

GRAND CANYON UNIVERSITY®

FIND YOUR PURPOSE

Teacher Standards and Practices Commission
250 Division St. NE
Salem, OR 97301

Dear Oregon Teacher Standards and Practices Commission:

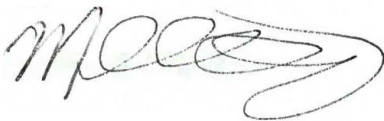

Grand Canyon University (GCU) is submitting its application to obtain program recognition for the Master of Arts in K-12 Reading and Master of Arts in Teaching English to Speakers of Other Languages (TESOL) programs in Oregon. GCU began in 1949 with 16 faculty members and approximately 100 students enrolled in traditional programs. Over the past 73 years, GCU has grown through its program expansion and investment intended to improve the quality of GCU's academic offerings and student experiences. From 2009 – 2021, 67,383 students graduated from GCU's College of Education (COE), helping to fill the nation's teacher shortage.

GCU is a missional, Christ-centered university with an innovative and adaptive spirit that addresses the world's deep needs by cultivating compassionate Christian community, empowering free and virtuous action, and serving others in ways that promote human flourishing. Through academic excellence, the university equips students with knowledge of the Christian worldview, instilling in them a sense of purpose and vocational calling that enables them to be innovative thinkers, effective communicators, global contributors and transformative leaders who change their communities by placing the interests of others before their own.

Since its inception, GCU has provided foundational teacher preparation programs providing multiple generations of teachers to the communities GCU serves. GCU's College of Education (COE) supports the integration of faith and support services through a proactive approach to developing student's servant leadership skills and ensuring the success of GCU's alumni in education settings. The mission of COE is to inspire excellence in pedagogy and scholarship; advance reflective, innovative, and collaborative teaching practices to maximize student learning and achievement; promote servant leadership in educational communities and engage a diverse and global community of learners with purpose and passion. In COE, learning, leading, and serving are the foundational components of its conceptual framework, symbolizing the College's diverse learning opportunities. Full-time faculty, administrative staff, and adjunct faculty work diligently to create a culture of mutual respect, fellowship, and servant leadership within the educational community to propel the GCU mission and vision.

Please accept this letter and application as GCU's intent to obtain program recognition from the Oregon Teacher Standards and Practices Commission for its Master of Arts in K-12 Reading and Master of Arts in Teaching English to Speakers of Other Languages (TESOL) programs.

Sincerely,

Dr. Meredith Critchfield
Dean of the College of Education
Grand Canyon University

Contents

Oregon Pre-Conditions Application	2
Criterion 1: Institutional Accreditation	2
Criterion 2: NC-SARA Participation and ODA Confirmation Letter	2
Criterion 3: Letter of Assurance	2
Criterion 4: College of Education Organizational Chart	2
Criterion 5: GCU’s Academic Catalog and University Policy Handbook.....	2
Criterion 6: COE’s Conceptual Framework	3
Criterion 7: Institutional Effectiveness and Assessment	7
Criterion 8: Admission and Graduation Policies	10

Oregon Pre-Conditions Application

Criterion 1: Institutional Accreditation

Obtain institutional accreditation by an agency approved by CHEA or the US Department of Education, as required in OAR 584-010-0015

Please see Appendix A, Grand Canyon University's Higher Learning Commission Approval Letter.

Criterion 2: NC-SARA Participation and ODA Confirmation Letter

Obtain approval by the Oregon Office of Degree Authorization or its equivalent authorizing body, and if an Oregon public institution, by the Oregon Higher Education Coordinating Commission or its equivalent authorizing body;

Please see Appendix B, NC-SARA Participation and ODA Confirmation Letter. As Grand Canyon University is approved to participate in NC-SARA and will only be offering these programs via distance education from its Arizona location, Oregon ODA has determined that Grand Canyon University is not required to obtain authorization.

Criterion 3: Letter of Assurance

Provide a letter from the institution's administrative body recognizing and identifying the professional educational unit as having responsibility and authority for the preparation of licensed educators;

Please see Appendix C, a signed letter from Dr. Meredith Critchfield on letterhead that ensures the College of Education at Grand Canyon University recognizes and identifies as having the responsibility and authority for the preparation of licensed educators.

Criterion 4: College of Education Organizational Chart

Provide evidence that a dean, director or chair has been officially designated as head of the unit and is assigned the authority and responsibility for its overall administration and operation;

Please see Appendix D, Grand Canyon University's organizational chart for the College of Education.

Criterion 5: GCU's Academic Catalog and University Policy Handbook

Provide written policies and procedures that will guide the operations of the unit, including, but not limited to: student handbooks; procedures on admission; program waivers; and student appeal rights;

Grand Canyon University's program and courses are provided in its Academic Catalog (AC). Institutional policies that include procedures of admission, general academic regulations, student appeal rights, and graduation requirements are contained within GCU's University Policy Handbook (UPH) on the following pages:

Admission Policies and Application Procedures - Pages 34-52.

General Academic Regulation - Pages 55-181.

University Appeal Procedures - Pages 151-153.

Graduation Requirements - Pages 204-207.

In the UPH, students are provided information guiding them to the College of Education Student Teaching Manual to locate specific information that is relevant to their academic experience. Although the Student Teaching Manual is not linked to the UPH, the Student Teaching Manual can be found referenced on the following pages of the UPH: 69, 70, 99, and 100.

Students can also access the Student Teaching Manual, along with a great deal of additional student teaching resources, in the Student Success Center. All academic classes provide a direct link to the Student Success Center allowing students to easily locate College of Education material. Please see Appendix E for Grand Canyon University's Academic Catalog.

Please see Appendix F for Grand Canyon University's University Policy Handbook.

Criterion 6: COE's Conceptual Framework

Provide the unit's conceptual framework that establishes the shared vision for a unit's efforts in preparing educators to work in P-12 schools and provides direction for programs, courses, teaching, candidate performance, scholarship, leadership, service, and unit accountability. Additional information is provided in the Conceptual Framework subsection in this section;

The College of Education (noted as “the College” or “COE”) at Grand Canyon University (“GCU”) is part of a rich heritage of service to the community. For over 60 years, the COE has proudly maintained its place as a prestigious teaching College, ensuring programs continue to meet the changing, diverse needs in education and local communities, and provide opportunities that create meaningful learning experiences for education candidates. The College places great importance on the development of meaningful and authentic partnerships from practicum/field experience through student teaching. This work goes from embedded partnerships in the greater Phoenix area to affiliation agreements across the country. With each, knowing what schools and districts value and what our candidates need to have the best learning experiences remain at the forefront of the College's clinical work.

GCU is a member in good standing of the Association for Advancing Quality in Educator Preparation (AAQEP), a national accrediting organization recognized by the Council for Higher Education Accreditation. COE has established a committee of staff and faculty to work collaboratively on the revisions. All revisions will be approved through college and university processes.

The *Mission* of COE is to inspire excellence in pedagogy and scholarship; advance reflective, innovative, and collaborative teaching practices to maximize student learning and achievement; promote servant leadership in educational communities, and engage a diverse and global community of learners with purpose and passion. COE develops educators who are classroom ready through programs and processes that exemplify excellence in pedagogy, scholarship, and service while engaging a diverse and global community of learners. The desire is to prepare purposeful and passionate educators who

strive to deliver quality education and enrich lives across a variety of school and community settings.

Learning, Leading, and Serving are the foundational components of COE's *Conceptual Framework*. These words symbolize the College's diverse learning opportunities where faculty and administrative staff work diligently to create a culture of mutual respect, fellowship, and servant leadership within the educational community. COE's Conceptual Framework directly reflects GCU's commitment to serving educational communities in ways that promote human flourishing. GCU's placement of candidates directly reflects GCU's commitment to promoting servant leadership in educational communities. These three elements are as follows:

- **Learning:** COE believes that all students can learn and that educators who inspire excellence engage in best practices and maximize student learning achievements. Effective educators are highly experience and skilled communicator who are dedicated and compassionate, ensuring all students learn to the best of their ability.
- **Leading:** COE believes that education is a powerful tool with which to purposefully transform and uplift communities. As our candidates find their purpose and calling within education, the College aims to support candidates to reach their God-given potential and fulfill their passion in education by helping them lead with a keen focus on addressing the world's deep needs.
- **Serving:** COE believes in the spirit of servant leadership and are committed to serving all candidates to enable them to become global contributors who change their communities and the world. As faculty, staff and candidates, we believe in serving educational communities with an innovative and adaptive spirit and a strong dedication to professional conduct and ethics, respect for the diversity of others and excellence for all.

The College of Education teacher and administrator preparation programs are designed to ensure that candidates aspire to a set of personal and professional goals that will enable them to be educators focused on student learning and achievement, as a direct reflection of the College's mission.

Eight *Learner Goals* are reflective of standards espoused by state and federal departments of national accrediting bodies, and professional education organizations., and accrediting bodies.

1. **Professional Dispositions:** Candidates will develop the values, commitments, and ethics that positively impact the educational community as well as the educator's own professional growth.
2. **Content Knowledge:** Candidates will master the content they intend to teach and will be able to explain its important principles and concepts.

3. **Pedagogical Knowledge and Skills:** Candidates will develop an understanding of the relationship between content and content-specific pedagogy, instructional strategy, and technology.
4. **Professional Knowledge and Skills:** Candidates will be able to develop meaningful learning experiences that improve student learning and achievement, collaborate with other education professionals, and reflect on their practice.
5. **Data-Informed Decision Making:** Candidates will use data to make informed decisions about student learning and achievement, continuous school improvement, and professional practice.
6. **Performance Assessment:** Candidates will align educational objectives to content and professional education standards, as well as design formative and summative assessments including rubrics that analyze student learning and teacher effectiveness.
7. **Technology Integration:** Candidates will be able to select and use applicable technology to enhance learning experiences.
8. **Field Experience/Clinical Practice:** Candidates will participate in field-based learning opportunities that focus on observation, participation, application, leadership, and/or reflection in real world settings.

The College's *Professional Dispositions* are the values, commitments and professional ethics that influence behaviors toward students, families, colleagues and communities and that affect student learning and achievement, motivation and development, as well as the educator's own professional growth. If sincerely held, dispositions should lead to actions and patterns of professional conduct. For GCU College of Education students, these dispositions flow from the university's mission statement. A values-based education emphasizing community, character and citizenship in the context of a Christian worldview seeks to teach, reinforce, support and cause teacher candidates to contemplate

certain foundational values which Christianity contends lead to a good life and overall human flourishing. These normative Christian values are integral to the development, maturity and education of ethical and morally respectable citizens who continue on the path of lifelong learning and service. For College of Education students, this is manifested in the professional dispositions each carries into the educational community.

1. **High Expectations:** Educators should believe that all students could learn and should set and support realistic expectations for student success.
2. **Respect for the Diversity of Others:** Educators should be sensitive to individual learning and the social needs of students and embrace the cultural diversity of the community. They should develop and maintain educational communities marked by respect for others. They should interact with their students, fellow educators, administrators, parents and other community members with courtesy and civility and establish relationships characterized by respect and rapport.
3. **Fairness:** Educators should promote social justice and equity, maintain appropriate standards of confidentiality and exercise fairness in all areas including assessment.
4. **Professional Conduct:** Educators should exercise sound judgment and ethical behavior. They should be a positive role model within their community.
5. **Reflection:** Educators should recognize that reflection combined with experience leads to growth as a professional. Educators should be thoughtful about their professional practice, critically examine it and seek continual improvement
6. **Curiosity:** Educators should promote and support curiosity and encourage active inquiry. They should be able to think innovatively and creatively, using critical thinking as a problem-solving approach.
7. **Honesty:** Educators should model integrity by their words and actions. They should be forthright with others and uphold high standards of trust, character and integrity.
8. **Compassion:** Educators should demonstrate professional friendliness, warmth and genuine caring in their relationships with others while providing intellectual, emotional and spiritual support.
9. **Advocacy:** Educators should promote positive change in schools and communities that benefit the welfare of others.
10. **Dedication:** Educators should be committed to the profession of teaching and learning. They should be professionally active, lifelong learners and seek opportunities for professional development.

The College also has a *Pledge and Promise* to its students to actively assist all COE graduates who need support in an educational setting. Since 1984, we have upheld this promise to provide additional support. To honor this promise, we ask graduates to pledge to uphold a high level of excellence in an educational setting.

As a Christian university, GCU and COE take a proactive approach to developing students' servant leadership skills and ensuring the success of our alumni in educational settings. While the College's accredited programs are designed to equip students for a career in education, our faculty, staff, and College leaders understand the unique challenges a career in education might occasionally present. Collectively, our College's Mission, Conceptual Framework, and Pledge and Promise provide the foundation for a shared vision in preparing P-12 educators, as well as in our college's commitment to continuous improvement.

Criterion 7: Institutional Effectiveness and Assessment

Provide evidence that the unit regularly monitors and evaluates its operations, the quality of its offerings, the performance of its candidates, and the effectiveness of its graduates;

GCU's academic mantra of "Say It, Do It, Prove It, Improve It" has guided assessment since 2006. This mantra was created to demonstrate GCU's commitment to student learning, the assessment of that learning, and the improvement of student learning. Therefore, the entire curriculum process demonstrates clear learning goals that are later assessed through programmatic assessment and improvement action plans are created. This brings the learning process full-circle.

GCU has clearly stated goals for student learning at the course, program, and University levels. All curriculum is created through a multi-stage design process led by faculty and supported by instructional staff and industry experts. The innovative program design process ensures authentic performance-based assessment of student learning and provides a systematic process to obtain assessment data across levels, modalities, and time.

The clear articulation of learning outcome expectations resulting from the design process allows all courses to map specific objectives to particular assignments. These designated benchmark assignments produce student work collected as authentic artifacts and used for direct assessment of student learning at the course, program, and institutional levels. The analysis and interpretation of the results guide improvement action plans, inform curricular and instructional changes, and spur further development at all levels to more effectively meet program needs. Assessment at GCU is authentic, embedded, and above all, faculty-driven.

The GCU Student Learning Assessment Model, attached as Appendix G, depicts how the University has developed a systematic approach to assess achievement of learning outcomes across levels, modalities, and time in curricular and co-curricular areas.

The core represents University and programmatic learning outcomes, and the students' value of their learning. The internal assessment and improvement ring displays significant processes and resulting data measuring student performance and identifying areas for improvement. Interventions are determined in collaboration with faculty, counselors, and other University support resources. The external ring demonstrates the connection of internal learning outcomes to external benchmarks, such as national and professional exams, surveys, acceptance into graduate schools, and employment.

The foremost gauge of successful assessment processes and methodologies is through the continued demonstrable improvement of student learning. Shared ownership, participation, and accountability of people, processes, and systems inform the vision and collective goal. The consistency and coherence of widespread reflective practice and evaluative expertise characterize GCU's commitment to assessment and improvement of student learning.

GCU's culture of continuous improvement led to significant gains in retention, persistence, and graduation, and the creation of sustainable processes for long-term progress. GCU determines targets that are discrete, achievable goals at the course, programmatic, and university levels.

COE believes in an assessment model grounded in continuous improvement, where authentic data is systematically reflected on, evaluated, with results used and implemented to improve practice, and reevaluated by stakeholders to ensure outcomes that are reflected in candidates of the highest quality. The College promotes an evaluation system that is holistic in nature, with ties to its Conceptual Framework and College and University Mission Statements. The College collects a variety of data points throughout the life cycle of a candidate that helps faculty and administration evaluate, recommend, and implement course and programmatic improvements.

COE holds an annual Assessment Summit, in which the formal presentation of assessment data by program of study is presented for review by faculty and administrative staff. This formal review provides the foundation for the College's assessment philosophy of continuous improvement. The Assessment Summit enhances continuous improvement and is a foundational base for year-round activities. The assessment system itself is founded within the College Conceptual Framework and aligns to the various national standards recognized in the preparation of candidates. The life cycle of the candidate, as reflected with defined transition points, provides the underpinnings from which assessments are measured and evaluated.

The College of Education employs a wide array of assessment tools and techniques to measure and enhance a candidate's competency in coursework and clinical field experience. All candidate competencies are influenced by the curriculum, student teaching experience, the faculty, and the candidates themselves. To ensure that a holistic approach is used to measure competencies, the College assesses candidates in the following ways:

- **Program Review:** Program efficacy and performance are assessed and evaluated in a recursive three-year cycle which culminates in a formal Program Review of which ongoing assessment, analysis, and improvement actions occur. Program Review assesses data gathered from multiple indicators appropriate to a program's mission and educational purposes, and concomitant with candidate success and external requirements.
- **Data Dialogue:** The Data Dialogue is used to monitor ongoing course operations, curriculum and instructional data, as well as provide baseline information for major program revisions through Academic Metrics and Trends (AM&T) and candidate and faculty End of Course Surveys (EOCS). The data dialogue process has been the key driver in detecting and resolving course and program related concerns.
- **Benchmark Assignments:** The College annually reviews programmatic benchmark results at the course, program, and university levels to evaluate candidate performance, aligned to specific domains and competencies.
- **Grades:** The College monitors grade distribution statistics at the instructor, program, course, and term levels in a College-maintained database to measure candidate success and competency, as well as areas for curricular and faculty training growth.
- **Student Teaching Evaluation of Performance (STEP)*:** GCU's Student Teaching Evaluation of Performance (STEP) is a standards-aligned summative assessment of teacher candidates using video and work sample components to demonstrate programmatic proficiency and preparedness
- **Clinical Field Experience and Internship Evaluations**:** GCU provides trained faculty supervisors and cooperating teachers/principal mentors who collaboratively reflect on the candidate's performance throughout the student teaching / internship experience(s). These mentors and supervisors use criterion-referenced rubrics and meet regularly with candidates throughout student teaching and internships
- **Content Knowledge Exams*:** Teacher candidates must pass their state-mandated basic skills and content area exams prior to applying for the student teaching experience. The College actively monitors exam data to evaluate programmatic success. College staff and faculty have created a proprietary library of videos and resources available to candidates throughout their programs.

**Applies to initial teacher licensure programs*

***Applies to initial teacher licensure and principal licensure programs*

The College's philosophy of assessment continues post-graduation for the candidate, as the College implements assessment systems to track overall program satisfaction, career preparation, and employment outlook. In addition to the End of Program Survey, a GCU Alumni Survey is sent to alumni at 1- and 5-years post-graduation. The survey prompts responses related to program and academic satisfaction, career readiness and advancement, value-add of the degree completion, graduate performance, as well as employer satisfaction.

The primary purpose of assessment is to measure candidate learning during and at the completion of a program, and in the case of the COE itself, to measure programmatic and operational effectiveness as well. Assessment is a process that permits the COE to accomplish its goals outlined in the Conceptual Framework. In alignment with national standards, the College has initialized an assessment system that collects and analyzes data on candidate and graduate performance and dispositions, as well as unit operations.

GCU College of Education is a member in good standing of the Association for Advancing Quality in Educator Preparation (AAQEP), a national accrediting organization recognized by the Council for Higher Education Accreditation. Full accreditation acknowledges that a program prepares effective educators who continue to grow as professionals and has demonstrated the commitment and capacity to maintain quality. As a part of the AAQEP accreditation process, the College conducts an annual review of candidate enrollment and completion data, program performance indicators, and candidate academic performance indicators. This review is one of the many ways the College monitors and evaluates the quality of our programs and processes to support candidate preparation and success. The summary of the data reviewed is provided as annual reports provided to the public on GCU.edu.

Please see Appendix H for GCU's 2021 AAQEP Annual Report for Advanced Programs.

Please see Appendix I for GCU's 2021 AAQEP Annual Report for Initial Programs.

Criterion 8: Admission and Graduation Policies

Provide evidence that the unit has published criteria for admission to and exit from all initial teacher preparation and advanced programs and can provide summary reports of candidate performance at exit from the program.

GCU publishes the criteria for admission and graduation from all initial teacher preparation programs in the University Policy Handbook (UPH). This information is publicly available on GCU's Academic Catalog (AC) and Policies website which can be found [here](#). GCU's and COE's admission requirements can be found on page 41 of the UPH, while the graduation requirements can be found on page 204 of the UPH. Program and coursework descriptions for GCU's Master of Arts in K-12 Reading and Master of Arts in Teaching English to Speakers of Other Languages (TESOL) programs can be found on page 112 of the AC.

GCU's summary reports include the GCU End of Program (EOP) survey which is a survey presented to all GCU students near completion of their program of study to assess overall satisfaction, career preparation, and employment outlook. Data available from EOP surveys include comprehensive program satisfaction, feedback on the instructional materials, and curriculum concerns for all courses associated with the program of study. Program satisfaction is measured directly by the EOP surveys and the University desires a program satisfaction threshold level of 82%. Employee outlook is also measured directly by the EOP surveys and the University desires an employment outlook threshold level of 70%.

The Executive Director of Assessment and Program Operations, Alexi Linn, is the individual who holds responsibility for COE EOP survey data and is the primary recipient and responder for COE related data requests. An example of a summary report from EOP survey data for the Master of Arts in Teaching English to Speakers of Other Languages (TESOL) program can be read as follows.

Based on respondents from 2021 in the Master of Arts in Teaching English to Speakers of Other Languages (TESOL) program, 96.77% reported employment or graduate school acceptance near the time of program completion. In addition, 93.11% of students reported satisfaction with their GCU program. In addition to the End of Program Survey, a GCU Alumni Survey is sent to alumni at 1- and 5-years post-graduation. The survey prompts responses related to program and academic satisfaction, career readiness and advancement, and value-add of the degree completion. Based on respondents from the TESOL program in 2021, 100% reported employment.

GCU's Master of Arts in Reading Education K-12 program has not been offered long enough for EOP program survey recipients. However, GCU will utilize EOP survey data once GCU's Master of Arts in Reading Education K-12 program is effective in Fall 2023. Once EOP survey data is collected, COE will utilize the data to evaluate the success of the program and identify opportunities for continued growth to support the learning experience for students.

Appendix A: Higher Learning Commission Approval Letter

The following document is a copy of Grand Canyon University's Higher Learning Commission approval letter.

June 11, 2021

Mr. Brian Mueller
President
Grand Canyon University
3300 W. Camelback Road
Phoenix, AZ 85017-1097

Dear President Mueller:

This letter serves as formal notification and official record of action taken concerning Grand Canyon University by the Institutional Actions Council of the Higher Learning Commission at its meeting on June 7, 2021. The date of this action constitutes the effective date of the institution's new status with HLC.

Action. IAC continued the accreditation of Grand Canyon University with the next Reaffirmation of Accreditation in 2026-27.

In taking this action, the IAC considered materials from the most recent evaluation and the institutional response (if applicable) to the evaluation findings.

In two weeks, this action will be added to the *Institutional Status and Requirements (ISR) Report*, a resource for Accreditation Liaison Officers to review and manage information regarding the institution's accreditation relationship. Accreditation Liaison Officers may request the ISR Report on HLC's website at <https://www.hlcommission.org/isr-request>.

Within the next 30 days, HLC will also publish information about this action on its website at <https://www.hlcommission.org/Student-Resources/recent-actions.html>.

If you have any questions about these documents after viewing them, please contact the institution's staff liaison Linnea Stenson. Your cooperation in this matter is appreciated.

Sincerely,

Barbara Gellman-Danley
President

CC: ALO

Appendix B: ODA Confirmation Letter and NC-SARA Renewal Letter

The following document is a copy of Grand Canyon University's ODA confirmation letter and NC-SARA renewal letter.

Good morning,

Thank you for your inquiry regarding distance education for students in Oregon. The applicable statutes and rules for degree-granting institutions are Oregon Revised Statute (ORS) 348.606, and Oregon Administrative Rules (OAR) 583-030-0035 Standards and Practices, and OAR 583-050-0014 (3). Here is a link to HECC statutes and rules on our website: <https://www.oregon.gov/highered/about/Pages/rules-statutes.aspx>. The Higher Education Coordinating Commission (HECC) is the state regulatory agency for postsecondary institutions in Oregon. Per Oregon Revised Statute 348.606, all actions involving Oregon students must be authorized by the HECC. Here is the language of the statute:

ORS 348.606 Prohibition on conferring or offering of degree before approval obtained; fees; rules.

- (1) A school may not confer or offer to confer any academic degree upon a person, or provide services purporting to lead to a degree in whole or in part, without first obtaining approval from the Higher Education Coordinating Commission. The commission shall adopt by rule standards and procedures for the approval of schools.
- (2) A school based outside of Oregon may not offer any educational credit or degree within Oregon, including through the Internet, mail or telephone, without first obtaining approval from the commission. This subsection does not apply to schools operating as part of an interstate agreement entered into under ORS 350.075 (3).

Grand Canyon University is approved by its home state of Arizona to participate in NC-SARA. The Higher Education Coordinating Commission is the state regulatory agency for postsecondary education, and also is the state portal entity for SARA approvals in Oregon. Under the terms of the interstate reciprocity of authorization agreement for distance education/online instruction only (i.e., no on-campus instruction), institutions are allowed up to 10 program placements in Oregon without direct authorization from the ODA. More than 10 program placements would require direct authorization from the HECC. Program placements include clinicals, internships, practicums, externships, or supervised field experiences.

If the profession is a regulated one in our state requiring licensure, then any placement activity would have to meet the guidelines of the appropriate state licensing agency. The institution must first clear any licensing agency requirements and check with them directly to ensure that your program, the practicum placement (location and student) plus related supervision requirements meet the standards and guidelines of the profession in this state, and to complete any necessary paperwork between the university and the placement facility. No further approval action involving the HECC/ODA would be required unless the institution establishes a physical presence in Oregon or exceeds the number of allowable placements (10 students per site).

The correct process depends on where the students are doing the learning from and the delivery method of instruction. Are the students gathering at a location in Oregon for face-to-face instruction beyond a [supervised field experience](#), or attending online from their location in Oregon or in another state? Are the students seeking a placement in Oregon? If more than 10 students are seeking a placement in Oregon, then GCU must complete the application for Practicum Placement Only. In order to promote fair business practices, we ask institutions to limit students to less than 10 students per placement site. The cost is \$1,000 per program and the authorization would be valid for two years. Forms and information may be found on our website at the following link:<https://www.oregon.gov/highered/institutions-programs/private/Pages/ODA-forms-procedures-out-state.aspx>. If you wish to proceed, then you may contact me when you are ready to submit your completed, signed form so I can send you a link to our secured file transfer server to upload your files; the check, payable to “HECC / Office of Degree Authorization”, would still need to be mailed.

Higher Education Coordinating Commission
ATTN: Office of Degree Authorization
3225 25th St. SE
Salem, OR 97302

If approved, the authorization would allow for the placement of multiple students at sites in Oregon. For further information, you may find more information on the SARA website at: <https://nc-sara.org>

Subject: Oregon Authorization and NC-SARA Participant Inquiry

Hello Dr. Dujon,

My name is Justin Atkins and I am a State Compliance Administrator at Grand Canyon University (GCU) in Phoenix, Arizona. University leadership has asked me to conduct preliminary research into institutional and programmatic approval in other states for our online educator preparation programs. Due to this, I have been in recent contact with the Oregon Teacher Standards and Practices Commission (TSPC) to determine the requirements for institutional and programmatic approval. GCU is considering seeking TSPC approval for some of its educator preparation programs. TSPC has stated that out-of-state universities seeking programmatic and institutional approval in Oregon for online programs are not required to have a physical location within the state. However, TSPC has stated that GCU may have to obtain authorization from the Oregon Office of Degree Authorization (ODA). As a result, I am reaching out to you for assistance with questions regarding NC-SARA participation and authorization from ODA.

GCU is regionally accredited by the Higher Learning Commission (HLC) and is approved to participate in the National Council for State Authorization Reciprocity Agreements (NC-SARA). As such, GCU operates within NC-SARA policy in Oregon and has no physical location in the state.

Grand Canyon University's initial teacher licensure, Educational Administration, and School Counseling programs are approved by the Arizona State Board of Education. In Oregon, we offer these programs via distance education. These programs contain field experience activities, such as student teaching, which fall within NC-SARA policy.

ODA's [Oregon Statutes 348.606](#) and [350.075](#) state the following:

A school-based outside of Oregon may not offer any educational credit or degree within Oregon, including through the Internet, mail or telephone, without first obtaining approval from the commission. This subsection does not apply to schools operating as part of an interstate agreement entered into under [ORS 350.075](#);

The participation by an educational institution that is not based in this state in distance learning courses or programs that are part of an interstate agreement entered into and administered under this paragraph does not constitute operating in this state for purposes of [ORS 348.594](#).

Based on my reading the standards, it seems out-of-state institutions that are operating as part of an interstate agreement offering distance learning programs do not constitute operating in Oregon and do not need to apply for authorization from the commission. However, TSPC has indicated we would need to obtain authorization from you. If GCU were to seek TSPC approval for select distance education programs intended to lead to a teaching credential, could we do so as an NC-SARA participant or would GCU need to apply for state authorization in Oregon?

Thank you for taking the time out of your busy day to assist with this inquiry.

Best Wishes,

Justin Atkins

Phoenix, Arizona 85017
United States

Current participating period 5/5/2022-5/5/2023

Dear Glen Tharp,

On behalf of the National Council for State Authorization Reciprocity Agreements (NC-SARA), I am pleased to welcome Grand Canyon University as an institutional participant in SARA. Your institution will be listed on our website (www.nc-sara.org) as a participating institution.

Institutional Requirements to Maintain Participation

The National Council for State Authorization Reciprocity Agreements (NC-SARA) was established to help expand students' access to educational opportunities and ensure more efficient, consistent, and effective regulation of distance learning programs.

Two critical components of our mission are:

1. to assure students are well-served in a rapidly-changing education landscape, and
2. to increase the quality and value of higher education credentials earned through distance learning programs.

SARA increases administrative efficiency and lowers the costs of obtaining authorization to provide postsecondary distance education in states that join. These benefits result in increased access as institutions like yours are able to make their academic programs more widely available and accept enrollments from students in all states except for California without additional work to seek state authorization.

But increased access and efficiency will mean little if they are not accompanied by high quality. That is why all SARA institutions annually commit to several requirements designed to ensure that courses and programs they offer through SARA provide high-quality learning opportunities that can help students reach their goals as well as to ensure appropriate consumer protections for students.

Institution staff working with SARA are encouraged to read the *SARA Policy Manual* (www.nc-sara.org)

and ask questions regarding policies about which they have concerns. We welcome your comments, questions, and concerns at info@nc-sara.org.

Using the NC-SARA Approved Institution Seal

Use of the NC-SARA Approved Institution Seal is encouraged to inform students of participation SARA. The institution seal may be downloaded at <https://www.nc-sara.org/logos>. The following language must be used with the NC-SARA Approved Institution Seal: "(Name of institution) has been approved to participate in the National Council for State Authorization Reciprocity Agreements."

Thank you for joining us in this work and best wishes for your continued success.

Sincerely,

A handwritten signature in blue ink that reads "Lori Williams". The signature is fluid and cursive, with the first name "Lori" being more prominent and the last name "Williams" written in a more continuous, flowing style.

Lori Williams
President and Chief Executive Officer
National Council for State Authorization Reciprocity Agreements

Appendix C: Letter of Assurance

The following document is a copy of Grand Canyon University's letter of assurance signed by the Dean of the College of Education, Dr. Meredith Critchfield.

FIND YOUR PURPOSE

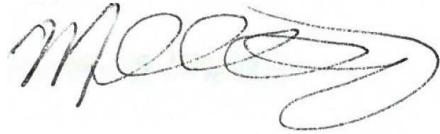

January 12, 2023

Dear Oregon Teacher Standards and Practice Commission,

I, Dr. Meredith Critchfield, hereby ensure that the College of Education at Grand Canyon University recognize and identify as having the responsibility and authority for the preparation of licensed educators.

Please feel free to contact me at Meredith.Critchfield@gcu.edu or (602) 639-8139 if you have any questions.

Sincerely,

Dr. Meredith Critchfield

Right to Change Requirements:

The University reserves the right to make changes of any nature to the calendar, admission requirements, degree requirements, fees, regulations, course offerings, programs, or academic schedules whenever they are deemed necessary or desirable, including changes or modification of course content, class scheduling, offering patterns, canceling of scheduled classes, or other academic activities.

The Grand Canyon University Academic Catalog does not establish a contractual relationship; rather, it sets forth academic and other requirements that students must meet to be granted a degree and, in some circumstances, to continue to be enrolled at the institution. While advisors and other Grand Canyon University personnel are available to guide students with respect to the requirements, students ultimately bear the responsibility of following the requirements.

Notice of Non-Discrimination

Grand Canyon University does not discriminate on the basis of race, color, national or ethnic origin, sex, disability, age, sexual orientation, gender identity or any legally protected status. Title IX regulations require non-discrimination on the basis of sex or gender, which includes unlawful discrimination based on pregnancy and/or disability discrimination based upon complications related to pregnancy. As a religious institution, Grand Canyon University expressly reserves its rights, its understandings of, and its commitments to Christian principles, and reserves the legal right to hire and employ individuals who support the values of the University.

Inquiries concerning the application of Title IX discrimination or the application of Title IX harassment policies may be submitted to the Title IX coordinator and/or to the Office of Civil Rights for the United States Department of Education:

PO Box 11097
Phoenix, AZ 85061-1097

Main Campus Street Address

Grand Canyon University – Main Campus
3300 West Camelback Road
Phoenix, AZ 85017-3030

Student Contacts

Admissions Representatives

Responsibility: Assists students with their initial enrollment into a program of study.

Phone: 1-800-800-9776

Campus Operations

Responsibility: Provide parking passes for campus students, faculty and staff along with issue campus ID cards

Phone: 602-639-7739

Canyon Health and Wellness Clinic

Responsibility: Assists campus students with health needs.

Phone: 602-639-6215

Fax: 602-639-7830

Website: <http://www.gcu.edu/Campus-Resources/Health-and-Wellness-Center.php>

Career Services

Responsibility: GCU's Career Services team provides students and alumni with the resources, professional knowledge and support they need to successfully transition from academics into purposeful and satisfying employment.

Phone: 602-639-6606

E-mail: careerservices@gcu.edu

Center for Learning and Advancement

Responsibility: Provides learning resources for students through free face-to-face and online tutoring in writing, math (algebra, trigonometry, calculus), accounting, finance, statistics, APA, as well as workshops in test-taking techniques, reading strategies, time management, study skills, and note-taking techniques. The Center also oversees the First Year Experience (FYE) program, Study Abroad, Peer Mentoring, Lifelong Learning Assessment, and the Honors College.

Accreditation, Authorizations, and Approvals

Accreditation

Accreditation is a third-party peer review process which provides the public an assurance that the university is providing a quality education which meets or exceeds the accreditors stated requirements and criteria. Accreditation is key factor which may be recognized by employers, other postsecondary institutions, and licensing bodies. The US Department of Education requires accreditation from a body recognized by the agency as a key requirement for a university being permitted to disperse federal financial aid. In short, in choosing a university, parents and students should ensure their university of choice is accredited.

Institutional Accreditation

Grand Canyon University has been accredited by the Higher Learning Commission (HLC) and its predecessor continually since 1968. Every ten years, HLC conducts a comprehensive review of the university to ensure the university continues to meet HLC's standards. In June 2021, HLC reaffirmed GCU's accreditation. The next comprehensive visit is scheduled for the 2026-2027 academic year. A listing of programmatic accreditations held within each college is provided below.

Higher Learning Commission

The Higher Learning Commission accredits Grand Canyon University.

The Higher Learning Commission
230 South LaSalle Street, Suite 7-500
Chicago, Illinois 60604-1411
Phone: 312-263-0456
Toll-free: 800-621-7440
<http://www.ncahlc.org/>

Programmatic Accreditations

GCU holds multiple programmatic accreditations for over 80 of its programs. These accreditations demonstrate that the accredited programs meet or exceed the standards for the profession set forth by the accrediting body. Programmatic accreditation may help graduates meet the educational requirements for professional licensure or certification. The programmatic accreditations by college are provided below.

Colangelo College of Business

Accreditation Council for Business Schools and Programs (ACBSP)

The Accreditation Council for Business Schools and Programs (ACBSP), 7007 College Boulevard, Suite 420, Overland Park, KS 66211, 913-339-9356, accredits the following programs of the Colangelo College of Business: Bachelor of Science in Accounting, Bachelor of Science in Applied Management, Bachelor of Science in Business Administration, Bachelor of Science in Business Administration with an Emphasis in Business Intelligence, Bachelor of Science in Business Management, Bachelor of Science in Entrepreneurial Studies, Bachelor of Science in Finance and Economics, Bachelor of Science in Marketing, Bachelor of Science in Sports Management, Master of Science in Accounting, Master of Business Administration, Master of Business Administration with an Emphasis in Accounting, Master of Business Administration with an Emphasis in Finance, Master of Business Administration with an Emphasis in Health Systems Management, Master of Business Administration with an Emphasis in Leadership, Master of Business Administration with an Emphasis in Marketing, Master of Business Administration with an Emphasis in Project Management, Master of Business Administration with an Emphasis in Strategic Human Resource Management, and Doctor of Business Administration with an Emphasis in Management. The ACBSP requires each school to submit a periodic Quality Assurance Report that summarizes recent activity regarding compliance with ACBSP standards. [View our most recent ACBSP Quality Assurance Report](#). View the results of the [Undergraduate Business Field Test](#).

Grand Canyon University's Colangelo College of Business is approved by the Arizona State Board of Education to offer institutional recommendations (credentials) for the certification of Bachelor of Science in Business for Secondary Education.

College of Education

Association for Advancing Quality in Educator Preparation (AAQEP)

Grand Canyon University's College of Education is approved by the Arizona State Board of Education to offer institutional recommendations (credentials) for the certification of early childhood, elementary, secondary and special education teachers, as well as administrators.

Association for Advancing Quality in Educator Preparation (AAQEP)

Grand Canyon University is a member in good standing of the Association for Advancing Quality in Educator Preparation (AAQEP), a national accrediting organization recognized by the Council for Higher Education Accreditation. The programs listed below have been awarded full accreditation by AAQEP through June 30, 2026. Full accreditation acknowledges that a program prepares effective educators who continue to grow as professionals and has demonstrated the commitment and capacity to maintain quality.

AAQEP-Accredited Programs at GCU:

- Initial Programs
- Advanced Programs

Association for Advancing Quality in Educator Preparation

College of Nursing and Health Care Professions

Commission on Accreditation of Athletic Training Education (CAATE)

Recognized by CHEA, the Commission on Accreditation of Athletic Training Education (CAATE) assess and recognizes excellence in athletic training. CAATE accredits GCU's Bachelor of Science in Athletic Training program. <https://caate.net/>.

CAATE
2001 K Street NW, 3rd Floor North
Washington, DC 20006
P: 512-733-9700

Commission on Collegiate Nursing Education (CCNE)

The Commission on Collegiate Nursing Education (CCNE), recognized by ED, assesses the quality and integrity of nursing programs. Grand Canyon University's Bachelor of Science in Nursing (Pre-Licensure), Bachelor of Science in Nursing (RN to BSN), Master of Science in Nursing with an Emphasis in Health Informatics, Master of Science in Nursing with an Emphasis in Nursing Education, Master of Science in Nursing with an Emphasis in Public Health Nursing, Master of Science of Nursing with an Emphasis in Nursing Leadership in Health Care Systems, Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult Gerontology, Master of Science in Nursing: Family Nurse Practitioner, Post Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult Gerontology, Post Master of Science in Nursing: Family Nurse Practitioner, Doctor of Nursing Practice, and Doctor of Nursing Practice with an Emphasis in Educational Leadership are accredited by the Commission on Collegiate Nursing Education (<http://www.ccnaccreditation.org>).

Commission on Collegiate Nursing Education
655 K Street, NW, Suite 750
Washington, DC 20001
P: (202) 887-6791

Society for Simulation in Healthcare

The Grand Canyon University Pre-Licensure Nursing Immersive Simulation has been granted Provisional Accreditation from the Society for Simulation in Healthcare (SSH). The SSH accreditation is a peer-reviewed, customized evaluation of the simulation program. With obtaining accreditation, GCU is recognized for its expertise in simulation above and beyond domain expertise. <https://www.ssih.org/>.

Society for Simulation in Healthcare
P.O. Box 856114
Minneapolis, MN 55485-6114
Phone: 866.730.6127

College of Humanities and Social Sciences

Council on Social Work Education (CSWE) - BSW

Grand Canyon University's College of Humanities and Social Sciences' Bachelor of Social Work program is in Candidacy status with the Council on Social Work Education.

Candidacy for a baccalaureate or master's social work program by the Council on Social Work Education's Commission on Accreditation indicates that it has made progress toward meeting criteria for the assessment of program quality evaluated through a peer review process. A program that has attained Candidacy has demonstrated a commitment to meeting the compliance standards set by the Educational Policy and Accreditation Standards but has not yet demonstrated full compliance.

Students who enter programs that attain Candidacy in or before the academic year in which they begin their program of study will be retroactively recognized as having graduated from a CSWE-accredited program once the program attains Initial Accreditation. Candidacy is typically a three-year process and attaining Candidacy does not guarantee that a program will eventually attain Initial Accreditation.

Candidacy applies to all program sites and program delivery methods of an accredited program. Accreditation provides reasonable assurance about the quality of the program and the competence of students graduating from the program.

Council on Social Work Education (CSWE) – MSW

Grand Canyon University's Master of Social Work program is accredited by the Council on Social Work Education's Commission on Accreditation.

Accreditation of a baccalaureate or master's social work program by the Council on Social Work Education's Commission on Accreditation indicates that it meets or exceeds criteria for the assessment of program quality evaluated through a peer review process. An accredited program has sufficient resources to meet its mission and goals and the Commission on Accreditation has verified that it demonstrates compliance with all sections of the Educational Policy and Accreditation Standards.

Accreditation applies to all program sites and program delivery methods of an accredited program. Accreditation provides reasonable assurance about the quality of the program and the competence of students graduating from the program.

For more information about social work accreditation, you may contact Accreditation.

Council on Social Work Education
1701 Duke Street, Suite 200
Alexandria, VA 22314-3457

Phoenix, AZ 85007
Phone: 602-542-5709
<http://azppse.state.az.us>

California Bureau of Private Postsecondary Education

California Resident Students Rights and Responsibilities Related to the Student Tuition Recovery Fund (STRF)

The State of California established the Student Tuition Recovery Fund (STRF) to relieve or mitigate economic loss suffered by a student in an educational program at a qualifying institution, who is or was a California resident while enrolled, or was enrolled in a residency program, if the student enrolled in the institution, prepaid tuition, and suffered an economic loss. Unless relieved of the obligation to do so, you must pay the state-imposed assessment for the STRF, or it must be paid on your behalf, if you are a student in an educational program, who is a California resident, or are enrolled in a residency program, and prepay all or part of your tuition. You are not eligible for protection from the STRF and you are not required to pay the STRF assessment, if you are not a California resident, or are not enrolled in a residency program. It is important that you keep copies of your enrollment agreement, financial aid documents, receipts, or any other information that documents the amount paid to the school. Questions regarding the STRF may be directed to the Bureau for Private Postsecondary Education, 2535 Capitol Oaks Drive, Suite 400, Sacramento, CA 95833, (916) 431-6959 or (888) 370-7589.

To be eligible for STRF, you must be a California resident or are enrolled in a residency program, prepaid tuition, paid or deemed to have paid the STRF assessment, and suffered an economic loss as a result of any of the following:

1. The institution, a location of the institution, or an educational program offered by the institution was closed or discontinued, and you did not choose to participate in a teach-out plan approved by the Bureau or did not complete a chosen teach-out plan approved by the Bureau.
2. You were enrolled at an institution or a location of the institution within the 120 day period before the closure of the institution or location of the institution, or were enrolled in an educational program within the 120 day period before the program was discontinued.
3. You were enrolled at an institution or a location of the institution more than 120 days before the closure of the institution or location of the institution, in an educational program offered by the institution as to which the Bureau determined there was a significant decline in the quality or value of the program more than 120 days before closure.
4. The institution has been ordered to pay a refund by the Bureau but has failed to do so.
5. The institution has failed to pay or reimburse loan proceeds under a federal student loan program as required by law, or has failed to pay or reimburse proceeds received by the institution in excess of tuition and other costs.
6. You have been awarded restitution, a refund, or other monetary award by an arbitrator or court, based on a violation of this chapter by an institution or representative of an institution, but have been unable to collect the award from the institution.
7. You sought legal counsel that resulted in the cancellation of one or more of your student loans and have an invoice for services rendered and evidence of the cancellation of the student loan or loans.

To qualify for STRF reimbursement, the application must be received within four (4) years from the date of the action or event that made the student eligible for recovery from STRF. A student whose loan is revived by a loan holder or debt collector after a period of non-collection may, at any time, file a written application for recovery from STRF for the debt that would have otherwise been eligible for recovery. If it has been more than four (4) years since the action or event that made the student eligible, the student must have filed a written application for recovery within the original four (4) year period, unless the period has been extended by another act of law. However, no claim can be paid to any student without a social security number or a taxpayer identification number.

Nevada Commission on Postsecondary Education (CPE)

Grand Canyon University is provisionally licensed by the Nevada Commission on Postsecondary Education (CPE) to operate as a private postsecondary educational institution at the following location within the state of Nevada.

Grand Canyon University
2485 Village View Drive
Henderson, Nevada 89074

The Bachelor of Science in Nursing: Pre-Licensure, Accelerated (ABSN) program is the only program offered at this location. As a result, Grand Canyon University is authorized to offer the laboratory and simulation courses of the Bachelor of Science in Nursing: Pre-Licensure, Accelerated (ABSN) program at this location.

GCU encourages students to follow the appeals process outlined in the University Policy Handbook. However, students enrolled in the ABSN – NV program version may file a complaint with the Nevada Commission on Postsecondary Education by filling out the Student Complaint Form which can be found on their website or at the following link:

<https://cpe.nv.gov/uploadedFiles/cpenvgov/content/Students/Complaint%20Form%20Initial%202021.pdf>. This form can be submitted via email, fax, or mailed to the following address:

Nevada Commission on Postsecondary Education
2800 E. St. Louis Avenue
Las Vegas, NV 89104

Utah Division of Consumer Protection

Grand Canyon University has been granted a certificate of State Authorization as a registered postsecondary school from the Utah Division of Consumer Protection. As a result, Grand Canyon University is authorized to offer laboratory and simulation components of the Bachelor of Science in Nursing: Pre-Licensure, Accelerated (ABSN) program at the following location:

Grand Canyon University

150 Civic Center Dr
Ste 100
Sandy, UT 84070

GCU encourages students to follow the appeals process outlined in the University Policy Handbook. However, students enrolled in the ABSN – UT program version may file a complaint with the Utah Division of Consumer Protection by following the instructions on their website which can be found at the following link: <https://dcp.utah.gov/complaints.html>

Wyoming Department of Education (WY DOE)

Grand Canyon University has been granted a Chapter 30 license by the Wyoming Department of Education (WYDOE) to offer educational services to Wyoming students. For more information, please visit the following link: <https://edu.wyoming.gov/for-district-leadership/school-programs/private-school-licensing/>

Wyoming Department of Education
122 W. 25th St
STE E200
Cheyenne, WY 82002
<https://edu.wyoming.gov/>

GCU encourages students to follow the appeals process outlined in the University Policy Handbook. However, students enrolled in the program versions offered on the military base may file a complaint with the Wyoming Department of Education by completing the student complain form which can be found at the following link:

<https://edu.wyoming.gov/for-district-leadership/school-programs/private-%20school-licensing/>

State Authorization Reciprocity Agreements (SARA) Participant

Grand Canyon University is an institutional participant in the State Authorization Reciprocity Agreement (SARA) initiative. SARA is an agreement among member states, districts and territories that establishes comparable national standards for interstate offering of postsecondary distance education courses and programs. It is intended to make it easier for students to take online courses offered by postsecondary institutions based in another state. SARA is overseen by a National Council and administered by four regional education compacts. For more information and a list of member states, please visit <http://nc-sara.org/>.

Program Approvals

Many of GCU's programs are approved by state licensing boards or national certifying agencies to meet the educational requirements for licensure or certification or to permit a graduate to sit for a professional exam. A list of agency approvals and registrations are provided below.

Colangelo College of Business

Arizona State Board of Education (ASBE/ADE)

GCU's Colangelo College of Business is approved by the Arizona State Board of Education to offer institutional recommendations (credentials) for the certification of Bachelor of Science in Business for Secondary Education.

Certified Financial Planner (CFP®) Board Registered Program

GCU's Bachelor's in Finance with an emphasis in Financial Planning is a Certified Financial Planner (CFP) Board Registered Program (<https://www.cfp.net/get-certified/certification-process/education-requirement/certification-coursework-requirement/find-an-education-program>). As such, the program meets the education requirements for CFP® certification. Individuals who meet the CFP Board's education requirement are eligible to sit for the CFP® Certification Examination. CFP Board Registered Programs meet the education coursework requirement and help provide the knowledge required to deliver professional, competent, and ethical financial planning services to clients. For more information visit <https://www.cfp.net/contact>.

College of Arts and Media

Arizona State Board of Education (ASBE/ADE)

Grand Canyon University's College of Education is approved by the Arizona State Board of Education to offer institutional recommendations (credentials) for the certification of early childhood, elementary, secondary and special education teachers, as well as administrators.

Arizona State Board of Education
1700 W. Washington St.
Phoenix, AZ 85007
<https://azsbe.az.gov/>

Nevada Department of Education (NVDOE)

Grand Canyon University's College of Education is approved by the Nevada Department of Education to offer alternative route to licensure programs that lead to conditional licensure (credentials) for early childhood, elementary, secondary, and special education teachers.

Nevada Department of Education
700 E. Fifth St.
Carson City, NV 89701
<https://doe.nv.gov/>

College of Humanities and Social Sciences

Arizona Board of Behavioral Health Examiners (AZBBHE)

Grand Canyon University's Master of Science in Clinical Mental Health Counseling, Master of Science in Professional Counseling and Master of Science in Christian Counseling are approved by the Arizona Board of Behavioral Health Examiners as being consistent with the curriculum requirements for LAC or LPC licensure.

Grand Canyon University's Bachelor of Science in Counseling with an Emphasis in Addiction, Chemical Dependency and Substance Abuse is approved by the Arizona Board of Behavioral Health Examiners as being consistent with the curriculum requirements for LSAT licensure.

Arizona Board of Behavioral Health Examiners
1740 West Adams St
Phoenix, AZ 85007 <http://www.azbbhe.us/>

Arizona State Board of Education (ASBE/ADE)

Grand Canyon University's College of Humanities and Social Sciences is approved by the Arizona State Board of Education to offer institutional recommendations (credentials) for the certification of Bachelor of Arts in History for Secondary Education, Bachelor of Arts in English for Secondary Education and Bachelor of Science in Math for Secondary Education.

California Consortium of Addiction Programs and Professionals (CCAPP)

Grand Canyon University has been approved as an Approved School/Program by the California Consortium of Addiction Programs and Professionals (CCAPP) for the following online programs: Master of Science in Addiction Counseling and Master of Science in Christian Counseling of Substance Use and Addictive Disorders. These programs are approved until February 28, 2025.

Grand Canyon University's Bachelor of Science in Counseling with an Emphasis in Chemical Dependency and Substance Abuse is an Approved School/Program by CCAPP. This program is approved until September 30, 2023.

California Consortium of Addiction Programs and Professionals
2400 Marconi Avenue, Suite C
Sacramento, CA 95821
PO Box 214127
<https://www.ccapp.us/>

Georgia Addiction Counselors Association (GACA)

Grand Canyon University has been approved as an Education Provider by the Georgia Addiction Counselors Association (GACA) for the Master of Science in Addiction Counseling and Bachelor of Science in Counseling with an Emphasis in Chemical Dependency and Substance Abuse programs. These programs are approved until December 31, 2022.

Georgia Addiction Counselors Association
4015 South Cobb Drive
Suite 160
Smyrna, GA 30080 <http://gaca.org/>

GCU encourages students to follow the appeals process outlined in the University Policy Handbook. However, Wisconsin residents enrolled in one of GCU's nursing programs listed above may file a complaint with the Wisconsin Board of Nursing. The Board accepts online complaints at the following link: <https://dpscomplaintform.wi.gov/dpsplsconlinecomplaint.aspx> or mailed at the following address:

Wisconsin Department of Safety and Professional Services
Division of Legal Services and Compliance
P.O. Box 7190
Madison, WI 53707-7190

College of Science, Engineering and Technology

Arizona State Board of Education (ASBE/ADE)

Grand Canyon University's College of Science, Engineering and Technology is approved by the Arizona State Board of Education to offer institutional recommendations (credentials) for the certification of Bachelor of Science in Biology for Secondary Education and Bachelor of Science in Chemistry for Secondary Education.

