Quick Tip: E-mail Safety

The leading cause of cyberattacks and data breaches around the world is employee error. Many of these errors occur in response to tactics used by hackers to manipulate people into providing access or supplying information via e-mail.

Below are some e-mail safety best practices that can help educate your staff on how to respond to or handle suspicious e-mails:

- ▲ Never open e-mails from someone you do not know or that you are not expecting. If the e-mail is unexpected or seems fishy, it likely is. Delete the e-mail and report it to your IT department.
- A Never open an attachment or click on a link in an e-mail from someone you do not know or that you are not expecting. Attachments and suspicious links sent via phishing e-mails often contain viruses or ransomware, which can provide unauthorized access to protected information.
- Avoid sending confidential information through e-mail. Sensitive information such as passwords, bank account numbers, and social security numbers are prime targets for hackers and should never be sent via e-mail.
- Always remember to properly log out of your e-mail when not in use. This is a quick and easy way to help protect your account from unwanted trespassers.
- ▲ Use multi-factor authentication when possible. Multifactor authentication provides an additional layer of security by requiring a second form of verification when signing into your e-mail account.
