I look forward to hearing from you.

Sincerely,
James Klein

Dear Tobias Read,

My name is Norman Dowling and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Norman Dowling

Dear Tobias Read,

My name is Josh Schachter and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Kaneisha Lewis and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kaneisha Lewis

Dear Tobias Read,

My name is Iris Arno and I work with many young people who are deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on them and future generations. I am writing today to request that you support critical climate resolutions this shareholder season. I worked with Divest NY to convince our state comptroller to divest the major pension funds and he is doing a great job of working for our young people. You can do the same!

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to me as a mother and lover of our planet. I am saddened and horrified that the lives of our youth

are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact all of us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

Speaking to support the young people who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Iris Arno

Dear Tobias Read,

My name is Veronica Schweyen and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Veronica Schweyen

Dear Tobias Read,

My name is Sharon Baker and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

When ALL the trees and animals are dead and ALL the air, land and water are polluted you will then realize you and your progeny can't eat money.....

As a person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Dear Tobias Read,

My name is Tamar Schwartz and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Tamar Schwartz

Dear Tobias Read,

My name is Johnny Fifles and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Johnny Ffiles

Dear Tobias Read,

My name is Vicki Fox and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Linda Bescrypt and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Linda Bescrypt

Dear Tobias Read,

My name is Dorothy Li Calzi and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Dorothy Li Calzi

Dear Tobias Read,

My name is Meg Lessard and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Meg Lessard

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to urge that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Joseph Stenger

Mr. Treasurer Read,

As an Oregonian, I am concerned about the ways in which public funds managed by the Oregon Treasury are being invested. The fossil fuel industry is a financially risky investment whose product harms the climate. I join with the Divest Oregon campaign to demand the following things:

- Immediately: No NEW investments in fossil fuels since they pose a financial, health, and climate risk to Oregonians.
- By 2026: Transparently phase out all CURRENT fossil fuel investments and move to climate-safe investments, using a social justice framework.

Thank you,

In solidarity,

Katie Abbott

Dear Tobias Read,

My name is Laurie O'Loughlin and I am deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Laurie O'Loughlin

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Lauren Fenenbock

Dear Tobias Read,

Please, it's imperative that you vote YES on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Judith Eda

Subject: AGM inquiry

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Sandy Rhein and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Dear Tobias Read,

My name is Denise Lytle and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Denise Lytle

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
B. Peterson

Dear Tobias Read,

My name is Miranda Daviduk and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

Dear Tobias Read,

My name is Karen Babin and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Dear Tobias Read,

My name is Sandy Dumke and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Sandy Dumke

Dear Tobias Read,

My name is Ashley Hanshaw and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Susannah Laskaris and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Susannah Laskaris

Dear Tobias Read,

My name is Anthony Measham and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Anthony Measham

Dear Tobias Read,

My name is Kimberly Derwent and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Jack Gorman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jack Gorman

Dear Tobias Read,

My name is Dennis Yates and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Dennis Yates

Dear Tobias Read,

My name is Deann Darling and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Deann Darling

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kim Clark

Dear Tobias Read,

My name is Ed Dye and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ed Dye

Dear Tobias Read,

My name is Bryant Belli and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Bryant Belli

Dear Tobias Read,

My name is Daniel Lipson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Sandy Harper and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Sandy Harper
cyrano@ak.net

PS I am actually an older person in my 80's but wish to see a healthy planet for my children and grandchildren and future generations. ...

Dear Tobias Read,

My name is Jean Dibble and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jean Dibble

Dear Tobias Read,

My name is Lucy Austin and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Sam Dibrell and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Sam Dibrell

Dear Tobias Read,

My name is Paula Gordinier and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Paula Gordinier

Dear Tobias Read,

My name is Marie Driscoll and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Liz Lundquist and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Liz Lundquist

Dear Tobias Read,

My name is B. Z. and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,

B. Z.

Dear Tobias Read,

My name is Jan Beauchamp and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jan Beauchamp

The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
judi burbes

Dear Tobias Read,

My name is Karen Cotterell and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Karen Cotterell

Subject: Please help: Financing Consistent with the IEA Net-Zero 1.5°C

Follow Up Flag: Follow up
Flag Status: Flagged

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

I'm writing to ask that you vote yes on the "Financing Consistent with the IEA Net-Zero 1.5°C Scenario" at bank and insurance shareholder meetings this spring.