Cyber Defense Education (CAE-CD)

The College of Science, Engineering, and Technology's Bachelor of Science in Information Technology with an Emphasis in Cybersecurity program was awarded the National Center of Academic Excellence in Cyber Defense Education (CAE-CD) designation.* CAE-CD designation recognizes college programs that meet the standards of learning concepts and skills outlined by the National Security Agency (NSA) and Department of Defense (DoD), (<https://www.nsa.gov/Academics/Centers-of-Academic-Excellence/>).

Professional Licensure Disclosures and Field Experiences

Professional Licensure Disclosures

GCU strives to provide accurate, transparent information to students enrolled in all programs intended to lead to a state-issued, professional license. Grand Canyon University periodically reviews the licensure requirements of its programs in all US states and territories. Each student's Enrollment Agreement provides professional licensure disclosures stating whether a program meets the educational requirements for licensure in the student's location. GCU also publishes licensure disclosures publicly on gcu.edu. The most current disclosures are available on each program's home page clicking the "State Disclosures" link under the "Accreditation and Compliance" header in the toolbar. Students may refer to the information on GCU.edu at any time for the current disclosures.

In addition to the public disclosures, GCU provides a direct and timely notification to students if a change to the licensure determination is identified.

Location and Professional Licensure

GCU is required to determine the location of distance education students, evidenced by a student's address. If you are considering relocating, or have relocated to another state, territory, or outside of the United States during your program, whether relocation is permanent or temporary, you must contact your Student Services Counselor immediately to determine whether your Program of Study is available in the new location and whether it will lead to professional licensure in the new location. Students must do this before incurring any/additional financial obligations. The new location may have additional requirements that would need to be completed in order to be eligible for certification or licensure. In addition, GCU encourages students to contact their state licensure board to ensure the program will meet their needs.

Field Placements within the United States

Students are expected to conduct all field placements, practicum, or student teaching within the state in which they are located at the time of enrollment. Students who seek to conduct field placements, practicum, or student teaching in a state other than the state in which they are located, or who intend to seek licensure in a different state, must disclose this to their Student Services Counselor to determine whether field placement or licensure is possible in the desired location.

International Military Field Placements

Military students who are located outside of the United States who are enrolled in programs that contain field placement must complete all placements on a base or in a Department of Defense approved location. Students are advised to contact a Field Experience Counselor to determine whether field experience can be completed. Students who cannot complete field placements on a base or in a DOD-approved location may be required to take a leave of absence until they return to a location at which placements are allowed.

Professional Licensure Outside of the United States

GCU programs are not designed nor intended to lead to licensure or certification outside of the United States. Student teaching, practicum, internship, or field experience is not permitted outside of the United States.

Additional State-Specific Disclosures

Iowa Board of Educational Examiners

Students seeking an Iowa license are advised that successful completion of Grand Canyon University's programs of educator preparation do not qualify you for initial educator licensure by the Iowa Board of Educational Examiners. Candidates seeking licensure in the state of Iowa must first be licensed/certified as educators in Arizona. Grand Canyon University will assist you in understanding the licensure requirements of the Arizona Department of Education prior to completion of your educational preparation program. Arizona Department of Education can be contacted at 800-352-4558 or <http://www.azed.gov/>. Candidates seeking subsequent licensure from the Iowa Board of Educational Examiners must contact that Board (515-281-5849; <http://www.boe.iowa.gov/>) for licensure requirements in Iowa.

Pennsylvania Department of Education (PADOE)

Teacher education programs have not been reviewed or approved by Pennsylvania. Candidates will have to apply for certification and meet requirements for certification as out-of-state candidates.

Residents of Pennsylvania should direct questions, complaints, or concerns to:

Pennsylvania Department of Education

<http://www.education.pa.gov/Postsecondary-Adult/College%20and%20Career%20Education/Pages/Students-Complaints.aspx#tab-1>

Pennsylvania Department of Education - Postsecondary and Adult Education

333 Market Street, 12th Fl

Harrisburg, PA 17126-0333

Athletics

Intercollegiate Athletics (NCAA)

Intercollegiate athletics function under the guidelines of the National Collegiate Athletic Association (NCAA) Division I, 700 W.

Washington Street, P.O. Box 6222, Indianapolis, IN 46202, regarding eligibility to participate in intercollegiate sports. In the 2013-14 season, Grand Canyon University began the process of reclassifying from Division II to Division I as a member of the Western Athletic Conference.

International Students

Student Exchange Visitor Program (SEVP)

Grand Canyon University has applied for and received certification to enroll F nonimmigrant students per the Student Exchange Visitor Program (SEVP) under 8 CFR 214.3. The International Students Office has access to SEVIS and may issue Forms I-20, Certificate of Eligibility for Student Status, to prospective students. For more information see the International Students Office website.

Veteran's Administration

Veteran's Administration State Approval Agency (SAA)

Grand Canyon University is approved for the education and training of veterans under the provisions of Title 10 and 38, United States Code. We accept Chapter 30, 31, 33, 35, and 1606 recipients. Veterans are approved for benefits for numerous programs. For more information regarding using your VA benefits at Grand Canyon University, email Military.Billing@gcu.edu.

Facilities and Locations

Arizona

Main Campus – Phoenix AZ

3300 West Camelback Road, Phoenix, AZ 85017

GCU's main campus encompasses over 300 acres in Phoenix, Arizona. Comprised of 9 colleges, the campus houses over 800,000 square feet of classrooms, labs and faculty space, as well as over 300,000 square feet of office and conference space, a basketball arena, soccer stadium, baseball and softball stadiums, cyber center, and 17,500 student bedspaces, both apartment and dorm style.

Classroom equipment includes webcams, high-definition projector, drop-down screen, instructor podium with equipment rack, instructor microphone, classroom speakers, dedicated instructor computer systems, instructor touch screen overlap-to-projector image, instructor touch audio and video switcher, and 8Mbps up/down wireless. Some classrooms have additional equipment, including dedicated large flat panel student group screens

Auxiliary Locations

In addition to the locations listed above, the following locations provide classroom space for various GCU cohorts of students. The Arizona State Board for Private Postsecondary Education has granted approval for Grand Canyon University's main Phoenix campus to operate at variable auxiliary locations.

Kyrene School District

8700 S. Kyrene Road

Tempe, AZ 85284

Mesa Community College

1833 West Southern Avenue

Mesa, AZ 85202-4822

Phoenix VA Healthcare

650 East Indian School Road

Phoenix, AZ 85012-1839

Pima Salt River High School

4827 N. Country Club Drive

Scottsdale, AZ 85256-2915

Boswell/Sun City ABSN Location

10484 W Thunderbird Blvd #102, Sun City, AZ 85351

GCU's Sun City location is comprised of over 21,000 square feet of classroom, lab space, simulation space, and offices including two testing/study rooms, an accommodations testing room, a simulation lab with four simulation rooms, a clinical skills lab, a common area for general student interaction, and multiple small faculty and staff offices.

Tucson ABSN Location

3500 N Campbell Ave, Tucson, AZ 85719

GCU's Tucson location is comprised of over 16,000 square feet of classroom, lab space, simulation space, and offices including two testing/study rooms, an accommodations testing room, a simulation lab with four simulation rooms, a clinical skills lab, a common area for general student interaction, and multiple small faculty and staff offices.

Nevada**Las Vegas ABSN Site**

2485 Village View Drive, Henderson, Nevada 89074

GCU's Nevada location is comprised of over 21,000 square feet of classroom, lab space, simulation space, and offices including two testing/study rooms, an accommodations testing room, two simulation labs with four simulation rooms, a common area for general student interaction, and multiple small faculty and staff offices.

Utah**Sandy/Salt Lake City ABSN Location**

150 Civic Center Dr, Ste 100, Sandy, UT 84070

GCU's Utah location is comprised of over 26,000 square feet of classroom, lab space, simulation space, and offices including two testing/study rooms, an accommodations testing room, two simulation labs with four simulation rooms, a common area for general student interaction, and multiple small faculty and staff offices.

About Grand Canyon University

Vision

Grand Canyon University is a premier Christian University educating people to lead and serve.

Mission Statement

GCU is a missional, Christ-centered university with an innovative and adaptive spirit that addresses the world's deep needs by cultivating compassionate Christian community, empowering free and virtuous action, and serving others in ways that promote human flourishing.

Through academic excellence, the university equips students with knowledge of the Christian worldview, instilling in them a sense of purpose and vocational calling that enables them to be innovative thinkers, effective communicators, global contributors, and transformative leaders who change their communities by placing the interests of others before their own.

Mission-Based Student Learning Competencies

Tied to the mission statement of GCU are mission-based competencies that faculty and administration believe are imperative for students to learn. GCU strives to ensure students who progress through their program at different times exit the program with the same foundational knowledge and demonstrable skills, and that graduates bring commensurate knowledge and practical skills to the workforce. Consistent competencies and objectives, regardless of the modality, are the foundation of every program design. All GCU courses provide foundational knowledge and then apply or synthesize the learning. Thus, all graduates of the same program will have developed comparable skill sets.

Mission-based Bachelor's Competencies

Domains	Competencies
<p>Leadership</p> <p>Graduates of Grand Canyon University's bachelor's program will be able to demonstrate an understanding of the reality of the world, examine the consequences of choice, and provide unselfishly to help others meet their highest potential.</p>	<ul style="list-style-type: none"> • Graduates of the bachelor's program will be able to apply leadership models and demonstrate the capacity for leadership. • Graduates of the bachelor's program will be able to develop a clear vision that informs, inspires, and motivates others to achieve goals. • Graduates of the bachelor's program will be able to determine various leadership styles and rationale for differences.
<p>Communication</p> <p>Graduates of Grand Canyon University's bachelor's program will be able to develop and apply intrapersonal and professional communication behaviors essential to servant leadership and rooted in Christian ethical belief.</p>	<ul style="list-style-type: none"> • Graduates of the bachelor's program will be able to recognize the power, ethical ramifications, and consequences of communication style as it relates to personal and professional success in a diverse society. • Graduates of the bachelor's program will be able to design and disseminate compelling messages that create understanding and desired results using a variety of traditional and innovative modalities.
<p>Global Citizenship</p> <p>Graduates of Grand Canyon University's bachelor's program will be able to apply empathy, identify ethnocentrism, and defend the reality that people are different with different perspectives on history, religion, value-systems, and many other aspects of life and living.</p>	<ul style="list-style-type: none"> • Graduates of the bachelor's program will be able to develop long-term relationships across cultures through effective communication. • Graduates of the bachelor's program will be able to perform service initiatives from a tradition of servant leadership in an effort to foster positive interpersonal relationships and a dynamic global community. • Graduates of the bachelor's program will be able to apply the necessary skills to work effectively with individuals from diverse cultural backgrounds.

Domains	Competencies
<p>Critical Thinking</p> <p>Graduates of Grand Canyon University’s bachelor’s program will be able to show clarity and logic in thought by asking questions and pursuing knowledge to avoid delusion and blind acceptance of ideas, to reduce vulnerability, and to work to find solutions rather than dwell on problems.</p>	<ul style="list-style-type: none"> • Graduates of the bachelor’s program will be able to use personal skill sets of critical thinking, risk assessment, decision-making, analytical skills, and creativity that promote effective judgment and actions. • Graduates of the bachelor’s program will be able to apply social judgment skills and knowledge gained through gathering, sorting, analyzing, applying, and evaluating information to solve problems in applied learning settings. • Graduates of the bachelor’s program will be able to make informed decisions based on historical, current, reliable, and valid information.
<p>Christian Heritage</p> <p>Graduates of Grand Canyon University’s bachelor’s program will be able to identify and express aspects of a Christian heritage which affect their relationships with others and the community, as well as their decision-making processes.</p>	<ul style="list-style-type: none"> • Graduates of the bachelor’s program will be able to articulate an awareness of a Christian heritage and its effects on Western society. • Graduates of the bachelor’s program will be able to identify and comprehend the moral and ethical foundations of Judeo-Christian thought, and analyze situations and problems from this basis. • Graduates of the bachelor’s program will be able to demonstrate the ability to make values-based decisions from the perspective of a Christian heritage.
<p>Technology</p> <p>Graduates of Grand Canyon University’s bachelor’s program will be able to demonstrate efficient and effective use of technological tools.</p>	<ul style="list-style-type: none"> • Graduates of the bachelor’s program will be able to retrieve, organize, assess, process, and safely secure information. • Graduates of the bachelor’s program will be able to demonstrate proficiency and adaptability in commonly accepted applications and devices. • Graduates of the bachelor’s program will be able to demonstrate competence in mediated communication, connect globally to present an “e-self” that is sensitive to audience and context, and analyze and interpret visual rhetoric.

Mission-based Master’s Competencies

Domains	Competencies
<p>Leadership</p> <p>Graduates of Grand Canyon University’s master’s program will be able to establish effective leadership by being grounded in the reality of the world, accepting the consequences of choice, and striving unselfishly to help others meet their highest potential.</p>	<ul style="list-style-type: none"> • Graduates of the master’s program will be able to utilize responsible leadership through the application of leadership models. • Graduates of the master’s program will be able to integrate leadership skills that inform, inspire, and motivate others to achieve their goals. • Graduates of the master’s program will be able to select effective leadership styles appropriate to the situation. • Graduates of the master’s program will be able to improve their leadership by applying initiative, political sensitivity, self-discipline, and perseverance.
<p>Communication</p> <p>Graduates of Grand Canyon University’s master’s program will be able to identify and cultivate interpersonal and professional communication behaviors essential to servant leadership and rooted in Christian ethical belief.</p>	<ul style="list-style-type: none"> • Graduates of the master’s program will be able to operate in a pluralistic society developing authentic relationships and contributing to their discipline, while serving and promoting community. • Graduates of the master’s program will be able to formulate clear and compelling arguments, rationally constructed, prefaced by critical analysis, and composed with a conscious awareness of the power, ethical ramifications, and consequences of communication style. • Graduates of the master’s program will be able to design and execute clear communication, which creates understanding and achieves desired results through a variety of communication modalities.

Domains	Competencies
<p>Global Citizenship</p> <p>Graduates of Grand Canyon University’s master’s program will be able to propose empathy, refute ethnocentrism, and champion the reality that people are different with different perspectives on history, religion, value-systems, and many other aspects of life and living.</p>	<ul style="list-style-type: none"> • Graduates of the master’s program will be able to guide and manage global organizations, applying business knowledge within cross-cultural contexts. • Graduates of the master’s program will be able to support a global mindset that is sensitive to cultural differences and tolerant of differing perspectives, practices, and values. • Graduates of the master’s program will be able to value cultural diversity in order to build more innovative and competitive organizations. • Graduates of the master’s program will be able to construct responsible plans and decisions that balance the creation of economic wealth with the promotion of human welfare worldwide.
<p>Critical Thinking</p> <p>Graduates of Grand Canyon University’s master’s program will be able to champion clarity and logic in thought by asking questions and pursuing knowledge to avoid delusion and blind acceptance of ideas, to reduce vulnerability, and to work to find solutions rather than dwell on problems.</p>	<ul style="list-style-type: none"> • Graduates of the master’s program will be able to evaluate and synthesize personal skill sets of critical thinking, risk assessment, decision-making, analytical skills, and creativity to promote effective judgment and actions. • Graduates of the master’s program will be able to utilize social judgment skills and research through gathering, sorting, analyzing, applying, and evaluating information to solve problems. • Graduates of the master’s program will be able to evaluate information based on historical, current, reliable, and valid information and to utilize applications of research to impact decision-making.
<p>Values & Ethics</p> <p>Graduates of Grand Canyon University’s master’s program will be able to model and communicate the values and ethics formulated within the context of a global perspective by critically integrating them into their decision-making.</p>	<ul style="list-style-type: none"> • Graduates of the master’s program will be able to demonstrate cultural competence by synthesizing a variety of views and perspectives on values and ethics. • Graduates of the master’s program will be able to integrate course work, professional life, life experience, and educational experience into a coherent values-based worldview. • Graduates of the master’s program will be able to investigate the historical foundations of critical thought through the context of values and ethics to find meaning, construct knowledge, and deconstruct faulty thinking. • Graduates of the master’s program will be able to demonstrate the ability to communicate and model a holistic ethical system.
<p>Technology</p> <p>Graduates of Grand Canyon University’s master’s program will demonstrate the use of technological tools as well as efficient and effective use of the tools themselves, including retrieving, organizing, and assessing information; securing information; and analyzing information as the basis for evidence-driven action.</p>	<ul style="list-style-type: none"> • Graduates of the master’s program will be able to judge the quality of information to determine how it can be best used for problem solving, through development and application of data models, both quantitative and qualitative, to identify and project patterns and trends. • Graduates of the master’s program will be able to develop proficiency in practices that assure the confidentiality, quality, and continuing existence of information. • Graduates of the master’s program will be able to demonstrate efficiency in strategies, which will ensure efficient and effective analysis and use of information.

Mission-based Doctoral Competencies

Domains	Competencies
<p>Leadership</p> <p>Graduates of Grand Canyon University’s doctoral program will be able to achieve effective leadership in their organization and discipline by making discoveries, contributing knowledge founded and rooted in proven theory through research, and making effective use of leadership to manage change.</p>	<ul style="list-style-type: none"> • Graduates of the doctoral program will be able to act as leaders in their discipline through the active application of knowledge in an intelligent and effective way to lead and construct an inventive, original, and creative vision. • Graduates of the doctoral program will be able to employ meta-thinking and self-evaluation to assess their current leadership style and leadership potential in order to develop clarity of vision, purpose, and action in the leading of self and others. • Graduates of the doctoral program will be able to utilize compelling leadership styles and models to manage change, exercise influence, empower others, create interest, motivate followers, and have a greater impact in their field of study.
<p>Communication</p> <p>Graduates of Grand Canyon University’s doctoral program will be able to communicate effectively the results of their research in an academic environment, demonstrate a strong link between behaviors, beliefs and ethical values, and be good stewards of their words.</p>	<ul style="list-style-type: none"> • Graduates of the doctoral program will be able to combine effective oral and written communication to disseminate clear and compelling research to the academic community through multiple modalities in a way that promotes excellence in their discipline. • Graduates of the doctoral program will be able to design and execute succinct synthesis of ideas and data while guiding followers through skilled use of verbal imagery, active listening skill, and audience assessment.
<p>Global Citizenship</p> <p>Graduates of Grand Canyon University’s doctoral program will be able to build practices and a culture which honor diversity, demonstrate cultural sensitivity, engage in globally focused leadership, and value international perspectives.</p>	<ul style="list-style-type: none"> • Graduates of the doctoral program will be able to apply and analyze cultural implications rooted in diverse ethical and global systems to transcend geographical and cultural paradigms, allowing them to think in interconnected and important ways that expand beyond the organization’s boundaries and into the global community. • Graduates of the doctoral program will be able to become participants in the global academic community, view their scholarly area from a global perspective, approach scholarly activity from a global mindset, and pursue research beyond the academic traditions of a single culture.
<p>Critical Thinking</p> <p>Graduates of Grand Canyon University’s doctoral program will be able to understand the history of ideas, employ empirical examples in order to provide relevance and validity to ideas, and judge their capacity to act based upon various scales of intelligence to create change.</p>	<ul style="list-style-type: none"> • Graduates of the doctoral program will be able to use critical thinking skills to sustain research and analysis for the purpose of attaining new cognitive processes, critique opinions and assumptions using intellectual reasoning free of egocentrism, and research patterns and relationships in order to promote change. • Graduates of the doctoral program will be able to create new knowledge through critical thinking by combining and integrating different opinions to further understanding in their field.
<p>Values & Ethics</p> <p>Graduates of Grand Canyon University’s doctoral program will be able to model and communicate at the organizational level the values and ethics formulated within the context of a global perspective by critically integrating into their decision-making and other professional actions as leaders those values and ethics.</p>	<ul style="list-style-type: none"> • Graduates of the doctoral program will be able to integrate a multiplicity of views and perspectives to develop cultural competence through values and ethics, while having the capacity to understand and synthesize other worldviews into their actions. • Graduates of the doctoral program will be able to formulate leadership strategies through the context of the highest ethical standards to inform behavior. • Graduates of the doctoral program will be able to effect change and align belief systems in their respective organizations relative to the highest values and ethical standards. • Graduates of the doctoral program will be able to investigate the historical foundations of critical thought through the context of values and ethics to find meaning, construct knowledge, and deconstruct faulty thinking.

Domains	Competencies
<p>Technology</p> <p>Graduates of Grand Canyon University’s doctoral program will demonstrate the leadership practices that guide the use of technological tools as well as efficient and effective use of the tools themselves, including retrieving, organizing, and assessing information; securing information; and analyzing information as the basis for evidence-driven action.</p>	<ul style="list-style-type: none"> • Graduates of the doctoral program will be able to direct the formulation of policies and implementation strategies for efficient and effective retrieval and organization of information. • Graduates of the doctoral program will be able to judge the quality of information to determine how it can be best used for organizational problem solving, through development and application of data models, both quantitative and qualitative, to identify and project patterns and trends. • Graduates of the doctoral program will be able to develop and implement at the organizational level practices that assure the confidentiality, quality, and continuing existence of information. • Graduates of the doctoral program will be able to demonstrate leadership dedicated to evidence-driven action by formulating policies and implement strategies at the organizational level which will ensure efficient and effective analysis and use of information.

Historical Sketch

Grand Canyon College was chartered on August 1, 1949, with 16 faculty and approximately 100 students, many of them veterans. In 1951 the College put up its first permanent buildings on a 90-acre tract in west Phoenix. Grand Canyon College was fully accredited in 1968 by the Commission on Institutions of Higher Education, 30 North LaSalle Street, Suite 2400, Chicago, IL 60602-2504, 312-263-0456, 800-621-7440.

Established as a Baptist-affiliated institution with a strong emphasis on religious studies, the school initially focused on offering bachelor’s degree programs in education. Over the years, the school expanded its curricula to include programs in the sciences, nursing, business, music, and arts, and developed a strong reputation for producing some of the most effective teachers, nurses, health care professionals and fine-arts students in the Southwest.

During planning for the change in institutional organization and status from Grand Canyon College to Grand Canyon University, the institution identified several landmark events that had been and would be pivotal during this transition. These included, but were not limited to, the organization of programs and departments into multiple colleges, the offering of graduate degree programs, the formation of the Grand Canyon University Foundation, and the generosity of several individuals who pledged or gave unrestricted gifts valued at one million dollars or more to launch the University into the next decade and century. In May of 1984, the College trustees voted to prepare for transition to University status on the school’s 40th anniversary in 1989. Another landmark event occurred at the turn of the century that moved the University away from being owned and operated by the Arizona Southern Baptist Convention to being self-owned by the Board of Trustees.

By the early 2000’s, though, GCU was struggling with maintaining its operations in light of dwindling financial support. In September 2003, the University was at a critical juncture, teetering on the verge of insolvency and facing the prospect of bankruptcy with a limited student body. In early 2004, a small group of investors acquired the University and undertook a mission to salvage GCU by focusing primarily on offering online programs to working adults. With an improving financial structure, but a languishing student body and campus, the University recruited a new leadership team in 2008 to envision a future for GCU that centered around a hybrid campus strategy that combined a thriving, traditional student body with a growing nontraditional student body focused primarily on working adults studying at the graduate level. To generate the additional capital necessary to improve its online campus infrastructure and begin the expansion of its ground, traditional campus, the University completed an initial public offering in 2008.

The University began to implement its vision in earnest by making significant investments in its campus. The University began to see a transformation in the quality and growth of its traditional student body which grew from less than 1,000 students attending its campus in 2009 to approximately 19,000 students in fall 2017, with an incoming GPA of approximately 3.5. GCU’s nontraditional student body also made tremendous strides during this time as well, growing from approximately 22,000 students at the beginning of 2009 to approximately 70,000 students at the end of 2017, with greater than 50% studying in graduate programs. Almost 70% of the University’s traditional students are studying in rigorous science, technology, engineering, math and business programs and the University expects to see its overall traditional student body expand to approximately 25,000 students by 2025.

In total, since 2009, the University has invested over one billion dollars in facilities and technology infrastructure. The University continues to invest in full-time faculty teaching both traditional and nontraditional students, improved technology infrastructure and programmatic expansion in high-growth, high-demand areas such as engineering, computer science, and information technology. Importantly, the University has been able to self-fund these investments with only nominal increases in tuition for nontraditional students while freezing tuition for traditional students for 10 straight years.

GCU’s unique history and recent transformation are distinctive in higher education today as no other university in the country has seen such dramatic change. This is further evidenced in 2018 when GCU transitioned back to a non-profit institution. This decision provided faculty and students equitable opportunities to participate in academic and co-curricular opportunities with peer-institutions, to operate a philanthropic foundation and provide grant writing and research opportunities for faculty and students, to invest in educational infrastructure allowing the University to continue offering tuition at levels that make private higher education affordable to all socio-economic classes of

Americans, to provide employment and career growth opportunities for faculty and staff, and continue to invest in the communities the University serves. This transition also allowed student-athletes to participate in governance opportunities afforded by the NCAA.

Board of Trustees

Will Gonzalez, Chairman
City of Phoenix Prosecutor's Office
M.S., Grand Canyon University; J.D., Thurgood Marshall School of Law

Don Andorfer
Previous Grand Canyon University Interim President, Spring 2006
B.S., M.A., Ball State University

Peggy J. Chase
President and CEO, Terros Health
B.S.W., Arizona State University

Dr. Lupita Ley Hightower
Superintendent, Tolleson Elementary School District No. 17
B.S., University of Arizona; MEd, EdD, Arizona State University

Marion Kelly
Director Community Affairs, Mayo Clinic
B.A., Kentucky State University; B.A., University of Kentucky

Dr. Fred Miller
Medical Director, Bridgeway Health Solutions
M.S., PhD, Howard University; CMD, University of Medicine & Dentistry

Dr. Jim Rice
Retired Superintendent of the Alhambra Elementary School District
B.S., Grand Canyon University; MEd, EdD, Arizona State University

University Seal

When the Grand Canyon College seal was adopted in 1950, two of its major components were the cross and the cactus. The saguaro cactus rises from its desert setting to signify the intellectual opportunity for Grand Canyon University students, counteracting the arid mental state of uneducated man. The cross stands prominently on the horizon as a guide for spiritual enlightenment. Between the outer circle representing the earth and the inner circle representing the wheel of progress, the name of the University and its location are inscribed. The use of the seal is permitted only with approval of the Chief Executive Officer of the University.

University Mascot and Colors

The University mascot is the antelope. Antelope are native to the region surrounding Prescott, Arizona, near the college's first campus. The mascot reminds us of our heritage and humble beginnings. School colors are purple, black, and white. Students, employees, or contractors of the University shall not use the Grand Canyon University name, logo, or mascot in connection with any commercial venture without written approval of the Chief Executive Officer.

Statement of Principle

The words of the Alma Mater summarize the attitude and spirit of Grand Canyon University:

ALMA MATER

Hail to thee, Grand Can-yon Col-lege

Al-ma Ma-ter True.

Set a-midst the des-ert's glo-ry,

High-est praise to you.

So to God our hopes as-pir-ing,

This our pledge di-vine,

Striv-ing, seek-ing, find-ing, serv-ing

God and all man-kind.

The musical notation consists of eight staves of music in a single system. Each staff begins with a treble clef, a key signature of one flat (B-flat), and a 4/4 time signature. The notes are primarily quarter and eighth notes, with some rests. The lyrics are centered under each staff.

Words and music composed by Dr. Chester S. Bagg

University Calendar

Degrees Offered

The University offers curricula leading to the degrees of Doctor of Business Administration, Doctor of Education, Doctor of Nursing Practice, Doctor of Philosophy, Master of Arts, Master of Business Administration, Master of Divinity, Master of Education, Master of Public Administration, Master of Public Health, Master of Science, Bachelor of Arts, and Bachelor of Science, as well as offering graduate and undergraduate certificates. Please refer to the university website (www.gcu.edu) for the locations/modalities in for each program. Students should be advised that some degree programs at GCU have competitive admissions or require college-specific admission requirements beyond the University level admission requirements. If a program is offered on campus and online, the courses within the program are the same regardless of modality.

Doctoral Programs

Doctor of Business Administration

The Doctor of Business Administration (D.B.A.) is designed for those who desire a deeper understanding of business theory and its application to their area of professional interest. Grand Canyon University offers the following emphases for this degree:

- Data Analytics Qualitative
- Data Analytics Quantitative
- Management Qualitative
- Management Quantitative
- Marketing Qualitative
- Marketing Quantitative

Doctor of Education in Organizational Leadership

The Doctor of Education (Ed.D.) in Organizational Leadership program is delivered through a combination of online courses and face-to-face residencies. Aspects of the program's curriculum and instruction are shared by the College of Education, College of Humanities and Social Sciences, College of Nursing and Health Care Professions, College of Theology and the Colangelo College of Business, meeting the needs of master's-prepared professionals seeking a terminal degree in leadership. Grand Canyon University offers the following emphases for this degree:

- Behavioral Health Qualitative
- Behavioral Health Quantitative
- Christian Ministry Qualitative
- Christian Ministry Quantitative
- Health Care Administration Qualitative
- Health Care Administration Quantitative
- Higher Education Leadership Qualitative
- Higher Education Leadership Quantitative
- K-12 Leadership Qualitative
- K-12 Leadership Quantitative
- Organizational Development Qualitative
- Organizational Development Quantitative
- Special Education Qualitative
- Special Education Quantitative

Doctor of Education in Teaching and Learning with an Emphasis in Adult Learning

The Doctor of Education in Teaching and Learning program develops educators capable of generating new knowledge and responsibly applying knowledge to achieve educational outcomes as well as mentoring, coaching, and collaborating from the perspective of the Christian worldview. Students will study the major bodies of literature in educational theory and philosophy, will reflect critically on existing theory, will identify appropriate applications of theory, and will conceptualize philosophy from its theoretic foundation. Students will develop academic and research expertise through the study of research methodology.

The program of study is consistent with Grand Canyon University's mission to develop students who are global citizens, critical thinkers, effective communicators, and responsible leaders. Grand Canyon University offers the following emphases for this degree:

- Adult Learning Qualitative
- Adult Learning Quantitative

Doctor of Health Administration

The doctorate in health administration is a terminal research degree that allows for the development of theoretical knowledge in the healthcare industry and application of that knowledge to the improvement of practice. The program will prepare established professionals to design innovative operational approaches to leadership within healthcare organizations through addressing technology, efficiency, quality, safety, and outcomes. The program will prepare students for careers in health system management, healthcare operations, healthcare research, and health policy. Credits: 60+. Grand Canyon University offers the following emphases for this degree:

- Operational Leadership Qualitative
- Operational Leadership Quantitative

Doctor of Nursing Practice

The Doctor Nursing Practice Degree (DNP) encompasses a mixture of didactic courses and mentored practicum experiences. Each course allows for the demonstration and achievement of programmatic competencies and objectives through real-world health care systems application. The curriculum and instruction meet the needs of master's-prepared nurses seeking a terminal-practice degree. Grand Canyon University offers the following emphasis for this degree:

- Educational Leadership

Doctor of Philosophy in Counselor Education and Supervision

The doctoral degree in Counselor Education and Supervision is intended to prepare graduates to work as counselor educators, supervisors, researchers, and practitioners in academic and clinical settings. The standards for this program are intended to accommodate the unique strengths of students seeking to enhance their leadership and counseling skills. Grand Canyon University offers the following emphases for this degree:

- Qualitative
- Quantitative

Doctor of Philosophy in General Psychology

The Doctor of Philosophy (Ph.D.) in General Psychology program offers a broad array of courses that increase the understanding of human actions in the past and present. Grand Canyon University offers the following emphases for this degree:

- Cognition and Instruction Qualitative
- Cognition and Instruction Quantitative
- Industrial and Organizational Psychology Qualitative
- Industrial and Organizational Psychology Quantitative
- Integrating Technology, Learning, and Psychology Qualitative
- Integrating Technology, Learning, and Psychology Quantitative
- Performance Psychology Qualitative
- Performance Psychology Quantitative

Education Specialist

The Education Specialist (Ed.S.) in K-12 Leadership program develops and enhances the learner's ability to grasp, process, and apply doctoral-level constructs that positions them for organizational governance, capacity building, and vision casting.

Professional Programs

Post-Master of Arts in Theology: Introductory Biblical Languages Certificate

The Post-Master of Arts in Theology Certificate provides experienced professionals with fundamental understandings and skills that prepare them to properly interpret and communicate the biblical text for the sake of ministry within a local church. Grand Canyon University offers the following emphasis for this degree:

- Introductory Biblical Languages

Post-Master of Science in Counseling

- Addiction Counseling
- Childhood and Adolescence Disorders
- Marriage and Family Therapy
- Trauma

Post-Master of Science in Nursing Certificates

The Post-Master of Science in Nursing Certificates prepare experienced registered nurses to provide competent advanced practice nursing care through an evidence-based program of study. Grand Canyon University offers the following emphases for this degree:

- Acute Care Nurse Practitioner Certificate with an Emphasis in Adult Gerontology
- Family Nurse Practitioner Cert
- Nursing Education Certificate

Master Programs

Bridge to Doctor of Philosophy

- Counselor Education and Supervision

Master of Arts

The Master of Arts is granted to those students who have completed a bachelor's degree at an accredited, GCU-approved institution and are seeking a Master of Arts degree.

- Autism Spectrum Disorders
- Christian Leadership
- Christian Ministry
- Christian Studies
- Communication

- Emphasis in Education
- Curriculum and Instruction
- English
 - Emphasis in Education
- Higher Education Student Affairs
- History
 - Emphasis in Education
- Reading
 - Emphasis in Elementary Education
 - Emphasis in Secondary Education
- Teaching English to Speakers of Other Languages
- Urban Ministry
- Youth and Family Ministry

Master of Business Administration

The Master of Business Administration is designed for those students who have previously completed a bachelor's degree at an accredited, GCU-approved institution.

- Emphases in:
 - Accounting
 - Business Analytics
 - Cybersecurity
 - Finance
 - Health Systems Management
 - Leadership
 - Marketing
 - Project Management
 - Sports Business
 - Strategic Human Resource Management

Master of Business Administration and Master of Science in Leadership

The Master of Business Administration and Master of Science in Leadership is designed for those students who have previously completed a bachelor's degree at an accredited, GCU-approved institution.

Master of Business Administration and Master of Science in Nursing

The Master of Business Administration and Master of Science in Nursing is designed for those students who have previously completed a bachelor's degree at an accredited, GCU-approved institution.

Master of Divinity

The Master of Divinity is the standard degree for professional ministry preparation and is designed for students who intend to serve in local churches, Christian organizations, and other ministerial roles. The Master of Divinity program offers comprehensive biblical and theological knowledge while developing skills necessary for effective Christian ministry. This degree features a foundational, pastorally oriented program of study that emphasizes the centrality of the gospel, the significance of the church, and the pressing need to advance the Kingdom of God through missions.

Master of Education

The Master of Education degree is designed for students who have previously completed a bachelor's degree at an accredited, GCU-approved institution and may be seeking certification at the elementary or secondary level. An advanced Program of Study is

included in that preparation or can be obtained after certification requirements are completed. This degree is available in the following specialized areas:

- Early Childhood Education
 - Early Childhood Education and Early Childhood Special Education
 - Educational Administration
 - Educational Leadership
 - Elementary Education
 - Elementary Education and Special Education
 - School Counseling
 - Secondary Education
 - Emphasis in Humanities*
 - Emphasis in Humanities‡
 - Emphasis in Science Technology Engineering and Mathematics*
 - Emphasis in Science Technology Engineering and Mathematics‡
 - Secondary Humanities Education
 - Secondary STEM Education
 - Special Education
 - Special Education: Moderate to Severe
- * Initial Program – Leads to Initial Teacher Licensure
 ‡ Initial Program – Does Not Lead to Initial Teacher Licensure

Master of Public Administration

The Master of Public Administration is designed for those students who have previously completed a bachelor's degree at an accredited, GCU-approved institution.

- Emphases in:
 - Government and Policy
 - Health Care Management
 - Non-Profit Management

Master of Public Health

The Master of Public Health is designed for those students who have previously completed a bachelor's degree at an accredited, GCU-approved institution.

Master of Science

The Master of Science is granted to those students who have completed a bachelor's degree at an accredited, GCU-approved institution and are seeking a Master of Science degree.

Note: Students should contact a University Counselor or Student Services Counselor for more information about program availability.

General Education Requirements

General Education coursework prepares Grand Canyon University graduates to think critically, communicate clearly, live responsibly in a diverse world, and thoughtfully integrate their faith and ethical convictions into all dimensions of life. These competencies, essential to an effective and satisfying life, are outlined in the General Education Learner Outcomes. General Education courses embody the breadth of human understanding and creativity contained in the liberal arts and sciences tradition. Students take an array of foundational knowledge courses that promote expanded knowledge, insight, and the outcomes identified in the University's General Education Competencies. The knowledge and skills students acquire through these courses serve as a foundation for successful careers and lifelong journeys of growing understanding and wisdom.

General Education Information

Requirements for Minnesota Students

Minnesota students should refer to the Minnesota-specific General Education requirements below, and consult their Student Services Counselor if necessary.

Recommended Sequence for Online Students

It is recommended that online students at Grand Canyon University use the suggested GCU Course Options identified in the table below and complete the sequence of general education courses in the following order:

Bachelor of Arts	Bachelor of Science
UNV-103/303 ^Ω	UNV-103/303 ^Ω
UNV-104	UNV-104
PSY-102	PHI-105
ENG-105 ^Δ	ENG-105 ^Δ
SOC-100	PSY-102
CWV-101/301 ^Ω	CWV-101/301 ^Ω
Major Course 1	Major Course 1
ENG-106 ^Δ	ENG-106 ^Δ
MAT-144	BIO-220
Major Course 2	Major Course 2
INT-244	SOC-100
COM-263	MAT-154 or MAT-144*

Students enrolled in the traditional campus may have a wider variety of options available in which to satisfy their general education requirements. Please contact your Student Services Counselor.

*Math requirement is dependent on Program of Study.

Bachelor of Arts

Competency	Requirements	GCU Course Options	Total Credits
<p>University Foundations</p>	<p>Upon completion of Grand Canyon University's University Foundation experience, students will be able to demonstrate competency in the areas of academic skills and self-leadership. They will be able to articulate the range of resources available to assist them, explore career options related to their area of study, and have knowledge of Grand Canyon's community. Students will be able to:</p> <ul style="list-style-type: none"> • Demonstrate foundational academic success skills • Explore GCU resources (CLA, library, Career Center, ADA office, etc.) • Articulate strategies of self-leadership and self-management • Recognize opportunities to engage in the GCU community. <p>Students with fewer than 24 credits will fulfill the University Foundations requirement with a specified lower-division course. An upper-division selection will be made available to students who enter the university with more than 24 credits.</p>	<ul style="list-style-type: none"> • UNV-103/303: University Success, 4 credits 	<p>4</p>

Honors College

Honors College Description

Grand Canyon University's Honors College oversees the success of honors students as they progress through and complete required coursework in the honors program. Each college has a unique set of courses that must be taken to successfully complete the honors program and to earn a certificate of honors from the Honors College. Each college's honors program is designed to challenge students in the areas of personal and academic growth, as well as influence students' mental paradigms for viewing the world in which they live. This is accomplished by holistically developing competencies in the areas of decision-making and research, ethics, leadership, service, and cultural awareness. In particular, students will drive change that affects their community. Academically, the program consists of three general education courses, 8-9 credits of major coursework, and four annual symposia.

Honors College Mission

The honors program at Grand Canyon University is designed to produce exemplary graduates who are uniquely equipped to lead and serve in both the workplace and local and global communities. Academically advanced students participate in curricular and co-curricular experiences which are rigorous, meaningful, interdisciplinary, and unique to the honors community. The focus is on developing a depth and breadth of understanding of content within a challenging curriculum that holistically integrates faith, theory, practice and research. The goal of the honors program is to develop servant leaders and change agents who are primed to enter the world with a competitive advantage over their contemporaries in the fields of problem solving, communication, critical thinking, evidence-based decision making, and cultural awareness.

Honors College Goals

While the outcomes of the honors program cannot be confined to a list of specific tangible targets, servant leadership and scholarship are its overarching goals. The honors program:

- Focuses on transforming students academically through a broad exposure to many disciplines while being challenged to higher levels of thinking within those disciplines.
- Expects students to acquire Habits of Mind and novel ways of thinking that prepare them to analyze relevant issues and to become change agents who problem-solve solutions to real-world applications in innovative ways.
- Provides avenues for students to represent the university as ambassadors who display servant leadership through experiential learning and service opportunities.

Programs Requirements

The following expectations for coursework must be completed in order to earn a special designation upon graduation from the Honors College. The honors program requires 24 credits of honors coursework as well as attendance and participation in HON-110: Honors Symposium. The HON-110 course is worth 0 credit but is mandatory.

Students that transfer in an approved equivalent of an honors general education course through GCU dual-enrollment or from a college or university must complete an additional honors course within his or her program of study.

For questions, please review the Honors College website for additional details at www.gcu.edu/honors or contact the Honors College at GCUHonors@gcu.edu.

Degree Requirements - Freshman

The Colangelo College of Business

College Description

The Colangelo College of Business (CCOB) focuses on providing cutting-edge and innovative courses designed to meet students' career needs. The College offers Programs of Study for those who desire the traditional four-year baccalaureate degree, accelerated degree-completion programs for working adults, and graduate degrees for working professionals. The College's academically qualified faculty has relevant business and teaching experience and is committed to providing an excellent business education through the primacy of teaching, offering small class sizes, and building student-faculty relationships that foster the student's academic and professional growth.

College Mission

The Colangelo College of Business challenges and inspires students to be servant leaders with the business skills and values necessary to drive organizational success and positively impact society.

College Features

The Colangelo College of Business is comprised of two academic schools. Each school serves a unique set of students and offers quality programs to meet specific students' career needs.

School of Business Studies

The School of Business Studies exists to serve both undergraduates who are preparing to initiate careers and working professionals who are seeking to develop their careers further. All programs within the School of Business Studies are developed in accordance with the accreditation standards of the Accreditation Council of Business Schools and Programs (ACBSP), which requires that a program be in existence for two or more years before it receives accreditation. Programs in the School of Business Studies that have reached this threshold and received ACBSP accreditation include the Bachelor of Science in Accounting, Bachelor of Science in Business Administration, Bachelor of Science in Entrepreneurial Studies, Bachelor of Science in Finance and Economics, Bachelor of Science in Marketing, and Master of Business Administration.

School of Business Studies: Undergraduate Programs

The School of Business Studies offers a Bachelor of Science degree with majors in Accounting, Business Administration, Entrepreneurial Studies, Finance and Economics, Marketing, and Sports Management. The accounting major and the finance and economics major are designed to prepare students for professional practice in corporate accounting and finance or for management positions in business. Completing the requirements for the accounting major qualifies students to sit for the Certified Management Accountant (CMA) examination and for the Certified Public Accountant (CPA) exam in most states. The entrepreneurship major is designed for students who desire to start their own business, or be a change agent for innovation within larger organizations. The business administration major is a broadly-based degree that emphasizes technical, human, and conceptual skills that encompass all functional areas of business. The marketing major combines a strong business core with special emphasis in market forces, marketing strategy, and sales management. The sports management major prepares students to become professional managers in areas such as sports marketing,

sports media, amateur and professional athletics, and sports and entertainment event planning.

Bachelor of Science in Accounting

The Bachelor of Science in Accounting program prepares graduates for a future career working as an accountant. Upon completing the bachelor's degree in accounting, students possess the skills necessary to work in a variety of careers, such as corporate accounting, financial analysis, tax preparation, and internal auditing. Learning the core foundations of accounting principles and procedures, students qualify to sit for the Certified Management Accountant (CMA) exam. Coursework for the bachelor's degree in accounting includes a focus on accounting principles and theories necessary for preparing financial statements in the United States. Principles of management accounting, including decision making, financial analysis, and cost accounting are also examined in this bachelor's degree in accounting.

Bachelor of Science in Accounting with an Emphasis in Public Accounting

Grand Canyon University's Bachelor of Science in Accounting with an Emphasis in Public Accounting prepares graduates for a future career working as an accountant. Immediately upon completing the bachelor's degree in accounting, students will be provided with the skills necessary to work in a variety of careers within public accounting, such as a staff accountant, tax accountant, or auditor. Graduates may qualify to sit for the Certified Public Accountant (CPA) exam in most states, while continuing to work toward the 150-credit-hour minimum required for licensure. It is recommended that that students continue on to the Master of Science in Accounting in order to meet the educational requirements for becoming licensed as a CPA.

Bachelor of Science in Applied Human Resources Management

Grand Canyon University's Bachelor of Science in Applied Human Resources Management program prepares graduates to possess the skills necessary for careers in talent management – one of the essential business functions. Learning the core foundations of Human Resources Management (HRM) principles and procedures, students gain an understanding of how employees are motivated to accomplish organizational goals. Students explore how to align talent with an organization's strategic mission. The program is based on theory interwoven with practice in order for students to gain an understanding of the strategies and skills needed to successfully execute HRM tasks. Students study the theories and best practices of employee recruitment, selection, placement, retention, total compensation, training, development, and performance management.

Bachelor of Science in Business for Secondary Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Bachelor of Science in Business for Secondary Education prepares students to become a junior high or high school business teacher. This program provides initial teacher licensure. The format and courses of this regionally accredited and Arizona State Board of Education approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. Teacher candidates must have access to a grade 6-12 classroom to complete the program and practicum assignments, which guide them through 85 hours of observational experiences. The final semester of this Secondary Education program includes a full-time, 15-week student teaching component. Candidates are responsible for contacting their state department of education for licensure requirements and program approval.

Grand Canyon University's Bachelor of Science in Entrepreneurial Studies with an Emphasis in Technology Management program addresses solving real-world problems with the tools of computation and computer hardware by

partnering entrepreneurial technology students with computer programming and computer science students at the start of the program and for the final capstone project. The program embraces servant leadership, innovation, an entrepreneurial spirit, and business skills in order to develop the global citizens, critical thinkers, effective communicators, and responsible leaders required in today's global economy. The program, which is built on the principles of personal integrity, values, and innovation, provides students with the personal and business skills to think analytically, ask the right questions, solve problems, and function as entrepreneurs in their own businesses or as intrapreneurs in larger companies.

Bachelor of Science in Finance with an Emphasis in Financial Planning

The Bachelor of Science in Finance with an Emphasis in Financial Planning is an industry-supported program which provides students with an education in the financial planning field and the opportunity to meet both the coursework and the degree requirement to sit for the CERTIFIED FINANCIAL PLANNER(TM) exam—an important step in the path to CFP(R) certification. The curriculum teaches students about the process of personal financial planning. Students learn how to assess clients' personal current and future financial needs, develop goals, evaluate alternatives, develop a comprehensive action plan in alignment with their values to achieve their goals, and monitor and adjust plans in a changing environment. The program focuses on personal financial management, investing, retirement planning, taxes, estate planning, risk management, client communication, and ethics.

School of Business Studies: Graduate Programs

The Colangelo College of Business offers the Master of Business Administration (MBA) program provides emphases in Accounting, Finance, Health Systems Management, Leadership, Marketing, and Strategic Human Resource Management. The Master of Business Administration (MBA) degree is designed for working professionals who desire to complete their graduate degree without interrupting their professional careers. The program consists of 39-51 graduate credit hours. It affords students the opportunity to develop cross-functional business-management skills, preparing business practitioners for advanced management and executive positions. Students have the option of completing two emphasis areas as part of their MBA degree. Students with the necessary academic or professional background who complete two courses per semester on a trimester basis will be able to complete the MBA program in just over two years. The Colangelo College of Business MBA Program is fully accredited by the Accreditation Council of Business Schools and Programs (ACBSP).

The Master of Science in Accounting program prepares students to sit for the CPA exam and provides opportunities for current CPAs and accountants to advance their skills in theory, practice, and research.

Master of Business Administration

The Master of Business Administration program is designed for working professionals who desire to complete a program of study that allows focus across technical, human, and conceptual skills that encompass the functional areas of business. The core courses in the MBA program allow the student to develop strong foundations across accounting, economics, finance, information systems, management, marketing and quantitative methods provided in the core courses. Courses in the critical areas of leadership and human resources management will provide the student the broad management perspective as well as the analytical and interpersonal skills needed to succeed in global business.

Master of Business Administration with an Emphasis in Business Analytics

The Master of Business Administration with an Emphasis in Business Analytics program provides the foundation of an MBA, including emphasis on accounting, finance, organizational leadership, management, marketing, and strategic planning, as well as two courses in business analytics. The two business analytics courses address implementation of database functions in relation to performing data analytics along with techniques for extracting knowledge from large data sets. Emphasis is on hands-on application of key concepts.

Master of Business Administration with an Emphasis in Finance

Grand Canyon University's Master of Business Administration with an Emphasis in Finance program provides students with the capacity for transformational leadership through the application of business practices. The program highlights the impact of the global economy on organizational decision making, planning, and sourcing of organizational resources. Students draw upon interpersonal skills to address each practice, as well as to comprehend the influence that diverse cultures have on it. The use of telecommunications, emerging technologies, and e-commerce applications combine with essential business principles that encompass finance, accounting, economics, marketing, and management, providing students with the capacity to lead and manage business enterprises both effectively and ethically. The program encourages students to be informed critical thinkers and decision makers through active research and the application of quantitative methods that transform raw data into useful information. The program provides students with the skills necessary to demonstrate proficiency in corporate financial management and investments in order to ensure corporate solvency, profitability, and efficiency.

Master of Business Administration with an Emphasis in Sports Business

The Grand Canyon University MBA with Sports Business emphasis is specifically designed for ambitious students who seek to further develop their business knowledge and skills in order to maximize career opportunities within the multi-billion dollar global sports business industry. Graduates receive an MBA diploma from the GCU Colangelo College of Business that is intended for relevance and utility in the modern sports business world. The degree program is immersed with Christian-based business values and entrepreneurship, which are foundations of the GCU experience.

The MBA with Sports Business emphasis examines a broad range of business topics and principles with specific application to some of the sports industry's major job category areas such as sports sales and marketing, entrepreneurship, athletic administration, media, as well as trades and services. While giving a healthy respect to the notable pioneers of the industry, the curriculum primarily explores the current trends and future strategies that seek to help sports organizations remain competitive in a global marketplace. The program highlights the impact of the global economy on organizational decision making, planning, and sourcing of administrative resources. Students draw upon interpersonal skills to address each practice, as well as to comprehend the influence diverse cultures have on it. Coursework addresses how the use of emerging digital, social, and e-commerce technologies combine with essential business principles that encompass finance, accounting, economics, marketing, and management. Graduates from the GCU Colangelo College of Business with an MBA Sports Business emphasis are provided with the capacity to lead and manage sports business enterprises both effectively and ethically.

Master of Science in Leadership

Developed for individuals interested in the leadership skills involved in management, Grand Canyon University offers a Master of Science in Leadership. This leadership degree provides students with the skills necessary to develop professionally and gain self-confidence in their own leadership styles. Students learn to integrate a conceptual foundation for an executive leadership role that emphasizes the immediate application of ethical and practical leadership skills. This program also focuses on the ability to create, communicate and influence decisions using critical thinking and problem-solving skills that are grounded in theory and research. Students gain an understanding of key audiences and learn how to effectively connect and communicate with important stakeholders.

Coursework in the Master of Science in Leadership degree explores the nature of business leadership models and theories, examines these models through a broad variety of perspectives, and provides a description and analysis of these approaches to leadership. Special attention is given to how the models can improve leadership in real-world organizations. Students will also study tactics for becoming an empowering leader. Organizational politics, influence tactics, and succession planning are also topics of discussion.

Servant leadership is another area of focus in this leadership degree. Students study the biblical basis of servant leadership and examine how servant leaders can play a significant role in leading organizations that are committed to empowering the people and communities they serve. They have the opportunity to participate in an organization or community-based leadership project and create a professional portfolio.

The College of Doctoral Studies

College Description

The College of Doctoral Studies provides planning, administration, and evaluation of GCU doctoral programs. The College is responsible for operations concerning doctoral learners including screening applications, assessing students' needs for support services, interfacing with Enrollment, planning and participating in residencies, helping to develop course materials, and providing support throughout the doctoral process. The College provides oversight to the selection of doctoral faculty and contributes to faculty training and evaluation.

College Mission

The College develops expert practitioners and researchers who become leaders in the disciplines and communities they serve.

College Vision

Through innovative uses of technology, collaboration, and learning communities, the College of Doctoral Studies will be the premier provider of online doctoral education.

College Features

Innovative programs in the College of Doctoral Studies are designed to develop scholars through instruction in theory and research, and through practitioners' knowledge. These activities prepare learners to produce scholarly literature, solve problems, and enhance performance in professional roles. The doctoral programs leverage the knowledge and expertise of faculty, learners, and experts external to the University through learning communities specific to the issues, concepts, and methods of a given discipline. Furthermore, the College of Doctoral Studies emphasizes that graduates apply their professional knowledge and services to the benefit of the community.

Doctoral Program Goals

The College of Doctoral Studies expects its graduates to:

- Be experts in the concepts and methods of their disciplines.
- Create new ways to explain, predict, and improve performance within their areas of expertise.
- Conduct scholarly research that creates knowledge and leads to effective actions.
- Exercise ethical and effective leadership.
- Lead through critical analysis and creative solutions.

Doctoral Programs

Bridge to Doctor of Business Administration with an Emphasis in Data Analytics

Offered online by the College of Doctoral Studies, Grand Canyon University's Bridge to Doctor of Business Administration (DBA) program is designed for ambitious learners with a Master's degree in a field other than business administration. Bridge courses taken prior to the DBA program offer the essential prerequisites to doctoral study. The Bridge to the Doctor of Business Administration with an emphasis in Data Analytics program includes coursework in probability, statistics, finance, accounting, marketing and relational database to help the learner prepare to successfully complete the DBA degree program.

[ACC-502](#) Accounting Practices 4 credits

FIN-504	Finance Principles	4 credits
SYM-506	Applied Business Probability and Statistics	4 credits
MKT-607	Marketing Management	4 credits
MIS-605	Introduction to Databases	4 credits

Bridge to Doctor of Business Administration with an Emphasis in Data Analytics 20 credits

Bridge to Doctor of Business Administration with an Emphasis in Management

Offered online by the College of Doctoral Studies, Grand Canyon University's Bridge to Doctor of Business Administration (DBA) program is designed for ambitious learners with a Master's degree in a field other than business administration. Bridge courses taken prior to the DBA program offer the essential prerequisites to doctoral study. The Bridge to the Doctor of Business Administration with an emphasis in Management program includes coursework in probability, statistics, finance, accounting, and marketing to help prepare the learner to successfully complete the DBA degree program.

Doctor of Education in Organizational Leadership: Behavioral Health (Qualitative Research)

The Doctor of Education in Organizational Leadership program develops the learner's ability to generate new knowledge and responsibly apply knowledge to achieve high-performing entities that allow organizational employees and followers to grow and develop to their full potential. Learners will study the major bodies of literature in leadership, reflect critically on existing theory, and identify appropriate applications of theory in education, business, and other organizational cultures. Learners will develop academic and organizational research expertise through the study of statistical and research methodologies. Students will be able to employ qualitative methodology to design, collect, and analyze information in alignment with conducting a scholarly dissertation. The program of study is consistent with Grand Canyon University's mission to develop learners who are global citizens, critical thinkers, effective communicators, and responsible leaders. Graduates who earn the Doctor of Education in Organizational Leadership with an Emphasis in Behavioral Health will advance the study of leadership within the field of behavior health with an in-depth, research-based approach to facilitate the leadership abilities and role as a strategic professional.

The Doctor of Education in Organizational Leadership program develops the learner's ability to generate new knowledge and responsibly apply knowledge to achieve high-performing entities that allow organizational employees and followers to grow and develop to their full potential. Learners will study the major bodies of literature in leadership, reflect critically on existing theory, and identify appropriate applications of theory in education, business, and other organizational cultures. Learners will develop academic and organizational research expertise through the study of statistical and research methodologies. Students will be able to employ qualitative methodology to design, collect, and analyze information in alignment with conducting a scholarly dissertation. The program of study is consistent with Grand Canyon University's mission to develop learners who are global citizens, critical thinkers, effective communicators, and responsible leaders. Graduates who earn the Doctor of Education in Organizational Leadership with an Emphasis in Christian Ministry will advance the study of leadership within the field of Christian ministry with an in-depth research-based approach to facilitate leadership within Christian ministry and society.

Doctor of Education in Organizational Leadership: Special Education (Qualitative Research)

The Doctor of Education in Organizational Leadership program develops the learner's ability to generate new knowledge and responsibly apply knowledge to achieve high-performing entities that allow organizational employees and followers to grow and develop to their full potential. Learners will study the major bodies of literature in leadership, reflect critically on existing theory, and identify appropriate applications of theory in education, business, and other organizational cultures. Learners will develop academic and organizational research expertise through the study of statistical and research methodologies. Students will be able to employ qualitative methodology to design, collect, and analyze information in alignment with conducting a scholarly dissertation. The program of study is consistent with Grand Canyon University's mission to develop learners who are global citizens, critical thinkers, effective communicators, and responsible leaders. Graduates who earn the Doctor of Education in Organizational Leadership with an Emphasis in Special Education will advance the study of leadership within the field of special education with an in-depth research-based approach to facilitate the leadership abilities and role as a strategic professional.

Doctor of Education in Health Administration: Operational Leadership (Qualitative Research)

The doctorate in health administration is a terminal research degree that allows for the development of theoretical knowledge in the healthcare industry and application of that knowledge to the improvement of practice. The program will prepare established professionals to design innovative operational approaches to leadership within healthcare organizations through addressing technology, efficiency, quality, safety, and outcomes. The program will prepare students for careers in health system management, healthcare operations, healthcare research, and health policy.

Doctor of Philosophy in General Psychology: Cognition and Instruction (Qualitative Research)

This degree is not intended for those seeking licensure in clinical practice. Those interested in licensure or certification should identify the applicable requirements by inquiring directly with their state or province.

Grand Canyon University's Doctor of Philosophy (Ph.D.) in General Psychology program offers a broad array of courses that increase the understanding of human behavior and mental processes. The program prepares individuals to engage their knowledge and skills in cognition and instruction in applied settings of teaching and/or conducting psychological research in business, government, or institutions of higher education. Core areas of instruction include five emphasis courses in cognition, research methods as well as history and systems in psychology, personality, and social, biological, and developmental psychology. Students will be able to employ qualitative methodology to design, collect, and analyze information in alignment with conducting a scholarly dissertation. Students are advised to inquire directly with their state if they intend to pursue

PSY-972^Ω	Research Continuation VII	3 credits
PSY-973^Ω	Research Continuation VII	3 credits
PSY-974^Ω	Research Continuation IX	3 credits

Doctor of Philosophy in General Psychology: Industrial and Organizational Psychology (Quantitative Research)

This degree is not intended for those seeking licensure in clinical practice. Those interested in licensure or certification should identify the applicable requirements by inquiring directly with their state or province.

This degree is not intended for those seeking licensure in clinical practice. Those interested in licensure or certification should identify the applicable requirements by inquiring directly with their state or province. Grand Canyon University's Doctor of Philosophy (Ph.D.) in General Psychology program offers a broad array of courses that increase the understanding of human behavior and mental processes. The program prepares individuals to engage their knowledge and skills in the areas of industrial and organizational psychology in applied business-related settings. Core areas of instruction include five emphasis courses in industrial/organizational psychology, research methods, as well as history and systems of psychology, personality, and social, biological, and developmental psychology. Students will be able to employ quantitative methodology to design, collect, and analyze information in alignment with conducting a scholarly dissertation. Students are advised to inquire directly with their state if they intend to pursue licensure, as this degree does not lead directly to licensure in and of itself.

variety of leadership roles in economically and culturally diverse 21st century K-12 educational communities. After foundational instruction in ethics, research, and theory, coursework focuses on educational policy development and decision making, staffing, and organizational leadership, supervision of teaching and learning, instructional and curricular supervision, department and unit management, and other areas related to leadership at the building or district level. The program is aligned with the standards of the Educational Leadership Constituent Council (ELCC) and is consistent with the University’s mission to develop learners who are global citizens, critical thinkers, effective communicators, and responsible leaders in a technologically advanced world.

Education Specialist in Teaching and Learning

Building a collaborative community focused on student learning requires research, knowledge and the ability plan strategically. Grand Canyon University’s Education Specialist (EdS) in Teaching and Learning program is designed to prepare you to assume a expert role in economically and culturally diverse 21st century educational communities. Offered by the College of Doctoral Studies, this accelerated EdS online program streamlines a rigorous curriculum. Unlike the Doctor of Education in Organizational Leadership with an Emphasis in K-12 Leadership, the EdS degree program does not require a residency or dissertation. With an in-depth analysis-based approach, the Education Specialist degree emphasizes theories and models of teaching, learning and leading in elementary, junior high and high school learning environments. Examine the global politics of education and intervention facilitated by government entities. Study professional learning communities, theories of pedagogy, and explore ways to train and develop the team you will lead and support. Students will learn to excel in teaching with the advanced ability to study industry trends, implement new effective teaching strategies based on original research and apply findings to foster greater classroom success.

The College of Education

College Description

The preparation of teachers and administrators for the public and private schools of this nation is a significant responsibility for the College of Education. The programs seek to ensure the highest level of professional and academic competence of the graduate in the classroom. Consequently, most education courses require a certain number of practicum hours. For more detailed information, please refer to the College of Education Web site at: <http://www.gcu.edu/College-of-Education.php>.

College Mission

Professional education programs at Grand Canyon University are designed to support and promote the university's mission to prepare learners to become global citizens, critical thinkers, effective communicators, and responsible leaders from the context of its Christian heritage. The College of Education inspires excellence in pedagogy and scholarship; advances reflective, innovative, and collaborative teaching practices to maximize student learning and achievement; promotes servant leadership in educational communities; and engages a diverse and global community of learners with purpose and passion.

The College of Education operates as a unit of Grand Canyon University. As such, its mission statement reflects the obligation of the College to support and promote the University's mission as well as to guide its own operations. Within its learners, the College inspires excellence in the art and science of teaching; within its faculty, it does so through their scholarly enterprises. Via its professional education programs, the College teaches learners that all learners can learn and that focused teaching practice can maximize that learning and achievement. The culture and Christian heritage of the University promote a spirit of servant leadership within the College's faculty, staff, and learners so they can minister to people within the broader educational community. And, finally, education is a powerful tool with which to purposefully engage a diverse, global community; the College exhorts its faculty, staff, and learners to do so with fervor.

The essence of the College's mission is embodied in three elements—learning, leading, and serving, which are defined as follows:

Learning

The University believes that all learners can learn and that highly effective, innovative, and collaborative teaching and administration maximizes best practice as well as student learning and achievement. Effective teachers and administrators are highly educated, skilled, committed, and compassionate; they ensure all learners learn to the best of their ability.

Leading

The University believes that education is a powerful tool with which to purposefully engage a diverse, global community. As the College's teacher and administrator candidates find their purpose and calling within education, they seek to lead others to reach their God-given potential that they, in turn, will influence their changing world.

Serving

The culture and Christian heritage of the University promote a spirit of servant leadership within the College of Education's faculty, staff, and learners so they can serve people within the broader educational community.

College of Education Promise

Grand Canyon University College of Education's programs are designed to prepare and equip students for a career in the field of education. However, the College of Education's faculty, staff, and college leaders understand the unique opportunities and challenges a career in education might occasionally present. Since 1984, we have upheld the promise to assist COE graduates who need support in an educational setting. The need for assistance may be requested by the Grand Canyon University graduate, the principal, or superintendent. The appropriate assistance will be determined by the College of Education and can range from content-area teaching materials, certification testing resources, course curriculum assistance, or faculty mentoring.

College Features

The College of Education provides learners with special program features. Practical classroom experience begins as early as the freshman year with a minimum of 100+ hours in the elementary and/or secondary classroom prior to student teaching. Student teaching is offered in semester-long courses.

The Faculty has significant experience in the K-12 school system and many adjunct faculty hold concurrent employment in the classroom and administrative positions.

The courses in education are planned to provide curricula for licensure and continuing professional education of elementary teachers, secondary teachers, special education teachers, and principals. The learner is strongly advised to contact the College of Education and/or the Arizona State Department of Education regarding licensure information. The Grand Canyon University College of Education is approved by the [Arizona State Board of Education](#) to offer initial programs leading to initial teacher licensure of elementary, secondary, and special education teachers, and an advanced program for principal licensure. The Arizona state-approved programs lead to licensure in Arizona. College of Education learners are responsible for contacting their state Department of Education or Licensing Department for licensure requirements and program approval.

Benchmarks

Based upon requirements established by the Arizona State Board of Education, all teacher candidates, (i.e., COE learners who are in teacher-education programs), will have to demonstrate competency with essential knowledge, skills, and dispositions that are based upon the Interstate Teacher Assessment and Support Consortium (InTASC). Consequently, certain critical assignments in each course will be developed as benchmarks that serve as check points of learner competencies. Some of the benchmarks will be practicum-based, and others will not. Benchmark rubrics inform learners and instructors of the pre-

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

established levels of competency performance for benchmark assignments.

Endorsements

Grand Canyon University does not issue endorsements.

Several different types of endorsements are made available through the various State Departments of Education. Learners should contact their respective state agency to determine the range and requirements of endorsements that are offered.

The College of Education offers the following courses for teacher candidates to obtain a full Arizona SEI Endorsement:

- ESL-223N - SEI English Language Teaching: Foundations and Methodologies
- ESL-433N - Advanced Methodologies and Assessments of Structured English Immersion

The College of Education offers the following courses for practicing teachers to obtain a full Arizona SEI Endorsement:

- ESL-523 - English Language Teaching Foundations & Methodologies
- ESL-533 - Advanced Methodologies of SEI

Undergraduate Programs

Learners are given the choice of undergraduate study in the areas of early childhood education, elementary education, and secondary education with an emphasis in an academic content area, and elementary/special education. The Arizona state-approved programs lead to initial teacher licensure in Arizona. College of Education learners are responsible for contacting their state Department of Education or Licensing Department for licensure requirements and program approval.

The programs are designed to enable learners to demonstrate competency in essential pedagogical and content knowledge, skills, and dispositions that are based upon the Interstate Teacher Assessment and Support Consortium (InTASC) principles and/or the standards of specialized professional associations, depending on the program.

Eligibility for initial educator certification in Washington is based on completion of a state-approved educator preparation program. This program is approved in Arizona. Even though you may be residing in Washington while in this program, your application for educator certification in Washington will be processed as an out-of-state application. Go to <http://pathway.pesb.wa.gov/outofstate> for more information. Teachers are advised to contact their individual school districts as to whether this program may qualify for teacher advancement.

Bachelor of Science in Early Childhood Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Bachelor of Science in Early Childhood Education program is designed for students seeking initial licensure in the field of early childhood education. The format and courses of this regionally accredited program include instructional strategies, Montessori and other teaching methodologies, assessment techniques, theories of early childhood growth and development, and the effect of family and cultural diversity on early childhood. Courses are taught by experts in their respective fields who share knowledge and

experience in areas of early childhood education and educational psychology. All courses are directly aligned with standards from the Interstate Teacher Assessment and Support Consortium (InTASC) and the National Association for the Education of Young Children (NAEYC). Opportunities are provided to apply concepts, theories, and research throughout the program, but particularly in early childhood field experiences that guide students through 130 hours of observational and practice-based experiences. Teacher candidates also complete a 16-week student teaching experience that includes eight weeks in a Birth – Pre-K classroom and eight weeks in a K-3 classroom. Graduates of this program are eligible for an early childhood teaching credential in the state of Arizona.

Bachelor of Science in Early Childhood Education and Early Childhood Special Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

The Bachelor of Science in Early Childhood/Early Childhood Special Education dual licensure program is a degree for candidates seeking knowledge in the field of early childhood/early childhood special education development and teaching. The curriculum includes: social/emotional development and behavioral interventions; early language and literacy development; assessment, evaluation and reporting progress; and, child, family, and community collaboration and advocacy to promote the education of young children with and without exceptionalities. All courses are directly aligned with specialized professional teaching standards and the associated national content standards: Interstate Teacher Assessment and Support Consortium (InTASC) principles, International Society for Technology in Education Standards for Teachers (ISTE-T), National Association for the Education of Young Children (NAEYC) Standards for Initial and Advanced Early Childhood Preparation Programs, and the Council for Exceptional Children (CEC) Initial Special Educator Preparation Standards Early Childhood Specialist Set.. This regionally accredited and Arizona Department of Education approved degree program includes 235 field experience hours in special education, inclusive, and general education Birth – Grade 3 classrooms, with an emphasis on Birth – Pre-K experiences. Teacher candidates also complete a 16-week student teaching experience that includes eight weeks in a

Bachelor of Science in Educational Studies (IP/Non-TL)

(Initial Program-Does Not Lead to Initial Teacher Licensure)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those who already licensed as teachers.

Grand Canyon University's Bachelor of Science in Educational Studies develops students for educational opportunities outside of the traditional classroom. An educational studies degree provides foundational skills that focus on developing and applying fundamental pedagogical practices to a variety of settings. The bachelor's degree in educational studies also includes study of educational psychology, literacy, diversity, instructional technology, communications and classroom management. Teaching skills are a cornerstone for a variety of career opportunities. Traditionally, students graduating with an educational studies degree have been interested in education-related jobs that do not require traditional teacher certifications, including parks and recreation, non-profits, workplace training and community programs. After understanding the fundamentals of teaching and learning, students develop skills to effectively teach and train in diverse learning environments.

Bachelor of Science in Elementary Education and Special Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

This program is designed for students who seek an elementary or cross-categorical teaching license to teach children with special needs in the elementary classroom setting. The format and courses of this regionally accredited and Arizona-approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. Courses are taught by experts in their respective fields who share knowledge and experience in areas of learning disabilities, emotional and behavioral disabilities, and other physical and cognitive impairments. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles, Association for Childhood International standards, and/or Council for Exceptional Children standards. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within each course guide students through observational and practice-based experiences. Teacher candidates must have access to an elementary and elementary-special education classroom to complete the program assignments. Graduates of the program are prepared to work with special needs populations and implement individualized educational plans to accommodate the students' various learning, behavioral, and social needs. Teacher candidates must be prepared to complete a full-time, 16-week student teaching component at the end of the program. Eight weeks of student teaching are completed in a regular education setting. In addition, eight weeks are completed in an inclusion classroom, resource room, self-contained class, or in a special school, serving students with mild to moderate disabilities and must be completed with a certified special educator. Teacher candidates are responsible for contacting their state department of education for licensure requirements and program approval. Furthermore, applicants should consult the University Policy Handbook and a Student Services Counselor to obtain information regarding current policies and procedures inherent in a teacher licensure program.

Bachelor of Science in Elementary Education with an Emphasis in English as a Second Language (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

This program is designed for students who seek an elementary teaching license to teach children who are English Learners in an elementary classroom setting. The format and courses of this regionally accredited and Arizona-approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. Courses are taught by experts in their respective fields who share knowledge and experience in areas of linguistics, second language acquisition, and curriculum development. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles, and Teachers of English to Speakers of Other Languages (TESOL) standards. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within each course guide students through 160 hours of observational and practice-based experiences. Teacher candidates must have access to an elementary and an ESL classroom to complete the program assignments. Graduates of the program qualify for the English as a Second Language (ESL) endorsement in the state of Arizona, as well as their Elementary Teacher license. Teacher candidates must be prepared to complete a full-time, 15-week student teaching component at the end of the program. The 15-week student teaching will be completed in a grades 1-8 ESL classroom and must be completed with a certified ESL teacher. Teacher candidates are responsible for contacting their state department of education for licensure requirements and program approval. Furthermore, applicants should consult the University Policy Handbook and a Student Services Counselor to obtain information regarding current policies and procedures inherent in a teacher licensure program.

Bachelor of Science in Elementary Education with an Emphasis in STEM (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Bachelor of Science in Elementary Education with an Emphasis in STEM program is designed for students who are preparing for a teaching career as an elementary STEM teacher, inclusive of elementary and middle school, and who are seeking initial teacher licensure. The format and courses of this regionally accredited and Arizona State Board of Education approved program include studies and practices in lesson planning and assessments, classroom management, social justice, family and cultural diversity, English as a Second Language, and instructional methods and strategies for a variety of content areas. This program emphasizes content knowledge to meet the needs of 21st century learners by specializing in STEM. Courses are taught by experts in their respective fields who share knowledge and experience in areas of elementary education and educational psychology. All courses are directly aligned with standards from the Interstate Teacher Assessment and Support Consortium (InTASC), the Association for Childhood Education International (ACEI), and the International Society for Technology in Education (ISTE). Opportunities are provided to apply concepts, theories, and research throughout the program, but particularly in elementary education field experiences that guide students through 130 hours of observational and practice-based experiences. Teacher candidates also complete a 15-week student teaching experience. Graduates of this program are eligible for an elementary education teaching credential in the state of Arizona.

Graduate Programs

Learners are given the choice of graduate study for a Master of Education in the areas of elementary education, secondary education, early childhood education, special education, and educational administration. The Arizona state approved programs lead to initial teacher licensure in Arizona. College of Education learners are responsible for contacting their state Department of Education or Licensing Department for licensure requirements and program approval.

Master of Education (IP/Non-TL) programs are available in the areas of elementary education, secondary education, early childhood education, and special education. Master of Education (AP/CPE) programs are available in the following areas: special education for certified special educators; curriculum and instruction: reading/elementary or secondary; curriculum and instruction: technology; educational leadership; and teachers of English to speakers of other languages (TESOL). A Master of Arts in Teaching (AP/CPE) with an emphasis either in professional learning communities or teacher leadership is available as well. These programs do not lead to licensure.

The graduate program framework provides for the professional growth of the practitioner and permits demonstration of competency in essential pedagogical knowledge, skills, and dispositions that are based upon Interstate Teacher Assessment and Support Consortium (InTASC) principles, Interstate School Leaders Licensure Consortium/Educational Leadership Constituent Council (ISLLC/ELCC) standards, and/or the standards of specialized professional associations, depending on the program. The framework is a cyclical process of inquiry, reflection, application, evaluation, and additional reflection. These elements are incorporated into activities and assessments in each course of a program through a combination of collaborative and individual work. Graduate programs in education are provided in two learning formats; both online and traditional campus courses are available to the learner.

Eligibility for initial educator certification in Washington is based on completion of a state-approved educator preparation program. This program is approved in Arizona. Even though you may be residing in Washington while in this program, your application for educator certification in Washington will be processed as an out-of-state application. Go to <http://pathway.pesb.wa.gov/outofstate> for more information. Teachers are advised to contact their individual school districts as to whether this program may qualify for teacher advancement.

The following programs are not intended to lead to teacher certification. Teachers in Washington are advised to contact their individual school districts as to whether this program may qualify for salary advancement. Programs: Master of Education in Early Childhood Education (IP/Non-TL); Master of Education in Educational Leadership (AP/CPE); Master of Education in Elementary Education (IP/Non-TL); Master of Education in Secondary Education (IP/Non-TL); and Master of Education in Teaching English to Speakers of Other Languages (AP/CPE).

Master of Arts in Autism Spectrum Disorders (AP/CPE)

(Advanced Program for Continuing Professional Education)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

During the program of study, professional educators survey the unique characteristics of students with autism spectrum disorders (ASD) and the core challenges associated with language and communication, social skills, behavior, and processing. From this foundational knowledge, educators design and implement program planning and service delivery. As a result, educators demonstrate knowledge, skills, and abilities in implementing evidence-based and multi-faceted methodologies and strategies necessary in teaching and engaging students with ASD. In addition, educators collaborate as a member of a multi-disciplinary team with service providers and effectively interact with families.

Master of Arts in Curriculum and Instruction (AP/CPE)

(Advanced Program for Continuing Professional Education)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

The Master of Arts in Curriculum and Instruction program is designed for educators who seek to further develop the strategies and skills needed to be curriculum designers or instructional leaders in a variety of professional settings. The program of study includes coursework, research, and practical field experiences that provide graduates with a scholar/practitioner approach to curriculum development, professional development, and assessment of learning. Graduates from the Master of Arts in Curriculum and Instruction program are prepared to research, develop, and implement standards-based curriculum to increase student academic achievement. Coursework and field experience are prepared for individuals who are already licensed as teachers and/or who have at least one year of teaching or related experience. Program applicants must submit a copy of a current teaching license or provide evidence of a minimum of one year of verified, full-time experience in curriculum or instruction. This curriculum and instruction program does not lead to licensure. The assignments within each course will guide students through 90 hours of observational and practice-based experiences. Candidates must have access to a classroom under the supervision of a certified teacher to complete the field experience and capstone course.

Master of Arts in Higher Education Student Affairs

The Master of Arts in Higher Education Student Affairs prepares professionals for a career in student affairs administration at higher education institutions. Graduates of this program will understand how student affairs administrators directly contribute to the social development, academic success, and overall well-being of students. Coursework includes foundational knowledge in student development theory and the history of Student Affairs while introducing topics relevant to the major service areas

within student affairs. Areas of focus include operations management, campus community, health and safety, crisis management, spiritual life, housing, legal aspects of student affairs, and campus partnerships.

Master of Arts in Reading with an Emphasis in Elementary Education (AP/CPE)

(Advanced Program for Continuing Professional Education)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

The Master of Arts in Reading with an Emphasis in Elementary Education degree is designed for current teaching professionals who would like to become reading specialists or literacy coaches to increase the educational and literacy success of grade K-8 students by working with them to develop and enhance their reading abilities. Other topics of focus include: foundational theory and research, developmental learning and assessments, corrective reading assessment, and instructional leadership and literacy coaching. Applicants to this program are required to submit a copy of a current teaching license or provide evidence of a minimum of one year of teaching experience. The format and courses of this regionally accredited program are aligned to the International Literacy Association (ILA) and the Interstate Teacher Assessment and Support Consortium (InTASC) standards. Courses are taught by experts in their respective fields who share knowledge and experience in the areas of curriculum and instruction, cognition, emergent literature, linguistics, phonics, literacy, assessments, and developmental and corrective reading processes. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within each course guide students through observational and practice-based experiences. Students must have access to an elementary classroom to complete the practicum course and program assignments.

Master of Arts in Reading with an Emphasis in Secondary Education (AP/CPE)

(Advanced Program for Continuing Professional Education)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

The Master of Arts in Reading with an Emphasis in Secondary Education degree is designed for current teaching professionals who would like to become reading specialists or literacy coaches to increase the educational and literacy success of grade 6-12 students by working with them to develop and enhance their reading abilities. Other topics of focus include: foundational theory and research, developmental learning and assessments, corrective reading assessment, and instructional leadership and literacy coaching. Applicants to this program are required to submit a copy of a current teaching license or provide evidence of a minimum of one year of teaching experience. The format and courses of this regionally accredited program are aligned to the International Literacy Association (ILA) and the Interstate Teacher Assessment and Support Consortium (InTASC) standards. Courses are taught by experts in their respective fields who share knowledge and experience in the areas of curriculum and instruction, cognition, emergent literature, linguistics, literacy, assessments, and developmental and corrective reading processes. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within each course guide students through observational and practice-based experiences. Students must have access to a secondary classroom to complete the practicum course and program assignments.

Master of Arts in Teaching English to Speakers of Other Languages (TESOL) (AP/CPE)

(Advanced Program for Continuing Professional Education)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

The Master of Arts in Teaching English to Speakers of Other Languages (TESOL) is designed for teaching professionals with an interest in working with English language learners (ELLs) in or out of the classroom. The format and courses of this regionally accredited program are tailored to meet the needs of the adult learner and to maximize strengths that the working educator possesses. Courses are taught by experts in their respective fields who share knowledge and experience in areas of linguistics, second language acquisition, and curriculum development. All courses are directly aligned with the Interstate Teacher Assessment and Support Consortium (InTASC) and the Standards for the Recognition of Initial TESOL Programs in P-12 ESL Teacher Education (TESOL). Opportunities are provided to apply concepts, theories, and research throughout the program, but particularly in TESOL field experiences and a practicum that guide students through 110 hours of observational and practice-based experiences. Candidates must have access to a P-12 classroom with ESL students to complete the practicum course and program assignments. Graduates of the program may be eligible for the ESL and/or the BLE endorsement in the state of Arizona, and are prepared to become leaders in ESL/BLE/TESOL at the P-12 classroom, school, and district level.

Master of Education in Early Childhood Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Master of Education in Early Childhood Education program is designed for students seeking initial licensure in the field of early childhood education. The format and courses of this regionally accredited program include instructional strategies, Montessori and other teaching methodologies, assessment techniques, theories of early childhood growth and development, and the effect of family and cultural diversity on early childhood. Courses are taught by experts in their respective fields who share knowledge and experience in areas of early childhood education and educational psychology. All courses are directly aligned with standards from the Interstate Teacher Assessment and Support Consortium (InTASC) and the National Association for the Education of Young Children (NAEYC). Opportunities are provided to apply concepts, theories, and research throughout the program, but particularly in early childhood field experiences that guide students through 118 hours of observational and practice-based experiences. Teacher candidates also complete a 16-week student teaching experience that includes eight weeks in a Birth – Pre-K classroom and eight weeks in a K-3 classroom. Graduates of this program are eligible for an early childhood teaching credential in the state of Arizona.

Master of Education in Early Childhood Education and Early Childhood Special Education (IP/TL)

(Initial Program—Leads to Teacher Licensure)

Grand Canyon University's Master of Education in Early Childhood and Early Childhood Special Education dual licensure program is a degree for candidates seeking to build skills and apply best-practice pedagogy and methodologies in the field of early childhood/early childhood special education development. Graduates of this Master's program are prepared to become informed educators in public and private schools and other settings requiring a teaching license. The curriculum includes: social/emotional development and behavioral interventions; early language and literacy development; assessment, evaluation and reporting progress; and, child, family, and community

collaboration and advocacy to promote the education of young children with and without exceptionalities. All courses are directly aligned with specialized professional teaching standards and the associated national content standards: Interstate Teacher Assessment and Support Consortium (InTASC) principles, International Society for Technology in Education Standards for Teachers (ISTE-T), National Association for the Education of Young Children (NAEYC) Standards for Initial and Advanced Early Childhood Preparation Programs, and the Council for Exceptional Children (CEC) Initial Special Educator Preparation Standards Early Childhood Specialist Set. This regionally accredited and Arizona Department of Education approved degree program includes 224 hours of field experience in special education, inclusive, and general education Birth – Grade 3 classrooms, with an emphasis on Birth – Pre-K experiences. Teacher candidates also complete a 16-week student teaching experience that includes eight weeks in a K-3 general education classroom, and eight weeks in a K-3 special education classroom. Graduates of this program are eligible for early childhood and early childhood special education teaching certification in Arizona

Master of Education in Educational Administration (AP/PL)

(Advanced Program for Principal Licensure)

This program is designed for individuals interested in educational administration in the PK-12 setting and seeking a K-12 principal's license. Applicants for this program are required to provide documentation of two years of verified teaching experience. The Interstate School Leaders Licensure Consortium (ISLLC) and the Educational Leadership Constituent Council (ELCC) standards form the foundation of this regionally accredited and Arizona-approved program of study. Courses are taught by expert practitioners in their respective fields who share knowledge and experience in areas of school leadership, administrative/leadership foundations, creating/sustaining positive school cultures, PK-12 legal issues, public school finance, curriculum development, professional development/empowerment of teachers, and instructional leadership. As an opportunity to apply theory to practice, practicum/field experience hours are embedded throughout the program. The Action Planning process frames these experiences. Field work within each course guides Principal Candidates through observation, practice, and hands-on leadership experiences. Principal Candidates must be prepared to complete three clinical internships for a total of 270 hours. Graduates of the program are well-prepared to be informed educational administrators in public and private schools, and other settings requiring a principal's license.

Master of Education in Educational Leadership (AP/CPE)

(Advanced Program for Continuing Professional Education)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

This program is designed for individuals interested in educational administration in the PK-12 setting and social services settings for children, but who must postpone a school site-based administrative internship or do not choose to seek a K-12 principal's license. The Interstate School Leaders Licensure Consortium (ISLLC) and the Educational Leadership Constituent Council (ELCC) standards form the foundation of this program of study. Courses are taught by expert practitioners in their respective fields who share knowledge and experience in areas of school and business leadership, administrative foundations, organizational theory and culture, PK-12 legal issues, public school finance, curriculum development, and instructional and team leadership. As an opportunity to apply theory to practice, practicum/field experience hours are embedded throughout the program. The Action Inquiry process frames these experiences. Benchmark assessments within each course guide students through observation, practice, and hands-on leadership experiences. Graduates of the program are prepared to become educational leaders in the home, church, private schools, and other settings not requiring a principal's license. To be admitted into this program, two years of teaching experience is strongly recommended. Students who complete this program and then desire to secure a principal's license will be required to complete the program requirements of the Master of Education in Educational Administration.

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

The program is designed for any individual interested in the education of children in elementary or middle school. The format and courses of this regionally accredited program are tailored to meet the needs of the adult learner and to maximize the content knowledge that teacher candidates possess upon graduation. Courses are taught by experts in their respective fields who share knowledge and experience in areas of educational psychology, philosophy, methodology, and curriculum development. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within many of the courses guide students through more than 100 hours of observational and practice-based experiences. Students have the option of transferring into the version of the program that leads to initial teacher licensure up to, but not after, the time of degree posting. Graduates of the program are prepared to become informed educators in the home, church, private schools, and other settings not requiring a teaching license. This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

Master of Education in Elementary Education and Special Education (IP/TL)

(Initial Program–Leads to Teacher Licensure)

This program is designed for students who are seeking dual certification in elementary education (K-8) and mild to moderate education (K-12). The format and courses of this regionally accredited and Arizona-approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. Courses are taught by experts in their respective fields who share knowledge and experience. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles, Association for Childhood International standards, and/or Council for Exceptional Children standards. Opportunities are provided to apply concepts, theories, and research throughout the program with focused experiences that guide students through 113 hours of observational and practice-based experiences in both K-8 elementary settings, as well as K-12 special education mild to moderate settings. Graduates of the program are prepared to work with special needs populations and implement individualized educational plans to accommodate the students' various learning, behavioral, and social needs. Teacher candidates must be prepared to complete a full-time, 16-week student teaching component at the end of the program. Eight weeks of student teaching are completed in a K-8 general education setting, and 8 weeks are completed in a K-12 mild to moderate setting for students with disabilities. Student teaching settings must be completed with a certified elementary education teacher for the first eight weeks, and a certified special education teacher for the last eight weeks. Teacher candidates are responsible for contacting their state department of education for licensure requirements and program approval. Teacher candidates should consult the Grand Canyon University Catalog, the University Policy Handbook, and an academic advisor to obtain information regarding current policies and procedures inherent in a teacher licensure program. Graduates of this program are eligible for the Moderate to Severe Disabilities Special Education, K-12 Certificate and the Elementary Education, K-8 Certificate in the state of Arizona.

Master of Education in Secondary Education with an Emphasis in Humanities (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Master of Education in Secondary Education with Emphasis in Humanities ITL program is designed for candidates interested in the education of children in the Humanities areas in grades 5-12 who are also seeking initial teaching licensure. The format and courses of this regionally accredited and Arizona-approved program are tailored to meet the needs of the adult learner and to maximize the content knowledge that the candidate already possesses. Courses are taught by experts in their respective fields who share knowledge and experience in areas of secondary education, humanities, and educational psychology. All courses are directly aligned with standards from the Interstate Teacher Assessment and Support Consortium (InTASC) and the International Society of Technology Educators (ISTE). Opportunities are provided to apply concepts, theories, and research throughout the program, but particularly in secondary education field experiences that guide students through 100 hours of observational and practice-based experiences. The final semester of this program includes a full-time, 15-week student teaching component. Teacher candidates are responsible for contacting their state department of education for licensure requirements and program approval. Teacher candidates are required to produce documentation of successful completion of the content area exam(s) in a Humanities field in order to student teach. Teacher candidates who student teach in a middle grades setting may be eligible for the middle grades endorsement, in addition to the Secondary Education teacher license in the state of Arizona.

Master of Education in Secondary Education with an Emphasis in STEM (Non-IP/TL)

(Initial Program—Does Not Lead to Teacher Licensure)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

Grand Canyon University's Master of Education in Secondary Education with Emphasis in STEM program is designed for candidates interested in the education of children in STEM areas in grades 6-12. The format and courses of this regionally

accredited program are tailored to meet the needs of the adult learner and to maximize the content knowledge that the candidate already possesses. Courses are taught by experts in their respective fields who share knowledge and experience in areas of secondary education, STEM, and educational psychology. All courses are directly aligned with standards from the Interstate Teacher Assessment and Support Consortium (InTASC) and the International Society of Technology Educators (ISTE). Opportunities are provided to apply concepts, theories, and research throughout the program, but particularly in secondary education field experiences that guide students through 100 hours of observational and practice-based experiences. This program does not lead to licensure.

Master of Education in Secondary STEM Education (IP/TL) Nevada ARL

(Initial Program—Leads to Teacher Licensure)

Grand Canyon University's Master of Education in Secondary STEM Education program is designed for candidates interested in the education of adolescents and young adults in the Science, Technology, Engineering and Mathematics (STEM) areas in grades 6-12 who are also seeking alternative route licensure in the state of Nevada. The format and courses of this regionally accredited and Nevada-approved program are tailored to meet the needs of the adult learner and to maximize the content knowledge that the candidate already possesses. Courses are taught by experts in their respective fields who share knowledge and experience in the areas of secondary education, STEM, and educational psychology. All courses are directly aligned with standards from the Interstate Teacher Assessment and Support Consortium (InTASC) and the International Society of Technology Educators (ISTE). Opportunities are provided to apply concepts, theories, and research throughout the program, but particularly in secondary education field experiences that guide students through 101 hours of observational and practice-based experiences. The final semester of this program includes a full-time, 15-week student teaching component. Teacher candidates are required to produce documentation of successful completion of required Nevada teaching exams that include content exams in biology, physics, or mathematics in order to progress in this program.

Master of Education in Special Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

This program is designed for any individual interested in the education of children with mild to moderate special needs in the K-12 setting who also wish to seek initial teaching licensure. The format and courses of this regionally accredited and Arizona-approved program are tailored to meet the needs of adult learners and to maximize strengths that teacher candidates already possess. Courses are taught by experts in their respective fields who share knowledge and experience in areas of learning disabilities, emotional and behavioral disabilities, and other physical and cognitive impairments. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles and Council for Exceptional Children Standards. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within each course guide teacher candidates through observational and practice-based experiences. Teacher candidates must have access to a K-12 special education classroom to complete the program assignments. The classroom setting must have mild to moderate disability categories represented, which may include: emotional disability, learning disability, intellectual disability, physical impairment, and/or health impairment. Graduates of the program are prepared to work with special needs populations and implement individualized educational plans to accommodate various learning needs. Teacher candidates must be prepared to complete a full-time, 15-week student teaching component at the end of the program that must be completed with a certified special educator. Students/applicants are responsible for contacting their state department of education for licensure requirements and program approval. The student/applicant should consult the Grand Canyon Academic Catalog, the University Policy Handbook, and an academic advisor to obtain information regarding current policies and procedures inherent in an initial teacher licensure program.

Master of Education in Special Education: Moderate to Severe (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

The Master of Education in Special Education Moderate to Severe (eligible for Institutional Recommendation/Credential) is designed for individuals with a bachelor's degree in any field who are interested in the education of children with moderate to severe special needs in the K-12 setting. This program prepares candidates seeking initial teaching licensure in the special education area of moderate to severe. Graduates of the program are prepared to work with individuals with moderate to severe exceptionalities and implement individualized educational plans to accommodate various student needs. Teacher candidates study topics such as ethical and legal practices; collaboration with internal and external stakeholders; diagnosis and assessment in special education; characteristics of intellectual disabilities and other physical and health impairments; the implementation of communication and behavior strategies; and the use of assistive technologies for individuals with moderate to severe exceptionalities. Classroom management methods, classroom structures, and educational planning are also explored. The special education degree program concludes with a full-time, 15-week student teaching component that must be completed with a certified special educator. In order to complete the 103 hours of field experience and student teaching requirement, teacher candidates must have access to K-12 special education settings with a moderate to severe population.

Master of Science in Instructional Design (AP/CPE)

The Master of Science in Instructional Design program is designed for professionals who wish to further their skills in instructional design and/or curriculum development, as well as the use of emerging technology for training purposes. In this program, students learn to apply theory, research, analysis, and problem-solving skills to solve a variety of issues related to training, education, and organizational performance. The program helps students build their research skills, so they can collect and analyze appropriate data to make evidence-driven design decisions. Students learn to use learning theories, instructional design models, and design thinking in the analysis, design, development, implementation, and evaluation of instructional interventions. Students also develop the skills necessary to create, assess, and manage training materials using technology and multimedia tools. The combination of these skills will help students to identify learning needs, determine desired outcomes, and create learning interventions within educational institutions and corporate training environments. Learning theory and systematic design approaches are the fundamentals of instructional design that are accomplished in this program. Courses are taught by experts in their respective fields who share knowledge and experience in the areas of curriculum and instructional design. Technology Requirement: Students are

Master of Science in Instructional Technology (AP/CPE)

(Advanced Program for Continuing Professional Education)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

The Master of Science in Instructional Technology program is designed for current teaching professionals who have an interest in becoming a technology specialist or coach. The format and courses of this regionally accredited program are aligned to the International Society for Technology in Education (ISTE) Standards for Coaches, and the Interstate Teacher Assessment and Support Consortium (InTASC) standards. Courses are taught by experts in their respective fields who share knowledge and experience in the areas of technology-based instructional theories and models, digital literacies and new media, ethical and equitable technology integration, technology for student assessment, multimedia instructional strategies, distance learning, andragogy and coaching. This program includes field experiences that help develop the students understanding of the complexity of being a leader in the school setting, classroom technology use and training, development of a vision for technology, and ensuring smooth day-to-day technology integration in teaching. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within each course guide students through 120 hours of observational and practice-based experiences. Candidates must have access to a K-12 school classroom with technology to complete the capstone course and program assignments. Graduates of the program are prepared to become leaders in technology at the K-12 classroom, school, and district levels.

Graduate Certificate of Completion Canyon L.E.A.P. to Teach, Elementary Education

The Canyon L.E.A.P. to Teach pathway, Elementary Education Graduate Certificate of Completion pathway option is intended for candidates interested in becoming a teacher of record in their elementary classroom by pursuing a non-traditional route to teacher licensure with the support of their school district. The structured pathway prepares teacher candidates for an elementary education certification through an immersive learning experience that includes daytime teaching, LEA provides professional development and mentor support, Grand Canyon University (GCU) College of Education graduate coursework and Grand Canyon Education (GCE) Canyon Professional Development. The post baccalaureate certificate serves as an alternative route for entering the field of education to champion students mental, emotional and social development, as well as to provide students with an academic foundation and passion for learning. Canyon L.E.A.P. to Teach candidates will have the opportunity to complete coursework, LEA provided professional development and Grand Canyon Education professional development with the support of all three stakeholders. Starting with a week-long in person boot camp before the fall semester begins, candidates will continue their development in partnership with GCU, GCE and the LEA through two formal LEA evaluations, two informal GCU observations each semester, and two GCE coaching sessions each semester. During the year, candidates will also complete four online GCU teacher education courses, four in person Saturday workshops, a culminating capstone, and LEA-led professional development and mentoring. This three-pronged approach ensures that the candidates are well-supported in the pathway as they develop their pedagogical skills.

Graduate Certificate of Completion in Teaching English to Speakers of Other Languages (TESOL)

This program does not include a student teaching component, and does not therefore lead to licensure, but may lead to career advancement for those already licensed as teachers.

The Graduate Certificate of Completion in Teaching English to Speakers of Other Languages (TESOL) is designed for teaching professionals with an interest in working with English language learners (ELLs) in or out of the classroom. The format and courses of this regionally accredited program are tailored to meet the needs of the adult learner and to maximize strengths that the working educator possesses. Courses are taught by experts in their respective fields who share knowledge and experience in areas of linguistics, second language acquisition, and curriculum development. All courses are directly aligned with the Interstate Teacher Assessment and Support Consortium (InTASC) and the Standards for the Recognition of Initial TESOL Programs in P-12 ESL Teacher Education (TESOL). Opportunities are provided to apply concepts, theories, and research throughout the program,

but particularly in TESOL field experiences and a practicum that guide students through 40 hours of observational and practice-based experiences. Candidates must have access to a P-12 classroom with ESL students to complete the practicum course and program assignments. Graduates of the program are prepared to become leaders in ESL/BLE/TESOL at the P-12 classroom, school, community college, and district level (18 credits).

Degree Requirements

The College of Arts and Media

College Description

The College of Arts and Media is dedicated to providing its students with the finest training possible in their chosen fields. All disciplines and majors within the College require a thorough and exhaustive study of subject-specific theory and related performance to translate theory into active and exciting participation and presentation. All of the College's faculty are dedicated professionals who are active within their fields and therefore can offer students the unique opportunity of their current professional expertise as well as classroom knowledge.

College Mission

The College of Arts and Media endeavors to create an environment where students can be challenged to excel throughout all of their class work as well as in their performance opportunities. Faculty members strive to imbue students with the tools to create, analyze, lead, and teach through the eventual mastery of their chosen disciplines.

College Features

Currently, the College consists of four departments, Dance, Music, Production, and Theatre.

The Department of Dance offers a Bachelor of Arts in Dance and Bachelor of Arts in Dance Education.

The Department of Music features seven degrees, a Bachelor of Arts in Music Education-Choral: Voice, a Bachelor of Arts in Music Education-Choral: Piano, a Bachelor of Arts in Music Education-Instrumental: Brass, Percussion, Woodwind, Strings, a Bachelor of Arts in Music Education-Instrumental: Piano, a Bachelor of Arts in Music with an Emphasis in Piano, a Bachelor of Arts in Music with an Emphasis in Instrumental Music, and a Bachelor of Arts in Music with an Emphasis in Voice. The Department of Music features nine ensembles —Canyon Choral Society, Canyon Chorale, Canyon Singers, Critical Mass, Thundering Heard Pep Band, Thunder Big Band, Symphonic Band, Percussion Ensemble and Woodwind Ensemble.

The Department of Production offers a Bachelor of Arts in Advertising and Public Relations with an Emphasis in Advertising Design, Bachelor of Arts in Digital Design with an Emphasis in either Animation or Web Design, and a Bachelor of Arts in Digital Film with an Emphasis in either Production or Screenwriting.

The Department of Theatre offers a Bachelor of Arts in Theatre and Drama and a Bachelor of Arts in Theatre Education. Both departments have several performing groups. The Department of Theatre presents the Grand Canyon University's Ethington Theatre Series, which is comprised of five productions performing over 30 times annually.

Department of Dance

Grand Canyon University's Department of Dance is dedicated to the training of dancers, teachers, and choreographers by blending both the theory and the practice of dance performance and its related disciplines.

In addition to regular classroom studies, dance major students will take part in the Ethington Dance Ensemble in numerous capacities, including performance, choreography and technical production, thus allowing them to explore the creative process from rehearsal to live performance. This global approach to

dance education creates a multifaceted graduate who is prepared to succeed in today's marketplace.

Bachelor of Arts in Dance

Grand Canyon University's Bachelor of Arts in Dance program is designed to train balanced dance practitioners who may succeed in a range of career paths related to dance. Experiences in our program will blend the theory and practice of dance performance and choreography with interdisciplinary applications in fields such as social and life sciences, technology, and other visual and performing arts.

Bachelor of Arts in Dance for Secondary Education (IP-TL)

(Initial Program - Leads to Initial Teacher Licensure)

The Bachelor of Arts for Secondary Education is a program designed to prepare and certify candidates for the instruction of Dance Arts in a secondary education environment. All courses are directly aligned with the Interstate Teacher Assessment and Support Consortium (InTASC) principles. The program spans 126 credit hours of instruction and practicum experience resulting in a recommendation for an Arizona initial certificate to work in the State's schools. As part of the dance program's development, a council comprised of faculty from the College of Education, the College of Arts and Media, and the College of Arts and Sciences has been instituted. The relationship between the College of Arts and Media and the College of Education ensures student teachers will receive both content knowledge, and the means to convey that knowledge in their classrooms. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within many of the courses guide students through 105 hours of observational and practice-based experiences, and the final semester of the program includes a full-time student teaching component. These educational settings must be state-certified environments, and mentor teachers must be fully certified. Graduates of this program are prepared to become informed educators in public and private schools and other settings requiring teaching licensure. The program is designed to train dance educators and practitioners by blending the theories and practices of dance and its related fields. In addition to regular classroom studies, Dance Education majors are required to participate in the Ethington

Dance Ensemble for our bi-annual concert series. Students serve in numerous capacities, including onstage and offstage disciplines, thus allowing them to explore the creative process from rehearsal to live performance. This global approach to dance education training creates a graduate who is multi-faceted and prepared to succeed in today's marketplace.

Department of Music

The Department of Music offers various areas of study for students desiring to pursue music as a profession; provides classes, ensembles, and private music instruction for students majoring in other fields; and contributes to the cultural environment of the University community.

The Department of Music is dedicated to developing the musicianship of each student through excellence in the classroom and all performance facets. Students from the entire University join with music majors in performing in a variety of ensembles and productions throughout the year.

The Music Department exists to provide accessible and affordable quality undergraduate music education to the next generation of musicians and music educators in the context of a Christian liberal arts university.

The music department aspires to provide strong undergraduate academic programs, multiple music performance opportunities, and a welcoming environment where future musicians and music educators are constantly challenged to greater levels of academic and artistic achievement in order to achieve success in their chosen disciplines.

Each of these mission statements are reflected in the Mission-based Bachelor's Competencies. These competencies are critical components embedded into each undergraduate-level, music program.

Music Education Programs

Grand Canyon University's Bachelor of Arts in Music Education program is designed for students devoted to developing their musical abilities and refining performance skills in order to teach in elementary and secondary schools. The music education curriculum is driven by standards created by the National Association of Schools of Music. Additionally, course topics and objectives have been aligned to the Interstate Teacher Assessment and Support Consortium (InTASC) standards.

In the liberal arts setting, in addition to performance, the Bachelor of Arts in Music Education curriculum provides a balanced program of applied music, theoretical and historical studies, professional education studies, and field work experiences. An emphasis is placed on contemporary music education with training and experiences designed to meet the varying needs of today's schools. Students selecting the music education program will need to determine whether they want to pursue a choral or instrumental emphasis. Private instruction in an applied instrument or voice is also required.

The mission of our music education program is to prepare outstanding educators who can make a difference in the lives of their students. Integral to the music education program at Grand Canyon University is the opportunity for students to perform in public. Choir concerts, voice and piano recitals, as well as smaller vocal ensembles are a staple of the musical landscape at GCU. The music education program, in conjunction with the theatre program, produces the University Theatre series, which presents a series of major productions annually. Auditions for all of the productions are open to the entire student body. Scholarships are available by audition and interview.

The Music Department will assign a variable of 14 ensemble courses total, through placement audition, throughout the entirety of the music program effective Fall 2014. Ensembles can include: MEN-308: Canyon Chorale, MEN-348: Jazz Band, MEN-318: Collaborative Music Ensemble, MEN-312: Opera Workshop, MEN-305: Musical Theatre Workshop, MEN-314: Canyon Singers, MEN-306: Canyon Choral Society, MEN-338: Wind Ensemble, MEN-336: Pep Band, or MEN-334: Percussion Ensemble.

Bachelor of Arts in Music Education – Choral: Voice (IP/TL)

Grand Canyon University's Bachelor of Arts in Music Education program is designed for students devoted to developing their musical abilities and refining performance skills in order to teach in elementary and secondary schools. The music education curriculum is driven by professional degree standards created by the National Association of Schools of Music (NASM). Additionally, course topics and objectives have been aligned to the Interstate Teacher Assessment and Support Consortium (InTASC) standards. In the professional studies setting, the Bachelor of Arts in Music Education curriculum provides a balanced program of applied music, theoretical and historical studies, professional education studies, and field work experiences. An emphasis is placed on contemporary music education with training and experiences designed to meet the varying needs of today's schools. Students selecting the music education program will need to determine whether they want to pursue a choral or instrumental emphasis, and a primary instrument must be declared. Private instruction in an applied instrument or voice is required. Performance scholarships for program majors and/or Pep Band members are available by audition and interview. The mission of our music education program is to prepare outstanding educators who can make a difference in the lives of their students. Integral to the BA in Music Education program at Grand Canyon University is the opportunity for students to perform in public. Ensemble concerts and solo recitals, as well as smaller chamber ensembles, are a staple of the musical landscape at GCU. The music program, in conjunction with the theatre program, produces the University's Ethington Theatre series, which presents a series of major

Bachelor of Arts in Music Education – Instrumental: Brass, Woodwind, Percussion, or Strings (IP/TL)

Grand Canyon University’s Bachelor of Arts in Music Education program is designed for students devoted to developing their musical abilities and refining performance skills in order to teach in elementary and secondary schools. The music education curriculum is driven by professional degree standards created by the National Association of Schools of Music (NASM). Additionally, course topics and objectives have been aligned to the Interstate Teacher Assessment and Support Consortium (InTASC) standards. In the professional studies setting, the Bachelor of Arts in Music Education curriculum provides a balanced program of applied music, theoretical and historical studies, professional education studies, and field work experiences. An emphasis is placed on contemporary music education with training and experiences designed to meet the varying needs of today’s schools. Students selecting the music education program will need to determine whether they want to pursue a choral or instrumental emphasis, and a primary instrument must be declared. Private instruction in an applied instrument or voice is required. Performance scholarships for program majors and/or Pep Band members are available by audition and interview. The mission of our music education program is to prepare outstanding educators who can make a difference in the lives of their students. Integral to the BA in Music Education program at Grand Canyon University is the opportunity for students to perform in public. Ensemble concerts and solo recitals, as well as smaller chamber ensembles, are a staple of the musical landscape at GCU. The music program, in conjunction with the theatre program, produces the University’s Ethington Theatre series, which presents a series of major productions annually. Auditions for all productions are open to the entire student body.