Last year, the International Energy Agency (IEA) released the world's most comprehensive study of what is required to meet the goals of the Paris Agreement. One of the IEA's most important findings is that "there is no need for investment in new fossil fuel supply" if we want to curtail global warming to 1.5°C. However, big banks and insurance companies continue to finance fossil fuel expansion.

The difference between 2°C and 1.5°C of global warming is colossal — at 2°C of warming, hundreds of millions more people will be impacted by extreme heat, sea-level rise, crop failure, punishing droughts, and other extreme weather events. Exceeding 1.5°C will also jeopardize the global economy. It's estimated that limiting warming to 1.5 versus 2°C could save \$20 trillion globally by 2100.

This is why nearly every nation in the world has agreed to the Paris Agreement goal of limiting global warming to 1.5°C.

In addition, continued investment in fossil fuels exposes our state's funds to substantial financial risk. In order to meet 1.5° targets, fossil fuel infrastructure built this year will have to come off-line well before the end of its predicted economic lifespan, leaving trillions of dollars in stranded assets and causing a bubble exposing everyone invested in fossil fuels to significant risk.

As the chief financial officer for our state, you have a responsibility to protect our state's residents from the climate crisis and the financial risk that comes from investing in fossil fuels. I urge you to vote YES on the climate resolutions before major banks and insurance companies this spring.

Sincerely,
Priscilla Carlson

Dear Tobias Read,

My name is Debra Smith and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Debra Smith

Dear Tobias Read,

My name is Gerritt and Elizabet Baker-Smith and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Gerritt and Elizabet Baker-Smith

Dear Tobias Read,

My name is Angus M. Macdonald and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Salissa Chavez and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Salissa Chavez

Dear Tobias Read,

My name is Ela Thomas and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ela Thomas

Dear Tobias Read,

My name is Susan Chenelle and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Kim Smith and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kim Smith

Dear Tobias Read,

My name is Mary Thornton and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Mary Thornton

Dear Tobias Read,

My name is Jess DePew and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain from lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net-zero by 2050, released last May [1]. This, along with other climate proposals filed this year, is aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to aligning their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net-Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As a youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heatwaves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Jess DePew

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Annie McMahon

Dear Tobias Read,

My name is Maribelle Troup Perez and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is edna gruvman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
edna gruvman

Dear Tobias Read,

My name is Eugene Humrighouse and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Eugene Humrighouse

Dear Tobias Read,

My name is Carlos Cuevas and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

Dear Tobias Read,

My name is Stuart Braman and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Stuart Braman

Dear Tobias Read,

My name is Ariella Safer and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ariella Safer

Dear Tobias Read,

My name is Silvio Fittipaldi and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Dear Tobias Read,

My name is sherrri hodes and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
sherrri hodges

Dear Tobias Read,

My name is Joan Kolessar and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Joan Kolessar

Dear Tobias Read,

My name is Judith TURNER and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Laura Esparza and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Laura Esparza

Dear Tobias Read,

My name is Kris Kinner and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Kris Kinner

Dear Tobias Read,

My name is Cynthia Bennett and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Cynthia Bernett

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Margaret Dukes

This email is from a party external to Treasury. Use care with links and attachments.

Dear Tobias Read,

My name is Linda Jenkins and I am a mother, grandmother, retired attorney and pastor deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. For our youth, their entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the

frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a grandparent of a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Linda Jenkins

Dear Tobias Read,

My name is John Dunn and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
John Dunn

Dear Tobias Read,

My name is Hipolito Arriaga and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Hipolito Arriaga

Dear Tobias Read,

My name is Terry Tedesco and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Beth Levin and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Beth Levin

Dear Tobias Read,

My name is David Stevei and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
David Stevei

Dear Tobias Read,

My name is Leilani Mack and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Dear Tobias Read,

My name is Diane Soddy and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Diane Soddy

Dear Tobias Read,

My name is Diane Soddy and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Diane Soddy

Dear Tobias Read,

My name is Mark Williams and I am a young person in Fort Lauderdale who is deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Gary Nelson and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Gary Nelson

Dear Tobias Read,

My name is Lawrence East and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Lawrence East

Dear Tobias Read,

My name is Carolyn Rainwater and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Carolyn Rainwater

This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Taylor Smith

Dear Tobias Read,

My name is Nancy McCullough and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

Dear Tobias Read,

My name is Vyonne Jenks and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Vyonne Jenks

Dear Tobias Read,

My name is Michael Hubbard and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Michael Hubbard