Music Programs

The Bachelor of Arts in Music program is designed for serious students who wish to devote themselves to developing musical skills, understanding composition, and refining their performance skills. The program is a true liberal arts degree, allowing participation in varied performing ensembles and studies while simultaneously preparing students for a variety of careers both within and outside the field.

The Music Department will assign a variable of 16 ensemble courses total, through placement audition, throughout the entirety of the music program effective Fall 2014. Ensembles can include: MEN-308: Canyon Chorale, MEN-348: Jazz Band, MEN-318: Collaborative Music Ensemble, MEN-312: Opera Workshop, MEN-305: Musical Theatre Workshop, MEN-306: Canyon Choral Society, MEN-315: Critical Mass, MEN-338: Wind Ensemble, MEN-336: Pep Band, or MEN-334: Percussion Ensemble.

Bachelor of Arts in Music with an Emphasis in Instrumental Performance

The Bachelor of Arts in Music program is designed for developing musicians who wish to devote themselves to developing musical skills, understanding composition and refining their performance skills. The program is a Bachelor of Arts professional degree, aligned with the National Association of Schools of Music (NASM) standards. The degree allows participation in varied performing ensembles and studies, while simultaneously preparing students for a variety of careers both within and outside the field. Some students enter this program with aspirations of teaching private lessons or owning their own studio. Others wish to pursue their master's degree so they are able to teach studio lessons or other music courses at the collegiate level. Performance scholarships for program majors

^A Writing intensive course | [♦] Fulfills General Education requirement | ^f Honors Major Course | ^Ω Non-Transferable

and/or Pep Band members are available by audition and interview. Students selecting the Bachelor of Arts in Music program will need to determine whether they want to pursue an instrumental, piano or voice emphasis, and a primary instrument must be declared. Private instruction in an applied instrument or voice is required. Additionally, in order to meet NASM professional degree standards, the sixteen (16) elective credits present within the program must be taken from a specified pool of music-related electives. Adherence to this requirement will be checked by the department at regular intervals as part of normal progression through the degree. Integral to the Bachelor of Arts in Music program at Grand Canyon University is the opportunity for students to perform in public. Ensemble concerts and solo recitals, as well as smaller chamber ensembles, are a staple of the musical landscape at GCU. The music program, in conjunction with the theatre program, produces the University's Ethington Theatre series, which presents a series of major productions annually. Auditions for all productions are open to the entire student body.

Department of Production: Advertising and Public Relations, Digital Design and Digital Film

The Department of Production is committed to the development of strong artistic leaders in the fields of Digital Design– Animation/Web Design and Digital Film– Production/Screenwriting.

The Bachelor of Arts in Digital Design prepares graduates for careers in the expanding digital arts and media fields, including social media and the Web, animation, and print design industries. Students learn to plan, analyze, and create visual solutions to communication problems for the global world. The program focuses on the development of creativity, communication, and problem-solving skills that demonstrate critical thinking and ethical leadership.

Each Grand Canyon University Digital Film student receives a strong foundation in narrative storytelling, creativity, technical skills, film history, and the hands-on experience necessary to design and deliver effective and affecting stories through the medium of digital film. The integration of scriptwriting and production allows Digital Film graduates a unique breadth of experience which will help prepare them to succeed in the ever changing marketplace of filmmaking.

Bachelor of Arts in Advertising and Graphic Design

The Bachelor of Arts in Advertising and Graphic Design program develops students into creators of innovative advertising solutions utilizing integrated media strategies. The curriculum includes creative thinking, strategic problem solving, collaboration, brand and campaign development, and technology training for multi-platform campaigns. Students choose an emphasis area in Advertising Design, Public Relations, or Advertising Design Management. Students will be creative drivers of the concept and strategy, those who know the ins and outs of bringing ideas from paper to reality. Central to our curriculum are three Studio courses, where students work on active client projects with their peers. Projects grow in complexity, mirroring the progression of job skills in an advertising agency. Students will graduate with portfolios containing a broad variety of projects, exposure to the advertising industry at both the local and national levels, and possessing skills to match current industry job requests for designers, art directors, and creative specialists.

Technology Requirements

Students can view the programmatic technology requirements in the University Policy Handbook.

Bachelor of Arts in Digital Design with an Emphasis in Animation

The Bachelor of Arts in Digital Design with an Emphasis in Animation program prepares students to work as entry-level designers in a variety of exciting industries that use motion graphics including advertising, marketing, social media, journalism, and corporate communications. Students learn the design process, including concept development, visualization techniques, stylistic trends, composition, typography, color theory, image creation, and static and sequential composition using industry standard motion graphics software. While building all these skills, students create dynamic visual content in every studio course. Motion graphics pervade digital advertisements, social media videos, and brand experiences. The job opportunities for students with these skills span all sectors of the economy and will offer growth opportunities well into the future. This is a 4-year, 120-hour, traditional campus or online liberal arts program. The design education courses fall into three categories: foundational creative and skill development, motion graphics, and portfolio development. A mid-program portfolio focuses on preparing students to pursue internships and the fourth-year portfolio prepares students for employment and continued education. Students are expected to make these portfolios both industry ready and innovative in nature. Grand Canyon University is committed to teaching students to think critically and creatively about using their skills to improve and enrich society. Throughout the program students develop their communication, creativity, and problem-solving skills, because GCU believes in the development of the whole student. Examples of ethical leadership and the integration of a student's faith with their work are shown through profiles of Christian designers and guest speakers. Students can express their personal faith within design projects, as well as when choosing companies and causes to create content for. GCU is committed to building a creative community that is connected to the local and national design industry. The GCU Design Club (a multifaceted student design organization) and the student chapter of AIGA (Professional Association for Design) both provide opportunities for students to participate in extracurricular design events and career networking. Students are required to have both a personal laptop

Bachelor of Arts in Digital Design with an Emphasis in Web Design

The Bachelor of Arts in Digital Design with an Emphasis in Web Design prepares students to work as entry-level designers in a variety of exciting industries that use screen-based content including advertising, marketing, branding, social media, and

corporate communications. Behind every screen today is a digital designer deciding what content goes where, what moves, and how to marry form and function to create an enjoyable brand journey. Students learn the design process, including concept development, visualization techniques, stylistic trends, composition, typography, color theory, user experience and interface concepts, and responsive design. Students will also learn fundamentals of HTML and CSS, content management systems, analytics, and create dynamic visual content in every studio course. The program aims to create adept designers with a set of skills that appeal across all sectors of the economy and will offer growth opportunities well into the future. This is a 4-year, 120-hour, traditional campus or online liberal arts program. The design education courses fall into three categories: foundational creative and skill development, motion graphics, and portfolio development. A mid-program portfolio focuses on preparing students to pursue internships and the fourth-year portfolio prepares students for employment and continued education. Students are expected to make these portfolios both industry ready and innovative in nature. Bachelor of Arts in Social Media

The Bachelor of Arts in Digital Social Media prepares students to design, write and produce content for social media campaigns, blogs, websites, email marketing, and other digital media

activities. Coursework teaches digital media design through the continuum of production including strategic planning and target audience definition; creation of infographics, photographic and video imagery; and copywriting for short and long digital formats. Students also learn how to design and extend a brand, build social media calendars, drive engagement, utilize effective SEO (Search Engine Optimization) strategies, use industry-standard data reporting tools and evaluate the findings. Graduates of the program will be employed as Social Media Managers, Social Media Producers, Digital Content Creators, Digital Media Managers, and other job titles in the growing world of digital marketing. Advertising agencies, corporations, individuals and businesses in all fields utilize social media to deliver their digital content. GCU graduates will have the practical skills to design and produce digital social media content while supporting the business expectations of the employer.

Department of Theatre

The Department of Theatre provides the foundation needed to pursue careers in academic, professional, and community theatre. Students receive a comprehensive knowledge of the body of dramatic literature, theatre history, and practical experience in the production and performance of drama.

The Department of Theatre, in conjunction with the Department of Music, produces the Grand Canyon University Theatre Series which presents five major productions annually. Additionally, the department offers a student-directed series of productions that are

^Δ Writing intensive course | [♦] Fulfills General Education requirement | ^f Honors Major Course | ^Ω Non-Transferable

performed on campus. Auditions for all productions are open to the entire student body.

Bachelor of Arts in Theatre and Drama

The Bachelor of Arts in Theatre and Drama program provides students the foundation needed to pursue careers in community and professional theatre, the entertainment industry, and/or graduate study. Students are given the opportunity to receive a comprehensive knowledge of theatre history and dramatic literature, as well as practical experience in production and performance. The Theatre program, in conjunction with the Music program, produces the University Theatre series, which presents a series of major productions annually. Auditions for all of the productions are open to the entire student body. All students entering the program must audition, at which point scholarships may be awarded.

Bachelor of Arts in Theatre for Secondary Education (IP-TL)

(Initial Program - Leads to Initial Teacher Licensure)

Grand Canyon University's Bachelor of Arts in Theatre for Secondary Education (leads to credential) degree program is designed for students interested in teacher certification for the education of children in grades seven through twelve. The format and courses of this regionally accredited and Arizona-approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. Courses are taught by experts in their respective fields who share knowledge and experience in areas of educational psychology, philosophy, methodology, and curriculum development. All courses are directly aligned with the Interstate New Teacher Support and Assessment Consortium (InTASC, April 2011), National Association of Schools of Theatre (NAST-Handbook, 2015-2016), and the International Society of Technology in Education (Standards-T2008) standards. Opportunities are provided to apply concepts, theories, and research throughout the program. Assignments within many of the courses guide students through over 100 hours of observational and practice-based experiences, and the final semester of the program includes a full-time, 15-week student teaching component. These educational settings must be state certified environments and mentor teachers must be fully certified. Teacher candidates are responsible for contacting their state department of education for certification requirements and program approval. Furthermore, teacher candidates should consult the Grand Canyon University Academic Catalog, the University Policy Handbook, and an academic counselor to obtain information regarding current policies and procedures inherent in a teacher credentialing program. While completing a solid path in theatre content knowledge, learners will complete the methodological courses necessary to become certified secondary educators. All education courses will be offered and designed by the College of Education. Graduates of the Bachelor of Arts in Theatre for Secondary Education program are prepared to become informed educators in public and private schools and other settings requiring a teaching credential. Students and applicants are responsible for contacting their state department of education for certification requirements and program approval. All students entering the program must audition; at which point scholarships may be awarded. The program is designed to train theatre educators and theatre practitioners by blending both the theory and the practice of theatre education/performance and its related fields. In addition to regular classroom studies, students are encouraged to take part in the Ethington Theatre Series in a variety of capacities, including onstage and offstage disciplines, thus allowing learners to explore the creative process from rehearsal to live performance. This global approach to theatre education training creates a graduate who is multi-faceted and prepared to succeed in today's marketplace.

Minors

Minor in Advertising and Graphic Design

Communication using fundamentals of advertising can be used across a variety of disciplines in many settings. The Advertising and Graphic Design minor at Grand Canyon University introduces students to the foundations of design and methods of production. The student is familiarized with a fundamental understanding of advertising principles that have many applications.

DDN-101	Design Thinking	4 credits
DDN-110	Design Fundamentals	4 credits
DDN-120	Production Methods	4 credits
ADV-110	Fundamentals of Advertising	4 credits
Minor in Advertising and Graphic Design		16 credits

Minor in Animation Design

The Minor in Animation Design provides non-major students a foundational understanding used to design and produce 2D motion graphics. Students will learn the technology and

processes for developing ideas, storyboarding, creating assets and building the structure for motion graphics.

DDN-101	Design Thinking	4 credits
DDN-115	Raster and Vector Technologies	4 credits
DDN-160	2D Motion Design I	4 credits
DDN-260	2D Motion Design II	4 credits
Minor in Animation		16 credits

Minor in Dance

A minor in Dance is designed to develop a student's physical and cognitive skills and knowledge in the art of dance. Dance studies enhance any other area of study by providing opportunities to develop character, leadership skills, cooperation, and respect for others. Dance reflects cultural influences throughout the world and transcends religious barriers in its ability to communicate universal truths, leading to a shared understanding and expression of the human experience.

DAN-315	Dance History I	4 credits

DAN-313	Vernacular Dance: Urban & Hip-Hop I	1 credit
DAN-270	Modern II	1 credit
Minor in Dance		19 credits

Minor in Digital Design

Design principles can be used in a variety of disciplines. The Minor in Digital Design provides non-major students a foundational understanding of design thinking, design principles, and the basic technical tools and processes used in the creation of designed content, laying a foundation for understanding design concepts that can be applied in many settings, from simple presentations to complex proposals.

DDN-101	Design Thinking	4 credits
DDN-125	Layout and Composition	4 credits
DDN-115	Raster and Vector Technologies	4 credits
DDN-200	Creative Processes	4 credits
Minor in Digital Design		16 credits

Minor in Digital Film

The Digital Film Minor introduces students from various programs to the foundation of strong filmmaking. Students study and analyze film history before engaging in production and screenwriting courses. Digital Film Minors are also encouraged to participate in Digital Film events such as the 48 Hour Film

Minor in Musical Theatre

The minor in Musical Theatre at Grand Canyon University introduces students to the foundations of musical theater styles and history and advances principles applied to the form through courses in acting, movement, and voice production. The minor in Musical Theatre provides students from all majors the opportunity to focus on effective communication, using the body and the voice, and to develop critical thinking skills, analyzing music, text, and movement from a wide variety of styles and cultures. The minor specifically complements theatre, music, or dance majors in their major program of study with an artistic form that broadens marketability within the industry and promotes self-development, artistic exploration, and creative innovation.

The College of Humanities and Social Sciences

College Description

The College of Humanities and Social Sciences (CHSS) is dedicated to providing its learners with rigorous programs and the highest levels of pedagogy. Faculty and staff work to create a Christian-based learning environment focused on expanding students' understanding while preparing them for professional environments. Using practical experiences students learn in-depth knowledge of their fields of study, problem solving skills, rational thinking, leadership, and effective communication. Faculty and staff build meaningful relationships with students through extracurricular communities related to their discipline of study.

College Mission

The College of Humanities and Social Sciences promotes research, creativity, ethical formation, and inquiry through critical, analytic, and interdisciplinary study. The college's mission cultivates leaders in various fields of study through critical thinking and applied experience; linking theoretical foundations with practical application. Dynamic programs of study in the humanities and social sciences provoke inquiry and originality that prepare learners for diverse and ever-changing workplaces. Students are challenged to be curious, innovative, collaborative, and reflective in addressing the problems of tomorrow and to consider the institution's Christian heritage within their learning experiences. The college prepares students to be lifelong learners and evolving thinkers in an increasingly complex and diverse world.

Humanities Programs

The Humanities programs are designed to tell the stories, stimulate the ideas, and provide the words that help students make sense of their lives and the world in which they live. The programs introduce students to people and cultures that they have never met or experienced, places they have never seen or visited, and ideas that may have never crossed their minds. Through study of how others have lived and thought about life, students will begin to discern what is important in their own lives and what they might do to make them better, what is right or wrong, and the impact that heritage and history have on their thoughts and experiences. Graduates of the humanities programs will enter the workforce with a solid understanding of themselves and the human conditions. They will have the cultural knowledge and communication skills to address the challenges that we face together in our families, our communities, our nation, and our global society.

Bachelor of Arts in Communications

Students majoring in communication engage in a thoughtful exploration of how the construction of messages, communicator characteristics, and contextual factors influence professional and personal lives. The Bachelor of Arts in Communication program at GCU provides opportunities for scholarship in organizational, political, mass mediated, interpersonal, and intercultural communication contexts. The organizational emphasis allows students to focus on communication skills directly applicable to public relations, political communication, human resources, sales, and marketing. This program, like the greater GCU community, embodies Christian virtues in the way people communicate with each another. Faculty act as guides, collaborators, and mentors as students find their purpose. Students who earn their degree in communication work in a wide variety of contexts. Students at GCU learn the skills necessary to be competitive in both for

profit and nonprofit sectors. Common careers for communication majors with an organizational emphasis are public relations specialists, corporate trainers, campaign managers, community action directors, account executives, sales representatives, and human resources coordinators.

Bachelor of Arts in English for Secondary Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Bachelor of Arts in English for Secondary Education degree program is designed to provide future middle and high school teachers with skills in comprehending and interpreting texts, thinking critically about texts in a number of media, and effectively expressing their ideas orally and in writing. The format and courses of this regionally accredited and Arizona State Board of Education approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. By studying works of literature in context, focusing on particular authors and genres of literature, and analyzing the English language, students will be introduced to diverse artistic expressions. They will grapple with major issues and themes common to human life. Writing courses within the major will give students further practice in effective communication for a variety of media. Emphasis will be given to examining and implementing methodologies needed to teach writing, texts, and language to adolescents, enabling majors in this area to make informed, context-based decisions about instruction at the middle and secondary levels. Teacher candidates must have access to a grade 6-12 classroom to complete the program and practicum assignments, which guide them through 100 hours of observational experiences. The final semester of this Secondary Education program includes a full-time, 15-week student teaching component. Candidates are responsible for contacting their state department of education for licensure requirements and program approval.

Bachelor of Arts in History for Secondary Education (IP/TL)

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Bachelor of Arts in History for Secondary Education degree program is designed to provide future middle and high school teachers with the content knowledge they need to be successful teachers of history and social studies. While completing a solid path in historical content, learners will complete the methodological courses necessary to become certified secondary educators. All education courses will be designed and offered by the College of Education. The format and courses of this regionally accredited and Arizona State Board of Education approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. Teacher candidates will attain an extensive breadth and depth of content knowledge as well as research-based pedagogical practices prior to entering the classroom. This program prepares graduates to use the skills of the historian such as research, critical thinking, and effective communication in their future educational settings. Teacher candidates must have access to a grade 6-12 classroom to complete the program and practicum assignments, which guide them through 85 hours of observational experiences. The final semester of this Secondary Education program includes a full-time, 15-week student teaching component. Candidates are responsible for contacting their state department of education for licensure requirements and program approval

Bachelor of Arts in History for Secondary Education (IP/TL) Effective January 2022

(Initial Program—Leads to Initial Teacher Licensure)

Grand Canyon University's Bachelor of Arts in History for Secondary Education degree program is designed to provide future middle and high school teachers with the content knowledge they need to be successful teachers of history and social studies. While completing a solid path in historical content, learners will complete the methodological courses necessary to become certified secondary educators. All education courses will be designed and offered by the College of Education. The format and courses of this regionally accredited and Arizona State Board of Education approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. Teacher candidates will attain an extensive breadth and depth of content knowledge as well as research-based pedagogical practices prior to entering the classroom. This program prepares graduates to use the skills of the historian such as research, critical thinking, and effective communication in their future educational settings. Teacher candidates must have access to a grade 6-12 classroom to complete the program and practicum assignments, which guide them through 85 hours of observational experiences. The final semester of this Secondary Education program includes a full-time, 15-week student teaching component. Candidates are responsible for contacting their state department of education for licensure requirements and program approval

Bachelor of Arts in History

Grand Canyon University's Bachelor of Arts in History degree program allows students to study the past as a means of understanding the complexity of the world today. Earning a history degree affords graduates essential skills including critical thinking and writing. These proficiencies may prepare graduates for careers in teaching, public service, government, policy making, communication, or business management. A history degree allows students to develop the skills and knowledge associated with a liberal arts degree, while providing an orientation to the complexity and diversity of the world through a

disciplined study of the past, necessary to compete in a global economy. This degree program provides graduates with foundational structures that may prepare them for graduate degrees in business, history, or law.

Social and Behavioral Studies Programs

The Social and Behavioral Studies programs prepare students to understand, predict, and treat human behavior at both individual and societal levels. Depending on the program that is chosen, students are able to choose career paths that could involve direct patient care and treatment, justice services, social study, the development of impact initiatives, organizational understanding, human resource management, individual behavioral study and research, or consulting, to name a few. Graduates of the Social and Behavioral Studies programs will develop greater understanding and predictive knowledge of behavior at both the individual and societal levels that will provide significant impact on the overall behavioral health and wellness of society and its members.

Bachelor of Science in Behavioral Health Science

Grand Canyon University's Bachelor of Science in Behavioral Health Science degree is designed to prepare students to work as behavioral health technicians or specialists in various settings as members of a clinical team. This program offers students an exhaustive study of human behavior. It prepares students to work in behavioral health, counseling, health services management, human services, government, and law enforcement. Additionally, this curriculum offers a strong foundation for students who want to pursue a master's degree in counseling, criminal justice, clinical or forensic psychology, or human services.

Bachelor of Science in Behavioral Health Science with an Emphasis in Infancy and Early Childhood Studies

Grand Canyon University's Bachelor of Science in Behavioral Health Science with an Emphasis in Infancy and Early Childhood Studies program is designed for students interested in becoming behavioral health technicians or specialists in various settings as

members of a clinical team, particularly in the fast-growing specialization in the Infancy and Early Childhood field. The program provides students with an introductory study on the development and behavior of infants and young children. Students will gain the knowledge and skills necessary to work with young children and advocate the importance of the family system and caregiving environment to the well-being of infants and young children. Graduates of this degree program will be prepared for careers in behavioral health, health services management, human services, government, and law enforcement.

Bachelor of Science in Counseling with an Emphasis in Addiction, Chemical Dependency, and Substance Abuse

The Bachelor of Science in Counseling with an Emphasis in Addiction, Chemical Dependency, and Substance Abuse is designed to meet the needs of learners who wish to pursue entry-level careers as addiction counselors/behavioral health technicians. The demand for addiction counselors is expected to grow in both the public and private sectors in the near future. A bachelor's degree is the first step for individuals seeking certification/licensure in many states. Graduates from this degree program are prepared to meet the minimum academic requirements for licensure in Arizona as Licensed Associate Substance Abuse Counselors and Licensed Substance Abuse Technicians. Additionally, program graduates from many other states will be academically prepared to begin the process of seeking certification and/or licensure in their home states. Licensing and/or certification requirements may vary from state to state, and it is the student's responsibility to check the requirements in specific states.

Degree Requirements

Total General Education	34-40 credits

Master of Education in School Counseling (IL)

(Initial Program—Leads to Licensure)

Grand Canyon University's Master of Education in School Counseling (IL) program is designed for any individual with a bachelor's degree interested in seeking certification as a school guidance counselor. The format and courses of this regionally accredited and Arizona-approved program are tailored to meet the needs of the adult learner and to maximize strengths that the candidate already possesses. Courses are taught by experts in their respective fields who share knowledge and experience in child and adolescent development, counseling theory, group counseling, career and college counseling, trauma and psychopathology. Candidates gain knowledge and skills necessary to be effective counseling practitioners in PK-12 settings, working with students, parents, and school personnel to address the academic, social, and emotional needs of students. Graduates of this program are prepared to apply brief counseling, child and adolescent development theories, and research to school practice. This program is informed by the American School Counseling Association (ASCA) National Model. Candidates must have access to pre-approved PK-12 schools to complete program requirements. This program includes 25 field experience hours, 100 practicum hours, and 600 internship hours, for a total of 725 hours.

Master of Science in Addiction Counseling

The Master of Science in Addiction Counseling degree is designed to meet the needs of learners who wish to pursue careers as addiction counseling professionals. This degree prepares students to treat substance abuse/dependency disorders.

The demand for licensed addiction counselors is expected to grow in both the public and private sectors in the foreseeable future. A Master's degree is a required step for individuals seeking the highest level of licensing and/or certification in many states. Graduates from the GCU program of study are prepared to meet the academic requirements for licensure in Arizona as a:

- Licensed Associate Substance Abuse Counselor (LASAC)
- Licensed Independent Substance Abuse Counselor (LISAC).

Additionally, program graduates from most other states will be academically prepared to begin the process of seeking certification and/or licensure in their home state. Licensing and/or certification requirements may vary from state-to-state. It is the students' responsibility to check the licensing/certification requirements in their respective states.

Degree Requirements

UNV-502^Ω	Introduction to Graduate Studies in the Health Sciences	2 credits
PCN-505	Professional Counseling Orientation and Ethics	3 credits
PCN-500	Counseling Theories	3 credits

Master of Science in Addiction Counseling 36 credits

Students who are Ohio residents must complete the Ohio-specific requirements to meet the standards for certification/licensure in that state, students must take the following courses:

PCN-518	Human Growth and Development	3 credits
PCN-540	Research Methods	3 credits
PCN-605	Psychopathology and Counseling	3 credits
PCN-622B	Pre-Practicum II	2 credits

Master of Science in Christian Counseling of Substance Use and Addictive Disorders

The Master of Science in Christian Counseling of Substance Use and Addictive Disorders degree is for learners who wish to pursue careers as addiction counseling professionals, treating

individuals with substance abuse/dependency disorders and also able to integrate Christian principles into their counseling practice and to apply that knowledge in a counseling setting. With a master's in addiction counseling, graduates may be prepared to own and operate their own counseling clinic or work in a variety of settings including private practice, substance abuse clinics, group practices, and hospital settings. The demand for licensed addiction counselors is expected to grow in both the public and private sectors in the foreseeable future. A master's degree is a required step for individuals seeking the highest level of licensing and/or certification in many states.

The coursework that prepares students for licensure focuses on a variety of topics, including: theories of addiction, drug classification, assessment, and treatment; professional counseling orientation and ethics; counseling theories; group counseling theory and practice; social and cultural diversity issues in counseling; psychopharmacology theories of drug abuse, addiction, and treatment; psychiatric disorders in combination with an alcohol and/or drug abuse disorder; family issues and addictive disorders; diagnostics, assessment and treatment; and counseling chemically dependent adolescents.

Dispersed throughout the curriculum, the student will also take a number of courses that integrate a Christ-centered approach to emotional health, a foundational study of the integration of counseling theory and Christian thought, and a study of spiritual formation, thereby providing supplemental study of spiritual growth for the counselor in life and practice.

A pre-practicum or supervised field work experience concludes the program, under the supervision of a faculty member. Following the pre-practicum, students take part in a supervised practicum/internship experience to develop their counseling skills and to perform all the activities that a regularly employed professional counselor would be expected to perform in a supervised setting.

Graduates from the Grand Canyon University Master of Science in Addiction Counseling program are prepared to meet the academic requirements for licensure in Arizona as a Licensed Associate Substance Abuse Counselor (LASAC) OR a Licensed Independent Substance Abuse Counselor (LISAC). Additionally, program graduates from most other states will be academically prepared to begin the process of seeking certification and/or licensure in their home state. Licensing and/or certification requirements may vary from state-to-state. It is the students' responsibility to check the licensing/certification requirements in their respective states.

Master of Science in Clinical Mental Health Counseling

Grand Canyon University's Master of Science in Clinical Mental Health Counseling program is designed for students interested in becoming professional counselors. The program's courses were chosen to meet the academic requirements established by the National Board for Certified Counselors for the National Certified Counselor credential (NCC), the Certified Clinical Mental Health Counselor credential (CCMHC), and by the Arizona Board of Behavioral Health Examiners. A master's degree in counseling is a required step in all 50 states for individuals seeking to become a licensed counselor. This program of study is designed to meet the academic requirements for licensure in Arizona as a:

- Licensed Associate Counselor (LAC)
- Licensed Professional Counselor (LPC)

Licensing and/or certification requirements may vary from state to state. It is the students' responsibility to check the licensing/certification requirements in their respective state.

Master of Science in Clinical Mental Health Counseling with an Emphasis in Christian Counseling

Grand Canyon University's Master of Science in Clinical Mental Health Counseling with an Emphasis in Christian Counseling program is designed for students interested in becoming professional counselors who are able to integrate Christian principles into their counseling practice and to apply that knowledge in a counseling setting. The program provides students with the knowledge and skills necessary for counseling clients experiencing a variety of psychological, social, behavioral, and emotional issues. This program is designed to prepare students for careers as clinical mental health counselors. Graduates may also be qualified to provide counseling services to clients with substance use issues and marital and family issues. Students will take a number of courses that integrate a Christ-centered approach to emotional health, a foundational study of the integration of counseling theory and Christian thought, and a study of spiritual formation, thereby providing a supplemental study of spiritual growth for the counselor in life and practice. The program's courses were selected to meet the academic requirements established by the National Board for Certified Counselors for the National Certified Counselor credential (NCC), the Certified Clinical Mental Health Counselor credential (CCMHC), and by Arizona Board of Behavioral Health Examiners. A master's degree in counseling is a required step in all 50 states, for individuals seeking to become a licensed counselor. HIS-466	Southwest Borderlands	4 credits
SOC-436	Stratification and Inequality in a Diverse Society	4 credits
HTH-380	Kingdom Diversity	4 credits

Minor in Hispanic Experiences	16 credits
-------------------------------	------------

Minor in Behavioral Health Sciences

The new minor in Behavioral Health focuses on a core of useful and requisite knowledge to successfully work within the behavioral health field. The five courses for this minor introduce students to the behavioral health field by teaching them concepts related to ethics, cultural diversity, and basic clinical skills to apply as behavioral health paraprofessionals. It will help fulfill the great demand for entry-level professionals to work as part of an interdisciplinary team in behavioral health. This certificate will offer the necessary education to prepare students seeking employment as behavioral health paraprofessionals. This certificate does not lead to licensure or certification.

Minor Requirements

PCN-107	Introduction to Counseling Theories	4 credits
BHS-240	Group Dynamics and Process	4 credits
BHS-320	Ethics of Behavioral Health Science	4 credits
BHS-330	Culture and Social Diversity in Behavioral Health	4 credits
BHS-350	Report Writing, Research, and Information Literacy in Behavioral Health	4 credits

Minor in Behavioral Health Sciences	20 credits
-------------------------------------	------------

Minor in Communication

The minor in Communication is designed to develop a student's knowledge base of the theory of communication as well as how to speak, write, and think critically. The minor in Communication prepares students for positions in business, government, education, science, and healthcare. Communication is essential for the development of the whole person—socially, culturally, and professionally.

Minor Requirements

COM-100	Fundamentals of Communications	4 credits
COM-222	Small Group Communications	4 credits
COM-312	Conflict and Negotiations	4 credits
COM-451	Relational Communication	4 credits

Minor in Communication	16 credits
------------------------	------------

Minor in Counseling

The minor in Counseling is designed to develop students' understanding of counseling theories and how they relate to working in the human relations field of behavioral health. This minor prepares students with applicable skills in interpreting diagnoses, writing reports, and working on integrative health teams. It prepares students for positions in behavioral health settings such as community and private organizations. The minor in Counseling will also coordinate well with the theoretical backgrounds of psychology, sociology, communications, and ministry. The interplay of theory and practical skills will allow students to market their skills to a wider audience of employers. This minor does not lead to licensure.

Minor Requirements

PCN-100	Foundations of Addiction and Substance Use Disorders	4 credits
PCN-107	Introduction to Counseling Theories	4 credits
PCN-255	Case Management and Crisis Skills for Addiction and Substance	4 credits
PCN-404^A	Prof, Legal & Ethical Issues-Addiction & Substance Use Disorder	4 credits

Minor in Counseling	16 credits
---------------------	------------

Minor in Criminal Justice

The minor in criminal justice provides knowledge and skills across a broad range of real-world applications in criminal justice. Students acquire detailed knowledge of criminality and the justice system's response to criminal behavior. They are prepared for careers in local, state, and federal law enforcement such as police, sheriff, probation, and correctional officers.

Minor Requirements

JUS-212	Criminal Behavior and Victimology	4 credits
JUS-320	Police Function	4 credits
JUS-430	Criminal Law	4 credits
JUS-441	Criminal Procedure and Public Policy	4 credits

Minor in Criminal Justice	16 credits
---------------------------	------------

Minor in Forensic Psychology

The minor in forensic psychology focuses on the psychological experiences of victims and sheds insight into abnormal human behavior. Students are introduced to an understanding of the criminal justice system and exposed to crime-scene processing. The minor program better prepares students to work with people who need assistance coping with the aftereffects of a violent crime. More often than not, police officers are the first point of contact for these individuals. The program is designed for individuals seeking a career as a correctional professional, social worker, homeland security professional, community mental health professional, or private-sector worker.

Minor Requirements

JUS-212	Criminal Behavior and Victimology	4 credits
PSY-310	Introduction to Forensic Psychology	4 credits
JUS-430	Criminal Law	4 credits

^A Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

PSY-470	Abnormal Psychology	4 credits
BHS-440	Understanding Trauma	4 credits
Minor in Forensic Psychology		20 credits

Minor in History

The Minor in History encourages students to develop cultural and critical thinking competencies which orient them toward a better understanding of the global economy.

This program provides graduates with foundational knowledge of where society has come from and how best to interact with a wide variety of people from all walks of life..

Minor Requirements

HIS-325	Ancient Mediterranean History	4 credits
HIS-350	Survey of Asian Empires	4 credits
HIS-380	Renaissance and Reformation	4 credits
HIS-426	20 th Century Europe	4 credits
Minor in History		16 credits

Minor in Human Services Case Management

The minor in Human Services Case Management provides a well-rounded knowledge in understanding trauma-informed care, case management process, coordination of care, and working on integrative human services teams and other helping professions. This minor coordinates well with theoretical backgrounds in psychology, sociology, counseling, and ministry.

Minor Requirements

SOC-372	Introduction to Social Work	4 credits
BHS-350	Report Writing, Research, and Information Literacy in Behavioral Health	4 credits
BHS-470	Introduction to Trauma-Informed Care	4 credits
SOC-445	Case Management	4 credits
Minor in Human Services Case Management		16 credits

Minor in Literature

The minor in Literature broadens students' exposure to, and deepens their understanding and appreciation of, essential works of fiction, poetry, and drama. The works selected represent every important period and genre in the history of British and American literature, from Anglo-Saxon poetry to Existentialist drama. The authors studied in this program include the mainstays of the literary canon such as Chaucer, Shakespeare, Pope, Wordsworth, Hawthorne, Whitman, Dickinson, James, and Eliot, as well as writers whose works exemplify the challenges faced by women, Native Americans, African Americans, and other overlooked groups.

Minor Requirements

ENG-357	Foundational Texts of British Literature	4 credits
ENG-359	Transatlantic Literature	4 credits
ENG-360	American Encounter Narratives	4 credits
ENG-451	Shakespeare and the History of Drama	4 credits
Minor in Literature		16 credits

Minor in Mathematics

The minor in mathematics teaches skills in mathematical modeling, including many applications in computer science, engineering, and business. It helps students prepare for high-demand careers in STEM (science, technology, engineering, and math), statistical modeling, and quantitative visualization and analytics.

Minor Requirements

MAT-252	Calculus and Analytic Geometry	4 credits
MAT-253	Calculus and Analytic Geometry II	4 credits
MAT-215	Discrete Mathematics	4 credits
MAT-345	Applied Linear Algebra	4 credits
MAT-470	Mathematical Modeling	4 credits
Minor in Mathematicse		20 credits

Minor in Performance and Sport Psychology

The Minor in Performance and Sport Psychology provides individuals interested in sport, performing arts, health and fitness, or mental health fields the opportunity to develop their skills and abilities to improve the performance and lives of those with whom they work. The field of sport and performance psychology is concerned with the psychological factors that influence human performance. It involves improving the lives of others through assessment and intervention strategies that enhance performance and personal growth.

Minor Requirements

PSY-366	Introduction to Sport and Exercise Psychology	4 credits
PSY-368	Social Aspects of Sport/Psychosocial Aspects of Sport	4 credits
PSY-410	Psychology of Coaching	4 credits
PSY-425	Leadership and Team Building	4 credits
Minor in Performance and Sport Psychology		16 credits

Minor in Pre-Law

The Pre-Law Minor provides students with exposure to major concepts of the law, which include the philosophical underpinnings of the western legal tradition, civil law, criminal law and the practice of law. This foundation of legal thought is an ideal preparation for law school or a legal career path for students that desire to get a head start in their understanding of the framework of law.

Minor Requirements

GOV-357	Philosophy of Law	4 credits
GOV-360	Civil Law	4 credits
JUS-430	Criminal Law	4 credits
GOV-455	Practice of Law	4 credits
Minor in Pre-Law		16 credits

Minor in Professional Writing

The new minor in Professional Writing focuses on preparing learners to develop skills in writing and editing that can be applied to a broad range of professional contexts and careers. The courses for this minor provide students with important practice,

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

writing in a variety of professional genres, which will prepare them to adapt their practice to other contexts. Skills learned can include, but are not limited to, writing for public relations, writing and presentation for news stories in various forms of media, writing technical documents, and communicating scientific ideas to laypeople.

Minor Pre-requisites

ENG-105	English Composition I	4 credits
ENG-106	English Composition II	4 credits

Minor Requirements

PRW-100	Introduction to Professional Writing	4 credits
ENG-365	Multi-Media Journalism in the 21 st Century	4 credits
PRW-301	Reporting and Newswriting	4 credits
PRW-381	Writing for Public Relations	4 credits
ENG-456	Communicating Scientific Ideas to Popular Audiences	4 credits

Minor in Professional Writing 16 credits

Minor in Psychology

The minor in Psychology introduces students to the study of human behavior of all ages (children through elderly adults). The program examines how personality and cognitive thinking are formed, developed, and influenced through each person's social and cultural environment. Since behavior and emotional development are often affected by both cognitive thinking and the environment, students will examine the roles of science and research in understanding and enhancing mental health.

Minor Requirements

PSY-102	General Psychology	4 credits
PSY-255^Δ	Personality Psychology	4 credits
PSY-352	Health Psychology	4 credits
PSY-362	Social Psychology and Cultural Applications	4 credits
PSY-470^Δ	Abnormal Psychology	4 credits

Minor in Psychology 20 credits

Minor in Public Administration

The minor in Public Administration enhances students' understanding of how various factions of government and the private sector interact. Students in a business, health care, or STEM-related field would benefit, especially if there is an interest in a career tied to the public sector. This minor helps students prepare for career opportunities in the nonprofit and government sectors.

Minor Requirements

GOV-140	American Government and Politics	4 credits
GOV-351	Public Administration	4 credits
GOV-366	State and Local Government	4 credits
GOV-376	Municipal Government and Administration	4 credits

Minor in Public Administration 16 credits

Minor in Social Work

The new minor in Social Work focuses on preparing learners to pursue entry level careers in the field of social work and other helping professions. The contents of the courses provide a historical exploration of the development of social work as a profession and reviews the various populations and settings with which social workers engage within the field. Students learn case management skills, including assessment techniques, problem-solving strategies, and how to manage a client case. Other skills learned include, but are not limited to, identifying appropriate evidence-based treatment strategies, evaluation of interventions, strategies for termination of services, application of professional ethical standards, and application of research skills to the field of social work.

Minor Requirements

SWK-170	Introduction to Social Welfare	4 credits
SWK-330	Diversity, Advocacy, and Social Justice in Social Work	4 credits
SWK-350	Social Work Ethics and Decision-Making	4 credits
SWK-465	Case Management	4 credits

Minor in Social Work 16 credits

Minor in Spanish

The minor in Spanish is designed to develop at least intermediate level fluency in listening, speaking, reading, and writing Spanish, and to provide a general introduction to Spanish culture and literature in order to enhance cross-cultural sensibilities and expand opportunities in the job market.

Minor Requirements

SPA-214	Intermediate Spanish I	4 credits
SPA-224	Intermediate Spanish II	4 credits
SPA-309	Spanish Conversation	4 credits
SPA-310^Δ	Spanish Composition and Grammar	4 credits
SPA-320	Contemporary Issues	4 credits
SPA-341	Introduction to Literature in Spanish	4 credits

Minor in Spanish 24 credits

The College of Nursing and Health Care Professions

College Description

The College of Nursing and Health Care Professions has a nearly 35-year tradition of preparing students to fill evolving health care roles as highly qualified professional educated in direct care, management, health education, and administrative disciplines. Our available health care degree programs span a wide range from a pre-licensure degree program to a doctoral level Doctor of Nursing Practice program.

Health care organizations value our graduates because our curriculum connects classroom theories to working scenarios through many modalities: hands-on practice, online and lab simulations, and in-depth peer discussions exploring best practices.

Grand Canyon University's (GCU) in-class and online environments advance critical thinking, professionalism, accountability, and ethical decision-making by applying science, health and nursing theories, along with a foundation of Christian Values.

College Mission

The mission of the College of Nursing and Health Care Professions is to develop professionals using systems and evidence-based practice to promote health, wellness, safety, and quality care for individual patients and populations supported by an academically rigorous liberal-arts education reflecting Christian values.

Our commitment to preparing the next generation of health care's servant leaders is evident in the diversity of relevant degree programs offered, an evolving curriculum that anticipates changing health care roles, and instruction that connects theories to the real world, through hands-on practice, lab simulations, and much more.

College Features

The College of Nursing and Health Care Professions offers both quality undergraduate and graduate degree programs that meet specific students' career and academic needs. College faculty members hold master's degrees and/or doctoral degrees. Recognition of the spiritual needs of all persons is an integral part of caring for one's self and others therefore, the spiritual dimension is integrated into courses throughout the undergraduate and graduate curriculum.

College Philosophy

The College of Nursing and Health Care Professions curriculum is designed to facilitate the students' abilities to creatively respond to continuously changing health care systems throughout the world. Educational experiences are planned to meet the needs of and to empower both students and clients. Professionalism, ethical decision making, accountability, critical thinking, and effective communication are emphasized. This is achieved through the application of liberal arts constructs, science, health and nursing theories, and the values of the Christian faith within the scope of nursing knowledge and evidence-based practice. Nursing practice promotes human dignity through compassionate caring for all human beings, without consideration of their gender, age, color, creed, lifestyle, or cultural background. The faculty of the College of Nursing and Health Care Professions is accountable for the quality of the educational programs and for the promotion of safe and effective nursing through teaching, service, and collaboration with other professionals and consumers of care. The following statements reflect the philosophical beliefs

of the faculty in relation to the concepts of health, environment, person, and nursing.

Nursing

Grand Canyon University founded its College of Nursing in 1982, and the College of Nursing and Health Care Professions continues to educate nurses through rigorous academic and clinical preparation in a tradition of values-based Christian education. The Bachelor of Science in Nursing (BSN) degree is offered both as pre-licensure (Traditional, Fast, and Accelerated Tracks) and degree completion for already licensed and registered nurses. The pre-licensure curriculum is designed to help students assess individuals, the families, and communities; utilize functional health patterns within a variety of clinical settings; formulate nursing diagnoses; plan and evaluate nursing interventions; and function as professionals within the health care team. The Accelerated Track of the pre-licensure BSN program allows students who have met all requirements for secondary admission the opportunity to complete a degree in approximately 16 months. Building on the baccalaureate degree, the College offers a Master of Science in Nursing (MSN) featuring seven areas of focus and a dual degree: Acute Care Nurse Practitioner with an Emphasis in Adult-Gerontology, Adult Clinical Nurse Specialist with an Emphasis in Adult-Gerontology, Family Nurse Practitioner, Health Care Informatics, Nursing Education, Nursing Leadership in Health Care Systems, Public Health, and Master of Business Administration/Master of Science in Nursing with an Emphasis in Nursing Leadership in Health Care Systems. The Doctor of Nursing Practice (DNP) program offers students the option to continue their education at GCU and expand upon their practice using application of evidence to improve population health outcomes.

In concert with the mission of the University, the College of Nursing and Health Care Professions faculty affirms the belief in educating nurses within a dedicated and supportive community of Christian values. The American Association of Colleges of Nursing (AACN) Essentials of Baccalaureate Education for Professional Nursing Practice guides the curriculum for the baccalaureate program. The AACN Essentials of Master's Education for Advanced Nursing Practice, Advanced Nursing Practice: Curriculum Guidelines and Program Standards for Nurse Practitioner Education, National Organization of Nurse Practitioner Faculties (NONPF), AACN Nursing Practitioner Primary Care Competencies in Specialty Areas, NONPF Domains and Competencies of Nurse Practitioner Practice, the National League for Nursing Competencies for Nurse Educators and the Essentials of Doctoral Education for Advanced Nursing

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

Practice provide structure for the curriculum content of the graduate-level programs.

Health

Health is the central focus of nursing. Health is a dynamic aspect of being which incorporates physical, emotional, intellectual, spiritual, and social dimensions.

Environment

All humans interact with the physical, emotional, intellectual, spiritual, and social environments in which they work, play, and live. The nursing role is to help provide healthy and safe environments so that persons may live in optimal health.

Person

We believe that all people are accepted and loved unconditionally, as children of God. Clients are considered to be individuals, families, groups, communities, and populations. Human diversity is cherished. Spirituality is conceived as vertical and horizontal relationships with God and with humanity. These relationships give hope and meaning in life now and in the future.

Nursing

Baccalaureate nursing practice incorporates the roles of assessing, critical thinking, communicating, providing care, teaching, and leading. The caring professional approach includes the values of autonomy, altruism, human dignity, integrity and social justice with unconditional regard for all people. Nursing practice includes health promotion, disease prevention, early detection of health deviations, prompt and adequate treatment of the human response to acute and chronic illness, and compassionate care for those experiencing death.

Masters nursing practice expands upon baccalaureate nursing concepts to include primary care practice knowledge and advanced leadership with a focus on research and quality assurance, spirituality, diversity, critical thinking, caring, and learning. The advanced professional nursing role relies on best practices and evidence-based research with a focus on evaluation of health outcomes and process.

Doctoral nursing practice builds on the Masters Essentials to incorporate development of needed advanced competencies for increasingly complex practice, faculty, and leadership roles; enhanced knowledge to improve nursing practice and patient outcomes; enhanced leadership skills to strengthen practice and health care delivery; and provision of an advanced educational credential for those who require advanced practice knowledge but do not need or desire a degree with a research focus (e.g. practice faculty).

Nursing Education

Nursing education is theory driven. Theories are derived from the humanities, sciences, and biblical concepts. Nursing knowledge, theory, research, and health promotion are influenced by spiritual perspectives, ethical, legal, political, historical, and social influences. The faculty values excellence in teaching with an individual focus on the learner. Teaching includes a variety of methods, learning modalities, and practice situations. Faculty provides opportunities for students to give comprehensive care to diverse client populations.

Learning

Learning environment is created and arranged to meet individual learning outcomes that are consistent with College of Nursing and Health Care Professions program outcomes. The College of Nursing and Health Care Professions supports life-long learning

endeavors and fosters an appreciation of diversity among traditional and nontraditional learners. Students are educated to provide, direct and evaluate client-centered care while focusing on the person as an integrated whole.

Health Care Professions

Athletic Training

The Bachelor of Science in Athletic Training is an entry-level athletic training program accredited by the Commission on Accreditation of Athletic Training Education (CAATE). This allied health profession program challenges students to apply theories and skills as they relate to a physically active population and utilizes the National Athletic Trainer's Association Educational Competencies as the framework for student learning in didactic, laboratory, and clinical courses. Athletic training students are assessed following the five domains of the athletic training profession, including:

- Injury/Illness prevention and wellness protection
- Clinical evaluation and diagnosis
- Immediate and emergency care
- Treatment and rehabilitation
- Organization and professional health and well-being

Upon degree completion, students are eligible to take the Board of Certification exam for athletic training which is necessary to practice in the profession. Many states also require licensure, certification, or registration in addition to passing the Board of Certification Exam. Certified athletic trainers work in various settings including colleges and universities, secondary schools, professional sports, orthopedic rehabilitation clinics, hospitals, the military, public safety, and the performing arts, and as physician extenders and practice administrators.

Public Health

The Master of Public Health degree is the most widely recognized professional credential for leadership positions in public health. The public health program is designed to draw on knowledge and skills from a variety of disciplines to define, assess, and ultimately resolve public health problems. Students study theories, concepts, and principles of public health and their application.

The curriculum, developed around national public health curriculum standards, uses a multidisciplinary approach that emphasizes psychological, behavioral, and social factors influencing population-based health disparities; principles of epidemiology and biostatistics; environmental public health concepts; public health administration systems and processes; and economic factors. It prepares students for an expanding range of professional opportunities and roles in public health and medicine. The Master of Public Health program culminates with a practicum and capstone project that students are able to design to best fit their area of specific interest.

The professional standards outlined by the Council on Education for Public Health (CEPH) were utilized as the foundation of this program. The following core areas of knowledge are included in the Master of Public Health curriculum:

- Biostatistics – Collection, storage, retrieval, analysis, and interpretation of health data; design and analysis of health-related surveys and experiments; and concepts and practice of statistical data analysis.
- Epidemiology – Distributions and determinants of disease, disabilities and death in human populations; the characteristics

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

and dynamics of human populations; and the natural history of disease and the biologic basis of health.

- Environmental health sciences – Environmental factors including biological, physical, and chemical factors that affect the health of a community.
- Health services administration/policy – Planning, organization, administration, management, evaluation, and policy analysis of health and public health programs.
- Social and behavioral sciences – Concepts and methods of social and behavioral sciences relevant to the identification and solution of public health problems.

Health Care Administration

Health care is the largest industry in the United States, and the second largest employer, providing more than 11 million jobs. The sector continues to grow, and faster than most other industries. There are many opportunities, requiring specialized skills sets, such as implementing policy and procedure, hiring and supervising staff, financial management, and technology management. A degree in health care administration can also be easily transferred into other industries.

The Bachelor of Science in Health Care Administration program is designed to prepare graduates for entry-level management positions in numerous health care settings such as hospitals, clinics, medical groups, long-term care facilities, physician offices, insurance companies, and state and federal organizations. The central focus of the program is to provide a comprehensive base in health-related business knowledge and concepts, with an emphasis on health care finance, the U.S. health delivery system and policy, strategic planning, health information technology, human resources, organization behavior, and legal/ethical issues in medicine. The program prepares students to excel in decision-making skills, critical thinking, and group communications. Courses offered are in traditional and online forums. Students in the Bachelor of Science in Health Care Administration program are excellent candidates for the Master of Science in Health Care Administration, Master of Public Health, and Master of Business Administration programs.

The Master of Science in Health Care Administration program is designed to prepare graduates for mid- to senior-level management positions in a variety of health care organizations. As the health care industry continues to grow, it is also becoming more competitive, and many employers prefer advanced degrees. The primary goal of this program is to develop the skills, knowledge, and experience for individuals interested in being innovative change agents and leaders within the health care industry. Individuals may be employed in a clinical health care role, with the desire to move into an administrative or management role, or have a desire to move into the health care industry in a nonclinical capacity.

The following core areas of knowledge are included in the Master of Science in Health Care Administration curriculum:

- Leadership - Explores business leadership models and theory, with special attention to application of these models within organizations.
- Organizational Behavior – Focuses on organizational structure and effectiveness, applying models for collaboration and teamwork, and the analysis of the impact of change.
- Financial and Analytical Issues – Focuses on specific financial issues in health care, the use of appropriate analytics to measure performance and budget. Evaluates economic variables that influence market performance and outcomes.

- Human Resources – Focuses on managerial communications. Areas include conflict management, negotiation, mediation, and coaching.
- Marketing and Communications – Explores internal, external, and consumer communications.

Health Care Informatics

Health care informatics is a rapidly emerging discipline. The Master of Science in Health Care Informatics program is designed to prepare students for innovative leadership positions integrating technology with clinical operations, data management, decision support systems, and quality assessment. Graduates will be prepared for roles such as project manager, researcher, systems analyst, and mid- to senior-level management positions.

The following core areas of knowledge are included in the Master of Science in Health Care Informatics curriculum:

- Concepts in Health Care Informatics – Focuses on history, application, and future need in this specialty. Includes processes that affect evidence-based medicine, administrative and clinical support, security issues, and the growing use of electronic health records.
- Health Care Information Systems – Examines the use of information technology in health care, with emphasis on changing roles and challenges with implementation and communication.
- Health Care Data Management – Focuses on relational database management, hardware technology, and data communication protocols applied when designing and implementing networks and systems.
- Health Care Research Methods and Analysis – Examines the application of research in the delivery of health care. Focuses on strategies to synthesize and apply data.

Health Sciences: Professional Development and Advanced Patient Care

The Bachelor of Science in Health Sciences: Professional Development and Advanced Patient Care program is designed for health care professionals who graduated from accredited certificate and/or associate degree programs who wish to acquire baccalaureate level competencies in health sciences theory and in health care professional issues. Allied health professionals are involved with all aspects of health care delivery and are integral members of the collaborative, health care team. This program provides a foundation for introducing essentials of baccalaureate education, emphasizing the unique role and scope of allied health professions, emphasizing an interdisciplinary and multifaceted approach to care in order to maximize their ability to meet the specific medical needs of the patient.

Nursing: Undergraduate Programs

Bachelor of Science in Nursing (BSN) Pre-Licensure (*Traditional, Fast, and Accelerated Tracks*)

Grand Canyon University's Bachelor of Science in Nursing (BSN) Pre-Licensure degree prepares the graduate to practice as a registered nurse generalist for clients across the life span as a member of the health care team in a variety of settings. The BSN program prepares students to provide evidence-based, holistic, safe, quality care for culturally and spiritually diverse individuals,

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

families, communities, and populations. Program emphasis includes clinical nursing practice, health promotion and maintenance, hands-on experiences across the continuum of care, the use of innovative technologies and preparation for assuming leadership roles as a registered nurse. The Bachelor of Science in Nursing Pre-Licensure program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Baccalaureate Education for Professional Nursing Practice (AACN, 2008).

Bachelor of Science in Nursing Pre-Licensure Major 60 credits

The ABSN program at GCU's Nevada location requires successful completion of the following Nevada-specific course requirement. This course is a curriculum requirement for all Nevada Board of Nursing approved pre-licensure nursing programs operating/located within the state of Nevada. This course will be applied to GCU's Global Awareness competency and will be taken in place of SOC-102. Students intending to complete the ABSN program at GCU's Nevada location should plan accordingly:

POS-305	Nevada and U.S. Constitution	4 credits
-------------------------	------------------------------	-----------

Bachelor of Science in Nursing (RN-BSN)

The RN to BSN program is designed for registered nurses with an associate's degree or diploma in nursing. The format and courses of the regionally accredited program are tailored to meet the needs of the adult learner RN, and to maximize strengths that the working RN possesses. A bridge course facilitates the transition of the working RN into the baccalaureate program. Courses are taught by experts in their respective fields who share knowledge and experience in areas of clinical patient care, health care management, and professional nursing practice and leadership. Opportunities are provided to apply concepts, theories, and research in the RN's clinical practice. Both the science and art of nursing are integral components of the program and are woven throughout. Graduates of the program are prepared to become leaders in the nursing profession.

Program Description

The Registered Nurse to Bachelor of Science in Nursing (RN-BSN) program prepares registered nurses who have an associate degree or diploma in nursing to function as professionals within the health care team by providing holistic, safe, and quality care for individuals, families, and communities in diverse settings.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

The program includes an emphasis on spirituality, communication, health promotion, and disease prevention throughout the life span, which provides students the opportunity to achieve baccalaureate competencies.

The Registered Nurse to Bachelor of Science in Nursing program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Baccalaureate Education for Professional Nursing Practice (AACN, 2008)..

RN to BSN students who want to transition into GCU's Master of Science in Nursing (MSN) degree programs may complete two graduate level courses to meet their upper division elective credits for degree completion. Please refer to the [College of Nursing and Health Care Professions website](#) for additional information.

Bridge to Master of Science in Nursing

The Bridge to Master of Science in Nursing program is designed for registered nurses with a bachelor's degree in health sciences or other related fields. The program is intended to meet the needs of adult learners who already possess a bachelor's degree and an RN license who desire to pursue a graduate degree in nursing. Courses in the bridge program are a blending of RN to BSN core courses that are considered essential requisites to graduate study. Upon completion of bridge courses from the BSN core, students enter one of seven emphases offered for the Master of Science in Nursing or the Master of Business Administration and Master of Science in Nursing with an Emphasis in Nursing Leadership in Health Care Systems.

Nursing: Graduate Programs

Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult-Gerontology

The Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult-Gerontology program prepares experienced registered nurses to provide competent advanced practice nursing care in complex, acute, and critical care settings through an evidence-based program of study. Graduates are eligible for certification as Adult-Gerontology Acute Care Nurse Practitioners. The program combines courses in advanced health assessment, clinical diagnosis, procedural skill acquisition, and care management of adult and geriatric acute care patients, subacute patients, complex patients, and patients with exacerbations of chronic illness. Clinical experiences emphasize the physiological and psychosocial impact of acute and critical illness on the patient, family, and community, and prepare the Adult-Gerontology Acute Care Nurse Practitioner in the diagnosis and management of acute and life-threatening health problems. This program includes 675 hours of directly supervised clinical practice with qualified preceptors and two separate on-campus experiences. A post-master's certificate program is available to those nurses who already have a Master of Science in Nursing degree.

The Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult-Gerontology program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Master's Education in Nursing (AACN, 2011).

Master of Science in Nursing: Family Nurse Practitioner

The Master of Science in Nursing: Family Nurse Practitioner program prepares experienced professional nurses for advanced practice as primary care providers. The family nurse practitioner (FNP) makes independent critical judgments in all levels of prevention, including health promotion; illness prevention; and diagnosis and management for individuals, families, communities, and populations. The FNP performs comprehensive health assessments, diagnoses illness, and prescribes pharmacologic and nonpharmacologic treatments to manage acute and chronic health problems to achieve quality, cost-effective outcomes in a culturally sensitive context. The role of the FNP includes educating, consulting, collaborating, using research to make practice decisions, and influencing professional and public policies. Within various practice settings, the FNP provides health care for clients across the life span. This program includes 675 hours of directly supervised clinical practice with qualified preceptors and two separate on-campus experiences. A post-master's certificate program is available to those nurses who already have a Master of Science in Nursing degree.

The Master of Science in Nursing: Family Nurse Practitioner program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Master's Education in Nursing (AACN, 2011).

Master of Science in Nursing with an Emphasis in Health Care Quality & Patient Safety

The Master of Science in Nursing with an Emphasis in Health Care Quality and Patient Safety prepares licensed nurses to apply analytical processes to improve health and patient safety outcomes. Students will develop the essential knowledge and skills to lead clinical and non-clinical process improvement projects in a complex health care environment. The Master of Science in Nursing with an Emphasis in Health Care Quality & Patient Safety program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Master's Education in Nursing (AACN, 2011)

Master of Science in Nursing with an Emphasis in Health Informatics

Grand Canyon University's Master of Science in Nursing program incorporates the advanced roles of a clinician, researcher, learner/educator/coach, leader, community advocate, manager of systems, collaborator, and consultant. The master's prepared nurse requires clinical and organizational decision-making skills based on critical thinking, evidence-based research, and diagnostic reasoning. Nurses prepared at the advanced level synthesize elements of caring into the nurse-patient relationship based on advocacy, as well as ethical, social, legal, political, and historical perspectives. Emphasis is placed on client empowerment with unconditional regard for all. The role of the advanced practice registered nurse (APRN) also includes the clinical/practice component in preparation to become a nurse practitioner. Specialties within the advanced nursing role include an expansion of nursing knowledge from one of the following program emphases: education, informatics, leadership, public health, acute care nurse practitioner, and family nurse practitioner. Health informatics is a rapidly evolving discipline requiring innovative leadership. As health care reform begins to

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

impact all areas of the health care system, greater attention is being focused on the value of using health care data in reducing health care costs, increasing access to health care, and improving the quality of health care services. The integration of information technology into health care and the continuous changes in patient-care systems require professionals and leaders with training in clinical operations, data management systems, health care system operations, project management, decision making, and quality assessment. Graduates of the Master of Science in Nursing with an Emphasis in Health Informatics program may perform a variety of functions for organizations, such as automating clinical care; choosing, customizing or building new operational data systems; training health care workers in the use of computer systems; and collecting and analyzing data to improve patient care and outcomes. Depending on their areas of strength and focus, graduates may serve as project managers, project designers, researchers, systems analysts, or administrators and executives at all levels of the organization. Graduates may work in a variety of settings, including hospitals, primary care facilities, doctor's offices, insurance companies, pharmacies, technology suppliers, consulting firms, and other related settings. Potential employers for graduates of this program include the Centers for Disease Control and Prevention, National Institutes of Health, clinical data exchange insurance sites, the government's Military Health System (hospitals), Centers for Medicare and Medicaid Services, state health care organizations, and informational technology vendors. The Master of Science in Nursing with an Emphasis in Health Informatics program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Master's Education in Nursing (AACN, 2011)..

health, acute care nurse practitioner, and family nurse practitioner.

The Master of Science in Nursing with an Emphasis in Leadership in Health Care Systems program prepares nurses for leadership roles in today's rapidly changing health care delivery systems. The program consists of graduate nursing core and leadership courses, as well as leadership courses taken with Master of Science in Leadership (MSL) students. From the graduate nursing core courses, students gain the knowledge, values, and skills needed for advanced generalist nursing practice in an evolving health care system. The coursework in leadership provides insight into the functioning of organizations, including emphasis on financial and human resource management within health care organizations. Nursing leadership courses also emphasize the role of quality and performance improvement and the effective communication and interdisciplinary collaboration skills required of leaders in contemporary health care.

The Master of Science in Nursing with an Emphasis in Leadership in Health Care Systems program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Master's Education in Nursing (AACN, 2011).

Master of Science in Nursing with an Emphasis in Public Health Nursing

Grand Canyon University's Master of Science in Nursing program incorporates the advanced roles of a clinician, researcher, learner/educator/coach, leader, community advocate, manager of systems, collaborator, and consultant. The master's prepared nurse requires clinical and organizational decision-making skills based on critical thinking, evidence-based research, and diagnostic reasoning. Nurses prepared at the advanced level

synthesize elements of caring into the nurse-patient relationship based on advocacy, as well as ethical, social, legal, political, and historical perspectives. Emphasis is placed on client empowerment with unconditional regard for all. The role of the advanced practice registered nurse (APRN) also includes the clinical/practice component in preparation to become a nurse practitioner. Specialties within the advanced nursing role include an expansion of nursing knowledge from one of the following program emphases: education, informatics, leadership, public health, acute care nurse practitioner, and family nurse practitioner. The demand for public health professionals is rapidly increasing as a result of health care reform, environmental health concerns, emerging and re-emerging diseases, sociopolitical factors affecting the nation's health, and expansion of health issues that are global in scope. Professionals who graduate from the Master of Science in Nursing with an Emphasis in Public Health Nursing program may hold positions of responsibility in a variety of settings, including health care facilities, county and state health departments, social service agencies, health policy and planning organizations, universities, nongovernmental organizations, governmental agencies, international health organizations, community-based health education and health promotion settings, and the corporate world. Graduates of Grand Canyon University's Master of Science in Nursing with an Emphasis in Public Health Nursing program can be actively involved in the coordination, planning, development, implementation, and evaluation of health programs and services. The Master of Science in Nursing with an Emphasis in Public Health Nursing program is designed for nurses interested in disease prevention and community and population health. Public health professionals draw on knowledge and skills from a variety of disciplines to define, assess, and ultimately resolve public health problems and reduce health disparities. Students study theories, concepts, and principles of public health and their application. The curriculum, developed around the nursing core and national public health curriculum standards, uses a multidisciplinary approach that emphasizes psychological, behavioral, and social factors influencing population-based health disparities; principles of epidemiology and biostatistics; environmental public health concepts; public health administration systems and processes; and economic factors. It prepares students for an expanding range of professional opportunities and roles in public health and nursing. As part of the Master of Science in Nursing with an Emphasis in Public Health Nursing program, students complete an evidence-based practice project tailored to the student's area of specific interest. The program also culminates with a practicum experience through which students will learn to apply public health nursing concepts and skills in a public health setting. The Master of Science in Nursing with an Emphasis in Public Health Nursing program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Master's Education in Nursing (AACN, 2011).

Post-Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult-Gerontology Certificate

The Post-Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult-Gerontology Certificate program prepares experienced registered nurses to provide competent advanced practice nursing care in complex, acute, and critical care settings through an evidence-based program of study. Graduates are eligible for certification as Adult-Gerontology Acute Care Nurse Practitioners. The program combines courses in advanced health assessment, clinical diagnosis, procedural skill acquisition, and care management of adult and geriatric acute care patients, subacute patients, complex patients, and/or patients with exacerbations of chronic illness. Clinical experiences emphasize the physiological and psychosocial impact of acute and critical illness on the patient, family, and community, and prepare the ACNP-AG in the diagnosis and management of acute and life-threatening health problems. This program includes 675 hours of directly supervised clinical practice with qualified preceptors and two separate on-campus experiences. The Post-Master of Science in Nursing: Acute Care Nurse Practitioner with an Emphasis in Adult-Gerontology Certificate program is designed to meet current professional standards including but not limited to: American Association of Colleges of Nursing (AACN): The Essentials of Master's Education in Nursing (AACN, 2011).

Post-Master of Science in Nursing: Nursing Education Certificate

The Post-Master of Science in Nursing: Nursing Education Certificate prepares advanced professional nurses in the specialty of nursing education within the expanding educational needs of the nursing profession. Nurse educators practice in a variety of settings, including acute or chronic care settings, as staff educators or in a role responsible for planning, implementing, and evaluating continuing education programs. The advanced professional nurse educator will also be prepared to assume a faculty position in a traditional college of nursing or in a nontraditional program that relies on online technology as a teaching medium. Competencies of the professional practice nurse educator include assessing educational needs, planning programs to meet those needs, and evaluating program outcomes in the context of evidence-based practice models. The Post-

Nursing: Doctoral Programs

Doctor of Nursing Practice

Grand Canyon University's Doctor of Nursing Practice program provides broad and in-depth preparation for advanced practice and leadership roles in nursing. The program expands on current theoretical and scientific foundations of health care practice, including the discipline knowledge base, the design and evaluation of clinical solutions, and clinical and organizational change leadership. The program prepares nurse leaders to design and implement evidence-based strategies for practice that improve health care delivery and patient outcomes. Emphasis will be placed on preparing graduates to practice from the foundation of our Christian heritage through an intentional focus on values and ethics.

Health Care Professions: Undergraduate Programs

Bachelor of Science in Athletic Training

Athletic training, as defined by the National Athletic Trainer's Association, is practiced by athletic trainers, who are health care professionals who collaborate with physicians to optimize activity and participation of patients. Athletic training encompasses the prevention, diagnosis, and intervention of emergency, acute, and chronic medical conditions involving impairment, functional limitations, and disabilities. Students who want to become certified athletic trainers must earn a degree from an accredited athletic training program. Accredited programs include formal instruction in areas such as injury/illness prevention, first aid, and emergency care, assessment of injury/illness, human anatomy and physiology, therapeutic modalities, and nutrition. Classroom learning is enhanced through clinical education experiences. Certified athletic trainers

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

(ATCs) are qualified to work in a variety of settings, including high schools, colleges and universities, professional sports, clinics, and other areas, as an integral part of the health care team. A minimum of 900 hours of clinical rotations on and off-campus must be completed before graduation. Students must provide their own transportation to clinical rotations.

Bachelor of Science in Health Care Administration

The Bachelor of Science in Health Care Administration (BSHA) is an undergraduate professional degree designed to prepare students for entry-level supervisory roles in health care organizations. Ideal candidates for the BSHA program are those students looking for career entry in health care administration and those looking to advance from clinical/technical roles to supervisory roles. The BSHA program emphasizes both the conceptual and analytical skills required to manage in contemporary health care organizations. Graduates prepare themselves for administrative positions in hospitals, long-term care, outpatient facilities, physician offices, mental health organizations, insurance companies, public health agencies, and other types of health organizations. The BSHA program also prepares students who wish to eventually seek their master's degree in order to obtain senior health care executive positions.

The BSHA program features investigative and experimental opportunities in project management, teamwork, and leadership. Students of this program will have the opportunity to gain an in-depth understanding of the following:

- The organization and structure of components of the health care sector to permit development and implementation of successful management strategies within the industry.
- The managerial skills needed to work in teams, build cross-functional teams, and facilitate collaborative decision making.
- The industry-specific business knowledge and skills related to finance management, human resources, strategic planning, marketing, information management, and quality improvement.
- The impact that various dynamics (e.g., regulatory, legal, ethical, public policy, and political) can have on health service organizations and the management or administration of any specific sector of the health care industry.
- The manner in which public, private, and social forces can shape the health care system and affect health care providers.
- The financial options and strategies within and between component sectors of the health care industry.

Bachelor of Science in Health Information Management

The Bachelor of Science in Health Information Management program prepares students to assume administrative positions in health data management, information policy, information systems integration, quality improvement, medical record processing, and operations management. The health information management sector of health care provides the knowledge, resources, and tools needed to advance professional standards and professional practice to ensure the delivery of quality health care.

Program Vision and Mission Statements

Vision

To empower healthcare communities in transforming healthcare through the application of health information management and information systems and to incorporate collaborative initiatives led by program students, faculty, and alumni.

Mission

Grand Canyon University's BS Health Information Management program prepares graduates to promote quality health information for the benefit of the public, healthcare consumers, providers, and other users of clinical data. This mission is accomplished through a program that focuses on integrating Christian values and servant leadership.

Bachelor of Science in Public Health

Grand Canyon University's Bachelor of Science in Public Health program prepares students to work as public health practitioners in various health-related settings, including community-based organizations, government agencies, behavioral health agencies, primary care centers, and global or domestic nonprofit organizations. Public health practitioners focus on the prevention of communicable diseases, health education and promotion, and reducing the impact of environmental hazards. The discipline of public health provides the knowledge, resources, and tools needed to design and implement effective health promotion programs, including health education and policies for specific populations within the larger community. The Bachelor of Science in Public Health program also integrates the National Commission for Health Education Credentialing (NCHEC) Seven Areas of Responsibility for Health Education Specialists, addressing fundamental skills in community assessment, program planning, and program implementation and evaluation.

Health Care Professions: Graduate Programs

Master of Public Health

Public health is a multidisciplinary and collaborative field of study integrating the biological, social, psychological, anthropological, political, and environmental sciences to improve health outcomes among populations. There is a high demand for trained public health professionals as a result of the increased prevalence of chronic diseases, emerging and re-emerging infectious diseases, environmental health concerns, trends toward population health management in health care, health care reform, and global health concerns. Grand Canyon University's (GCU) Master of Public Health (MPH) program prepares graduates to apply public health theories to relevant and emerging health issues in order to develop, implement, lead, and evaluate health promotion and disease prevention programs through collaborative partnerships. The program prepares students for leadership positions in state and local health departments, international government agencies, nonprofit organizations, health policy and planning organizations, health care organizations, universities, community-based education programs, and faith-based ministries addressing public health issues. The curriculum combines core subject areas like epidemiology, environmental health, quantitative analysis and interpretation, health policy, social and behavioral factors, planning, and evaluation with unique applications to community engagement and health ministry. The program culminates with a practicum and capstone project that students are able to design based on their professional interest area. The GCU MPH program is unique because the program focuses on integrating Christian values, servant leadership, and community engagement throughout the program.

Master of Science in Health Care Informatics

Health care informatics is a rapidly emerging discipline that offers new frontiers requiring innovative leadership. As health care reform begins to impact all areas of the health care system, greater attention is being focused on the value of health informatics in reducing health care costs, increasing access, and improving the quality of health care services. Health care informatics is quickly becoming vital to the growth and security of the United States' health care system. The integration of information technology into health care and the continuous changes in patient-care systems require professionals and leaders with training in clinical operations, data management systems, health care system operations, project management, decision making, and quality assessment.

Graduates may perform a variety of functions for the organization, such as automating clinical care, building new operational data systems, training health care workers in the use of computer systems, collecting and analyzing data to improve patient care, etc. Depending on their areas of strength and focus, graduates may serve as project managers, project designers, researchers, systems analysts, or administrators and executives at all levels of the organization. Graduates may work in a variety of settings, including hospitals, primary care facilities, doctors' offices, insurance companies, pharmacies, technology suppliers, consulting firms, and more. Organizations of potential employment include the Centers for Disease Control and

Prevention; National Institutes of Health; clinical data exchange insurance sites; the government's Military Health System (hospitals); Centers for Medicare & Medicaid Services; state health care; and informational technology vendors.

The College of Theology

College Description

Christian Studies programs are designed to equip students with an understanding of the Bible and its historical and theological significance for the Christian faith, to prepare them for ministry, and to provide them with spiritual guidance. Students are equipped, as well, to relate to diverse other religions in global culture. The faculty is committed to helping students formulate their call to ministry by exploring the various directions that a call may take, and by helping students develop character and integrity in all aspects of life.

College Mission

Grand Canyon University's College of Theology, in keeping with its commitment to the authority of the Bible as Scripture and the centrality of Jesus Christ, exists to resource, educate and equip students in theological scholarship, ethical integrity, effective leadership, and ministry in service to God, the Church, the academy, and the world.

Christian Studies: Undergraduate Programs

Bachelor of Arts in Christian Ministry

Grand Canyon University's Bachelor of Arts in Christian Ministry prepares students for pastoral leadership in the local church and other Christian ministries. This practically-oriented program is designed to equip students with the broad understandings and skills needed for faithful, Christian ministry. Graduates of this program will possess basic biblical and theological knowledge, understand the dynamics of pastoral leadership, develop Christian character, and acquire the skills needed for effective ministry. The core of this pre-seminary curriculum provides a well-rounded theological education with emphasis on personal and professional formation and the development of ministerial abilities. Coursework in biblical, theological, and historical studies is combined with practical courses in leadership, spiritual formation, communication, and ministry. Students learn how to apply biblical and theological truth personally and practically to life and ministry contexts. Ministry internships provide additional opportunities for students to connect sound doctrine and practical ministry experience within the context of local churches and ministries.

Bachelor of Arts in Christian Studies with an Emphasis in Global Ministry

The Bachelor of Arts in Christian Studies is designed to prepare students for careers in ministry within the church, on the mission field, or within Christian organizations. Graduates of this program will possess a strong foundation of biblical and theological knowledge, will develop spiritually and professionally, and will gain communication and leadership skills necessary for effective ministry.

The core of the Bachelor of Arts in Christian Studies program is designed to offer a well-rounded theological education and to equip students with the basic knowledge and skills required for faithful ministry. Attention is also given to the inward formation of Christ-like character and an ability to minister with wisdom and sensitivity within the local church and in other Christian environments.

Graduates of the Bachelor of Arts in Christian Studies with an Emphasis in Global Ministry program are prepared for cross-cultural ministry in a variety of national and international contexts. Coursework for this emphasis introduces students to cross-cultural studies and provides them with the skills required for a contextualized gospel ministry. Students are equipped with biblical and theological foundations for mission work, an understanding of missions from a historical perspective, and the skills needed for effective communication of the gospel across cultures. This program of study is designed to equip students with competencies necessary for service as effective ministers and missions leaders in churches and mission agencies, in North American and international settings.

Bachelor of Arts in Christian Studies with an Emphasis in Philosophy

The Bachelor of Arts in Christian Studies is designed to prepare students for careers in ministry within the church, on the mission field, or within Christian organizations. Graduates of this program will possess a strong foundation of biblical and theological knowledge, will develop spiritually and professionally, and will gain communication and leadership skills necessary for effective ministry.

The core of the Bachelor of Arts in Christian Studies program is designed to offer a well-rounded theological education and to equip students with the basic knowledge and skills required for faithful ministry. Attention is also given to the inward formation of Christ-like character and an ability to minister with wisdom

and sensitivity within the local church and in other Christian environments.

Graduates of the Bachelor of Arts in Christian Studies with an Emphasis in Philosophy program are equipped for ministry that requires ethical and ideological engagement in the public arena and are prepared for further study at the graduate level in preparation for a career in the church or academy. Coursework for this emphasis introduces students to philosophical studies in key areas including knowledge and reality, ethics, and philosophy of religion. Students are trained to analyze and assess ideas and ethical systems and express their understandings effectively to others. This program of study is designed to provide students with competencies necessary for service as effective ministers who are capable of engaging the public square and leading others to do the same.

Bachelor of Arts in Christian Studies with an Emphasis in Youth Ministry

The Bachelor of Arts in Christian Studies is designed to prepare students for careers in ministry within the church, on the mission field, or within Christian organizations. Graduates of this program will possess a strong foundation of biblical and theological knowledge, will develop spiritually and professionally, and will gain communication and leadership skills necessary for effective ministry.

The core of the Bachelor of Arts in Christian Studies program is designed to offer a well-rounded theological education and to equip students with the basic knowledge and skills required for faithful ministry. Attention is also given to the inward formation of Christ-like character and an ability to minister with wisdom and sensitivity within the local church and in other Christian environments.

Graduates of the Bachelor of Arts in Christian Studies with an Emphasis in Youth Ministry program are prepared for a variety of ministerial and leadership positions that require a solid biblical and theological foundation as well as skills related to ministerial leadership and ministry. Coursework in this program explores effective ways to lead students to Christ in their formative years, develops abilities to recognize times of crisis in the lives of young people, and cultivates skills for providing guidance and help as needed. This program of study is suited to students who have a passion for serving and would like to help youth develop their relationship with Jesus Christ and fulfill their calling to minister to young men and women in churches, high school programs, parachurch ministries, and other Christian organizations.

Worship Arts: Undergraduate Programs

The Bachelor of Arts in Worship Arts is a 120-credit-hour degree designed to prepare students for careers in contemporary worship ministry and the Christian music industry. Worship Arts refers not only to worship leadership within local churches but, more broadly, to performance, visual media, production, and the business aspects of the contemporary Christian music industry. Students who graduate from this program will possess a strong foundation of biblical and theological knowledge and will be skilled in worship leadership, musical performance, production, and business management.

The core of the worship arts program is designed to offer a well-rounded theological education and to equip students with basic knowledge and skills in the areas of vocal and instrumental performance, production (lighting, digital film, sound systems,

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

and recording), management and marketing, and worship leadership. Attention is also given to the inward formation of Christ-like character and an ability to minister with wisdom and sensitivity within the local church and in other Christian worship environments.

Bachelor of Arts in Worship Arts with an Emphasis in Media and Production Ministry

Grand Canyon University's Bachelor of Arts in Worship Arts is designed to prepare students for careers in worship leadership, ministry, technical direction, and production. Worship Arts refers not only to worship leadership within local churches but, more broadly, to songwriting, performance, media, production, and technical direction. The core of the Worship Arts program is designed to offer a well-rounded theological education and to equip students with basic knowledge and skills in the areas of worship leadership, performance, lighting, media, and sound production. Attention is also given to the inward formation of Christ-like character and an ability to minister with wisdom and sensitivity within the local church and in other Christian worship environments. Students who graduate from this program will possess a strong foundation of biblical and theological knowledge and will be skilled in worship leadership, ministry, production, and the technical aspects of worship arts. In addition to the core, students will choose an emphasis in either Worship Ministry or Media and Production Ministry depending on their desired area of specialization. Graduates of the Bachelor of Arts in Worship Arts with an Emphasis in Media and Production Ministry are prepared to provide vital leadership and creative direction for worship services through media, audio/visual production, and technical direction. This degree emphasizes ministerial leadership in the areas of technical ability, artistic excellence, and production. Upon completion of the program, students will possess a strong foundation of biblical and theological knowledge and will be prepared to lead in the areas of media and production ministry. Coursework emphasizes media and production ministry for contemporary worship, sound recording and reinforcement, and audio/visual direction. Students study lighting design, technical direction, media preparation and presentation, sound and lighting enhancements, and stage and set design while learning to coordinate instrumentalists, vocalists, and audio/visual teams. Significant emphasis is placed on project management, team building, and effective leadership. An internship provides learners with diverse opportunities to apply their knowledge and continue to develop their worship arts skills under the supervision of experienced worship pastors in local ministry settings.

Christian Studies: Graduate Programs

Master of Arts in Christian Leadership

Grand Canyon University's Masters of Arts in Christian Leadership degree is designed for individuals who plan to provide distinctively Christian leadership within various contexts, including church, parachurch, non-profit organizations, business, community, and public service contexts. This degree program offers basic biblical knowledge, practical theology, and skills necessary for effective leadership in order to make maximum impact for God's kingdom.

Curriculum for the Masters of Arts in Christian Leadership degree explores Old and New Testament foundations, biblical interpretation, Christian doctrine, ministerial ethics, and various styles of leadership. Coursework also guides students through the process of developing theologically sound strategies for leading in ways that align well with the needs of the community and individual giftedness.

This degree prepares students with the knowledge and skills necessary for service as Christian leaders within the church or the community. Students complete the program with foundational understandings and the ability to apply those understandings practically in leadership settings. The program teaches how to lead with Christ-like character through good times and through crises. It was created for those with a passion for biblical leadership who intend to serve faithfully within their church or community. Supervised ministry field experiences are embedded throughout the coursework to apply the program's concepts, theories, and research into real-world contexts.

Master of Arts in Christian Ministry

Grand Canyon University's Masters of Arts in Christian Ministry degree prepares graduates to provide spiritual guidance and care to members of their church or Christian organization. This program is designed for those who are called to part-time, bi-vocational, or lay ministry and require theological training to lead in the local church.

Curriculum for the Masters of Arts in Christian Ministry degree explores Old and New Testament foundations, biblical interpretation, Christian doctrine, ministerial ethics, and basic pastoral care. Coursework also guides students through the process of preparing spiritually and professionally in order to shepherd others with grace, compassion, and skill.

This degree prepares students with the knowledge and skills necessary for service as assistant pastors, pastoral associates, administrative pastors, Bible study leaders, deacons, lay elders, or in various supporting roles related to Christian ministry and service. Students complete the program with foundational understandings and the ability to apply those understandings within the context of Christian ministry. The program teaches how to provide pastoral care that centers on the gospel of Jesus Christ, edifies the Christian community, and serves the needs of those inside and outside of the local church. It was developed for the lay person with a passion for Christ-like service and ministry.

Master of Arts in Urban Ministry

Grand Canyon University's Masters of Arts in Urban Ministry degree was created for individuals with a heart for the city who are concerned to meet spiritual needs in urban settings. This degree program features basic biblical knowledge, practical theology, and the skills necessary to address the unique needs that arise in urban contexts.

Curriculum for the Masters of Arts in Urban Ministry degree explores Old and New Testament foundations, biblical interpretation, Christian doctrine, and ministerial ethics. Coursework also provides students the ability to contextualize the Christian message without compromising the integrity of the gospel. Emphasis is placed on the dynamics of urban communities, challenges facing the church today, and the need to minister to people holistically through the power of the gospel while maintaining the priorities of evangelism and discipleship.

Students complete the program with foundational understandings and the ability to apply those understandings within urban contexts. Inner cities can present a unique set of issues and circumstances. Graduates of the program are prepared to address these specific challenges and offer guidance to urban communities. This program is also appropriate for those interested in working at a suburban church with an outreach to urban church counterparts, those who wish to work for a nonprofit, or individuals interested in starting their own nonprofit ministry in an urban setting. Supervised ministry field experiences are embedded throughout the coursework to apply the program's concepts, theories, and research into real-world contexts.

Master of Arts in Youth and Family Ministry

Grand Canyon University's Masters of Arts in Youth and Family Ministry degree is designed for people who have a passion for discipleship that addresses the key stages of human development, from childhood through adulthood. This degree program offers basic biblical knowledge, practical theology, and skills necessary for effective ministry to youth and families within the local church or a Christian organization.

Curriculum for the Masters of Arts in Youth and Family Ministry degree explores Old and New Testament foundations, biblical interpretation, Christian doctrine, and ministerial ethics. Coursework also guides students through the process of learning to apply biblical and theological principles within the context of ministry to specific groups and members of families. Special emphasis is placed on learning to listen and guide youth and their families through the challenging years of pre-adult growth and development.

This degree prepares students with the knowledge and skills necessary for service as youth leaders, children's ministers, assistant pastors, family ministers, or para-church leaders. Students complete the program with foundational understandings and the ability to apply those understandings within the context of youth and family ministry. The program teaches how to provide biblical care that centers on the gospel of Jesus Christ while meeting the unique needs of family life and personal development at each of life's stages. It was created for those with a strong desire to provide discipleship that addresses today's challenges with godly wisdom. Supervised ministry field experiences are embedded throughout the coursework to apply the program's concepts, theories, and research into real-world contexts.

Master of Divinity

The Master of Divinity is the standard degree for professional ministry preparation and is designed for students who intend to

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

serve in local churches, Christian organizations, and other ministerial roles. The Master of Divinity program offers comprehensive biblical and theological knowledge while developing skills necessary for effective Christian ministry. The Master of Divinity curriculum focuses on biblical, historical, theological, and ethical knowledge as well as exegetical, pastoral, and homiletic skills. Significant attention is also directed at the inward formation of Christ-like character and an ability to minister with wisdom and sensitivity within the community of faith and as leaders in the public domain. Thus the Master of Divinity provides a strong basis for ordained, professional ministry and a substantial foundation for advanced study in preparation for an academic career. This degree features a foundational, pastorally oriented program of study that emphasizes the centrality of the gospel, the significance of the church, and the pressing need to advance the Kingdom through missions. The program's courses are designed to offer the crucial components of a well-rounded, theological education and to equip students for a life of faithful ministry. This program is part of an accelerated BA to MDiv (3+2) which requires a 12-month program of study. Graduates of the entire accelerated program will earn a BA after completing all undergraduate requirements and a Master of Divinity after completing all graduate requirements.

Post-Master of Arts in Theology: Introductory Biblical Languages Certificate		18 credits

Minors

Minor in Biblical Studies

A minor in Biblical Studies provides students in any major with basic knowledge of the Bible and the ability to interpret Scripture effectively. Coursework surveys the Bible as a whole, introduces principles and practices for sound interpretation, and applies interpretive skills to major divisions of the Bible. This minor is designed for students who want to understand the Bible more fully and learn to interpret it faithfully.

Minor Requirements

BIB-106	Old Testament Survey	4 credits
BIB-107	New Testament Survey	4 credits
BIB-355^Δ	Biblical Interpretation	4 credits
BIB-350	Pentateuch	4 credits
BIB-360	Gospel and Acts	4 credits
Minor in Biblical Studies		20 credits

Minor in Christian Studies

A minor in Christian studies offers you a basic understanding of the Bible and theology. Gain ethical knowledge while exploring the virtues and habits that shape Christian character and morality. This minor entails an advanced exploration of the Christian worldview with an emphasis on calling, vocation, character development, the Christian life, and Christian community.

Minor Requirements

BIB-100	Bible Survey	4 credits

WSA-123	Church Audio	4 credits
WSA-320	Digital Audio Workstation	4 credits
WSA-322	Theology of Worship	4 credits
WSA-423	Worship Leadership	4 credits
Minor in Media and Production Ministry		20 credits

Minor in Philosophy

The Grand Canyon University Minor in Philosophy introduces students to philosophical studies in key areas including knowledge and reality, ethics, and philosophy of religion. The program complements foundational teachings introduced in Christian worldview by providing students with competencies necessary to effectively engage in ethical and philosophical discourse. Students are trained to analyze and assess ideas and ethical systems and express their understandings effectively to others.

Minor Requirements

PHI-103	Introduction to Philosophy and Ethics	4 credits
PHI-301	Knowledge and Reality	4 credits
PHI-307	Applied Ethics	4 credits
PHI-403	Philosophy of Religion	4 credits
Minor in Philosophy		16 credits

Minor in Short-Term Missions

A minor in Short-Term Missions provides students with basic biblical understandings and the ability to communicate the gospel effectively within cross-cultural contexts. Coursework surveys the Bible as a whole, introduces principles and practices for global and local missions, and culminates in a short-term missions experience. This minor is designed for students who want to understand how to share the Christian faith in word and

deed within various cross-cultural contexts while gaining hands-on experience through short-term missions experiences in local and international contexts.

Minor Requirements

The College of Science, Engineering, and Technology

College Description

With science, engineering, technology, and mathematics professions in extremely high demand, driving our economy, continuously evolving, and redefining modern day life the College of Science, Engineering, and Technology is focused on preparing exceptionally competent graduates to enter the dynamic and highly competitive workforce of the 21st century.

While excellence in content knowledge and skill is essential, developed abilities such as creativity, adaptability, collaboration, effective communication along with personal qualities such as social awareness, responsibility, ethical character, and compassion are significant differentiators of the strongest candidates or applicants whether they are seeking to go on to graduate school or enter the workforce.

To help students develop these abilities we provide ample opportunity through our curricular and co-curricular activities to apply skills, solve problems, and innovate through inquiry-based learning; to engage in internships designed in conjunction with educational and industry partners; to participate in multifaceted team projects; and to experience cross-disciplinary exposure; ensuring that their acquired skills are relevant to the workplace and their future success.

Through intentional focus on the students as unique and special individuals they are also provided opportunity to develop the more personal interactional qualities necessary to be an ethical team player within the workforce and productive contributor to the greater society. Such opportunities include participation in faculty mentoring, engagement in the GCU and local communities, and developing an understanding of, or fully embracing, a Christian worldview as well as developing an understanding of how the worldview that we approach life with affects both the intention and the outcome of that interaction.

College Vision

The College of Science, Engineering, and Technology will become the premier choice for a first-class educational experience that nurtures and supports Christian character development while providing exceptional career preparation in the fields of science, technology, engineering, and mathematics.

College Mission

Through robust collaboration and partnership with industry; a challenging, engaging, and inquiry-based learning environment; a faculty focused exclusively on student success; and a deep, rich Christian heritage; the College of Science, Engineering, and Technology exemplifies the preparation of top candidates for graduate study and professional practice in the most rapidly developing and competitive fields of science, technology, engineering, and mathematics.

Guiding Principles

The College of Science, Engineering and Technology

- Empowers students to find and fulfill their purpose
- Offers an educational experience of superior value
- Prepares students with the knowledge, skills and mental disciplines to succeed in the contemporary job market and to positively impact their world
- Develops in students an informed, critical-thinking mind and a servant's heart
- Fosters qualities of creativity, adaptability, collaboration, effective communication, problem solving, and appreciation that support students in their continuous learning and spiritual growth
- Instills social awareness, responsibility, ethical character, and compassion in students that emanates from the Christian worldview and the example of Christ.

Science Programs

Bachelor of Science in Biochemistry and Molecular Biology

The Bachelors of Science (B.S.) in Biochemistry and Molecular Biology conforms to the guidelines provided by the American Society for Biochemistry and Molecular Biology and offers students a unique interdisciplinary curriculum. With a curriculum drawing from both disciplines as well as specific biochemistry courses, the program provides a broad background in the physical and life sciences. It is suitable for students planning careers in high-growth areas such as biotechnology and health care research or further training in graduate biomedical professional programs. Many graduates enter employment in the biomedical, biotechnology, pharmaceutical, agricultural research and chemical industries. Others find work in university, government or hospital research laboratories.

Bachelor of Science in Biological Sciences

Grand Canyon University's Bachelor of Science in Biological Sciences prepares students for careers in a wide range of fields that utilize biological principles and provide the foundation to develop as scientists or biology professionals. Possible career paths include: technicians, naturalists, environmental education/outreach professionals, museum coordinators, conservation biologists, park rangers, Game and Fish professionals, zookeepers, and EPA, NRCS, USGS, or other government professionals. Students completing the Bachelor of Science in Biological Sciences will understand and demonstrate competency in a broad body of knowledge that includes the domains of biology, chemistry, environmental sciences, ecology, and conservation. Students will also learn about professional and ethical practices associated with biology, all presented through the lens of a Christian worldview..

Bachelor of Science in Biology for Secondary Education (IP/TL)

(Initial Program–Leads to Initial Teacher Licensure)

This program is offered by the College of Science, Engineering, and Technology in conjunction with teaching licensure requirement courses provided by the College of Education for students who are preparing for a teaching career in grades 7-12 and who are seeking initial teacher licensure. The format and courses of this regionally accredited and Arizona-approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles. Content courses are aligned to the standards of the National Science Teachers Association (NSTA). Opportunities are provided to apply concepts, theories, and research throughout the program. Assessments within many of the courses guide students through 85 hours of practicum/field experiences prior to student teaching, and the final semester of the program requires a full-time, 16-week student teaching component. Applicants to the program are responsible for contacting their state department of education for licensure requirements and program approval. Arizona or home state fingerprint/background clearance is required for all practicum/field experiences and student teaching. Furthermore, applicants should consult the Grand Canyon University Catalog, the University Policy Handbook, and an academic counselor to obtain information regarding current policies and procedures inherent in a teacher licensure program.

Bachelor of Science in Biology for Secondary Education (IP/TL) Effective January 2023

(Initial Program—Leads to Initial Teacher Licensure)

This program is offered by the College of Science, Engineering, and Technology in conjunction with teaching licensure requirement courses provided by the College of Education for students who are preparing for a teaching career in grades 7-12 and who are seeking initial teacher licensure. The format and courses of this regionally accredited and Arizona-approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles. Content courses are aligned to the standards of the National Science Teachers Association (NSTA). Opportunities are provided to apply concepts, theories, and research throughout the program. Assessments within many of the courses guide students through 85 hours of practicum/field experiences prior to student teaching, and the final semester of the program requires a full-time, 16-week student teaching component. Applicants to the program are responsible for contacting their state department of education for licensure requirements and program approval. Arizona or home state fingerprint/background clearance is required for all practicum/field experiences and student teaching. Furthermore, applicants should consult the Grand Canyon University Catalog, the University Policy Handbook, and an academic counselor to obtain information regarding current policies and procedures inherent in a teacher licensure program.

Bachelor of Science in Biology with an Emphasis in Pre-Dentistry

The Bachelor of Science in Biology with an Emphasis in Pre-Dentistry is well-suited for students seeking acceptance into graduate study in dental medicine and other related degree programs. This program will prepare graduates for graduate school entrance exams (DAT) and includes specialized coursework focused on preparing students for success in their graduate studies and professional careers. Graduates will acquire foundational knowledge in biological sciences, physical sciences, social sciences, and general human health and dental care issues. They will also study interpersonal and intercultural communication skills and investigate the psychological, spiritual, and physical components of health, wellness, and medical intervention.

Bachelor of Science in Chemistry

The Bachelor of Science (B.S.) in Chemistry conforms to the guidelines provided by the American Chemical Society (ACS) and offers students an interdisciplinary curriculum. The program provides a broad background in chemical science, through the lens of our Christian worldview, guided by the principles of social and ecological responsibility and humanitarianism. It is suitable for students planning careers in high-growth areas such as biotechnology and health care research or further training in

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

graduate biomedical professional programs. Many graduates enter employment in the biomedical, biotechnology, pharmaceutical, environmental research and chemical industries. Others find work in university, government or hospital research laboratories.

Bachelor of Science in Environmental Science

The Bachelor of Science in Environmental Science is designed for students interested in environmental science, including ecology, natural resource management, waste management, environmental health, and environmental chemistry. Graduates will acquire foundational knowledge in environmental sciences, physical sciences, epidemiology, and health care issues along with developing interpersonal and intercultural communication skills. The environmental science courses will have a team-based analytical focus to challenge students on foundational and advanced concepts to strengthen their understanding for

Bachelor of Science in Environmental Science with an Emphasis in Environmental Chemistry

Grand Canyon University's Bachelor of Science in Environmental Science with emphasis in Environmental Chemistry prepares students for career options, that include but are not limited to: environmental and health scientist, analytical labs, pollution remediation, environmental impact assessment,

environmental consultancy, analyst, manager, instructor, and researcher. Students also learn professional and ethical practices associated with environmental science through the lens of our Christian worldview, guided by the principles of social and ecological responsibility and humanitarianism. Students will explore the problems and trends associated with measurement, cleanup and management of environmental contaminants. Competencies include proficiency in the foundations of science, scientific communication, data mining and statistical modeling, environmental and human health regulations, environmental science, and environmental health. This program emphasizes critical thinking, real-world application, practical project experience, and the development of scientific acumen. In addition, students develop valuable workplace skills, including effective communication, teamwork, initiative, work ethic, analytical skills, adaptability, and self-confidence.

Bachelor of Science in Exercise Science with an Emphasis in Sports Performance

The Bachelor of Science in Exercise Science with an Emphasis in Sports Performance program involves the study of the anatomical, kinesiological, and physiological principles and processes of human movement. This includes a focus on the link between physical activity and improved health outcomes with foundational knowledge of behavior change, basic nutrition, and sports nutrition. The emphasis in sports performance focuses on the application of this study to improving performance in sports-related activities with numerous hands-on laboratory courses in which students apply and practice skills studied in didactic courses. Students learn professional and ethical practices associated with this field of study as seen through the lens of a Christian worldview. Students in this program will be well versed in the knowledge and skills necessary for entering the field as fitness professionals. The program provides practical experience and aligns to the body of knowledge provided by organizations such as the American College of Sports Medicine, the National Strength and Conditioning Association, and/or National Academy of Sports Medicine. Options for students to continue their education include post-baccalaureate degrees such as athletic training, physical therapy, physical assistant, occupational therapy, medicine, kinesiology, exercise physiology, or fitness and wellness.

Bachelor of Science in Forensic Science

The Bachelor of Science in Forensic Science is designed for students who are interested in analyzing or collecting and processing biological evidence related to various types of legal and other investigations. The emphasis builds on a solid foundation of biology and chemistry, and provides additional training in criminal investigation, forensic biology, forensic human pathology, serology, and forensic DNA analysis. The program provides excellent preparation for graduate work in specialized areas of forensics. Forensic science students receive extensive training in the collection and analysis of biological evidence in both lab and field settings. Students learn how to evaluate mock crime scenes and how to document, collect, and analyze the biological evidence to establish the time and cause of death. With the rapid advances in biology, and because of the precision of the science, courts are apportioning greater weight to forensic evidence. Employment growth in state and local governments should be driven by the increasing application of forensic science techniques—such as DNA analysis—to examine, solve, and prevent crime. This has created a critical need for personnel with specialized training in the field. Individuals who earn a bachelor's degree may seek employment in various private or public forensic science and conventional analytical laboratories. Students with sufficient work experience could eventually qualify for positions as laboratory supervisors, managers, or directors. Graduates will also find the program very useful in pursuing future studies at the master or Ph.D. level.

Bachelor of Science in Molecular and Cellular Biology

The Bachelor of Science in Molecular and Cellular Biology offers a unique experience in scientific training within a broad spectrum of that builds a strong foundation in microbiology, cellular biology, genetics, chemistry, biochemistry, physics, and math. Students will also learn laboratory design and effectiveness, data analysis and interpretation, and basic computer programming skills. It is suitable for students planning to enter medical school, graduate school, or a career in a high-growth biotechnology or biological area as a lab technician or research assistant. Many graduates enter employment as researchers, educators, doctors, health professionals, scientific writers, lab managers, and more.

Bachelor of Science in Nutritional Sciences

Grand Canyon University's Bachelor of Science in Nutritional Sciences prepares students for graduate studies and/or careers in a wide range of fields that utilize nutritional principles and provide the foundation to develop as nutrition, healthcare, fitness, and education professionals. Possible career paths include: nutritionists, nutrition technicians, dietitians, nutritional and health education/outreach professionals, medical and other health professionals, and fitness professionals. Because this is a greatly expanding area, students will find career opportunities in education, commercial, and corporate industries, as well as in government and non-profit sectors. Students completing the Bachelor of Science in Nutritional Sciences will understand and demonstrate competency in a broad body of knowledge that includes the domains of food science, biochemistry, physiology, dietetics, and nutrition studies. Students will also learn about professional and ethical practices associated with nutrition, all presented through the lens of a Christian worldview.

Bachelor of Science in Physical Education

This program is offered by the College of Science, Engineering, and Technology in conjunction with the College of Education for students who are preparing for a teaching career in grades K-12, and who are seeking initial teacher licensure. The format and courses of this regionally accredited and Arizona approved program are designed to maximize the content knowledge that the teacher candidate will possess upon graduation. All courses are directly aligned with Interstate Teacher Assessment and Support Consortium (InTASC) principles. Content courses are aligned to the national standards for Physical Education Teacher (PETE) as established by SHAPE America, the national organization for Physical Education. Opportunities are provided to apply concepts, theories, and research throughout the program. Applicants to the program are responsible for contacting their desired state's department of education for licensure requirements and program approval. Arizona fingerprint/background clearance is required for all practicum/field experiences and student teaching. Furthermore, applicants should consult the University Policy Handbook and a Student Service Advisor (SSA) to obtain information regarding current policies and procedures inherent in a teacher licensure program.

Master of Science in Biology with an Emphasis in Education

The Master of Science in Biology with an Emphasis in Education prepares students for teaching undergraduate courses at a 2-year or 4-year institution in both ground and online modalities. Balancing biology content with pedagogy and classroom techniques, this unique program offers a pathway to obtaining advanced training in the field of biology while satisfying the requirements for ongoing professional development. Graduates of this program will be able to fulfill the graduate course requirements necessary for opportunities in teaching at the post-secondary level. Admission to the program requires a minimum of 24 UG credits in Biology content coursework (pedagogical or instructional design content will not count).

Master of Science in Forensic Science

Grand Canyon University's Master of Science in Forensic Science program is designed for professionals who are looking to advance their career in forensic sciences, as well as those who would like to enter the field. Students will develop a skill set required for forensic laboratories, including data collection and analysis, critical thinking skills, integrity, ethical principles, and courtroom testimony. The incorporation of a unique curriculum with hands-on, in-home laboratory activities readily prepares students to utilize logic and critical thinking in the analysis of various forms of forensic evidence. Admission to the program requires: a Bachelor's degree in Forensic Science, or any natural or applied science Bachelor's degree from an accredited institution; two (2) semesters of general chemistry with laboratory; two (2) semesters of organic chemistry with laboratory; and one (1) semester of biochemistry.

Degree Requirements

Master of Science in Nutrition and Dietetics

Grand Canyon University's Master of Science in Nutrition and Dietetics is an online program that prepares students to take the Commission on Dietetic Registration (CDR) credentialing examination to become a Registered Dietitian Nutritionist. The accreditation standards of the Accreditation Council for Education in Nutrition Dietetics in the Future Education Model integrate didactic coursework with supervised experiential learning in a competency-based curriculum, designed to prepare nutrition and dietetics practitioners for future practice. Graduates will be prepared to pursue careers in a wide range of fields that utilize nutrition principles and provide the foundation to develop as nutrition professionals. Possible career paths include clinical nutrition, sports nutrition, health and wellness, public health, education, eating disorders, food and nutrition management, entrepreneurship, research, food science, and other areas of dietetics. Students completing the Master of Science in Nutrition and Dietetics will understand and demonstrate competency in a broad body of knowledge that includes the domains of food science, biochemistry, physiology, dietetics, and nutrition studies. Students will also learn about professional and ethical practices associated with nutrition, all presented through the lens of a Christian worldview. Licensing and/or certification requirements may vary from state to state. It is the students' responsibility to check the licensing/certification requirements in their respective state.

Bachelor of Science in Computer Science with an Emphasis in Big Data Analytics

Grand Canyon University's Bachelor of Science in Computer Science with an Emphasis in Big Data and Analytics prepares students for career options which include computer systems analyst, networks specialist, database manager, programmer and software engineer. Students learn algorithms, discrete structures, programming languages, software development, networks, operating systems and computing systems fundamentals. Students also learn professional and ethical practices associated with computing through the lens of our Christian worldview. Students will explore the problems and trends associated with the management of huge volumes of data, gaining fundamental knowledge in the design of highly scalable systems that can collect, process, store and analyze large volumes of unstructured data. Competencies include large scale data processing, data mining and interpretation, pattern analysis and data-based decision making. This program integrates math, chemistry,

physics and biology and emphasizes critical thinking, real-world application and practical project experience. In addition, students develop valuable workplace skills, including effective communication, teamwork, initiative, strong work ethic, analytical skills, adaptability and self-confidence. Students entering the Bachelor of Science in Computer Science with an Emphasis in Big Data and Analytics program should possess knowledge of algebra and common office software applications.

Bachelor of Science in Computer Science with an Emphasis in Business Entrepreneurship

Grand Canyon University's Bachelor of Science in Computer Science with an Emphasis in Business Entrepreneurship prepares students for career options which include computer systems analyst, networks specialist, database manager, programmer and software engineer. Students learn algorithms, discrete structures, programming languages, software development, networks, operating systems and computing systems fundamentals. Students also learn professional and ethical practices associated with computing through the lens of our Christian worldview. This emphasis provides a foundation for business leaders and innovators of new technologies and business processes. Graduates will learn how to plan and manage projects, grow business opportunities, identify market opportunities and commercialize original products and services. They will also learn the best practices for creating innovative work environments and the importance of societal wealth ventures, social responsibility and community outreach. This program integrates math, chemistry, physics and biology and emphasizes critical thinking, real-world application and practical project experience. In addition, students develop valuable workplace skills, including effective communication, teamwork, initiative, strong work ethic, analytical skills, adaptability and self-confidence. Students entering the Bachelor of Science in Computer Science with an Emphasis in Business Entrepreneurship program should possess knowledge of algebra and common office software applications.