Dear Tobias Read,

My name is virginia liebowitz and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is willis gravelle and I am an elderly person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
willis gravelle

Dear Tobias Read,

My name is Pete Sinica and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Pete Sinica

Dear Tobias Read,

My name is Ann Marie Sinica and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is Doris Ward and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Doris Ward

Dear Tobias Read,

My name is Ryan Joyce and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Ryan Joyce

Dear Tobias Read,

My name is George Hanas and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
George Hanas

The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Joseph Kenosky

Dear Tobias Read,

My name is Karen Langelier and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Karen Langelier

Dear Tobias Read,

My name is Chey Richmond and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Chey Richmond

Dear Tobias Read,

My name is Deirdre McKiernan Hetzler and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Dear Tobias Read,

My name is lisa fisk and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
lisa fisk

Dear Tobias Read,

My name is Heidi Andrade and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.

Financial institutions like banks are enabling climate change acceleration by providing key financial services to the fossil fuel industry [6]. For decades, we've known that the burning of fossil fuels is the number one driver of climate change. Yet fossil fuel extraction has only continued, and fossil fuel companies are still exploring and building new, deadly projects [7].

As a shareholder and as the custodian of our community's resources for the long-term, your Office of the Treasury must use its shareholder power to curb climate risk and to push these companies to adopt climate-safe policies we all desperately need for our long-term economic and climate security and resilience. We urge you to use your proxy voting power to support these resolutions and to push for the end of financial services for fossil fuel expansion.

As a young person who will be deeply affected by climate change and the continued rampant use of fossil fuels, I request your support for these critical climate votes and for making climate a priority in your shareholder engagement. Thank you for your attention, and I look forward to hearing from you.

Sincerely,
Heidi Andrade

Dear Tobias Read,

My name is Stephen Brace and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. Dear Tobias Read,

My name is Gianluca Guaitoli and I am a young person deeply concerned about climate change and the escalating impacts that pollution, ecological destruction, and extreme weather events will have on me and future generations. I am writing today to request that you support critical climate resolutions this shareholder season.

This year, shareholders have filed climate resolutions at the 6 largest U.S. banks to propose policies to refrain lending for new fossil fuel exploration and development. The resolutions are based on a new energy scenario by the International Energy Agency for reaching net zero by 2050, released last May [1]. This, along with other climate proposals filed this year, are aimed at improving climate governance, mitigating climate risk, and encouraging climate action. You can review the bank resolutions here (<https://www.iccr.org/2022-climate-finance-resolutions>) and read about them in Reuters and Bloomberg [2].

Already, we have seen support for these resolutions. The New York State Comptroller Tom DiNapoli recently announced that the \$279 billion New York State Common Retirement Fund will vote in favor of these climate resolutions [3]. They further urged other shareholders to follow suit.

Here is a quote from their exempt solicitation: "Financial institutions have a key role to play in decarbonizing the global economy and addressing the systemic risks posed by climate change. Failure to achieve net-zero greenhouse gas emissions by 2050 at the latest and limit global warming to 1.5-degrees Celsius poses enormous risks to the global economy, with estimates of global losses from unabated climate change of 10% of total economic value by mid-century." [4] This support comes from the third-largest public retirement system in the country.

All 6 major U.S. banks have already committed to align their lending and investment portfolios with pathways to net-zero by 2050 or sooner [5]. The IEA's Net Zero by 2050 report concluded that "there is no need for investment in new fossil fuel supply" if we are to curtail global warming to 1.5°C. As the New York State Retirement Fund said, "All of these financial institutions have made net-zero commitments and joined the Net-Zero Banking Alliance, but to ensure that those commitments are credible, they need to adopt policies that eliminate financing of new fossil fuel exploration and development." [4] By continuing to finance new fossil fuel supply, these banks are acting against their own climate commitments to align with the Paris Agreement and are disregarding reputable industry voices and science-based targets.

The responsible way forward for banks is clearly laid, and this spring, you have the power to vote for climate resolutions that will ensure that banks are following through with their promises.

This issue is serious to us. As youth, our entire lives are drastically restricted and threatened by climate change and its impacts. The effects of climate change are no longer a future problem. As temperatures rise, so does the frequency and severity of floods, wildfires, hurricanes, and heat waves across the United States and around the world.

Your votes as a shareholder impact us because each year of delayed or insufficient climate action by these financial institutions is directly tied to millions of metric tons of greenhouse gas emissions that will lock us into runaway climate change.