Bachelor of Science in Computer Science with an Emphasis in Game and Simulation Development

Grand Canyon University's Bachelor of Science in Computer Science with an Emphasis in Game and Simulation Development prepares students for career options which include computer systems analyst, networks specialist, database manager, programmer and software engineer. Students learn algorithms, discrete structures, programming languages, software development, networks, operating systems and computing systems fundamentals. Students also learn professional and ethical practices associated with computing through the lens of our Christian worldview. This emphasis provides additional preparation in areas of graphic visualization, game development, computer modeling, and simulations with applications for entertainment, educational or scientific purposes. Students will augment a foundational skillset with knowledge of the design, development and production of computer games and related applications. Competencies include visualization, gaming design, artificial intelligence implementation and development for mobile device applications. This program integrates math, chemistry, physics and biology and emphasizes critical thinking, real-world application and practical project experience. In addition, students develop valuable workplace skills, including effective communication, teamwork, initiative, strong work ethic, analytical skills, adaptability and self-confidence. Students entering the Bachelor of Science in Computer Science with an Emphasis in Game and Simulation Development program should possess knowledge of algebra and common office software applications.

Bachelor of Science in Information Technology

Grand Canyon University's Bachelor of Science in Information Technology prepares students for career options which include information systems manager, information security specialist, IT project manager, network support specialist, systems programmer, IT instructor, and system integrator. Students learn platform technologies, networking, information assurance, security and management, programming fundamentals, cloud computing, and web systems and technologies. Students also learn professional and ethical practices associated with information technology through the lens of our Christian worldview. Students will be prepared to enter careers in the rapidly expanding field of information technology. The program provides an understanding of the value of information technology and how it can improve the performance and efficiency, and lower cost of enterprise systems. Graduates will utilize technology to improve the deployment, configuration, and management of technologies using a variety of local and cloud-based platforms. Competencies include knowledge about IT-driven business, software technology and tools, enterprise information systems, and cyber-security. This program provides preparation in problem-solving using technology, with a focus on applied, hands-on activities, leveraging learners' current experience and certifications. In addition, students develop valuable workplace skills, including effective communication, teamwork, initiative, strong work ethic, analytical skills, adaptability and self-confidence. Students entering the Bachelor of Science in Information Technology program should possess knowledge of algebra and common office software applications.

In addition, students develop valuable workplace skills, including effective communication, teamwork, initiative, strong work ethic, analytical skills, adaptability and self-confidence. The Cyber Security Emphasis exposes students to the relationships between cyber defense, cyber operations, and cyber law. Students acquire working knowledge of processes and goals of cyber forensics and develop plans and strategies for security architectures. The emphasis culminates with an IT capstone project in cybersecurity. Students entering the Bachelor of Science in Information Technology with an Emphasis in Cyber Security program should possess knowledge of algebra and common office software applications.

Bachelor of Science in Software Engineering

The Bachelor program in Software Engineering spans software engineering principles, processes and practices with application to a series of complex systems and challenges faced by enterprises in a variety of private and public (ex. Government) sectors. A particular emphasis is placed on embedded systems, system verification, design, architecture, software analysis, process and project management, and the Software Development Lifecycle (SDLC). Graduates of the Bachelor of Science in Software Engineering may take roles within an organization, at any stage of the software development life cycle such as Software Engineer, Project Manager, Embedded Software Engineer, Systems Analyst, Chief Technology Officer (CTO, Chief Information Officer (CIO), and many others. Graduates of the Software Engineering program may work in a variety of settings, including embedded applications development, social media companies, healthcare providers, large corporations, software engineering corporations, financial institutions, insurance companies, educational institutions, technology suppliers, consulting firms, research facilities, and more. The program culminates in a capstone course that provides an opportunity for students to develop an evidence-based practice project proposal that addresses a current problem, issue, or concern in software engineering. Students identify a problem amenable to research-based intervention; search literature; propose a solution; develop a theoretical model, a system architecture, an implementation plan for a software solution, then evaluate its outcome(s), and disseminate the findings.

Undergraduate Certificate of Completion in Cybersecurity Foundations *Immersive*

This certificate provides students with concepts and practical application of cybersecurity tools, technologies, and procedures. Deploying advanced techniques in exploitation, vulnerability assessment, penetration testing, policy management, security program design, and cyber defense activities, with real-world hands-on practical activities that go beyond theory are integrated within this certificate. This certificate concludes with skills in professional communications and conduct associated with a career in technology.

Undergraduate Certificate of Completion in Java Programming *Immersive*

This certificate offers expanding opportunities for students to learn in-demand programming skills. This certificate is applicable to any major and provides the requisite knowledge that aligns with a certificate in Java Programming. Enhancing your knowledge in computer programming, this certificate focuses on object-oriented techniques in Java, software development using the Java programming language and building applications using software engineering methods. You will also learn concepts and techniques for improving new code and refactoring existing code. This certificate concludes with skills in professional communications and conduct associated with a career in technology.

Bridge (Master of Science in Cybersecurity)

Grand Canyon University's Master of Science in Cyber Security program trains students on using current, open source, and advanced techniques in digital forensics, penetration testing, vulnerability assessment, exploitation techniques, and other software and applications to protect organizations' systems, data,

and processes. This program focuses on the various areas of cybersecurity, providing students with the tools to understand and protect against the enemy in Cyber Warfare/Cyber Defense activities; including an exploration of policies, cyber law, national and international ramifications, and ethical considerations. Students enrolled in this program will gain the technical skills and hands-on experience with real world data integrating a Christian worldview into cybersecurity. These students, applying the Hackers-with-Halos™ methodology, will build and become part of a vast network of highly-skilled professionals and white-hat penetration testers in the field of Cybersecurity.

Master of Science in Computer Science

The Master of Science in Computer Science is designed for Computer Science or for Engineering and other Science professionals with a strong background in areas related to Computer Science, who want to deepen their knowledge of the interplay between computer science and how theory and practice influence each other. The master program in Computer Science spans topics in abstraction, complexity, evolutionary change, and a set of general principles, such as sharing common resources, security, and concurrency. Graduates will be able to design, implement, and improve theoretical and functional systems based on quantitative and qualitative assessments of their functionality, usability and performance. Graduates of the Master of Science in Computer Science may take on senior and leadership roles within an organization such as Researcher, Algorithm Designer, Enterprise Software Tool Developer, Senior Software Architect, Senior Software Developer, Director of Software Development,

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

and many others. Graduates of the Computer Science program may work in a variety of settings, including game developers, social media companies, healthcare providers, large corporations, financial institutions, insurance companies, educational institutions, technology suppliers, consulting firms, research facilities, and more. The program culminates in a capstone course that provides an opportunity for students to develop an evidence-based practice project proposal that addresses a current problem, issue, or concern in computer science. Students identify a problem amenable to research-based intervention; search literature; propose a solution; and develop a theoretical model and implement the software solution, evaluate its outcome(s), and disseminate the findings. The Master of Science in Computer Science prepares graduates for pursuing a doctoral degree in Computer Science or related disciplines.

Master of Science in Data Science

The Master of Science in Data Science program is designed for Computer Science or Engineering professionals who want to better understand and apply predictive analytics theory, principles, and tools to a wide variety of problems in science, engineering, and business. The master program in Data Science spans interdisciplinary topics in predictive analytics, computing, statistics, business intelligence, machine learning, and software tools. Graduates of the Master of Science in Data Science program may take on roles within an organization such as analytics officer, business analytics director, predictive analyst, data scientist, fraud analytics manager, analytics strategy consultant, marketing analytics manager, risk analyst, customer analytics manager, etc. Graduates of the Data Science program may work in a variety of settings, including web-based retailers, social media companies, hospitals, primary care facilities, large manufacturing corporations, financial institutions, insurance companies, educational institutions, technology suppliers, consulting firms, think tanks, research facilities, and more. The program culminates in a capstone course that provides an opportunity for students to develop an evidence-based practice project proposal that addresses a current problem, issue, or concern in data science. Students identify a problem amenable to research-based intervention; search literature; propose a solution; and develop a plan to implement the solution, evaluate its outcome(s), and disseminate the findings.

Master of Science in Software Development

A program that focuses on the general writing and implementation of generic and customized programs to drive operating systems and that generally prepares individuals to apply the methods and procedures of software design and programming to software installation and maintenance. Includes instruction in software design, low- and high-level languages and program writing; program customization and linking; prototype testing; troubleshooting; and related aspects of operating systems and networks.

Master of Science in Software Engineering

The Master of Science in Software Engineering prepares students to work at any stage of the software development life cycle. This contains eliciting project requirements, writing algorithms, development, validating that the software is meeting its intended purpose and verifying that it is safe, secure and dependable. Software engineers concentrate on how a software project is

performing by being knowledgeable of software development life cycles, different software development processes, estimation techniques and measurement, and risk management. The primary objective of this program is to prepare students to develop the next generation of software products and services for consumers, industry, and government. The curriculum includes comprehensive, intensive coverage of modern software concepts and techniques, and emphasizes a holistic approach encompassing financial, legal, and presales issues; technical concepts; security; software design techniques; methods; and project management. Graduates of the Master of Science in Software Engineering may take on senior and leadership roles within an organization, at any stage of the software engineering life cycle such as Lead Software Engineer, Project Manager, Embedded Software Engineer, Systems Architect, and many others. Graduates of the Software Engineering program may work in a variety of settings, including mobile application development, game development, social media companies, healthcare providers, large corporations, financial institutions, insurance companies, educational institutions, technology suppliers, consulting firms, research facilities, and more.

Engineering Programs

Bachelor of Science in Biomedical Engineering

Grand Canyon University's Bachelor of Science in Biomedical Engineering was developed with industry and clinical guidance to address the broad, foundational knowledge and skills required to meet or exceed the expectations of employers in biomedical engineering and related fields, such as medical devices, medical imaging, tissue engineering and implantable design, government regulatory compliance, clinical research, and biomedical research. This program teaches topics and assesses competency in multidisciplinary engineering design principles linked with knowledge of human anatomy and physiology, including: biomechanics, materials properties/biocompatibility, biomedical instrumentation and imaging, and tissue engineering. This program integrates math, natural sciences, and computer programming with an emphasis on critical thinking, problem solving, real-world application and practical project management experience. The Christian worldview is integrated into the

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

classroom, preparing graduates to apply Christian principles of stewardship and discipline with a commitment to professional and ethical standards. Biomedical engineering graduates enter the workforce prepared to work in diverse teams, communicate effectively, and pursue leadership roles and advanced learning.

Bachelor of Science in Electrical Engineering Technology

Grand Canyon University's Bachelor of Science in Electrical Engineering Technology was developed with industry guidance to address the broad, foundational knowledge and skills required to be contributors as electrical engineering technicians, electronics engineering technicians, service engineers, industrial automation technicians, robotics technicians, telecommunications technicians, electric machinery technicians, and technician supervisors. This program teaches topics and assesses competency in circuits, analog and digital electronics, signal processing, communications, computer design, electronic materials, controls and robotics, power and machinery, and technical documentation. This program integrates math, chemistry, physics, and biology and emphasizes critical thinking, real-world applications, and practical project management project experience. In addition, students develop valuable workplace skills, including effective communication, teamwork, initiative, strong work ethic, analytical skills, adaptability, and self-confidence. Students learn professional and ethical practices associated with engineering through the lens of the Christian worldview.

Bachelor of Science in Mechanical Engineering with an Emphasis in Aerospace

Grand Canyon University’s Bachelor of Science in Mechanical Engineering with an Emphasis in Aerospace was developed with industry guidance to address the broad, foundational knowledge and skills required to meet or exceed the expectations of employers in mechanical engineering, aerospace engineering, and related fields, such as mechanical design engineering, systems engineering, manufacturing engineering, project engineering, and engineering sales. This program teaches topics and assesses competency in mechanical design principles such as statics, dynamics, materials science, fluid mechanics, thermodynamics, and heat transfer, as well as aerospace engineering, including aerodynamics, propulsion, flight control systems, and aerospace design. This program integrates math, natural sciences, and computer programming with an emphasis on critical thinking, problem solving, real-world application and practical project management experience. The Christian worldview is integrated into the classroom, preparing graduates to apply Christian principles of stewardship and discipline with a commitment to professional and ethical standards. Mechanical engineering graduates with an emphasis in aerospace enter the workforce prepared to work in diverse teams, communicate effectively, and pursue leadership roles and advanced learning.

Minor in Chemistry for Chemical and Structural Analysis

The minor in Chemistry-Chemical and Structural Analysis will give students majoring in non-chemistry disciplines a solid foundation in chemical science. This minor is particularly suitable for students that are studying laboratory sciences such as Forensic Science or Environmental Science.

Minor Pre-requisites

MAT-154	Applications of College Algebra	4 credits
BIO-181	General Biology I	3 credits
BIO-181L	General Biology I - Lab	1 credit
CHM-113	General Chemistry I – Lecture	3 credits
CHM-113L	General Chemistry I – Lab	1 credit
CHM-115	General Chemistry II – Lecture	3 credits
CHM-115L	General Chemistry II – Lab	1 credit
CHM-231	Organic Chemistry I	3 credits
CHM-231L	Organic Chemistry I Lab	1 credit

Minor Requirements

CHM-232	Organic Chemistry II	3 credits
CHM-232L	Organic Chemistry II Lab	1 credit
CHM-315	Analytical Chemistry	3 credits
CHM-315L	Analytical Chemistry Lab	1 credit
CHM-333	Structural Determination in Organic Chemistry	4 credits
CHM-360	Principles of Biochemistry	3 credits
CHM-360L	Principles of Biochemistry – Lab	1 credit
CHM-460	Advanced Biochemistry	3 credits
CHM-460L	Advanced Biochemistry Lab	1 credit

Minor in Chemistry for Chemical and Structural Analysis	40 credits
---	------------

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

Minor in Chemistry for Life Sciences

The minor in chemistry for life sciences will give students majoring in non-chemistry disciplines a solid foundation in chemical science. This minor is particularly suitable for students in life sciences but will interest anyone seeking to learn more about the relationship of chemistry with life processes.

Minor Pre-requisites

MAT-154	Applications of College Algebra	4 credits
BIO-181	General Biology I	3 credits
BIO-181L	General Biology I - Lab	1 credit
CHM-113	General Chemistry I – Lecture	3 credits
CHM-113L	General Chemistry I – Lab	1 credit
CHM-115	General Chemistry II – Lecture	3 credits
CHM-115L	General Chemistry II – Lab	1 credit
CHM-231	Organic Chemistry I	3 credits
CHM-231L	Organic Chemistry I Lab	1 credit

Minor Requirements

BIO-205	Microbiology	3 credits
BIO-205L	Microbiology – Lab	1 credit
CHM-232	Organic Chemistry II	3 credits
CHM-232L	Organic Chemistry II Lab	1 credit
CHM-315	Analytical Chemistry	3 credits
CHM-315L	Analytical Chemistry Lab	1 credit
CHM-360	Principles of Biochemistry	3 credits
CHM-360L	Principles of Biochemistry – Lab	1 credit
CHM-365	Instrumental Analysis	3 credits
CHM-365L	Instrumental Analysis Lab	1 credit
CHM-451	Pharmacology I	4 credits
CHM-452	Pharmacology II	4 credits
CHM-460	Advanced Biochemistry	3 credits
CHM-460L	Advanced Biochemistry Lab	1 credit

Minor in Chemistry for Life Sciences 52 credits

Minor in Chemistry for Physical Science and Engineering

The minor in chemistry for physical science and engineering will give students in non-chemistry disciplines a solid foundation in chemical science. This minor is particularly suitable for students in physical science and engineering disciplines but will suit anyone seeking a strong physical chemistry experience.

Minor Pre-requisites

MAT-154	Applications of College Algebra	4 credits
MAT-261	Pre-Calculus	4 credits
PHY-121	University Physics I	3 credits
PHY-121L	University Physics I Lab	1 credit
CHM-113	General Chemistry I – Lecture	3 credits

CHM-113L	General Chemistry I – Lab	1 credit
--------------------------	---------------------------	----------

Minor Requirements

MAT-262	Calculus for Science and Engineering I	4 credits
CHM-115	General Chemistry II – Lecture	3 credits
CHM-115L	General Chemistry II – Lab	1 credit
CHM-235	Survey of Organic Chemistry	3 credits
CHM-235L	Survey of Organic Chemistry Lab	1 credit
CHM-365	Instrumental Analysis	3 credits
CHM-365L	Instrumental Analysis Lab	1 credit
CHM-441	Physical Chemistry I	3 credits
CHM-441L	Physical Chemistry I Lab	1 credit
CHM-444	Physical Chemistry II	3 credits
CHM-444L	Physical Chemistry II Lab	1 credit

Minor in Chemistry for Physical Science and Engineering 40 credits

Minor in Cybersecurity

The minor in Cybersecurity provides students with foundational information technology skills in programming, system administration, and computer networks as well as concepts and practical applications of cybersecurity tools, technologies and procedures. Deploying advanced techniques in exploitation, vulnerability assessment, penetration testing, policy management, and security program design, with real-world hands-on practical activities that go beyond theory are integrated within this minor.

Minor Requirements

MAT-154	Applications of College Algebra	4 credits
CST-111	Introduction to Computer Science and Information Technology	4 credits
ITT-116	Platforms and Network Technologies	4 credits
ITT-121	System Administration and Maintenance	4 credits
ITT-307	Cybersecurity Foundations	4 credits
ITT-340	Cybersecurity and Ethical Hacking	4 credits

Minor in Cybersecurity 24 credits

Minor in Food and Nutrition Management

A minor in Food and Nutrition Management enables students to gain an understanding of food, nutrition, and hospitality management. This minor is ideal for students seeking a better understanding of how food safety and science integrates effectively in the hospitality industry.

Minor Requirements

NSC-150	Nutrition and Wellness	4 credits
HOS-200	Introduction to Hospitality	4 credits
BIO-319	Applied Nutrition	4 credits
NSC-350	Food Sciences	3 credits
NSC-350L	Food Sciences Lab	1 credit

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

HOS-455	Events and Tourism Management	4 credits
HOS-460	Food and Beverage Service Management and Operations	4 credits
Minor in Food and Nutrition Management		24 credits

Minor in Forensic Science

The minor in forensic science provides a basic understanding of how crime laboratories use science to solve crimes against persons. Students will develop an understanding of the types of evidence that are collected, how analyses are performed, and ways to present this information in a court of law. The minor in forensic science is ideal for students who are interested in pursuing careers in forensic pathology and investigations.

Minor Requirements

FOR-150	Critical Analysis in Forensic Science	4 credits
BIO-181	General Biology I	3 credits
BIO-181L	General Biology I - Lab	1 credit
CHM-113	General Chemistry I – Lecture	3 credits
CHM-113L	General Chemistry I – Lab	1 credit
SCI-220	Forensic Photography & Reconstruction	4 credits
SCI-255	Crime Scene Processing	3 credits
SCI-255L	Crime Scene Processing Lab	1 credit
SCI-330	Physical Evidence Analysis	3 credits
SCI-330L	Physical Evidence Analysis Lab	1 credit
Minor in Forensic Science		24 credits

Minor in Networking Technology

This minor in networking technology offers opportunities for students to learn in-demand technical skills. This minor provides the knowledge in selection, design, deployment, integration, and administration of networks and communication infrastructures in an organization using in-house and cloud-based solutions. Learning how to implement routing and switching while explaining the physical and transport layers relevant to the IT discipline are offered in this minor. This minor also provides opportunities to implement tools and strategies to meet business objectives and ensure network security as well as explore issues around network management.

Minor Requirements

MAT-154	Applications of College Algebra	4 credits
CST-111	Introduction to Computer Science and Information Technology	4 credits
ITT-116	Platforms and Network Technologies	4 credits
ITT-270	Routing and Switching	4 credits
ITT-370	Wireless Networks	4 credits
ITT-425	Analysis, Design, and Management of Secure Corporate Networks	4 credits
Minor in Networking Technology		24 credits

Minor in Nutrition

A minor in Nutrition enables students to gain a basic understanding of human nutritional needs & how nutrition contributes to healthy lifestyles & disease prevention. It is ideal for any student seeking a greater understanding of the relationship among food, nutrition, & health & fits easily with any major program of study.

Minor Requirements

NSC-150	Nutrition & Wellness	4 credits
BIO-319	Applied Nutrition	4 credits
NSC-305	Nutrition Across the Lifespan	4 credits
NSC-419	Advanced Nutrition	4 credits
Minor in Nutrition		16 credits

Minor in Object Oriented Programming in C#

This minor focuses on Object Oriented Programming in the C, C# and C++ programming languages. It also includes concepts in secure programming.

Minor Prerequisites

MAT-154	Applications of College Algebra	4 credits
Minor Requirements		
CST-150	Programming in C# I	4 credits
CST-250	Programming in C# II	4 credits
CST-210	Object-Oriented Programming Lecture & Lab	4 credits
ITT-310	Programming for Security Professionals	4 credits

Minor in Object Oriented Programming in C#		16 credits
--	--	------------

Minor in Object Oriented Programming in Java

This minor focuses on Object Oriented Programming in the Java, C, and C++ programming languages. It also includes concepts in secure programming.

Minor Requirements

CST-105	Computer Programming I	4 credits
CST-239	Programming in Java II	4 credits
CST-210	Object-Oriented Programming Lecture & Lab	4 credits
ITT-310	Programming for Security Professionals	4 credits

Minor in Object Oriented Programming in Java		16 credits
--	--	------------

Minor in Pre-Athletic Training

The Minor in Pre-Athletic Training is intended to assist the future coach, fitness professional, or other professional who wishes to provide care to interscholastic, intercollegiate, or other sports teams.

Minor Requirements

PSY-102	General Psychology	4 credits
ATP-214	Care, Treatment, and Prevention of Athletic Injuries	3 credits
ATP-214L	Care, Treatment, and Prevention of Athletic Injuries Lab	1 credit

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

BIO-253	Emergency Care for Acute Injuries	4 credits
BIO-319	Applied Nutrition	4 credits
PSY-357	Lifespan Development	4 credits
PSY-366	Introduction to Sport and Exercise Psychology	4 credits

Choose 2 of the following courses

BIO-201	Human Anatomy and Physiology I	3 credits
BIO-201L	Human Anatomy and Physiology I: Lab	1 credit
BIO-210	Anatomy and Physiology for Science Majors I	3 credits
BIO-210L	Anatomy and Physiology for Science Majors I Lab	1 credit

Choose 2 of the following courses

BIO-202	Human Anatomy and Physiology II	3 credits
BIO-202L	Human Anatomy and Physiology II: Lab	1 credit
BIO-211	Anatomy and Physiology for Science Majors II	3 credits
BIO-211L	Anatomy and Physiology for Science Majors II Lab	1 credit

Minor in Pre-Athletic Training 32 credits

Minor in Pre-Medicine

The Minor in Pre-Medicine includes the standard science coursework required for admission into most graduate medical programs. It also provides all the foundational concepts that would be covered in any entrance exam (MCAT, PCAT, DAT, OAT, etc.).

Graduate medical programs will accept applications from students with any baccalaureate degree as long as they meet all the other prescribed admission requirements. While the coursework defined in this minor covers the standard science courses required by almost all graduate programs, schools may have additional requirements for admission. It is strongly recommended that students considering this minor do some investigation into the admission requirements of the specific graduate programs that they are considering.

Minor Requirements

BIO-181	General Biology I	3 credits
BIO-181L	General Biology I Lab	1 credit
BIO-182	General Biology II	3 credits
BIO-182L	General Biology II Lab	1 credit
CHM-113	General Chemistry I	3 credits
CHM-113L	General Chemistry I Lab	1 credit
CHM-115	General Chemistry II	3 credits
CHM-115L	General Chemistry II Lab	1 credit
CHM-231	Organic Chemistry I	3 credits
CHM-231L	Organic Chemistry I Lab	1 credit
CHM-232	Organic Chemistry II	3 credits
CHM-232L	Organic Chemistry II Lab	1 credit
CHM-360	Principles of Biochemistry	3 credits

CHM-360L	Principles of Biochemistry Lab	1 credit
PHY-111	General Physics I	3 credits
PHY-111L	General Physics I Lab	1 credit
PHY-112	General Physics II	3 credits
PHY-112L	General Physics II Lab	1 credit

Minor in Pre-Medicine 36 credits

Minor in Web Application Development

This five-track sequence of courses focuses on basic web development using HTML, CSS, and JavaScript, an introduction to database development using NoSQL and MySQL database, and advanced web application development using the Express, Angular, and ReactJS JavaScript frameworks.

Minor Prerequisite

CST-120	Introduction to Web Development	4 credits
CST-105	Computer Programming I	4 credits
CST-239	Programming in Java II	4 credits
CST-345	Database Design and Development	4 credits
CST-391	JavaScript Web Application Development	4 credits

Minor in Web Application Development 20 credits

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

Course Descriptions

Accounting (ACC)

ACC-240♦: Fundamentals of Accounting 4 credits

In this course, students examine basic accounting concepts and explore how accounting information assists business leaders in making financial decisions that increase profitability and contribute to competitive advantage. There is specific emphasis on the analysis of financial statements in the business decision-making process, budgeting, and factors businesses must consider when determining appropriate pricing of goods and services. Prerequisite: MAT-144 or MAT-154.

ACC-250♦: Financial Accounting 4 credits

This course is an introduction to the accounting cycle and the construction of financial statements. Students explore the fundamental principles and practices of financial accounting as outlined by Generally Accepted Accounting Principles (GAAP); the steps in the accounting cycle from journalizing transactions through the preparation of financial statements; and the use and interpretation of the balance sheet, income statement, and statement of cash flows. Prerequisite: MAT-134, MAT-144 or MAT-154.

ACC-260♦: Management Accounting 4 credits

This course is an introduction to the use of managerial accounting data in the decision-making process. Topics include the use of cost-volume-profit (CVP) analysis and relevant costs in decision making, using budgets and the balanced scorecard to evaluate performance, methods for setting prices of products and services, and analyzing capital investment opportunities. Prerequisite: ACC-250.

ACC-335: Accounting Information Systems 4 credits

This course provides students with an introduction to current practices and techniques used to design, install, operate, and manage an integrated accounting system in either a manual or computerized setting. Application controls, information security requirements, and integration with other business information systems are examined. Prerequisite: BIT-200.

ACC-337: Introduction to Accounting Analytics 4 credits

This course is an introduction to data analytics techniques frequently used in accounting. Students explain basic concepts of financial data analytics and apply descriptive analyses, diagnostic analyses, predictive analytics, and prescriptive analytics to business scenarios. Prerequisite: ACC-335.

ACC-360♦: Cost Accounting 4 credits

This course provides a study of principles of internal accounting, including job order systems, process costing, activity-based costing, and budgeting. Prerequisite: ACC-260 or ACC-350.

ACC-361: Intermediate Managerial Accounting 4 credits

This course explores intermediate managerial accounting concepts. Students analyze cost behavior, value inventory using multiple costing methods, prepare budgets and evaluate variances, and use financial data and nonfinancial measures to analyze performance. Prerequisites: ACC-260, ACC-335 and, BUS-352.

ACC-370♦: Intermediate Accounting I 4 credits

This course is an in-depth study of accounting objectives, principles, theory, and practice as related to the balance sheet and income statement. Students explore the accounting cycle, the preparation of detailed financial statements in accordance with Generally Accepted Accounting Principles (GAAP), accounting for assets, and other items frequently addressed on the Uniform Certified Public Accounting Examination (Uniform CPA Exam). Prerequisites: ACC-250 and ACC-260.

ACC-371♦: Intermediate Accounting II 4 credits

This course is an in-depth study of accounting objectives, principles, theory, and practice as related to the balance sheet and income statement. Students explore liabilities and equity items; the specific rules for accounting for leases, accounting changes, and income taxes, and other items frequently addressed on the Uniform Certified Public Accounting Examination (Uniform CPA Exam). Prerequisite: ACC-370.

ACC-425: Ethics in Accounting 4 credits

This course is an in-depth study of ethical issues encountered in public accounting. Students develop a foundation for ethical decision making and explore ethical guidelines specific to the accounting profession. This course is designed to meet the requirements for licensure of certified public accountants in California. Prerequisites: BUS-340, ACC-460, and ACC-491.

ACC-460♦: Taxation 4 credits

This course provides a study of the theory and practices of accounting for income taxes of individuals. Students explore the responsibilities of a tax accountant, specific transactions that affect the tax liability of individuals. Prerequisite: ACC-370 or FIN-350.

ACC-465: Taxation II 4 credits

This course provides a study of the theory and practices of accounting for income taxes of corporations, partnerships, and S corporations. Students explore tax treatment of transactions frequently encountered by various entities and prepare illustrative tax returns and related schedules. Prerequisite: ACC-460.

ACC-482: Accounting Capstone 4 credits

This course is a synthesis of concepts learned throughout the student's prior coursework, with a focus on material tested on the Uniform Certified Public Accountant (CPA) Exam. Students reinforce concepts that have been introduced throughout the program and apply these concepts through completing questions and simulations like those found on the Uniform Certified Public Accountant (CPA) Exam. Prerequisites: ACC-485, ACC-460, and ACC-491.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

ACC-485♦: Advanced Accounting 4 credits

This course provides a study of accounting theory as it applies to partnerships and business combinations, international accounting, and governmental accounting. Prerequisites: ACC-370 and ACC-371.

ACC-486♦: Financial Statement Analysis 4 credits

This course provides a detailed analysis and interpretation of a firm's three principal financial statements and their uses from a managerial perspective. Prerequisites: ACC-240, ACC-260, or ACC-350; and FIN-350.

ACC-491♦: Auditing 4 credits

Auditing is an examination of generally accepted auditing standards, procedures involved in the auditing process, and ethical issues faced by the auditor. Through class discussions, practical applications, and case studies, students learn the responsibilities of the independent public auditor in the expression of opinion within the guidelines set by the AICPA's Code of Professional Ethics. Topics include the nature and types of audits, auditor responsibilities and legal liabilities, audit reports, auditing procedures, ethical issues, contemporary issues in auditing, and the Sarbanes-Oxley Act of 2002. Prerequisites: ACC-260 or ACC-350, and ACC-370.

ACC-502: Accounting Practices 4 credits

This course is designed for students who are preparing for more advanced coursework in business but who have not had accounting in undergraduate work. Topics covered include the principles and practices of financial accounting, including the fundamentals of revenue recognition, the components of the balance sheet, and financial statement analysis. The course explores accounting theories using publicly traded companies and case studies.

ACC-614: Accounting Research 2 credits

This course provides students with applied research experience using electronic databases to determine proper application of GAAP, IASs, and IFRSs to practical situations. Students develop the skills needed to access accounting and auditing rules and regulations, company financial statements, and related industry data used for analyzing financial statements.

ACC-616: Financial Research and Compliance 4 credits

This course provides students with applied research experience using electronic databases to determine proper application of GAAP, IASs, and IFRSs to practical situations. Students develop the skills needed to access accounting, auditing, and taxation rules and regulations; company financial statements; and related industry data used for analyzing financial statements.

ACC-622: Accounting Information Systems 4 credits

This course provides students with an analysis of current practices and techniques used to design, install, operate, and manage an integrated accounting system in either a manual or a computerized setting. Application controls, information security requirements, and integration with other business information systems are examined.

ACC-650: Managerial Accounting 4 credits

This course covers managerial accounting concepts and procedures for internal reporting, including the study of cost behavior, cost systems, budgeting, and performance evaluation. Coursework includes case studies, group projects, and class discussion. Prerequisite: ACC-502.

ACC-653: Advanced Managerial and Cost Accounting 4 credits

This course explores advanced managerial and cost accounting methods frequently used in accounting. Students apply managerial and cost accounting methods that are commonly tested on the Uniform Certified Public Accountant (CPA) Exam Business Analysis and Reporting (BAR) discipline.

ACC-656: Advanced Accounting 4 credits

This course explores advanced accounting theories and practices frequently used in public accounting. Students apply advanced accounting methods that are commonly tested on the Uniform Certified Public Accountant (CPA) Exam: Business Analysis and Reporting (BAR) Discipline.

ACC-657: Advanced Data Analytics 4 credits

This course explores advanced data analytics techniques frequently used in public accounting. Students apply financial data analytics methods that are commonly tested on the Uniform Certified Public Accountant (CPA) Exam: Business Analysis and Reporting (BAR) Discipline.

ACC-658: Governmental and Not-For-Profit Accounting 4 credits

This course explores accounting theories and practices used for governmental and not-for-profit entities. Students apply governmental and not-for-profit accounting methods that are commonly tested on the Uniform Certified Public Accountant (CPA) Exam: Business Analysis and Reporting (BAR) Discipline.

ACC-660: Advanced Financial Accounting 4 credits

This course is an exploration of advanced topics in financial accounting and reporting, including recognition, measurement, and valuation issues affecting organizations. Prerequisite: ACC-650.

ACC-667: Advanced Audit 4 credits

This course provides an overview of auditing concepts related to forensic accounting, the internal audit function, operational auditing, and auditing information systems. In addition, students will become familiar with fraudulent financial reporting and the prevention and detection of irregularities. Prerequisites: ACC-616, and BUS-623.

ACC-668: Advanced Taxation 4 credits

This course is a study of the theory and practices of accounting for income taxes of corporations, partnerships, estates, and trusts. In addition, students will explore advanced tax planning concepts, including international tax implications. Prerequisites: ACC-616 and BUS-623.

Δ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

ACC-670: Advanced Financial Statement Analysis 4 credits

This course covers in-depth analysis and interpretation of corporate financial reports. Students examine the form, content, and general accounting principles governing the construction of financial statements. There is particular emphasis on the analysis and interpretation of financial data as well as on the utility and limitations of financial accounting data. Prerequisites: ACC-650 or ACC-653, and ACC-660.

ACC-680: Auditing and Data Analytics Core 4 credits

This course is a review of concepts frequently tested on the Uniform Certified Public Accountant (CPA) Exam: Auditing and Accounting Information Systems Core (AUD). Students reinforce concepts learned in undergraduate work and apply them by completing questions and simulations similar to those found on the Uniform CPA Exam.

ACC-681: Tax Core 4 credits

This course is a review of concepts frequently tested on the Uniform Certified Public Accountant (CPA) Exam: Tax Core (TAX). Students reinforce concepts learned in undergraduate work and apply them by completing questions and simulations similar to those found on the Uniform CPA Exam.

ACC-682: Accounting and Data Analytics Core 4 credits

This course is a review of concepts frequently tested on the Uniform Certified Public Accountant (CPA) Exam: Accounting and Data Analytics Core (ACC). Students reinforce concepts learned in undergraduate work and apply them by completing questions and simulations similar to those found on the Uniform CPA Exam.

ACC-685: BAR Discipline Capstone 2 credits

This course is a review of concepts frequently tested on the Uniform Certified Public Accountant (CPA) Exam: Business Analysis and Reporting (BAR) Discipline. Students reinforce concepts learned throughout the program and apply them by completing questions and simulations similar to those found on the Uniform CPA Exam. Prerequisites: ACC-653, ACC-656, ACC-657, and ACC-658.

ACC-690^Δ: Capstone I 4 credits

This course is an introduction to the Uniform CPA exam. It is designed to prepare students for the Financial Accounting and Reporting (FAR) and Business Environment Concepts (BEC) parts of the exam.

ACC-691^Δ: Capstone II 4 credits

This course is designed to help students to prepare for the Auditing (AUD) and Regulation (REG) sections of the Uniform Certified Public Accountant (CPA) Exam. Students will review materials frequently tested on the Uniform CPA Exam and will use practice questions, problems, and simulations to demonstrate mastery of accounting concepts.

ADM-530: Public and Nonprofit Administration 4 credits

This course examines the day-to-day duties of public administrators. Relationship building, political awareness, and collaborative strategies are highlighted throughout the course. How to best employ skills for the effective running of an organization is incorporated.

ADM-560: Influence, Power, and Politics in Public Administration 4 credits

This course examines power and political structures employed within public administration. The ethical use of power and how to effectively influence others in public administration is practiced.

ADM-614: Economics for Public Administrators 4 credits

In this course, the role of government in the economy is explored within the general context of market failure and social equity. Topics include allocation of goods and services, income distribution, externalities, public goods, and public choice theory. This course also examines the impact of macroeconomic events and policy decisions on the budgets and service levels of public entities.

ADM-620: Leading Public Organizations 4 credits

This course examines leadership practices and qualities necessary to lead an organization. A focus is given to the science of organizational behavior and how it contributes to effective leaders and managers.

ADM-624: Public Governance 4 credits

This course focuses on how government and public organizations serve their stakeholders, the manner in which their services are carried out, how resources are managed, and how regulatory powers are complied with and/or managed. The best practices in public governance, issues related to transparency, participation, and accountability are examined.

ADM-626: Public Budgeting and Financial Management 4 credits

This course provides an introduction to the revenue and expenditure structure of the public sector, including revenue policy, expenditure policy, and budget structure and administration.

ADM-630: Introduction to the Nonprofit and NGO Sector 4 credits

This course explores the theories and concepts of nonprofit and nongovernmental organizations, stressing their waxing importance in the domestic and international arenas. In particular, the course examines the history, structure, management, missions, and future of nonprofits and NGOs.

Administration (ADM)

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ADM-632: Intergovernmental Relations 4 credits

This course examines in detail the relationships among the federal, state, and municipal levels of government in the United States. The history of U.S. federalism is briefly covered, followed by a more in-depth focus on such issues as competition among levels and branches of government, the challenge of institutional fragmentation, and the role of governmental interest groups. Specific policy issues (education, health care, social services) are used to examine and analyze the dynamics of these relationships.

ADM-634: Policy Studies 4 credits

This course focuses on how challenges and problems facing society become policy issues. Leading theories in policy analysis and the policy-making process are examined and critiqued. The impact of policy decisions on various groups within society (related to gender, age, ethnicity, etc.) is also examined.

ADM-636: Law and Administrative Process 4 credits

An introduction to law relevant to public administration, this course covers selected topics in administrative and constitutional law, including the exercise of governmental power, legislative and executive oversight, rule making, adjudication, and judicial review.

ADM-638: Fundamentals of Community Development 4 credits

This course reviews the theoretical concepts on community development. The practice of community development includes effective mobilization, building, and management of collective efforts. In particular, the course explores the social, political, economic, environmental, and religious aspects of community-based collective action to solve pressing problems.

ADM-640: Program Evaluation 4 credits

This course examines systematic program evaluation using various research methods. A focus is given to Local and State programs and policies.

ADM-641: Funding and Program Evaluation of Nonprofit Organizations 4 credits

This course addresses the many facets of funding for nonprofit organizations. Relationship building, in addition to various funding strategies are covered. Approaches to keep an organization on solid financial ground are examined.

ADM-645: Strategic Planning and Program Evaluation in Healthcare 4 credits

This course exposes students to the role strategic planning and program evaluation play in developing, implementing, and assessing public health care programs. The use of a strategic planning and program evaluation framework for program proposals is covered.

ADV-110: Fundamentals of Advertising 4 credits

This course introduces the fundamentals of the advertising industry including basic elements of campaign strategy and design. Students learn the foundational communication and writing skills necessary to create effective campaigns. Contemporary legal and ethical issues in advertising are also addressed. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu.

ADV-250[†]: Advanced Design Fundamentals 4 credits

This course builds on design fundamentals by increasing students' understanding of content development and production methods within the advertising design process. Students will create and produce advertising campaigns and products of various scope and size. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: ADV-110, DDN-110 or DDN-115.

ADV-250HN[†]: Advanced Design Fundamentals 4 credits

This course builds on design fundamentals by increasing students' understanding of content development and production methods within the advertising design process. Students will create and produce advertising campaigns and products of various scope and size. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: ADV-110, DDN-110.

ADV-260^{△♦}: Advertising Copywriting 4 credits

This writing intensive course focuses on creative copywriting techniques to develop advertising campaigns for print and multimedia channels. Students enhance persuasive writing skills to create compelling and ethical advertising campaigns that are competitive in the industry. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: ENG-106.

ADV-340^{△♦}: Media Law and Ethics 4 credits

This writing intensive course provides an overview of the laws and regulations that apply to advertising, marketing, and media organizations with emphasis on business organization, intellectual property, and regulatory processes. Ethical practices and theory as they apply to the mass media industry are also addressed. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu.

Advertising (ADV)

[△] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ADV-340HN^{Δ♦}: Media Law and Ethics 4 credits

This writing intensive course provides an overview of the laws and regulations that apply to advertising, marketing, and media organizations with emphasis on business organization, intellectual property, and regulatory processes. Ethical practices and theory as they apply to the mass media industry are also addressed. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu.

ADV-350^{Δ♦}: Digital Advertising Communication 4 credits

This writing intensive course explores integrated marketing communications and the development of marketing and advertising messages across digital platforms. Students focus on current trends in online advertising, social media platforms, and relevant emerging technologies. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: DDN-110 or DDN-115, ADV-260.

ADV-350HN^{Δ♦}: Digital Advertising Communication 4 credits

This writing intensive course explores integrated marketing communications and the development of marketing and advertising messages across digital platforms. Students focus on current trends in online advertising, social media platforms, and relevant emerging technologies. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: ADV-260.

ADV-355: Image Creation 4 credits

Students learn methods of image creation, including vectors, typographic, and pixel-based imagery manipulation, for the purposes of aligning image production with advertising campaign strategy. Emphasis is placed on selection of appropriate imagery through analysis of audience needs, historical representation of ideas, stereotypes, and cultural iconography. Each student will need a laptop computer with the Adobe Creative Cloud subscription. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: DDN-110 or DDN-115.

ADV-371[♦]: Design Studio I 4 credits

Students work with industry-based projects within a highly collaborative environment to develop strong strategy and concept development methodologies. Projects focus on production methods for print, web, and digital media. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisites: DDN-120 and DDN-210.

ADV-456[♦]: Design Studio II 4 credits

In this course students use the principles of user experience and user interaction to improve client-brand relationships within industry-based projects. Students create client and consumer profiles and develop projects within a highly collaborative environment. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: ADV-371.

ADV-471[♦]: Design Studio III 4 credits

Working with industry-based projects, students act as art directors to concept, develop, and produce interactive and multi-platform advertising solutions within a highly collaborative environment. Working in teams, students strengthen their process of collaboration from initial project identification through to final production. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: ADV-350, ADV-456.

Aerospace Studies (AES)

AES-101: Air Force Today I 2 credits

Every Fall. A survey course designed to introduce students to the United States Air Force and Air Force Reserve Officer Training Corps (AFROTC). Featured topics include: mission and organization of the Air Force, officership and professionalism, military customs and courtesies, Air Force officer opportunities, group leadership problems and an introduction to communication skills. Leadership Laboratory (AES-102) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences.

AES-102: Leadership Laboratory 0 credits

Every Fall. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the detachment commander and commandant of cadets. Leadership Lab emphasizes common Air Force customs and courtesies, drill and ceremonies, health and physical fitness through group participation. Co-requisite: AES-101.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

AES-103: The Air Force Today II 2 credits

Every Spring. A survey and follow-on course to AES-101 designed to introduce students to the United States Air Force and encourage participation in Air Force Reserve Officer Training Corps (AFROTC). Featured topics include: introduction to leadership, Air Force Core Values, introduction to interpersonal communication and team building, and a continuation of communication skills. Prerequisite: AES-101. Co-Requisites: Leadership Laboratory (AES-104) is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

AES-104: Leadership Laboratory 0 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the detachment commander and commandant of cadets. Prerequisites: AES-104 is a continuation of AES-102 with more in-depth emphasis on learning the environments and dynamics of an Air Force officer. Co-Requisite: AES-103.

AES-201: Evolution of USAF Air/Space Power 2 credits

Every Fall. This course focuses on facilitating the transition from Air Force ROTC cadet to Air Force ROTC candidate. The course is designed to examine the general aspects of air and space power through a historical perspective. Utilizing this perspective, the course covers a time period from the first balloons and dirigibles to the modern technology currently used in overseas contingency operations. Featured topics include: Air Force heritage, Air Force leaders, introduction to ethics and values, group leadership problems and continuing application of communication skills. Leadership Laboratory (AES-202) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences. Prerequisite: AES-103.

AES-202: Leadership Laboratory 2 credits

Every Fall. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. AES-202 provides application of advanced drill and ceremonies, issuing commands, knowing flag etiquette, and developing, directing, and evaluating skills to lead others. Co-requisite: AES-201.

AES-202A: Leadership Laboratory 0 credits

Every Fall. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. AES-202A provides application of advanced drill and ceremonies, issuing commands, knowing flag etiquette, and developing, directing, and evaluating skills to lead others. Co-requisite: AES-201.

AES-203: Evolution of USAF Air/Space Power 2 credits

Every Spring. Continuation of AES-201. The course provides students with knowledge level understanding for general element and employment of air and space power. Furthermore, it discusses the importance of Air Force Core Values with use of operational examples and historical Air Force leaders. Continues to develop communication skills. Topics include: the Air Force mission and organization, modern joint expeditionary Airmen, officer opportunities, and professionalism. Prerequisite: AES-201 or department approval. Co-Requisites: Leadership Laboratory (AES-204) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences.

AES-204: Leadership Laboratory 0 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-202 with an emphasis on preparation for field training. Co-requisite: AES-203.

AES-294A: Air Force Physical Fitness 2 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-202 with an emphasis on preparation for field training. Co-requisite: AES-203.

AES-294B: Air Force Physical Fitness 2 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-202 with an emphasis on preparation for field training. Co-requisite: AES-203.

AES-294C: Air Force Physical Fitness 2 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-202 with an emphasis on preparation for field training. Co-requisite: AES-203.

AES-294D: Air Force Physical Fitness 2 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-202 with an emphasis on preparation for field training. Co-requisite: AES-203.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

AES-294E: Air Force Physical Fitness 2 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-202 with an emphasis on preparation for field training. Co-requisite: AES-203.

AES-294F: Air Force Physical Fitness 2 credits

Instruction on adapted physical activities to promote a healthy Air Force lifestyle mixed with a variety of sports and sports activities to include calisthenics, sit-ups, push-ups, running, basketball, volleyball, and other physical events. Co-Requisite: AES-101, AES-103, AES-201, AES-203, AES-301, AES-303, AES-401 or AES-403.

AES-294G: Air Force Physical Fitness 2 credits

Instruction on adapted physical activities to promote a healthy Air Force lifestyle mixed with a variety of sports and sports activities to include calisthenics, sit-ups, push-ups, running, basketball, volleyball, and other physical events. Co-Requisite: AES-101, AES-103, AES-201, AES-203, AES-301, AES-303, AES-401 or AES-403.

AES-294H: Air Force Physical Fitness 2 credits

Instruction on adapted physical activities to promote a healthy Air Force lifestyle mixed with a variety of sports and sports activities to include calisthenics, sit-ups, push-ups, running, basketball, volleyball, and other physical events. Co-Requisite: AES-101, AES-103, AES-201, AES-203, AES-301, AES-303, AES-401 or AES-403.

AES-301: U.S. Air Force Communication Management Leadership 3 credits

Every Fall. A study of leadership, quality management fundamentals, professional knowledge, Air Force personnel evaluation systems, leadership ethics, and the communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical applications of the concepts being studied. Individual leadership skills and personal strengths and weaknesses are applied to the Air Force environment. Prerequisite: AES-203. Co-Requisites: Leadership Laboratory (AES-302) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences.

AES-302: Leadership Laboratory 0 credits

Every Fall. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Advanced leadership experiences applying leadership and management principles to motivate and enhance the performance of other cadets. Leadership traits and abilities are enhanced. Co-Requisite: AES-301.

AES-303: Air Force Leadership Studies II 3 credits

Every Spring. AES-303 is a continuation of AES-301 on the study of leadership and management fundamentals, professional knowledge, leadership ethics, and communicative skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical application of the concepts being studied. Prerequisite: AES-203. Co-Requisites: Leadership Laboratory (AES-304) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences.

AES-304: Leadership Laboratory 0 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-302 with emphasis on planning the military activities of the cadet corps and applying advanced leadership methods. Co-Requisite: AES-303.

AES-401: National Security Affairs 3 credits

Every Fall. The course examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest include the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting the military profession. Within this structure, continued emphasis is given to the refinement of communication skills. Prerequisite: AES-303. Co-Requisites: Leadership Laboratory (AES-402) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences.

AES-402: Leadership Laboratory 0 credits

Every Fall. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Advanced leadership experience demonstrating learned skills in planning and controlling the military activities of the corps. Co-Requisite: AES-401.

AES-403A: Regional Security Issues 3 credits

Every Spring. Continuation of AES-401 which examines regional studies and advanced leadership ethics. Special topics of interest focus on the military as a profession, officership, military justice, preparation for active duty, and current issues affecting military professionalism. Special emphasis is given on the transition from civilian to military life and what it takes to be a good second lieutenant in the United States Air Force. Co-requisite: Leadership Laboratory (AES-404) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences. Prerequisite: AES-401 Co-Requisites: Leadership Laboratory (AES-404) is mandatory for AFROTC cadets and complements this course by providing cadets with followership and leadership experiences.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

AES-404: Leadership Laboratory 0 credits

Every Spring. Leadership Laboratory (LLAB) is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Air Force second lieutenants and complement the AFROTC academic program. Continuation of AES-402 with emphasis on preparation for transition from civilian to military life. Co-Requirement: AES-403.

Applied Management (AMP)

AMP-450V: Leadership and Vocation 3 credits

This course emphasizes major leadership approaches and models used within health care today. Topics include regulatory leadership, servant leadership, and formal and informal leadership roles. Students have an opportunity to analyze leadership approaches to decision making and the impact of professional mentorship. The significance and use of collaborative leadership, communication, and decision making, in health care are explored. Students examine leadership behaviors that leverage diversity and foster inclusion to ensure professionalism and the professional responsibility of leaders today.

Acute Care Nurse Practitioner (ANP)

ANP-635^Ω: Health Promotion and Maintenance and On-Campus Experience I 4 credits

This course covers preventive health care practices and integrates cultural and spiritual considerations, environmental factors, genetic influences, and national public health objectives. Emphasis is placed on development of the advanced practice registered nurse-patient relationship to enhance the effectiveness of patient education, counseling, and promotion of healthy lifestyle changes. Learners explore concepts relevant to acute care, including integration of the family and patient support systems into care. Specific emphasis is placed on clinical diagnostic reasoning and interpretation and the development of differential diagnoses based on clinical practice guidelines. Learners examine professional and patient community resources and evaluate the use of integrative healing strategies in assisting patients to achieve health goals using evidence-based research. This course includes a required 3-day, on-campus experience. Prerequisite: NUR-634.

ANP-635CE^Ω: ANP-635 On-Campus Experience I 0 credits

This course covers preventive health care practices and integrates cultural and spiritual considerations, environmental factors, genetic influences, and national public health objectives. Emphasis is placed on development of the advanced practice registered nurse-patient relationship to enhance the effectiveness of patient education, counseling, and promotion of healthy lifestyle changes. Learners explore concepts relevant to acute care, including integration of the family and patient support systems into care. Specific emphasis is placed on clinical diagnostic reasoning and interpretation and the development of differential diagnoses based on clinical practice guidelines. Learners examine professional and patient community resources and evaluate the use of integrative healing strategies in assisting patients to achieve health goals using evidence-based research. This course includes a required 3-day, on-campus experience. Prerequisite: NUR-634.

ANP-650^Ω: Adult-Gerontology Acute Care I 7 credits

This course focuses on evidence-based theory and research related to adult-gerontological patients experiencing acute illnesses with comorbidities. Learners synthesize data from a variety of health resources related to the care of the adult-gerontological patient. Learners analyze common problems seen in the acute care setting to develop prioritized differential diagnoses, make clinical judgments, and recommend appropriate treatments for acute alterations in health with particular emphasis on restorative care. Clinical practice affords learners the opportunity to refine their clinical decision-making skills in advanced health assessment, clinical diagnosis, procedural skill acquisition, and care management of acute and chronically ill adult-gerontological patients. Practicum experiences emphasize the physiological and psychosocial impact of acute and critical illness on patients, family, and community. Practicum/field experience hours: 225. Prerequisite: ANP-635.

ANP-652^Ω: Adult-Gerontology Acute Care II 7 credits

This course continues to focus on evidenced-based theory and research related to acute illnesses in the adult-gerontological population in the acute care setting. Learners build on prior knowledge and synthesize data from a variety of health resources related to the care of the acutely ill patient. Utilizing a systems framework, learners further develop clinical judgment and decision-making skills in order to recommend treatments for alterations in different systems as they develop an evidence-based plan of care. Clinical practice affords learners the opportunity to refine their clinical decision-making skills in advanced health assessment, clinical diagnosis, procedural skill acquisition, and care management of acute and chronically ill adult-gerontological patients. Practicum experiences emphasize the physiological and psychosocial impact of acute and critical illness on patients, family, and community. Practicum/field experience hours: 225. Prerequisite: ANP-650.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

**ANP-654^Ω: Adult-Gerontology Acute Care III 7 credits
and On-Campus Experience II**

This course serves as the final synthesis of evidenced-based theory and research related to care of complex, acute, and critically ill adult-gerontological and frail elderly patients with comorbidities. Learners continue to build on prior knowledge and synthesize data from a variety of health resources related to the care of the acutely ill patient. Utilizing a systems framework, learners further develop appropriate clinical judgment and decision-making skills regarding appropriate recommendations and treatments related to alterations in different systems as they develop an evidence-based plan of care for adult-gerontological patients. Practicum experiences emphasize the physiological and psychosocial impact of acute and critical illness on patients, family, and community, and prepare the Adult Gerontology Acute Care Nurse Practitioner in the diagnosis and management of chronic, exacerbated, acute, and life-threatening health problems. This course includes a required 2-day, on-campus experience. Practicum/field experience hours: 225. Prerequisite: ANP-652.

**ANP-654CE^Ω: ANP-654 On-Campus Experience 0 credits
II**

This course serves as the final synthesis of evidenced-based theory and research related to care of complex, acute, and critically ill adult-gerontological and frail elderly patients with comorbidities. Learners continue to build on prior knowledge and synthesize data from a variety of health resources related to the care of the acutely ill patient. Utilizing a systems framework, learners further develop appropriate clinical judgment and decision-making skills regarding appropriate recommendations and treatments related to alterations in different systems as they develop an evidence-based plan of care for adult-gerontological patients. Practicum experiences emphasize the physiological and psychosocial impact of acute and critical illness on patients, family, and community, and prepare the Adult Gerontology Acute Care Nurse Practitioner in the diagnosis and management of chronic, exacerbated, acute, and life-threatening health problems. This course includes a required 2-day, on-campus experience. Prerequisite: ANP-652.

Arts Education (ARE)

ARE-337: Integrated Arts Methods and Assessment in the Elementary School 4 credits

This course explores an integrative arts model, using methods and assessments for teaching theatre and dance in elementary curriculum. Lesson planning and curriculum design are tied to state standards for theatre and dance education. Practicum/field experience hours: 20. Fingerprint clearance required.

ARE-480^Ω: Student Teaching: Arts Education 12 credits

Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Performance of Evaluation (STEP). Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 2.8 GPA; successful completion of NES or your state's mandated content area exams; and approval and placement by the College of Education Office of Clinical Practice. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching. Fingerprint clearance required.

Athletic Training (ATP)

ATP-214^Ω: Care, Treatment, and Prevention of Athletic Injuries 3 credits

This course provides students with a basic knowledge and understanding of the principles of sports medicine, the care and treatment of athletic trauma, and the use of proper conditioning principles for the prevention of injury. Prerequisites: BIO-155 and BIO-155L or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requirement: ATP-214L.

ATP-214L^Ω: Care, Treatment, and Prevention of Athletic Injuries Lab 1 credits

This lab complements and supports the principles taught in the lecture course and provides students with a basic knowledge and understanding of the principles of sports medicine, the care and treatment of athletic trauma, safety and its importance in related settings, and the use of proper conditioning principles in the prevention of injury. Prerequisites: BIO-155 and BIO-155L or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requirement: ATP-214.

ATP-256^{Ω♦}: Health Promotion and Wellness Protection 4 credits

This course includes the study of the general principles of health maintenance and promotion. Students learn the role of exercise, including flexibility, strength training, and cardiovascular conditioning in maintaining a healthy lifestyle. Topics include nutrition and dietary requirements for health and weight management. Students administer testing procedures to obtain baseline data regarding a patient's level of general health and use this data to design a program specific to the performance and health goals of the patient. In addition, this course reviews the basics of evidence-based practice in athletic training. Prerequisites: BIO-201 and BIO-201L.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ATP-301^Ω: Recognition and Evaluation of Injuries I 3 credits

This course provides students with the specific knowledge and practical skills required to perform proper evaluation of the upper and lower body. Students learn to palpate body and soft tissue structures, and perform active, passive, and resistive range of motion testing, neurological testing, and special ligament tests for the major synovial joints in the body. Students are provided multiple opportunities to reinforce their knowledge with hands-on practice. Prerequisites: ATP-214, ATP-214L, BIO-202, BIO-202L, and acceptance into the Athletic Training program. Co-Requisite: ATP-301L.

ATP-301HN[‡]: Recognition and Evaluation of Injuries I 3 credits

This course provides students with the specific knowledge and practical skills required to perform proper evaluation of the upper and lower body. Students learn to palpate body and soft tissue structures, and perform active, passive, and resistive range of motion testing, neurological testing, and special ligament tests for the major synovial joints in the body. Students are provided multiple opportunities to reinforce their knowledge with hands-on practice. Prerequisites: ATP-214, ATP-214L, BIO-202, BIO-202L, and acceptance into the Athletic Training program. Co-Requisite: ATP-301L.

ATP-301L^Ω: Recognition and Evaluation of Injuries I Lab 1 credits

This lab complements and supports the principles taught in the lecture course and provides students with the specific knowledge and practical skills required to perform proper evaluation of the lower body. Students learn to palpate body and soft tissue structures, and perform active, passive, and resistive range of motion testing, neurological testing, and special ligament tests for the major synovial joints in the body. Students are provided multiple opportunities to reinforce their knowledge with hands-on practice. Prerequisites: ATP-214, ATP-214L, BIO-202, BIO-202L, and acceptance into the Athletic Training program. Co-Requisite: ATP-301.

ATP-301LHN[‡]: Recognition and Evaluation of Injuries I Lab 1 credits

This lab complements and supports the principles taught in the lecture course and provides students with the specific knowledge and practical skills required to perform proper evaluation of the lower body. Students learn to palpate body and soft tissue structures, and perform active, passive, and resistive range of motion testing, neurological testing, and special ligament tests for the major synovial joints in the body. Students are provided multiple opportunities to reinforce their knowledge with hands-on practice. Prerequisites: ATP-214, ATP-214L, BIO-202, BIO-202L, and acceptance into the Athletic Training program. Co-Requisite: ATP-301.

ATP-302^Ω: Recognition and Evaluation of Injuries II 3 credits

Building on concepts from ATP-301, this course provides students the opportunity to further analyze and apply skills in the areas related to the components of injury evaluation of the upper extremity, including history taking, inspection, palpation, joint movement, manual muscle testing, joint stability tests, neurological testing, and formulation of both a clinical and a differential diagnoses. Prerequisites: ATP-301, ATP-301L, ATP-315, and ATP-315L. Co-Requisite: ATP-302L.

ATP-302HN[‡]: Recognition and Evaluation of Injuries II 3 credits

Building on concepts from ATP-301, this course provides students the opportunity to further analyze and apply skills in the areas related to the components of injury evaluation of the upper extremity, including history taking, inspection, palpation, joint movement, manual muscle testing, joint stability tests, neurological testing, and formulation of both a clinical and a differential diagnoses. Prerequisites: ATP-301, ATP-301L, ATP-315, and ATP-315L. Co-Requisite: ATP-302L.

ATP-302L^Ω: Recognition and Evaluation of Injuries II Lab 1 credits

This lab complements and supports the principles taught in the lecture course and provides students with specific knowledge and practical skills required to perform proper evaluation of the upper extremity. This course also allows students to demonstrate differences between on-field and clinical evaluations, including history taking, inspection, palpation, joint movement, manual muscle testing, joint stability tests, neurological testing, and formulation of both a clinical and a differential diagnosis. Students are provided multiple opportunities to reinforce their knowledge with hands-on practice. Prerequisites: ATP-301, ATP-301L, ATP-315, and ATP-315L. Co-Requisite: ATP-302.

ATP-302LHN[‡]: Recognition and Evaluation of Injuries II Lab 1 credits

This lab complements and supports the principles taught in the lecture course and provides students with specific knowledge and practical skills required to perform proper evaluation of the upper extremity. This course also allows students to demonstrate differences between on-field and clinical evaluations, including history taking, inspection, palpation, joint movement, manual muscle testing, joint stability tests, neurological testing, and formulation of both a clinical and a differential diagnosis. Students are provided multiple opportunities to reinforce their knowledge with hands-on practice. Prerequisites: ATP-301, ATP-301L, ATP-315, and ATP-315L. Co-Requisite: ATP-302.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

ATP-310^Ω: Injury Prevention and Wellness Clinical 4 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. In this clinical course, students select, apply, evaluate, and modify appropriate standard protective equipment, taping, wrapping, bracing, padding, and other custom devices for the patient. Students administer testing procedures to obtain baseline data regarding a patient's level of general health (including nutritional habits, physical activity status, and body composition) and use these data to design, implement, evaluate, and modify a program specific to the performance and health goals of the patient. This includes instructing the patient in the proper performance of the activities, recognizing the warning signs and symptoms of potential injuries and illnesses that may occur, and explaining the role of exercise in maintaining overall health and the prevention of diseases. Students are assigned to a preceptor who provides supervision on a daily basis through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on true patients. Practicum/field experience hours: 150. Prerequisites: ATP-214, ATP-214L, ATP-256, BIO-202, BIO-202L, and acceptance into the Athletic Training program.

ATP-315^{Ω♦}: Emergency Care for Acute Injuries 3 credits

This course includes the study of the proper techniques in caring for patients by recognizing catastrophic and emergent conditions and treating appropriately. Students learn establishing and maintaining an airway, maintaining neutral spine alignment with an athlete wearing protective equipment, wound management, immobilization, transfer techniques including spine boarding, core body temperature, and caring for athletes with conditions such as asthma and diabetes. Students are prepared to complete Emergency Cardiac Care (ECC) certification upon completion of the course. Prerequisites: BIO-202, BIO-202L, and acceptance into the Athletic Training program. Co-Requisite: ATP-315L.

ATP-315L^{Ω♦}: Emergency Care for Acute Injuries Lab 1 credits

This lab complements and supports the principles taught in the lecture course, including the study of the proper techniques in caring for a patient by recognizing catastrophic and emergent conditions and treating appropriately. Students demonstrate establishing and maintaining an airway, maintaining neutral spine alignment with an athlete wearing protective equipment, wound management, immobilization, transfer techniques including spine boarding, core body temperature, and caring for athletes with conditions such as asthma and diabetes. Prerequisites: BIO-202, BIO-202L, and acceptance into the Athletic Training program. Co-Requisite: ATP-315.

ATP-320^Ω: Emergency Care and Lower Extremity Evaluation Clinical 4 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. In this clinical course, students perform a comprehensive clinical examination of a patient with a lower extremity condition. This exam incorporates clinical reasoning in the selection of assessment procedures and interpretation of findings in order to formulate a diagnosis or differential diagnosis, determine underlying impairments, and identify activity limitations and participation restrictions. Based on the assessment data and consideration of the patient's goals, students provide the appropriate initial care and establish overall treatment goals. In addition, students also clinically evaluate and manage a patient with an emergency injury or condition to include the assessment of vital signs and level of consciousness, activation of emergency action plan, secondary assessment, diagnosis, and provision of the appropriate emergency care (e.g., CPR, AED, supplemental oxygen, airway adjunct, splinting, spinal stabilization, control of bleeding). Students are assigned to a preceptor who provides supervision on a daily basis through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on true patients. Practicum/field experience hours: 150. Prerequisites: ATP-301, ATP-301L, ATP-310, ATP-315, and ATP-315L.

ATP-322^Ω: Therapeutic Modalities 3 credits

This course is a study of various therapeutic modalities that aid in the healing process of injuries. The course covers the theory behind and proper use of these modalities. Prerequisites: ATP-301 and ATP-301L. Co-Requisite: ATP-322L.

ATP-322L^Ω: Therapeutic Modalities Lab 1 credits

This lab complements and supports the principles taught in the lecture course. Students develop practical applications of therapeutic modality techniques. Prerequisites: ATP-301 and ATP-301L. Co-Requisite: ATP-322.

^Ω Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ATP-330^Ω: Therapeutic Modalities and Upper Extremity Techniques Clinical 4 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. In this clinical course, students perform a comprehensive clinical examination of a patient with an upper extremity, head, neck, thorax, and spine injury or condition. This exam incorporates clinical reasoning in the selection of assessment procedures and interpretation of findings in order to formulate a diagnosis or differential diagnosis, determine underlying impairments, and identify activity limitations and participation restrictions. Based on the assessment data and consideration of the patient's goals, students provide the appropriate initial care, including appropriate therapeutic modalities, and establish overall treatment goals. Students are assigned to a preceptor who provides supervision on a daily basis through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on true patients. Practicum/field experience hours: 150. Prerequisites: ATP-302, ATP-302L, ATP-320, ATP-322, and ATP-322L.

ATP-360^Ω: Theory of Prescribing Exercise 3 credits

This course covers the specific and applied use of exercise in prevention of injury, improvement of performance, and recovery from disability and dysfunction, including specific exercise routines, kinesiological principles, history and scope of rehabilitating exercise, abnormal clinical kinesiology, examination procedures, and reconditioning of specific disorders. Prerequisites: ATP-302, ATP-302L, ATP-322, and ATP-322L. Co-Requisite: ATP-360L.

ATP-360HN[‡]: Theory of Prescribing Exercise 3 credits

This course covers the specific and applied use of exercise in prevention of injury, improvement of performance, and recovery from disability and dysfunction, including specific exercise routines, kinesiological principles, history and scope of rehabilitating exercise, abnormal clinical kinesiology, examination procedures, and reconditioning of specific disorders. Prerequisites: ATP-302, ATP-302L, ATP-322, and ATP-322L. Co-Requisite: ATP-360L.

ATP-360L^Ω: Theory of Prescribing Exercise Lab 1 credits

This lab complements and supports the principles taught in the lecture course. Practical applications and experiments include exercise prescription and rehabilitation techniques. Prerequisites: ATP-302, ATP-302L, ATP-322, and ATP-322L. Co-Requisite: ATP-360.

ATP-401^Ω: General Medical Conditions 3 credits

This course provides a broad discussion of general medical conditions and associated pathologies of the physically active, as well as information applicable to athletes, coaches, and athletic trainers of all levels. This course covers evaluation techniques and equipment for all body systems, conditions, and special populations. Prerequisites: ATP-360 and ATP-360L. Co-Requisite: ATP-401L.

ATP-401HN[‡]: General Medical Conditions 3 credits

This course provides a broad discussion of general medical conditions and associated pathologies of the physically active, as well as information applicable to athletes, coaches, and athletic trainers of all levels. This course covers evaluation techniques and equipment for all body systems, conditions, and special populations. Prerequisites: ATP-360 and ATP-360L. Co-Requisite: ATP-401L.

ATP-401L^Ω: General Medical Conditions Lab 1 credits

This lab complements and supports principles taught in the lecture course and provides a broad discussion of general medical conditions and associated pathologies of the physically active, as well as information applicable to athletes, coaches, and athletic trainers of all levels. This course covers evaluation techniques and equipment for all body systems, conditions, and special populations. Prerequisites: ATP-360 and ATP-360L. Co-Requisite: ATP-401.

ATP-401LHN[‡]: General Medical Conditions Lab 1 credits

This lab complements and supports principles taught in the lecture course and provides a broad discussion of general medical conditions and associated pathologies of the physically active, as well as information applicable to athletes, coaches, and athletic trainers of all levels. This course covers evaluation techniques and equipment for all body systems, conditions, and special populations. Prerequisites: ATP-360 and ATP-360L. Co-Requisite: ATP-401.

ATP-402^Ω: Pharmacology and Advanced Therapeutic Interventions 4 credits

This course examines current theories and practices of pharmacology and epidemiology of drug use as related to athletic training and sports medicine. The course also examines how to appropriately create a plan of care for a patient utilizing therapeutic modalities, rehabilitation, and pharmacologic interventions. Prerequisites: ATP-322, ATP-322L, ATP-360, ATP-360L, ATP-401, and ATP-401L.

ATP-420^Ω: Health Care Administration in Athletic Training 4 credits

This course establishes a framework for health care administration and management, tasks and techniques required in athletic training, health care programs, the health care industry, and interscholastic and intercollegiate athletics. Students assess their personal and professional readiness for management and leadership and acquire skills necessary for effective administration and leadership within the industry. Co-Requisite: ATP-450.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

ATP-440^Ω: Therapeutic Interventions Clinical 4 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. In this clinical course, students perform a comprehensive clinical examination of a patient. Based on the assessment data and consideration of the patient's goals, the student creates and implements a therapeutic intervention that targets these treatment goals to include, as appropriate, therapeutic modalities, medications (with physician involvement as necessary), and rehabilitative techniques and procedures. Students integrate and interpret various forms of standardized documentation, including both patient-oriented and clinician-oriented outcome measures, to recommend activity level, make return-to-play decisions, maximize patient outcomes and progress in the treatment plan, and analyze injury data to formulate a prevention program. Students are assigned to a preceptor who provides supervision on a daily basis through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on true patients. Practicum/field experience hours: 150. Prerequisites: ATP-330, ATP-360, and ATP-360L.

ATP-450^Ω: General Medicine and Health Care Administration Clinical 4 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. Students develop, implement, and monitor prevention strategies for at-risk individuals (e.g., persons with asthma or diabetes, a previous history of heat illness, or sickle cell trait) and large groups to allow safe physical activity in a variety of conditions. This includes obtaining and interpreting data related to potentially hazardous environmental conditions, monitoring body functions (e.g., blood glucose, peak expiratory flow, hydration status), and making the appropriate recommendations for individual safety and activity status. Students also demonstrate the ability to recognize and refer at-risk individuals and individuals with psychosocial disorders or mental health emergencies. Students also demonstrate appropriate documentation and policy/procedure strategies. As part of this clinical experience, students will participate in a minimum of four weeks at an immersive clinical rotation. This rotation allows the student to partake in the totality of care associated with professional practice. Per CAATE Standard 55, "Clinical education may begin prior to or extend beyond the institution's academic calendar." The student's clinical immersion site will be selected by the program. Students are assigned to a preceptor who provides supervision on a daily basis through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on true patients. Practicum/field experience hours: 150. Prerequisites: ATP-401, ATP-401L, and ATP-440. Co-Requisite: ATP-420.

ATP-460^Ω: Advanced Athletic Training Clinical 4 credits

This course provides a clinical setting in which athletic training students apply and demonstrate proficiency in athletic training skills. Students demonstrate knowledge and skills assessed in previous clinical coursework while integrating evidence-based practice into clinical decision making. Students are assigned to a preceptor who provides supervision on a daily basis through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on true patients. Practicum/field experience hours: 150. Prerequisite: ATP-450.

ATP-480^Ω: Athletic Training Capstone 3 credits

This writing-intensive capstone course serves as a culmination of the learning experiences during the athletic training education program at Grand Canyon University. Students are challenged to demonstrate higher level thinking, review evidence-based literature, and display athletic training professional behaviors. Students have the opportunity to identify a clinical practice problem, search the literature, and propose an evidence-based solution that results in practice improvement. Prerequisites: ATP-402, ATP-420, and ATP-450.

ATP-485^Ω: Athletic Training Board of Certification Exam Preparation 1 credits

This course prepares students to sit for the Athletic Training Board of Certification (BOC) exam. Students examine professional regulations and certification requirements and use practice exam questions to prepare for the certification exam. Prerequisite: ATP-420.

ATP-500: Foundations of Professional Practice and Athletic Training 2 credits

This course provides students with an introduction to the foundations of professional athletic training practice. Students learn about the various health professions that comprise the sports medicine team and the appropriate communication strategies in patient care. These concepts are rooted in rules, regulations, and profession documents that comprise the athletic trainer's scope of practice and standards of care. Students also learn about injury and illness prevention strategies such as health and wellness, nutrition, athletic taping and bracing, and sports regulations (NCAA, NAIA, etc.). Lastly, students learn about the Core Competencies: patient-centered care, interprofessional education (IPE), evidence-based practice, quality improvement, and health care informatics. Prerequisite: Formal acceptance into the MS – Athletic Training program. Co-Requisite: ATP-500L.

ATP-500L: Foundations of Professional Practice and Athletic Training Lab 1 credits

This lab complements and supports the principles taught in the lecture course. This course encompasses: the principles of health and wellness, injury and illness prevention basics, nutrition planning, taping, bracing and padding for the extremities and spine, communication strategies in sports medicine, and sports-specific equipment fitting. Prerequisite: Formal acceptance into the MS – Athletic Training program. Co-Requisite: ATP-500.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ATP-510: Evaluation, Diagnosis, and Pathophysiology of General Medical Conditions 4 credits

This course provides foundational knowledge in general evaluation skills for an athletic trainer. This course also provides knowledge, skills, and assessment techniques for general medical conditions and associated pathologies of the physically active, as well as information applicable to athletes, coaches, and athletic trainers of all levels. The systems instructed in this course are: Respiratory, Cardiovascular, Abdominal, Genitourinary, Gynecologic, Reproductive, Neurology and Concussions, Ears, Eyes, Nose, Throat, Infectious Disease, Systemic Conditions, Dermatology, and an Introduction to Psychosocial Conditions.

ATP-515: Emergency Management for Athletic Trainers 3 credits

This course includes the study of the proper techniques for managing patients with acute or emergent conditions. Students learn to perform a primary and secondary survey, as well as triage medical emergencies. Skills and knowledge instructed in this course include establishing and maintaining an airway, maintaining neutral spine alignment with an athlete wearing protective equipment, wound management, immobilization, management of shock, anaphylaxis, mental health emergencies, transfer techniques including spine boarding, core body temperature, and caring for athletes with systemic conditions. All this content is founded in the development of an Emergency Action Plan. Prerequisite: Formal acceptance into the MS – Athletic Training program. Co-Requisite: ATP-515L.

ATP-515L: Response to Emergent and Immediate Injuries and Illnesses Lab 1 credits

This lab complements and supports the principles taught in the lecture course. This course encompasses: establishing and maintaining an airway, maintaining neutral spine alignment with an athlete wearing protective equipment, wound management, immobilization, management of shock, anaphylaxis, mental health emergencies, transfer techniques including spine boarding, core body temperature, and caring for athletes with systemic conditions. Prerequisite: Formal acceptance into the MS – Athletic Training program. Co-Requisite: ATP-515.

ATP-520: Therapeutic Interventions I - Therapeutic Modalities 3 credits

This course is a study of various therapeutic modalities that aid in the healing process of injuries. Students learn the theories of pain relief and management, the phases of the healing process, and the viscoelastic properties of tissue. These concepts are woven into each of the electrophysical agents taught in this course such as manual therapies, electrical stimulation, cryotherapy, thermotherapy, ultrasound, diathermy, LASER, and other contemporary modalities. The course also covers treatment planning, goal setting, and the appropriate prescription of therapeutic agents. Prerequisite: ATP-500. Co-Requisite: ATP-520L.

ATP-520L: Therapeutic Interventions I - Therapeutic Modalities Lab 1 credits

This lab complements and supports the principles taught in the lecture course. This course encompasses: manual therapies, electrical stimulation, cryotherapy, thermotherapy, ultrasound, diathermy, LASER, and other contemporary modalities. Prerequisite: ATP-500. Co-Requisite: ATP-520.

ATP-521: Therapeutic Interventions II - Rehabilitation 3 credits

This course covers the specific and applied use of manual therapies and therapeutic exercises. Students are introduced to the principles of rehabilitation, including, exercise prescription, injury prevention programs, clinical evaluation, collecting and analyzing patient-rated outcome measures to make clinical decisions, and developing a plan of care, to include objective return to play criteria. Students in this course are prepared to work with members of the sports medicine team, through interprofessional collaboration, to optimize patient-centered care, function, and return to play. This course has a foundation in the ICF model to guide patient care to address all contextual and personal factors in the rehabilitation process. Prerequisite: ATP-520. Co-Requisite: ATP-521L.

ATP-521L: Therapeutic Interventions II - Rehabilitation Lab 1 credits

This lab complements and supports the principles taught in the lecture course. This course encompasses: the principles of rehabilitation, including, exercise prescription, injury prevention programs, clinical evaluation, collecting and analyzing patient rated outcome measures to make clinical decisions, and developing a plan of care, to include objective return to play criteria. Prerequisite: ATP-520. Co-Requisite: ATP-521.

ATP-522: Therapeutic Interventions III - Pharmacology and Advanced Interventions 3 credits

This course examines current theories and practices of pharmacology as related to athletic training and sports medicine. Students learn about the drugs used to treat musculoskeletal injuries, respiratory conditions, cardiovascular system, GI disorders, metabolic disorders, and infectious diseases. This course also covers the FDA approval process, supplements and banned substances in international sport. The course also examines how to appropriately create a plan of care for a patient utilizing therapeutic modalities, rehabilitation, and pharmacologic interventions.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

ATP-530: Research Methods and Statistics for Athletic Trainers 2 credits

This course introduces the student to statistics and research design in medicine. Students learn how to identify clinical and research problems. The main purpose of the Research Methods and Design and Statistics for Athletic Trainers course is to introduce students to quantitative and qualitative methods for conducting meaningful inquiry and research. Student gain an overview of research formulation, specifically: design, methodology, format, data management, data analysis, and data presentation. The course helps students develop the ability to use this knowledge to become more effective sports medicine researchers. This course also teaches students about: injury and illness surveillance systems and public data sources, incidence and prevalence rates, screening data, and patterns and trends in epidemiology. This course is an introduction to basic public health concepts and will be scaffolded upon later in the program.

ATP-540: Biomechanics in Sport 2 credits

This course prepares students for NASM's corrective exercise specialist credential. Students learn about human movement patterns, foundations in kinesiology, sports biomechanics, static and dynamic postural assessments, assessments for movement, strength, and range of motion, foundations in corrective exercise, and corrective exercise interventions.

ATP-551C: Clinical Education in Athletic Training I 3 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. Students are assigned to a preceptor who provides supervision daily through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on real patients. The emphasis of this clinical is on developing critical thinking skills, reasonable clinical decision making and clinical competency in emergency response, general medical evaluations, injury prevention strategies, lower extremity evaluations, and therapeutic modalities. Clinical hours: 135.

ATP-552C: Clinical Education in Athletic Training II 3 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. Students are assigned to a preceptor who provides supervision daily through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on real patients. The emphasis of this clinical is on developing critical thinking skills, reasonable clinical decision making and clinical competency in upper extremity evaluations, orthopedic rehabilitation, and a review of skills from the previous clinical class. Clinical hours: 135.

ATP-553C: Clinical Education in Athletic Training III 6 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. Students are assigned to a preceptor who provides supervision daily through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on real patients. The emphasis of this clinical is on developing critical thinking skills, reasonable clinical decision making, clinical competency, and integration of knowledge and skills from all domains of athletic training. Clinical hours: 270.

ATP-554C: Clinical Education in Athletic Training IV 4 credits

This course provides a clinical setting in which athletic training students clinically apply and demonstrate proficiency in athletic training skills. Students are assigned to a preceptor who provides supervision daily through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on real patients. The emphasis of this clinical is on developing critical thinking skills, reasonable clinical decision making, clinical competency, and integration of knowledge and skills from all domains of athletic training. Clinical hours: 180.

ATP-600C: Immersive Clinical Experience 4 credits

This clinical allows students to experience the totality of care rendered by an athletic trainer. Students are assigned to a preceptor who provides supervision daily through constant visual and auditory interaction, providing feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, or professional) on real patients. Clinical hours: 180.

ATP-601: Psychosocial Conditions and Interventions 2 credits

This course provides content in the recognition and management of mental health conditions, motivation of the athlete, and self-care strategies for the athletic trainer. This includes skills and knowledge in communication strategies, motivational techniques, appropriate referral strategies, intervention planning and mental health first response. Focus on the development and application of interpersonal communication strategies, motivational techniques, and referral strategies commonly used for psychosocial interventions in athletic training.

ATP-602: Research in Athletic Training I - Proposal and Methods 2 credits

In this course, students propose their capstone project. This includes: Problem Statements, a PICO question, Methodology, Review of Relevant Literature, CITI Training, Formal Proposal, and IRB Submission (if applicable). This course culminates into the second research class in preparation for data collection, publications, professional abstract submission, and final capstone presentations.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ATP-603: Research in Athletic Training II - Applied Project/Capstone 2 credits

In this course, students complete and present their capstone project. This includes: IRB Approval (if applicable), Data Collection, Data Analysis, Completion of Final Project, Dissemination of Results, and Future Research/Directions. This course prepares students to be clinical scholars and disseminate research that is practice-based and relevant to current practice.

ATP-610: Healthcare Administration and Public Health 3 credits

This course establishes a framework for health care administration and management, tasks and techniques required in athletic training, health care programs, the health care industry, and interscholastic and intercollegiate athletics. Students assess their personal and professional readiness for management and leadership and acquire skills necessary for effective administration and leadership within the industry. This knowledge and skills include: documentation in EHR/EMRs, leadership concepts, management (human resources, payroll systems, budget, grant funding or other income sources), organizational concepts, facility design, scope of practice and legal aspects in sports medicine. This course also builds on the foundations in public health and includes topics such as advocacy groups, group interventions, public education on specific pathologies, population health, regional identification of health-related problems, and other advanced public health concepts. This course contains a culminating project that proposes a solution to an identified public health problem.

ATP-620: BOC Prep Course 2 credits

This course prepares students to sit for the Athletic Training Board of Certification (BOC) exam. Students examine professional regulations and certification requirements and use practice exam questions to prepare for the certification exam. Students also develop a timeline for preparation for the BOC examination.

Behavioral Health Science (BHS)

BHS-240[♦]: Group Dynamics and Process 4 credits

This course provides a broad understanding of group development stages, group dynamics, group counseling theories, and ethical standards pertaining to group work. In addition, this course explores theoretical approaches to group work. The course also addresses the growth and development of group members.

BHS-240XV: Group Dynamics and Process 4 credits

This course provides a broad understanding of group development stages, group dynamics, group counseling theories, and ethical standards pertaining to group work. In addition, this course explores theoretical approaches to group work. The course also addresses the growth and development of group members.

BHS-320^Δ: Ethics of Behavioral Health Science 4 credits

This writing-intensive course provides a broad understanding of ethics, legal standards, and responsibilities in behavioral health. Students explore basic ethical concepts, legislation, and current trends in behavioral health ethics. This course pays special attention to technology and its effects on lawmaking and ethics in behavioral health. Important goals of this course are to help students develop a comprehensive understanding of the history and current application of ethics in the behavioral health field.

BHS-320HN^Δ: Ethics of Behavioral Health Science 4 credits

This writing-intensive course provides a broad understanding of ethics, legal standards, and responsibilities in behavioral health. Students explore basic ethical concepts, legislation, and current trends in behavioral health ethics. This course pays special attention to technology and its effects on lawmaking and ethics in behavioral health. Important goals of this course are to help students develop a comprehensive understanding of the history and current application of ethics in the behavioral health field.

BHS-330: Cultural and Social Diversity in Behavioral Health 4 credits

This course provides a comprehensive foundation through exploring the content areas of cultural diversity, social justice, and religious and spiritual values. Examination of these areas strives to offer an overarching framework to guide students and gain perspectives for working with multicultural populations in the behavioral health field. This course assists students with developing knowledge and application of cultural diversity, cultural competency, and the importance of self-awareness, social justice, and advocacy. In addition, this course provides students a blended approach of the beliefs and values associated with religion and spirituality as a component of cultural competency.

BHS-350: Report Writing, Research, and Information Literacy in Behavioral Health 4 credits

This course provides a comprehensive understanding of the various documentation styles used in the behavioral health field. Students critically examine evidence-based research in the field of behavioral health. The course offers an introduction to conducting applied clinical research.

BHS-420^Δ: Human Development 4 credits

This course provides an understanding of the nature and needs of individuals across the life-span development. This course covers physical, cognitive, and socioemotional development across various points in human development. Additionally, students learn about the influence of spiritual and moral beliefs throughout the life span.

BHS-420HN^Δ: Human Development 4 credits

This course provides an understanding of the nature and needs of individuals across the life-span development. This course covers physical, cognitive, and socioemotional development across various points in human development. Additionally, students learn about the influence of spiritual and moral beliefs throughout the life span.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | ^Δ Honors Major Course | ^Ω Non-Transferable

BHS-430^f: Introduction to Family Dynamics 4 credits

This course introduces the historical and theoretical perspectives of family dynamics and systems. Topics include roles, communication styles, boundaries, generational patterns, cultural influences, and couples and parenting dynamics. Skills and modalities relevant to working with families in the behavioral health field are explored.

BHS-430HN^f: Introduction to Family Dynamics 4 credits

This course introduces the historical and theoretical perspectives of family dynamics and systems. Topics include roles, communication styles, boundaries, generational patterns, cultural influences, and couples and parenting dynamics. Skills and modalities relevant to working with families in the behavioral health field are explored.

BHS-440: Understanding Trauma 4 credits

This course offers an overview of various types of trauma, and effects of traumatic experiences within the physical, emotional, sociological, cognitive, and spiritual domains of a human being. It studies the dynamics of trauma throughout the human life-span development. It offers a brief overview of trauma, informed care assessment and treatment, and ethics associated with working with trauma victims.

BHS-450: Childhood and Adolescence Disorders 4 credits

This course provides students with an understanding of the biological, emotional, and environmental aspects that impact childhood and adolescent development. The course addresses assessment, diagnosis, and intervention as it relates to childhood and adolescent disorders. Students examine the classification and epidemiology of anxiety disorders, mood disorders, conduct problems, ADD/ADHD, language and learning, intellectual disabilities, autism spectrum disorders, schizophrenia, and other childhood- and adolescence-related disorders according to the DSM. Prerequisite: BHS-420.

BHS-455[♦]: Introduction to Childhood and Adolescent Physical and Behavioral Health 4 credits

This course provides a broad understanding of the components and theories related to childhood and adolescent physical and behavioral health. Also covered are the modalities that can be utilized to promote best practice approaches in behavioral health treatment of both children and adolescents. Students gain the necessary knowledge to advance in the Childhood and Adolescence Disorders emphasis program. Prerequisite: BHS-420.

BHS-460: Introduction to Couples and Family Systems 4 credits

This course introduces the historical and theoretical perspectives of couples and family systems. Topics include a review of family systems, including roles within couples and family systems. Also covered are couple and family dynamics, the developmental stages of couples, and characteristics of successful couples and families. Additionally, the course explores the impact of substance use, mental illness, and culture on couple and family dynamics. Treatment modalities in working with couples and families are explored. Prerequisite: PCN-100.

BHS-465: Marriage and Family Ethical and Legal Issues 4 credits

This course describes the ethical and legal practice of marriage and family therapy. Special emphasis is placed on the Marriage and Family Therapy Code of Ethics and rules and regulations as it pertains to working within the context of marriage and family therapy. Prerequisites: BHS-320 and BHS-430.

BHS-470: Introduction to Trauma-Informed Care 4 credits

This course offers an overview of the six key principles of the trauma-informed care approach. The purpose of the course is to develop knowledge and awareness about safety building, trustworthiness, peer support networking, connectedness, empowerment, cultural, historical, spiritual, and gender issues. In addition, the course addresses recovery, support systems, resiliency, and an integrated approach when working with trauma victims.

BHS-475: Overview of Assessment and Treatment of Trauma 4 credits

This course offers an overview of the evidence-based screening and assessment tools utilized in assessing the impact of trauma. In addition, this course will cover best practice approaches to trauma treatment. Prerequisite: BHS-470.

BHS-480: Infancy and Early Childhood Development 4 credits

This course provides a comprehensive overview of the cognitive, physical, and socioemotional developmental stages and sensitive periods of early human development. The course addresses the critical influence the care-getting environment has on brain development and how relationships change the structure of the brain both positively and negatively. The stages of human attachment and a brief overview of styles of attachment as they relate to development throughout the lifespan are also reviewed. Additionally, the course addresses the effects of prenatal maternal care, environment, and premature birth on developmental stages. Students understand how culture and socioeconomic status affects development.

BHS-485: Infancy and Early Childhood Disorders and Assessment 4 credits

This course provides an overview of a variety of assessments commonly used to diagnose disorders in early childhood. Students learn the importance of ongoing assessment, assessment in a variety of settings, and the importance of the caregiver-child relationship in assessment. Students are provided an overview of common disorders found in early childhood, and how the DC: 0-5 is used to accurately identify early childhood disorders. Students understand the role of cultural and familial influence on assessment and diagnosis. Prerequisite: BHS-480.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BHS-490^Ω: Professional Capstone Project 4 credits

The capstone project is a culmination of the learning experiences while a student is within the behavioral health science program at Grand Canyon University's College of Humanities and Social Sciences. Students prepare a written proposal for a community-based behavioral health organization related to the student's specific area of focus. The proposal includes the name, geographical location, identified service gap, target populations, types of service/treatments, potential challenges, ethical considerations, and supervision/oversight considerations. The professional capstone project proposal needs to reflect synthesis and integration of course content. This capstone course needs to be completed at the end of program. Prerequisite: BHS-350.

Bible (BIB)

BIB-100: Bible Survey 4 credits

This course surveys the text of the Bible with emphasis on the overarching biblical narrative, the gospel of Jesus Christ, and God's Kingdom.

BIB-106[♦]: Old Testament Survey 4 credits

This course introduces the text of the Old Testament with emphasis on the biblical narrative, genres, major historical periods, and theological themes.

BIB-107[♦]: New Testament Survey 4 credits

This course introduces the text of the New Testament with emphasis on the biblical narrative, genres, major historical periods, and theological themes.

BIB-350[♦]: Pentateuch 4 credits

This course is an exegetical study of the first major division of the Old Testament with an emphasis on the application of hermeneutical principles. The class focuses on the interpretation of selected passages from the Pentateuch. Attention is also given to textual issues and major theological themes. Prerequisites: BIB-106 and BIB-355.

BIB-354[♦]: Jesus and His Interpreters 4 credits

This course focuses on the teachings and major events in the life of Jesus and the elaboration on those teachings in Paul's writings. Special attention is given to the person, teachings, and work of Jesus. Some pertinent issues in Pauline studies, such as the Judaizer conflict, the effect of Paul's conversion on his thinking and writing, and the sequence of his letters will be examined for their role in the development of the Gospel tradition. Prerequisite: BIB-107.

BIB-355^{Δ♦}: Biblical Interpretation and Application 4 credits

This writing-intensive course helps equip students to understand and use basic principles of biblical hermeneutics, including an introduction to the nature of Bible interpretation and the application to contemporary issues. The majority of the course focuses on developing practical procedures and step-by-step skills in exegesis of Scripture. Prerequisites: ENG-105 and BIB-106.

BIB-360[♦]: Gospels and Acts 4 credits

This course is an exegetical study of the initial books of the New Testament with an emphasis on the application of hermeneutical principles. The class focuses on the interpretation of selected passages from the Gospels and Acts. Attention is also given to textual issues and major theological themes. Prerequisites: BIB-107 and BIB-355.

BIB-365[♦]: Old Testament Writings 4 credits

This course addresses the historical books of the Old Testament (Joshua, Judges, Ruth, Samuel, Kings, Esther, Ezra, and Nehemiah), giving special attention to the text with regard to its politics, culture, religions, geographical setting, literary genre, and theological themes. Prerequisite: BIB-355.

BIB-370[♦]: Hebrew Poetical and Wisdom Literature 4 credits

This course is a study of Hebrew poetry and wisdom literature in the Old Testament. Attention is given to the development of the literature as well as an investigation of each book's composition and theological themes. Prerequisite: BIB-355.

BIB-380[♦]: Pauline Epistles 4 credits

This course provides an overview of the Apostle Paul's letters to the early New Testament churches. Special attention is given to the nature of Paul's ministry; the theological, social, and practical issues he addressed; and how these texts are relevant for faithful Christian living. Prerequisite: BIB-355.

BIB-455[♦]: Hebrew Prophets 4 credits

This course offers a critical study of the pre-exilic, exilic, and post-exilic prophets, with special consideration given to the social, political, and religious conditions of their times. Attention is given to the ministry and message of the prophets, in their day and today. Prerequisite: BIB-355.

BIB-465[♦]: The General Epistles 4 credits

This course covers Hebrews, James, 1 and 2 Peter, 1-3 John, and Jude as they relate to the theological and ethical content of Christianity. Students examine the nature, message, and historical context of the books. Prerequisite: BIB-355.

BIB-475[♦]: Johannine Literature 4 credits

This course provides an overview of the New Testament texts of the Apostle John. Special attention is given to the nature of John's ministry; the theological, social, and practical issues he addressed; and how these texts are relevant for faithful Christian living. Prerequisite: BIB-355.

BIB-501: Old Testament Foundations 4 credits

This course surveys the text and historical background of the Old Testament with an introduction to hermeneutics and the proper interpretation of the books of the Old Testament.

BIB-501GAR: Old Testament Foundations 4 credits

This course surveys the text and historical background of the Old Testament with an introduction to hermeneutics and the proper interpretation of the books of the Old Testament.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BIB-502: New Testament Foundations 4 credits

This course surveys the text and historical background of the New Testament with an introduction to hermeneutics and the proper interpretation of the books of the New Testament.

BIB-502GAR: New Testament Foundations 4 credits

This course surveys the text and historical background of the New Testament with an introduction to hermeneutics and the proper interpretation of the books of the New Testament.

BIB-610: Old Testament Exegesis: Prophets and Writings 4 credits

This course is an exegetical study of the second and third major divisions of the Old Testament. Special attention is given to key theological themes. Emphasis is also placed on the interpretation of selected passages from the prophets and writings and the application of elementary Hebrew language skills and interpretive tools. Prerequisite: HEB-501.

BIB-611: Old Testament Exegesis: Pentateuch 4 credits

This course is an exegetical study of the first major division of the Old Testament. Special attention is given to key theological themes. Emphasis is also placed on the interpretation of selected passages from the Pentateuch and the elementary Hebrew language skills and interpretive tools. Prerequisite: HEB-501.

BIB-620: New Testament Exegesis: Gospels and Acts 4 credits

This course is an exegetical study of the initial books of the New Testament. Special attention is given to key theological themes. Emphasis is placed on the interpretation of selected passages from the Gospels and Acts and the application of elementary Greek language skills and interpretive tools. Prerequisite: GRK-501.

BIB-621: New Testament Exegesis: Epistles and Revelation 4 credits

This course is an exegetical study of the latter books of the New Testament. Special attention is given to key theological themes. Emphasis is placed on the interpretation of selected passages from the New Testament epistles and the book of Revelation as well as the application of elementary Greek language skills and interpretive tools. Prerequisite: GRK-501.

BIB-650: Biblical Hermeneutics 4 credits

This course is a study of the basic principles of evangelical biblical interpretation, exegesis, and application, especially in the context of ministry, including an introduction to the use of biblical language tools.

BIB-650GAR: Biblical Hermeneutics 4 credits

This course is a study of the basic principles of evangelical biblical interpretation, exegesis, and application, especially in the context of ministry, including an introduction to the use of biblical language tools.

Biology (BIO)

BIO-130♦: Introduction to Life Sciences I 4 credits

This course introduces students to the concepts of the scientific method and critical thinking in making observations and formulating hypotheses. Students learn about the structure of cells, DNA replication and gene expression, metabolic pathways, cell cycle, and cell division. The final section of the class includes an overview of animal form and function, organs and organ systems, and physiological processes, with an emphasis on human systems.

BIO-155♦: Introduction to Anatomy and Physiology 3 credits

A study of the basic structure and function of the major systems of the human body, this course focuses on an in-depth exploration of the musculoskeletal and neurological systems for athletic training, health, and exercise science majors. This course also compares normal and abnormal function for more comprehensive understanding of the human body. Co-requisite: BIO-155L.

BIO-155L♦: Introduction to Anatomy and Physiology Lab 1 credits

This lab is designed to complement and support the principles taught in BIO-155. Upon successful completion of the course, students will be able to identify and describe functions, structures, and classifications of the skeletal, muscular, and organ systems along with related disorders. Co-requisite: BIO-155.

BIO-181♦: General Biology I 3 credits

This course is a study of biological concepts emphasizing the interplay of structure and function, particularly at the molecular and cellular levels of organization. Cell components and their duties are investigated, as well as the locations of cellular functions within the cell. The importance of the membrane is studied, particularly its roles in controlling movement of ions and molecules and in energy production. The effect of genetic information on the cell is followed through the pathway from DNA to RNA to protein. Co-requisite: BIO-181L.

BIO-181L♦: General Biology I - Lab 1 credits

This lab course is designed to reinforce principles learned in BIO-181 through experiments and activities which complement and enhance understanding of macromolecules, cell membrane properties, cellular components, and their contribution to cell structure and function. Assignments are designed to relate cellular processes such as metabolism, cell division, and the flow of genetic information to cell structure. Co-requisite: BIO-181.

BIO-182♦: General Biology II 3 credits

This course is a study of biological concepts emphasizing the interplay of structure and function at the molecular, cellular, and organismal levels of organization. Relationships of different life forms are studied, noting characteristics and general lifecycles of the different types of organisms, including bacteria, archaea, and eukaryotes. Plant structure, function, and reproduction are studied, as well as photosynthesis and plant nutrition. Ecological principles are discussed, including organism interactions at the various ecological levels. Principles of conservation are introduced. Prerequisite: BIO-181. Co-Requisite: BIO-182L.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BIO-182L♦: General Biology II - Lab 1 credits

This lab is designed to reinforce principles learned in BIO-182. Organisms are examined to recognize similarities and differences among different types. Plant structure and processes, including photosynthesis and water transport, are investigated through observation and activities. Concepts of ecology are explored through study of species interactions projects and other activities. Co-requisite: BIO-182.

BIO-191♦: Applied Anatomy and Physiology I 3 credits

This course examines the structure and function of the human body and mechanisms of homeostasis. This portion includes the study of cells; tissues; genetics; and the integumentary, skeletal, muscular, and nervous systems. Co-Requisite: BIO-191L.

BIO-191L♦: Applied Anatomy and Physiology I 1 credits Lab

This laboratory course examines the structure and function of the human body and mechanisms of homeostasis, complementing the lecture portion with a focus on anatomy. This portion includes the study of cells; tissues; and the integumentary, skeletal, muscular, and nervous systems. Co-Requisite: BIO-191.

BIO-192♦: Applied Anatomy and Physiology II 3 credits

This course examines the structure and function of the human body and mechanisms of homeostasis. This portion includes the study of metabolism; energetics; fluid, electrolyte and acid-base balance; and the endocrine, hematologic, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems. Prerequisite: BIO-191. Co-Requisite: BIO-192L.

BIO-192L♦: Applied Anatomy and Physiology II 1 credits Lab

This laboratory course examines the structure and function of the human body and mechanisms of homeostasis, complementing the lecture portion with a focus on anatomy. This portion includes the study of the endocrine, cardiovascular, respiratory, digestive, renal, and reproductive systems. Prerequisite: BIO-191L. Co-Requisite: BIO-192.

BIO-195: Fundamental Microbiology 3 credits

This course provides an introduction to the principles and applications of microbiology, including the study of microorganisms and their relationships. Students develop an understanding of microbial cell structure and function, microbial genetics, pathologies, and other selected applied areas. Co-Requisite: BIO-195L.

BIO-195L: Fundamental Microbiology Lab 1 credits

The laboratory accompanying Fundamental Microbiology supports further learning surrounding principles gained in the lecture course. Students develop fundamental knowledge of microbiological laboratory techniques and application to real-world situations. Co-Requisite: BIO-195.

BIO-201♦: Human Anatomy and Physiology I 3 credits

This course is the first of a two-course sequence examining the structure and function of the human body and mechanisms for maintaining homeostasis within it. This portion includes the study of cells; tissues; genetics; and the integumentary, skeletal, muscular, and nervous systems. Co-requisite: BIO-201L.

BIO-201L♦: Human Anatomy and Physiology I: 1 credits Lab

This course is a systematic study of human gross anatomy and function. Topics include the integumentary, skeletal, muscular, and nervous systems. Co-Requisite: BIO-201.

BIO-202♦: Human Anatomy and Physiology II 3 credits

This course is the second of a two-course sequence examining the structure and function of the human body and mechanisms for maintaining homeostasis within it. This portion includes the study of immunity; metabolism; energetics; fluid, electrolyte and acid-base balance; and the endocrine, hematologic, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive systems. Prerequisites: BIO-201 and BIO-201L. Co-requisite: BIO-202L.

BIO-202L♦: Human Anatomy and Physiology II-Lab 1 credits

This course is a systematic study of human gross anatomy and function. Topics include the endocrine, cardiovascular, respiratory, digestive, renal, and reproductive systems. Prerequisites: BIO-201 and BIO-201L. Co-Requisite: BIO-202.

BIO-205♦: Microbiology 3 credits

This course provides an introduction to the principles and applications of microbiology and a study of the general characteristics of microorganisms, their activities, and their relationship to humans. Students develop understanding of microbial cell structure and function, microbial genetics, related pathologies, immunity, and other selected applied areas. Co-requisite: BIO-205L.

BIO-205L♦: Microbiology - Lab 1 credits

The laboratory section of BIO-205 supports further learning surrounding principles gained in the lecture course. Students develop fundamental skills in microbiological laboratory techniques, microscopy methodologies, and the isolation and identification of pathogenic microorganisms. Co-requisite: BIO-205.

BIO-210♦: Anatomy and Physiology for Science Majors I 3 credits

This course examines human anatomy and physiology with an emphasis on function and homeostasis of the following areas: tissues, integument, skeletal system, muscular system, and the nervous system. Case studies are utilized to reinforce physiological processes. Prerequisites: BIO-181 and BIO-181L. Co-Requisite: BIO-210L.

BIO-210L♦: Anatomy and Physiology for Science Majors I Lab 1 credits

This course involves study of the gross anatomy and function of the skeletal, muscular, and nervous systems. This experiential lab involves an advanced exploration of concepts utilizing human cadavers and other supplemental materials. Co-Requisite: BIO-210.

Δ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

BIO-211[♦]: Anatomy and Physiology for Science Majors II 3 credits

This course examines human anatomy and physiology with an emphasis on function and homeostasis of the following systems: endocrine, cardiovascular, respiratory, digestive, urinary and reproductive. Case studies are utilized to reinforce physiological processes. Prerequisites: BIO-210 and BIO-210L. Co-Requisite: BIO-211L.

BIO-211L[♦]: Anatomy and Physiology for Science Majors II Lab 1 credits

This course involves study of the gross anatomy and functions of the endocrine, cardiovascular, respiratory, digestive, renal, and reproductive systems. This experiential lab involves an advanced exploration of concepts utilizing human cadavers and other supplemental materials. Prerequisite: BIO-210L. Co-Requisite: BIO-211.

BIO-215[♦]: General Microbiology 3 credits

This course, designed for Science majors, introduces the principles of microbiology and the study of the general characteristics, growth, and diversity of microorganisms. Topics include microbial cell structure and function, bacterial genetics, immune response and immunization, physical and chemical control of microorganisms, specific characteristics and mechanisms of antimicrobial medications, and microbial diseases with emphasis on pathogenesis, epidemiology and treatment. Prerequisites: BIO-181 and BIO-181L. Co-Requisite: BIO-215L.

BIO-215L[♦]: General Microbiology Lab 1 credits

The General Microbiology laboratory supports further learning surrounding principles gained in the lecture. Students develop fundamental skills in microbiological laboratory techniques, microscopy methodologies, molecular methods of detection, and the isolation and identification of pathogenic microorganisms. Prerequisites: BIO-181 and BIO-181L. Co-Requisite: BIO-215.

BIO-220[♦]: Environmental Science 4 credits

This course examines the risks and the environmental impact of human behavior and population growth on natural resources. Emphasis is placed on a holistic approach to environmental science using hands-on exercises, environmental surveys, and class discussions to reinforce scientific principles.

BIO-250[♦]: Introduction to Life Sciences II 4 credits

This course introduces students to the relevance and impact of scientific endeavors/advances/processes on human populations, society, and the environment. Natural phenomena and relationships between scientific disciplines and technology provide foundational knowledge for students to critically analyze the interactions between humans and their world. Prerequisite: BIO-130.

BIO-253[♦]: Emergency Care for Acute Injuries 4 credits

This course includes the study of the proper techniques in caring for a patient by recognizing catastrophic and emergent conditions and treating appropriately. Students learn establishing and maintaining an airway, maintaining neutral spine alignment with an athlete wearing protective equipment, wound management, immobilization, transfer techniques including spine boarding, core body temperature, as well as caring for athletes with conditions such as asthma and diabetes. Students are prepared to complete Emergency Cardiac Care (ECC) certification upon completion of the course. Prerequisites: BIO-155 and BIO-155L, or BIO-202 and BIO-202L, or BIO-211 and BIO-211L.

BIO-257[†]: Principles of Genetics 4 credits

This course explores the principles of Mendelian and molecular genetics, focusing on the relationship of inheritance to biological function at multiple levels: molecular, cellular, and with multicellular organisms. By examining the multiple levels of genetic organization, students will master concepts related to patterns of inheritance, genetic relationships across species, and biotechnological applications. Prerequisites: BIO-181 and BIO-181L.

BIO-257HN[†]: Principles of Genetics 4 credits

This course explores the principles of Mendelian and molecular genetics, focusing on the relationship of inheritance to biological function at multiple levels: molecular, cellular, and with multicellular organisms. By examining the multiple levels of genetic organization, students will master concepts related to patterns of inheritance, genetic relationships across species, and biotechnological applications. Prerequisites: BIO-181 and BIO-181L.

BIO-316V[♦]: Pharmacology for Health Care Professionals 3 credits

The content of this course is designed to broaden the health care professional's knowledge of pharmacology. Topics include types and effects of drugs, including diagnostic imaging contrast media. The pharmacology, pharmacokinetics, and pharmacodynamics of drugs commonly used in ancillary health care are presented. Conscious sedation, adverse reactions, and patient care under sedation are also included.

BIO-317V^{▲♦}: Science Communication & Research 3 credits

This writing intensive course focuses on the use of scientific research as a basis for understanding and improving clinical practice. Topics include differentiation between various forms of written communication, utilizing former research to support a position and/or develop new research proposals, organizing and writing research papers, and producing visual aids for oral presentations. Emphasis in this course is on the critical review of research studies and their applications to clinical practice. An overview of evidence-based practice is provided. Prerequisite: HLT-312.

BIO-319[♦]: Applied Nutrition 4 credits

This course provides a foundation of basic nutrition theory, with a focus on assessment, food components, exercise, nutrition, weight control, community programs, and resources. Application of these aspects is used to promote health and prevent illness.

[▲] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BIO-319HN[♦]: Applied Nutrition 4 credits

This course provides a foundation of basic nutrition theory, with a focus on assessment, food components, exercise, nutrition, weight control, community programs, and resources. Application of these aspects is used to promote health and prevent illness.

BIO-320[♦]: Fundamentals of Ecology 3 credits

A study of plants and animals as individuals and in communities in relation to their physical and biological environment.

Prerequisite: BIO-181. Co-Requisite: BIO-320L.

BIO-320L[♦]: Fundamentals of Ecology-Lab 1 credits

A laboratory course designed to complement and support the principles being learned in Biology (BIO-320). Co-requisite: BIO-320.

BIO-322[♦]: Applied Pathophysiology 4 credits

This course is designed to bridge the gap between basic preclinical science courses and the clinical requirements of health care professionals. Critical thinking skills are enhanced with case studies that integrate nutritional and pharmacological concepts. Systematic studies focus on the etiology, pathogenesis, and clinical manifestations associated with various altered health states and diseases. Upon completion of this course, students should be able to correctly discuss a variety of disease states with health care professionals while addressing the following questions: How does a change in normal physiology cause the signs and symptoms of a given condition or disease? How do these physiological effects correlate to mechanisms of accurate diagnoses? Why is one treatment method chosen over another? How do different systems intricately interrelate to cause a clinical picture? This course does not substitute for BIO-483 or fulfill the Biology major requirement for pathophysiology. Prerequisites: BIO-201 and BIO-202.

BIO-322HN[♦]: Applied Pathophysiology 4 credits

This course is designed to bridge the gap between basic preclinical science courses and the clinical requirements of health care professionals. Critical thinking skills are enhanced with case studies that integrate nutritional and pharmacological concepts. Systematic studies focus on the etiology, pathogenesis, and clinical manifestations associated with various altered health states and diseases. Upon completion of this course, students should be able to correctly discuss a variety of disease states with health care professionals while addressing the following questions: How does a change in normal physiology cause the signs and symptoms of a given condition or disease? How do these physiological effects correlate to mechanisms of accurate diagnoses? Why is one treatment method chosen over another? How do different systems intricately interrelate to cause a clinical picture? This course does not substitute for BIO-483 or fulfill the Biology major requirement for pathophysiology. Prerequisites: BIO-201 and BIO-202.

BIO-326: Interdisciplinary Applications of Biology 4 credits

Course Description: Interdisciplinary Applications of Biology introduces students to the intersections of biology with other fields of study, i.e. archaeology, paleontology, geology, psychology, and anthropology. Focus will be on how these disciplines intersect in research, practice, and application and include many real-world examples. Prerequisite: SCI-328.

BIO-328: Animal Behavior 3 credits

This course examines the complexities of animal behaviors and how we study them. Specifically, students will develop an understanding of how animals learn and communicate with each other, as well as other behaviors to help them survive and thrive in their natural habitats, by integrating concepts, theories, and models of the discipline with behavioral analyses and an historical perspective. Prerequisites: BIO-182 and BIO-182L. Co-Requisite: BIO-328L.

BIO-328L: Animal Behavior Lab 1 credits

The laboratory section of Animal Behavior reinforces and expands learning of principles introduced in the lecture course. Prerequisites: BIO-182 and BIO-182L. Co-Requisite: BIO-328.

BIO-330[♦]: Pathophysiology and Pharmacology 4 credits

This course introduces the etiology, pathogenesis, morphology, and clinical manifestations associated with various altered health states and diseases. Students also learn basic principles of pharmacotherapeutics and major classes of drugs used to treat disease. Emphasis is on clinically relevant terminology required to support accurate and effective communication in the health information management field. Prerequisites: BIO-192 and BIO-192L, or BIO-202 and BIO-202L, or BIO-211 and BIO-211L.

BIO-330HN[†]: Pathophysiology and Pharmacology 4 credits

This course introduces the etiology, pathogenesis, morphology, and clinical manifestations associated with various altered health states and diseases. Students also learn basic principles of pharmacotherapeutics and major classes of drugs used to treat disease. Emphasis is on clinically relevant terminology required to support accurate and effective communication in the health information management field. Prerequisites: BIO-192 and BIO-192L.

BIO-333[♦]: Molecular and Cellular Biology 4 credits

This course is a comprehensive study of the composition, structure, energetics, regulation, and growth of eukaryotic cells. Other topics include the essential processes of cells including the correlation of structure and function at the organelle and cellular levels. As well as, principles of molecular biology including recombinant DNA technology and other approaches and method used to investigate cell structure, development, chromosome organization, gene expression, and gene regulation. Prerequisites: BIO-181 and BIO-181L.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BIO-333HN[♦]: Molecular and Cellular Biology **4 credits**

This course is a comprehensive study of the composition, structure, energetics, regulation, and growth of eukaryotic cells. Other topics include the essential processes of cells including the correlation of structure and function at the organelle and cellular levels. As well as, principles of molecular biology including recombinant DNA technology and other approaches and method used to investigate cell structure, development, chromosome organization, gene expression, and gene regulation. Prerequisites: BIO-181 and BIO-181L.

BIO-335: Medical Terminology **2 credits**

This course covers the language of medicine that will be used as a foundation for understanding upper level undergraduate and graduate level courses to follow. It will include pronunciation, definition, usage and origins of medical terms. Medical terms presented will be used to identify signs, symptoms, diagnoses, and treatment options for selected pathologies. With these skills the student will be able to effectively interpret and communicate in a healthcare setting. Prerequisite: BIO-192 or BIO-202 or BIO-211 or BIO-364.

BIO-339: Molecular Biology **4 credits**

This course examines the activity within and between cells at the molecular level. The relationship between structure and function is examined within the genome through an analysis of its impact on proteins, gene expression, and gene regulation. The application of polymerase chain reaction, DNA sequencing, and recombinant DNA techniques are discussed within the context of real-world application. Prerequisites: BIO-181 and BIO-181L.

BIO-342[†]: Analysis of Biological Diversification **4 credits**

This courses introduces students to biological change at multiple levels of life, including molecular, cellular, organismal, and population. Students will gain an understanding of the mechanisms of change and how they work, as well as the patterns that result by examining molecular and organismal data, geological time, fossil evidence, and the history of Earth and man. Prerequisites: BIO-181 and BIO-181L.

BIO-342HN[†]: Analysis of Biological Diversification **4 credits**

This courses introduces students to biological change at multiple levels of life, including molecular, cellular, organismal, and population. Students will gain an understanding of the mechanisms of change and how they work, as well as the patterns that result by examining molecular and organismal data, geological time, fossil evidence, and the history of Earth and man. Prerequisites: BIO-181 and BIO-181L.

BIO-343: Neurobiology **4 credits**

This course focuses on fundamental concepts of the nervous system, including anatomy and function at various levels of analysis. Topics include key structures, neural development, neural communication, and neural systems, as well as select neuropathologies. Prerequisites: BIO-211 and BIO-211L.

BIO-360[♦]: Medical Physiology **3 credits**

This course focuses on the normal function of human cells, tissues, and organ systems. Emphasis is placed on the interconnections and biochemical functions between systems of the body and maintenance of homeostasis. Minor emphasis is placed on the dysfunctions and resulting pathologies. Prerequisites: BIO-181 and BIO-181L. Co-Requisite: BIO-360L.

BIO-360L[♦]: Medical Physiology - Lab **1 credits**

This course involves the exploration of normal function of human cells, tissues, and organ systems through hands-on laboratory experimentation. Students develop a deeper understanding of the materials learned in BIO-360 using simulation software for human functions, systems, and pathologies. Prerequisites: BIO-181 and BIO-181L. Co-Requisite: BIO-360.

BIO-364[♦]: Vertebrate Physiology **4 credits**

This course covers the functions of cells, organs, and systems of vertebrates. Prerequisite: BIO-182, BIO-182L.

BIO-415: Vertebrate Zoology **3 credits**

This course is a study of vertebrates, including fish, amphibians, reptiles, birds, and mammals. By integrating their history, morphology, physiology, ecology, and behavioral adaptations, students will develop a greater understanding of vertebrates and how they survive effectively in their natural habitats. Prerequisites: BIO-182 and BIO-182L. Co-Requisite: BIO-415L.

BIO-415L: Vertebrate Zoology Lab **1 credits**

The laboratory section of Vertebrate Zoology reinforces and expands learning of principles introduced in the lecture course. Prerequisites: BIO-182 and BIO-182L. Co-Requisite: BIO-415.

BIO-420[†]: Conservation Biology **4 credits**

Conservation biology systematically and scientifically studies biological diversity and the events and processes that affect the maintenance, loss, and recovery of biological diversity. This courses delves into the concepts and theories behind biological diversity and environmental conservation. As an interdisciplinary field, students will also consider perspectives from ecology, economics, psychology, sociology, and financing. Prerequisites: BIO-320 and BIO-320L.

BIO-420HN[†]: Conservation Biology **4 credits**

Conservation biology systematically and scientifically studies biological diversity and the events and processes that affect the maintenance, loss, and recovery of biological diversity. This courses delves into the concepts and theories behind biological diversity and environmental conservation. As an interdisciplinary field, students will also consider perspectives from ecology, economics, psychology, sociology, and financing. Prerequisites: BIO-320 and BIO-320L.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BIO-440[♦]: Body Fluid and DNA Analysis 4 credits

The content of this lecture/laboratory course is designed to equip learners with a strong background in molecular biology as it applies to serology and forensic DNA analysis. The identification of body fluids pertinent to forensic science, with a focus on saliva, blood, and semen, is introduced. Past and present theories, methods, and techniques used in the analysis of forensic DNA evidence are addressed. DNA profiling of various fluids and tissues of forensic interest is included. Laboratory work practicing various serology and STR analysis techniques provides hands-on experience. Key components of QC/QA are featured with reference to FBI, ASCLD, and ISO guidelines. Prerequisites: CHM-360, CHM-360L, and BIO-457.

BIO-440HN^{†♦}: Body Fluid and DNA Analysis 4 credits

The content of this lecture/laboratory course is designed to equip learners with a strong background in molecular biology as it applies to serology and forensic DNA analysis. The identification of body fluids pertinent to forensic science, with a focus on saliva, blood, and semen, is introduced. Past and present theories, methods, and techniques used in the analysis of forensic DNA evidence are addressed. DNA profiling of various fluids and tissues of forensic interest is included. Laboratory work practicing various serology and STR analysis techniques provides hands-on experience. Key components of QC/QA are featured with reference to FBI, ASCLD, and ISO guidelines. Prerequisites: BIO-457, CHM-360 and CHM-360L.

BIO-457^{Δ†♦}: Genetics 4 credits

This writing intensive course provides a comprehensive examination of the principles of heredity and variation, including Mendelian, molecular, and population genetics. Students explore topics such as gene mapping, DNA structure and replication, population genetics, and molecular change. Prerequisites: BIO-181 and BIO-181L.

BIO-457HN^{Δ†♦}: Genetics 4 credits

This writing intensive course provides a comprehensive examination of the principles of heredity and variation, including Mendelian, molecular, and population genetics. Students explore topics such as gene mapping, DNA structure and replication, population genetics, and molecular change. Prerequisites: BIO-181 and BIO-181L.

BIO-458HN^{Δ†♦}: Honors Genetics 4 credits

This writing intensive course provides a comprehensive examination of the principles of heredity and variation, including Mendelian, molecular, and population genetics. Students explore topics such as gene mapping, DNA structure and replication, population genetics, and molecular change. Prerequisites: BIO-181 and BIO-181L.

BIO-460[♦]: Toxicology 4 credits

The content of this course is designed to equip learners with general principles of toxicology, forensic toxicology, and drug metabolism. Topics include chemistry and biological activities, as well as types and effects of drugs of forensic interest in biological material. Key components of QC/QA are featured with reference to FBI, ASCLD, and ISO guidelines. Prerequisites: CHM-365 and CHM-365L

BIO-470: Head and Neck Anatomy & Lab 4 credits

This course focuses on the regional anatomy and function of the human head and neck, including skeletal structure, musculature, relevant neuroanatomy, and other topics pertinent to a detailed, clinical understanding of the head and neck. This course includes a significant experiential learning component. Prerequisites: BIO-211 and BIO-211L.

BIO-475^{†♦}: Advanced Genetics 3 credits

This course presents advanced topics in genetics and genomics, including prokaryotic and eukaryotic DNA replication and repair, regulation of transcription in prokaryotes and eukaryotes, reverse transcription, mutagenesis, carcinogenesis, cancer and personalized medicine, epigenetics, genomic analyses, genomic libraries and databases, phylogenetics and bioinformatics. Prerequisite: BIO-457, BIO-205; Co-Requisite: BIO-475L.

BIO-475HN^{†♦}: Advanced Genetics 3 credits

This course presents advanced topics in genetics and genomics, including prokaryotic and eukaryotic DNA replication and repair, regulation of transcription in prokaryotes and eukaryotes, reverse transcription, mutagenesis, carcinogenesis, cancer and personalized medicine, epigenetics, genomic analyses, genomic libraries and databases, phylogenetics and bioinformatics. Prerequisite: BIO-457, BIO-205; Co-Requisite: BIO-475L.

BIO-475L^{†♦}: Advanced Genetics Lab 1 credits

This hands-on laboratory course is designed to provide a project-based experience utilizing DNA, RNA, and molecular analysis techniques. These include isolation of DNA, action and laboratory use of restriction and modification enzymes, DNA amplification, DNA sequencing, mutagenesis and cloning, gene inactivation and complementation analysis, RT-PCR, DNA and RNA gel electrophoresis, Southern and Northern blot, and expression analyses (including Western blot and DNA microarrays). Co-requisite: BIO-475.

BIO-475LHN^{†♦}: Advanced Genetics Lab 1 credits

This hands-on laboratory course is designed to provide a project-based experience utilizing DNA, RNA, and molecular analysis techniques. These include isolation of DNA, action and laboratory use of restriction and modification enzymes, DNA amplification, DNA sequencing, mutagenesis and cloning, gene inactivation and complementation analysis, RT-PCR, DNA and RNA gel electrophoresis, Southern and Northern blot, and expression analyses (including Western blot and DNA microarrays). Co-requisite: BIO-475.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BIO-479: Applied Field Research 4 credits

This course immerses students in a variety of topics related to field work, including hypothesis and methods development, principles and procedures of field methodology, data collection, analysis, and communication, and problems encountered in field research. Prerequisites: BIO-320 and BIO-320L.

BIO-483[♦]: Pathophysiology 4 credits

This course is designed to bridge the gap between basic preclinical science courses and the clinical requirements of health care/life science professionals. Systematic studies focus on the etiology, pathogenesis, morphology, and clinical manifestations associated with various altered health states and diseases. Material is presented using clinically relevant terminology that increases accurate and effective communication through extensive vocabulary expansion. Upon completion of this course, students should be able to correctly discuss a variety of disease states with health care professionals and patients while addressing the following questions: What is actually happening at the physiological level that causes the signs and symptoms of a given condition or disease? How does a change in normal physiology cause the signs and symptoms of a given condition or disease? How do these physiological effects correlate to mechanisms of accurate diagnoses? Why is one treatment method chosen over another? How do different systems intricately interrelate to cause a clinical picture and complications?. Prerequisites: One of the following combinations: BIO-201 and BIO-202; 2) BIO-210 and BIO-211; or 3) BIO-360.

BIO-483HN[♦]: Pathophysiology 4 credits

This course is designed to bridge the gap between basic preclinical science courses and the clinical requirements of health care/life science professionals. Systematic studies focus on the etiology, pathogenesis, morphology, and clinical manifestations associated with various altered health states and diseases. Material is presented using clinically relevant terminology that increases accurate and effective communication through extensive vocabulary expansion. Upon completion of this course, students should be able to correctly discuss a variety of disease states with health care professionals and patients while addressing the following questions: What is actually happening at the physiological level that causes the signs and symptoms of a given condition or disease? How does a change in normal physiology cause the signs and symptoms of a given condition or disease? How do these physiological effects correlate to mechanisms of accurate diagnoses? Why is one treatment method chosen over another? How do different systems intricately interrelate to cause a clinical picture and complications?. Prerequisites: One of the following combinations: 1) BIO-201 and BIO-202; 2) BIO-210 and BIO-211; or 3) BIO-360.

BIO-485HN[♦]: Honors Pathophysiology 4 credits

This course is designed to bridge the gap between basic preclinical science courses and the clinical requirements of health care/life science professionals. Systematic studies focus on the etiology, pathogenesis, morphology, and clinical manifestations associated with various altered health states and diseases. Material is presented using clinically relevant terminology that increases accurate and effective communication through extensive vocabulary expansion. Upon completion of this course, students should be able to correctly discuss a variety of disease states with health care professionals and patients while addressing the following questions: What is actually happening at the physiological level that causes the signs and symptoms of a given condition or disease? How does a change in normal physiology cause the signs and symptoms of a given condition or disease? How do these physiological effects correlate to mechanisms of accurate diagnoses? Why is one treatment method chosen over another? How do different systems intricately interrelate to cause a clinical picture and complications?. Prerequisites: One of the following combinations: BIO-201 and BIO-202; 2) BIO-210 and BIO-211; or 3) BIO-360.

BIO-487^{ΔΩ}: Capstone Thesis in Biology 4 credits

This writing intensive capstone course requires students to integrate and apply what they have learned in their program. To do this, students will engage in projects and assignments that will demonstrate the knowledge and research skills gained in the program, including literature review, developing a research project, data collection and analysis, and written and oral communication of findings. Prerequisite: BIO-328 or BIO-415 or BIO-457 or CHM-420.

BIO-505: A Comprehensive Overview of Phylogenetics and Ecology 4 credits

This course will give a broad overview of the classification of organisms, including prokaryotes, protists, fungi, plants, and animals. Students will discuss the importance of the various types of organisms in global and human ecology. This course will also address principles of ecology with regard to populations, communities, and global ecology. Ecological research will be analyzed, and conservation and restoration efforts will be evaluated through the use of case studies.

BIO-510: A Comprehensive Overview of Cell and Molecular Biology 4 credits

This course will cover an overview of properties of cellular organization using molecular, genetic, and cell biological approaches. This course will provide a comprehensive study of the composition, structure, energetics, regulation, and growth of eukaryotic cells. Students will also become competent in DNA structure and function, protein synthesis and gene regulation and will also learn the molecular tools for studying genes, gene cloning, and gene activity. From this fundamental perspective, students will be reviewing important scientific literature on the subject of cell biology and will examine the information through discussions, presentations, literature based essays and presentations. Prerequisite: Students should have completed an undergraduate course in cellular/molecular biology.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BIO-515: Concepts of Human Physiology I 4 credits

This course presents a selection of complex physiological mechanisms which will be explored and analyzed to provide students with a comprehensive understanding of human physiology. Topics will be introduced through a system-based approach with the inclusion of application scenarios to enhance the understanding. Prerequisite: BIO-510.

BIO-520: Concepts of Human Physiology II 4 credits

This course continues the study of complex physiological mechanisms which will be explored and analyzed to provide students with a deeper understanding of human physiology. Topics will be introduced through a systems-based approach with the inclusion of application scenarios to enhance the understanding. Prerequisite: BIO-515.

BIO-525: Concepts of Medical Microbiology 4 credits

This course provides an introduction to the principles and applications of microbiology and a study of the general characteristics of microorganisms, their activities, and their relationship to humans. Students will be introduced to developing an understanding of microbial cell structure and function, microbial growth, bacterial genetics, characteristics of viruses, interaction of microbes and humans with reference to immune responses, related pathologies, and antimicrobial control medications. Prerequisite: BIO-505, BIO-510.

Business Intelligence (BIT)

BIT-200: Introduction to Computer Technology 4 credits

This course provides the foundation of core knowledge within the field of information technology. Topics include technology-centric organizations, the type and role of fundamental information technology systems, data management to include privacy and security, e-business and m-business, hardware, software, and computer networks.

BIT-200HN[†]: Introduction to Computer Technology 4 credits

This course provides the foundation of core knowledge within the field of information technology. Topics include technology-centric organizations, the type and role of fundamental information technology systems, data management to include privacy and security, e-business and m-business, hardware, software, and computer networks.

BIT-205: Introduction to Computer Technology and Analytics 4 credits

This course introduces core components of computer, information systems, and analytics technology. Students examine how organizations use technologies to analyze business processes and data and learn fundamental skills for business analytics.

BIT-210: Object-Oriented Programming for Business 4 credits

This course provides an introduction to object-oriented programming using most current business application programming languages and tools. Students will design, create, run, and debug applications. The course emphasizes the development of correct, well-documented programs using object-oriented programming concepts. Students also learn to create GUI-based programs. Prerequisite: CST-111 or ITT-111.

BIT-301: Fundamentals in Business Analytics 4 credits

This course examines basic business analytics concepts for students in nonanalytics degree programs. Emphasis is primarily placed on descriptive analytics topics. Students are introduced to techniques relevant for describing data behavior. Prerequisites: BIT-200, BIT-205, or CST-111; and MAT-274 or BUS-352.

BIT-310: Information Systems Design and Development 4 credits

This course introduces key aspects of information systems development within the context of business information systems. Students focus on systems development with an emphasis on the system development life cycle, including requirements analysis and traceability, feasibility, and cost-benefit analysis. Systems development, deployment, and post-implementation processes are also addressed.

BIT-415[‡]: IT Project Management 4 credits

This course examines information technology project management. Topics include the reasons why IT projects fail, the business cost of IT failure, managing IT teams, outsourcing, virtual teams, scope definition, project scheduling, risk mitigation, and leading successful projects. Additional topics focus on using project management to build an analytics organization. Prerequisite: BIT-200, BIT-205, CST-111 or ITT-111.

BIT-415HN[‡]: IT Project Management 4 credits

This course examines information technology project management. Topics include the reasons why IT projects fail, the business cost of IT failure, managing IT teams, outsourcing, virtual teams, scope definition, project scheduling, risk mitigation, and leading successful projects. Additional topics focus on using project management to build an analytics organization. Prerequisite: BIT-200 or CST-110 or CST-111.

BIT-417^{Δ♦}: IT Governance and Ethics 4 credits

This writing-intensive course examines the role of governance and ethics within information technology. Topics include understanding and satisfying Sarbanes/Oxley, preparing for an information technology audit, complying with government regulations such as HIPAA, and understanding data-privacy issues. Students examine real-world case studies. Prerequisite: BIT-200, BIT-205, CST-110, or CST-111.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

BIT-417HN^{Δ♦}: IT Governance and Ethics 4 credits

This writing intensive course examines the role of governance and ethics within information technology. Topics include understanding and satisfying Sarbanes/Oxley, preparing for an information technology audit, complying with government regulations such as HIPAA, and understanding data-privacy issues. Students examine real-world case studies. Prerequisite: BIT-200, BIT-205, CST-110, or CST-111.

BIT-430[†]: Introduction to Business Analytics 4 credits

This course examines basic business analytics concepts with specific emphasis on descriptive analytics. Students are introduced to techniques and selected industry tools relevant for describing data behavior. Prerequisites: BIT-200, BIT-205, or CST-111; and MAT-274 or BUS-352.

BIT-430HN[†]: Introduction to Business Analytics 4 credits

This course examines current business intelligence practices and tools. Topics include creating an intelligent data-driven company, the role of decision-management tools, information silo busting, and design techniques for information dashboards. This course also introduces the key aspects of conducting business analytics using Microsoft Excel's Advanced features. Students examine real-world case studies. Prerequisites: BIT-200 and BUS-352.

BIT-435[♦]: Advanced Business Analytics 4 credits

This course covers key concepts related to predictive and prescriptive analytics by combining information technologies and statistical techniques to extract meaning from organizational data. Students apply predictive and prescriptive analytics techniques in order to understand the business environment and guide business-related decisions. Use of selected industry tools to apply predictive and prescriptive analytics techniques is also addressed. Prerequisite: BIT-430.

BIT-435HN[♦]: Advanced Business Analytics 4 credits

This course examines key aspects of predictive analytics by combining both information technologies and modeling techniques to extract meaning from similar and/or dissimilar organizational data. The course covers the use of quantitative techniques to translate business data into business intelligence. The key focus of the course is how to leverage information technology to build predictive models for making tactical and strategic business decisions. Prerequisites: BIT-200, BIT-430, and BUS-352.

BIT-445: Data Mining 4 credits

This course covers basic concepts and techniques related to data mining. A key goal of the course is evaluating data in order to make business-related decisions. Use of selected industry tools to perform data mining is also addressed. Prerequisite: BUS-352.

BIT-455[♦]: Current Topics in Business Analytics 4 credits

This course builds upon the techniques and tools presented in prior courses in the program and focuses on how analytics are applied in contemporary organizations. Students use critical thinking skills to frame analytics problems, build and apply appropriate analytics models, and communicate relevant findings. Prerequisites: BIT-415, BIT-435, and BIT-445.

BIT-460: Enterprise Systems Integration 4 credits

This course examines the process of integrating different systems and software applications by examining current and emerging trends, strategies, and techniques for effectively developing systems integration solutions. Prerequisites: BIT-310, BIT-415, and SYM-408.

BIT-470^{Δ†}: Strategic Information Systems Management 4 credits

This writing intensive course emphasizes the centrality of business information systems in improving enterprise strategy to drive organizational success. Students learn how to help organizations achieve competitive advantage through the strategic aligning of information systems with organizational goals. There is particular emphasis on strategies for achieving organizational goals through the deployment of information technology-based solutions. Prerequisite: BIT-310.

BIT-470HN^{Δ†}: Strategic Information Systems Management 4 credits

This writing intensive course emphasizes the centrality of business information systems in improving enterprise strategy to drive organizational success. Students learn how to help organizations achieve competitive advantage through the strategic aligning of information systems with organizational goals. There is particular emphasis on strategies for achieving organizational goals through the deployment of information technology-based solutions. Prerequisite: BIT-310.

Biomedical Engineering (BME)

BME-260: Survey of Tissue Engineering 2 credits

This course aims to introduce students to the concepts and challenges of engineering tissues which will receive greater depth in later semesters. This will include an overview of tissue scaffolding, biocompatibility, tissue growth, and the ethics of synthetic tissues. Prerequisite: ESG-162, ESG-162L, BIO-181, BIO-181L.

BME-352: Bio-Solid Mechanics & Lab 4 credits

This course introduces students to a continuum approach to biomechanics. Stress and strain relationships are mathematically derived and physically justified as applied to physiological/clinical examples. For material behaviors that are linear, elastic, homogeneous and isotropic, universal solutions are developed and explored for physiologically relevant examples. Finally, the universal solutions are applied to and tested in biological mimics. Prerequisites: MAT-364, ESG-251, PHY-121 and PHY-121L.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BME-356[♦]: Biomaterials 3 credits

This course introduces students to the guiding principles involved in biomaterials. Students will learn about the materials that are used to replace or come in contact with living systems. They also examine biocompatibility – the reaction of the human body to materials that are introduced. Additionally, a specific emphasis on the regulatory guidance of new biomaterials will be covered. Prerequisites: CHM-115, CHM-115L, and STG-330. Co-Requisite: BME-356L.

BME-356L[♦]: Biomaterials Lab 1 credits

This is the lab section of BME-356. Students engage in hands-on activities to experience how materials can be used to replace or come in contact with living systems. They also examine biocompatibility – the reaction of the human body to materials that are introduced. Additionally, students practice drafting regulatory-compliant documents. Prerequisites: CHM-115, CHM-115L, and STG-330. Co-Requisite: BME-356.

BME-360[♦]: Introduction to Biomechanics & Lab 4 credits

This course introduces students to a continuum approach to biomechanics. Stress and strain relationships are mathematically derived and physically justified as applied to physiological/clinical examples. For material behaviors that are linear, elastic, homogeneous and isotropic, universal solutions are developed and explored for physiologically relevant examples. Finally, the universal solutions are applied to and tested in biological mimics. Prerequisites: BIO-181, BIO-181L, MAT-364, ESG-251, PHY-121 and PHY-121L.

BME-361: Biomechanics & Lab 4 credits

This course is the introduction to the dynamics of human movement based on the mechanics of motion. Students will learn the mechanical analysis of human motion such as joint models, human gait, and the effect of forces on the musculoskeletal structure in motion. Prerequisite: ESG-251, PHY-122/L, MAT-364.

BME-460[♦]: Biomedical Instrumentation and Devices & Lab 4 credits

This course introduces theory of measurement and analysis from biological systems. It explores the principles and use of transducers, data recording and analysis systems, and signal processing techniques. Students will develop and utilize instrumentation to measure or transmit physiological data using computer based data acquisition. Prerequisites: EEE-202, EEE-202L, and MAT-364.

BME-465[♦]: Advanced Biomedical Instrumentation and Devices & Lab 4 credits

This course applies the knowledge and skills obtained from BME-460 (Biomedical Instrumentation and Devices & Lab) to measurements of organs and tissues. Clinical instrumentation and therapeutic and prosthetic devices are analyzed according to their design, manufacture and use. Practicum/field experience hours: None. Fingerprint clearance not required. Prerequisites: BME-460, BIO-360, and BIO-360L.

BME-471: Biomedical Design Elements I 2 credits

This course provides an overview of designing a marketable medical device. Students will design a biomedical system, component, or process to meet desired needs within realistic constraints. This includes the design process from problem definition through concept design. FDA regulation, human factors, system safety consideration, and medical product liability will be covered. Prerequisite: ESG-395.

BME-472[♦]: Biomedical Design Elements II 2 credits

This course is a continuation of Biomedical Design Elements I. It provides a comprehensive view of designing a marketable medical device. This includes the design process from prototype, and clinical testing for market readiness. Topics covered include FDA regulation, human factors, system safety consideration, and medical product liability. Prerequisite: BME-471.

BME-480[‡]: Bioimaging 3 credits

This course will explore the fundamentals of Medical Imaging and Image Processing from an engineering prospective. Students will learn the mechanisms behind different imaging modalities. Students will learn how to acquire, read, interpret, and process images generated from radiologic and optical means. Students will receive hands on training in many of the discussed modalities, and will leave the class understanding the factors which can effect the images created. This is a writing intensive course. Prerequisite: BME-460. Co-Requisite: BME-480L.

BME-480L[‡]: Bioimaging 1 credits

This course will explore the fundamentals of Medical Imaging and Image Processing from an engineering prospective. Students will learn the mechanisms behind different imaging modalities. Students will learn how to acquire, read, interpret, and process images generated from radiologic and optical means. Students will receive hands on training in many of the discussed modalities, and will leave the class understanding the factors which can effect the images created. Prerequisite: BME-460. Co-Requisite: BME-480.

Business (BUS)

BUS-232: Introduction to Sports Management 4 credits

This course is an overview of the business of sports, including career opportunities, as well as a study of the value of professional management to sports organizations.

BUS-301[♦]: Professional Success within the Fine Arts 4 credits

This course will prepare the College of Fine Arts and Production student for professional success in their chosen field. Students will research their industry, gaining critical knowledge and learning the business practices needed for post-graduation success.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

BUS-317: Financial Decision Making 4 credits

This course is an exploration of the financial reports and tools used by managers to make decisions and analyze the performance of a business entity.

BUS-330: Business Process Design 4 credits

This course introduces intelligent business process management applications and the technical skills required to design and implement process modeling and user interfaces. Students apply critical thinking and problem solving in model development and efficient end-user displays. The course prepares students for the advanced topics of case design, data modeling, and business reporting.

BUS-332: Customer Engagement 4 credits

This course introduces models and practices used for engagement with customers, prospects, suppliers, and internal stakeholders and the communications strategies and tactics needed to build and sustain long-term and mutually satisfying relationships that add value in today's economy. Customer Relationship Management (CRM) technology will also be introduced. Prerequisite: MKT-315

BUS-340^{Δ♦}: Ethical and Legal Issues in Business 4 credits

This writing-intensive course is a comprehensive study of the legal and ethical issues of concern to business, including those areas of the U.S. legal system that are most relevant to business, such as the law of torts, strict liability, intellectual property, and contract law. It explores the role of ethics and values in business decision making and approaches these subjects from the perspective of the stakeholders as opposed to an economic interpretation of the firm and its responsibilities.

BUS-340HN^{Δ♦}: Ethical and Legal Issues in Business 4 credits

This writing intensive course is a comprehensive study of the legal and ethical issues of concern to business, including those areas of the U.S. legal system that are most relevant to business, such as the law of torts, strict liability, intellectual property, and contract law. It explores the role of ethics and values in business decision making, and approaches these subjects from the perspective of the stakeholders as opposed to an economic interpretation of the firm and its responsibilities.

BUS-352♦: Business Statistics 4 credits

This course provides an introduction to the practical application of descriptive and inferential statistics in business. Topics include probability, probability distributions, the central limit theorem, confidence intervals, hypothesis testing, correlation, and regression. Prerequisite: MAT-134, MAT-144 or MAT-154.

BUS-364♦: Sports Law 4 credits

This course is a presentation of the basic legal system, its terminology, and principles as applied to professional and amateur sports. Emphasis is on identifying and analyzing legal issues, the ramifications of those issues, and the means of limiting the liability of sports organizations. Prerequisite: BUS-340 or BUS-316.

BUS-372: Sports Event Planning 4 credits

This course provides an introduction to event planning for athletic, recreational, entertainment, and special events. An emphasis is placed on budgeting, site selection, sponsorship, and facility management. Prerequisites: BUS-232 and MKT-315.

BUS-390♦: Global Business 4 credits

This course surveys the global business environment with an emphasis on international markets and the global supply chain that impact all organizations and consumers. Students learn about basic international trade and currency issues and strategies to enter global markets successfully. Students focus on communication tools and negotiation tactics to enhance their cultural competence and business acumen.

BUS-435: Methods of Teaching Business in Middle and Secondary Schools 4 credits

This course is designed to help middle and secondary school teachers develop effective instructional strategies for teaching in the discipline of business. Emphasis is given to teaching methodologies that encourage project-based learning, problem solving, learner engagement, and effective assessment practices. Practicum/field experience hours: 15. Fingerprint clearance required.

BUS-470^Δ: Applied Business Project 4 credits

In this writing-intensive course, students investigate challenges facing contemporary organizations and recommend solutions based on research and critical analysis. Students integrate major concepts learned throughout their program to formulate problem statements, employ quantitative and qualitative data collection methods, and communicate recommendations that satisfy the needs of diverse stakeholders.

BUS-476: Conscious Capitalism: Free Market Perspectives 4 credits

This upper-division business course frames the topic of free market capitalism on the structure of conscious capitalism's four pillars: higher purpose, servant leadership, culture, and stakeholder orientation and provides additional perspectives on various approaches to free market capitalism today. The course begins by providing a historical foundation of capitalism and a consideration of the principles of economic freedom and concludes by exploring new narratives on capitalism and how modern business integrates with society. Case studies are used to provide in-depth analysis and highlight how business is used as a force for good in helping communities and human flourishing.

BUS-485^{ΔΩ}: Strategic Management 4 credits

This writing-intensive course serves as the capstone experience in business and management that includes the gradual development of a comprehensive and integrative business plan. This course is designed to assist students in their development as managers, servant leaders, and successful strategic thinkers. Management, marketing, accounting, finance, economics, global perspectives, law, and political issues are covered during this course. Prerequisites: MGT-420 or MGT-422HN; FIN-210 or FIN-350; and MKT-245 or MKT-315.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

BUS-485HN^Δ: Strategic Management **4 credits**

This writing intensive course serves as the capstone experience in business and management that includes the gradual development of a comprehensive and integrative business plan. This course is designed to assist students in their development as managers, servant leaders, and successful strategic thinkers. Management, marketing, accounting, finance, economics, global perspectives, law, and political issues are covered during this course. It is a writing intensive course that will help students develop competencies such as critical thinking, effective communication, leadership, and global awareness. Prerequisites: FIN-350, MGT-240 or MGT-420, MKT-245, and senior status.

BUS-499: Independent Study **1 credits**

This involves research, seminars, or readings on a special topic selected by the student and the faculty advisor as appropriate. This course may be taken for one, two, three, or four credits, depending on the amount of time and work involved, and may be repeated for up to four credits total per subject area unless specified otherwise in requirements for a major.

BUS-600: Financial Fundamentals for Managers **4 credits**

This course introduces basic accounting and finance principles relevant for managers. Students become familiar with basic financial statements, cash flow concepts, cost behavior, budgeting, and analytical tools.

BUS-623: Business Law and Ethics for Accounting **4 credits**

This course gives students a robust legal and ethical framework that is crucial for accountants and managers under Sarbanes-Oxley. Using case studies that incorporate the principles of business law, the AICPA code, and other systems of ethics, students learn how a commitment to ethics can enable accounting professionals to meet their ethical obligations to all stakeholders. Prerequisite: ACC-616.

BUS-635: Sports Business Revenue Generation **4 credits**

This course discusses the principles and strategies associated with generating revenue in the sports business industry.

BUS-655: Sports Business Analytics **4 credits**

This course emphasizes sports marketing research with the focus on teaching students how to obtain the data, insights, and intelligence needed in every area of sports marketing, sports media, and sponsorship in order to most effectively maximize value for brands, rights holders, agencies, and media.

BUS-660: Quantitative Methods **4 credits**

This course is a study in the quantitative tools and techniques used to model business functions and applications. Emphasis is placed on how to set up models, and how to interpret and apply their results. Prerequisite: SYM-506.

BUS-676: Advanced Conscious Capitalism: Free Market Perspectives **4 credits**

This graduate business course is structured around the emerging constructs of conscious capitalism's four pillars: higher purpose, servant leadership, culture, and stakeholder orientation and introduces the construct of economics of mutuality (EOM). This course begins with a historical foundation of capitalism and principles of economic freedom and then progresses to new narratives on capitalism and how business integrates with society. New forms of capital are introduced through EOM concepts. Case studies are used to provide in-depth analysis and highlight how purpose, stakeholder integration, and nonfinancial capital can contribute to people, planet, and profits, highlighting business elevating humanity in helping communities and human flourishing.

Christian Counseling (CCN)

CCN-601: Biblical Foundations for Counselors: The Story of God **3 credits**

This course is a narrative approach to the theology of God, humanity, and salvation. Students learn to apply the story of the Bible to the life and practice of the Christian counselor.

CCN-650: Spiritual Formation: Becoming a Healthy Practitioner **3 credits**

This course provides an introduction to spiritual formation with attention to classical spiritual disciplines and stages of growth. This course includes an exploration into personal spiritual health and character development with implications for counseling practice. Prerequisite: CCN-601.

CCN-655: Biblical Concepts-Healthy Relationships: Forgiveness & Healthy Spirituality **3 credits**

This course explores relational health in connection with topics including self-assessment, forgiveness, reconciliation with God and others, and the pursuit of spiritual health. Personal practice and implementation in professional counseling are emphasized. Prerequisite: CCN-650.

CCN-675: Integration of Scripture with Counseling Theory **3 credits**

In this course, students explore the integration of the Christian worldview into counseling theory and practice. Emphasis is placed on the nature and purpose of human beings from a biblical perspective as well as ethical issues pertinent to the Christian counselor, while critically evaluating contemporary secular theories and practices. Prerequisite: CCN-655.

Computer Engineering (CEE)

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CEE-300: Data Structures, Algorithms, and Numerical Recipes 4 credits

This course introduces students to data structures and algorithms. Students will learn the computational procedures for processing input data to obtain the desired output, including algorithm design, testing, and troubleshooting. Students will learn how to implement algorithms and numerical methods in a programming language. Prerequisite: EEE-212.

CEE-312: Advanced Embedded Systems Design & Lab 4 credits

This course combines hardware and firmware design aspects of embedded systems. Students will learn how to design an embedded system from the ground up, applying fundamentals of discrete mathematics and digital logic. Hands-on activities will focus on problem solving using scientific computation tools and programming. This is a project-based course, in which the students will design FPGA and microcontroller-based hardware and develop embedded software to solve real-world problems. Prerequisite: EEE-315.

CEE-440: Applied Research in Computer Engineering 4 credits

This course introduces advanced topics in computer engineering, with emphasis on current research and innovations. Utilizing scientific research and journal publications, students will learn about the most recent hardware and software developments in computer engineering. Prerequisites: EEE-320 and CEE-473.

CEE-473: Computer Engineering Design Principles I & Lab 2 credits

This course introduces students to the principles of computer engineering design. Students will learn to produce computer engineering designs that consider system requirements, engineering standards, and regulatory compliance. Students will apply engineering sciences, economics, and standards to design digital devices, circuits, and systems to solve real-world problems. Hands-on activities focus on the design and integration of different subsystems. Prerequisite: CEE-312. Co-Requisite: ESG-451.

CEE-474: Computer Engineering Design Principles II & Lab 2 credits

This project-based course will consolidate the student's knowledge of the computer engineering design process, from concept to manufacturing. It provides depth to the design process that enables students to contribute to the solution of real-world engineering problems. Prerequisite: CEE-473.

Christian Leadership (CHL)

CHL-510: Biblical Foundations of Christian Leadership 4 credits

This course provides students with a biblical foundation from the Old and New Testaments on Christian Leadership. In studying the Scriptures in their historical, cultural, and linguistic contexts, students gain an appreciation of principles of leadership and develop a theology of leadership centered on the narrative and teaching of Scripture. Issues of call, formation, character, purpose, service, and discipleship are addressed. This course requires supervised ministry hours. Practicum/field experience hours: 45.

CHL-630: Best Practices in Christian Leadership 4 credits

This course provides students with the opportunity to engage significant insights of contemporary leadership practice in order to integrate these insights into an effective and informed and integrated philosophy of Christian leadership. In this course, the student investigates some of the most helpful principles and people regarding the practice and the concept of leadership and organizational leadership. This course requires supervised ministry hours. Practicum/field experience hours: 45. Prerequisite: CHL-510.

CHL-650: Leading Through Crisis, Conflict and Change 4 credits

This course is an investigation into the dynamics of crisis, conflict, and change, and how to address these realities in Christian leadership. This course requires supervised ministry hours. Practicum/field experience hours: 45. Prerequisite: CHL-520 or CHL-630.

Chemistry (CHM)

CHM-101[♦]: Introduction to General, Organic, and Biochemistry 3 credits

An introduction to the principles of chemistry; designed for students without a strong background in science. Topics covered include a survey of the chemical and physical properties of elements and compounds, chemical reactions, chemical energetics, acids and bases, and chemical bonding. An introduction to organic and biochemistry emphasizes the relationship between molecular structure and function. Co-requisite: CHM-101L.

CHM-101L[♦]: Introduction to General, Organic, and Biochemistry Lab 1 credits

This lab course is designed to compliment and support the principles being addressed in CHM-101. Students learn basic lab techniques related to general and organic chemistry, building upon and strengthening foundational knowledge such as stoichiometry and reaction types. Additionally, some topics are addressed from a biochemical standpoint to highlight application to daily living. Co-requisite: CHM-101.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CHM-110[♦]: General and Organic Chemistry 3 credits

This course provides an introduction to the principles of chemistry, including chemical and physical properties of elements and compounds and chemical reactions. As an introduction to organic chemistry, this course also emphasizes molecular structure as it relates to function. Co-Requisite: CHM-110L.

CHM-110L[♦]: General and Organic Chemistry Lab 1 credits

The laboratory section of General and Organic Chemistry reinforces and expands learning of principles introduced in the lecture course. Co-Requisite: CHM-110.

CHM-111[♦]: General and Organic Chemistry II 3 credits

An introduction to the principles of chemistry, including chemical and physical properties of elements and compounds and chemical reactions. As an introduction to organic chemistry, this course also emphasizes molecular structure. Prerequisite: CHM-110. Co-Requisite: CHM-111L.

CHM-111L[♦]: General and Organic Chemistry II Lab 1 credits

The laboratory section of General and Organic Chemistry reinforces and expands learning of principles introduced in the lecture course. Prerequisite: CHM-110L. Co-Requisite: CHM-111.

CHM-113[♦]: General Chemistry I-Lecture 3 credits

This is the first course of a two-semester introduction to chemistry intended for undergraduates pursuing careers in the health professions and others desiring a firm foundation in chemistry. The course assumes no prior knowledge of chemistry and begins with basic concepts. Topics include an introduction to the scientific method, dimensional analysis, atomic structure, nomenclature, stoichiometry and chemical reactions, the gas laws, thermodynamics, chemical bonding, and properties of solutions. Co-Requisite: CHM-113L.

CHM-113L[♦]: General Chemistry I - Lab 1 credits

The laboratory section of CHM-113 reinforces and expands learning of principles introduced in the lecture course. Experiments include determination of density, classification of chemical reactions, the gas laws, determination of enthalpy change using calorimetry, and determination of empirical formula. Co-Requisite: CHM-113.

CHM-115[♦]: General Chemistry II-Lecture 3 credits

This is the second course of a two-semester introduction to chemistry intended for undergraduates pursuing careers in the health professions and others desiring a firm foundation in chemistry. Upon successful completion of this course, students demonstrate knowledge and/or skill in solving problems involving the principles of chemical kinetics, chemical equilibrium, and thermodynamics; understanding chemical reactions using kinetics, equilibrium, and thermodynamics; comparing and contrasting the principal theories of acids and bases; solving equilibrium involving acids, bases, and buffers; describing solubility equilibrium; describing terms associated with electrochemistry and solving problems associated with electrochemistry; and describing fundamentals and applications of nuclear chemistry and organic chemistry. Prerequisites: CHM-113 and MAT-154 or higher. Co-Requisite: CHM-115L.

CHM-115L[♦]: General Chemistry II - Lab 1 credits

The laboratory section of CHM-115 reinforces and expands learning of principles introduced in the lecture course. Experiments include determination of rate law, examples of Le Châtelier's principle, the use of pH indicators, buffer preparation, experimental determination of thermodynamic quantities, the use of electrochemical cells, and qualitative and quantitative analysis. Prerequisites: CHM-113L and MAT-154 or higher. Co-Requisite: CHM-115.

CHM-231[♦]: Organic Chemistry I 3 credits

This course is the first of two organic chemistry courses. The first half of this course develops the vocabulary and concepts of chemical bonding, chemical structure, acid-base principles, and nomenclature needed to understand properties and reactions of organic compounds. The second half of this course discusses chemical reactions, including radical reactions, substitution and elimination reactions, and synthesis and reactions of alkenes. Students learn how to predict reaction products and draw reaction mechanisms. Organic synthesis and structural determination are also covered. Instruction includes lecture and in-class problem solving. Prerequisites: CHM-115 and CHM-115L. Co-requisite: CHM-231L.

CHM-231L[♦]: Organic Chemistry I Lab 1 credits

The laboratory section of CHM-231 reinforces principles learned in the lecture course through various techniques that organic chemists use to synthesize compounds. Students use these techniques throughout the semester. These techniques include determination of melting point, determination of solubility, thin layer chromatography, recrystallization, and distillation. Structural determination using theories discussed in CHM-231 is applied to unknown compounds. Prerequisites: CHM-115 and CHM-115L. Co-requisite: CHM-231.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CHM-232[♦]: Organic Chemistry II **3 credits**

This course is the second of two organic chemistry courses. The course is organized by common organic functional groups, including alkynes, alcohols, ether, aromatic compounds, ketones and aldehydes, amines, carboxylic acid, and carboxylic acid derivatives. The reactions and properties of each functional group are discussed. Students learn how to predict reaction products, draw reaction mechanisms, and predict physical properties. Instruction includes lecture and in-class problem solving. Prerequisites: CHM-231 and CHM-231L. Co-Requisite: CHM-232L.

CHM-232L[♦]: Organic Chemistry II Lab **1 credits**

The laboratory section of CHM-232 supports and extends principles learned in the lecture course. Students carry out various organic syntheses using techniques taught in CHM-231. The experiments include preparation of an alkene from an alcohol, a Grignard reaction, preparation of cinnamaldehyde, nitration of methyl benzoate, synthesis of N-Methyl Prozac, an Aldol reaction, Benzimidazole synthesis, and a Diazonium coupling reaction. Prerequisites: CHM-231 and CHM-231L. Co-requisite: CHM-232.

CHM-235[♦]: Survey of Organic Chemistry **3 credits**

This course is a survey of basic structure and reactivity of carbon-containing structures with examples in biological and industrial processes. Students will learn how to name organic compounds, draw and understand their structures in two and three dimensions, and learn how structure and reactivity are interrelated. Students will be able to describe reactivity in terms of addition, elimination, and substitution. Biological compounds discussed in the course include the structure and reactivity of carbohydrates and polysaccharides followed by amino acids and proteins. The final topic for the course is a discussion about industrially important polymers. Prerequisites: CHM-115 and CHM-115L. Co-Requisite: CHM-235L.

CHM-235L[♦]: Survey of Organic Chemistry Lab **1 credits**

This is the lab section of CHM-235. It supports the lecture with hands-on activities. Lab experiments expand students' understanding of organic compounds, drawing and understanding their structures in two and three dimensions, and learning how structure and reactivity are interrelated. Students will be able to describe reactivity in terms of addition, elimination, and substitution. Biological compounds discussed in the course include the structure and reactivity of carbohydrates and polysaccharides followed by amino acids and proteins. The final topic for the course is a discussion about industrially important polymers. Prerequisites: CHM-115 and CHM-115L. Co-Requisite: CHM-235.

CHM-315[♦]: Analytical Chemistry **3 credits**

This course introduces advanced principles and theory of quantitative analysis, including stoichiometry, equilibria, photometric methods, electrochemistry, separation processes, statistical data analysis, and applications to advanced topics in analytical chemistry. Sampling strategies and sample preparation for analysis will also be discussed. Prerequisite: CHM-235, CHM-235L or CHM-231, CHM-231L. Co-Requisite: CHM-315L.

CHM-315HN[♦]: Analytical Chemistry **3 credits**

This course introduces advanced principles and theory of quantitative analysis, including stoichiometry, equilibria, photometric methods, electrochemistry, separation processes, statistical data analysis, and applications to advanced topics in analytical chemistry. Sampling strategies and sample preparation for analysis will also be discussed. Prerequisite: CHM-235, CHM-235L or CHM-231, CHM-231L. Co-Requisite: CHM-315L.

CHM-315L[♦]: Analytical Chemistry Lab **1 credits**

This course will discuss the fundamental principles of analytical chemistry. Topics will include sampling strategies, sample preparations and analysis, instrument operation, data collection and statistical analysis, and presentation of results. Prerequisites: CHM-235 and CHM-235L or CHM-231 and CHM-231L. Co-Requisite: CHM-315.

CHM-315LHN[♦]: Analytical Chemistry Lab **1 credits**

This course will discuss the fundamental principles of analytical chemistry. Topics will include sampling strategies, sample preparations and analysis, instrument operation, data collection and statistical analysis, and presentation of results. Prerequisites: CHM-235 and CHM-235L or CHM-231 and CHM-231L. Co-Requisite: CHM-315.

CHM-333[♦]: Structure Determination in Organic Chemistry **4 credits**

This course discusses the theory and application of spectroscopic methods/techniques useful for the determination of the molecular structures of organic molecules. Topics covered include chemical tests for functional group identification and modern instrumental techniques used for structure determination: ultraviolet/visible, infrared, and nuclear magnetic resonance spectroscopy and mass spectrometry. The major emphasis of this course is on structure determination by way of interpreting the data (generally in the form of a spectrum or spectra) that each method provides. Prerequisite: CHM-232 & CHM-232L.

CHM-350[†]: Fundamental Biochemistry **3 credits**

This course provides an introduction to the properties, structure, function, thermodynamics, and basic genetics of macromolecules, including proteins, enzymes, nucleic acids, carbohydrates, and lipids. The course also covers how living systems synthesize and utilize these macromolecules and how that relates to energy production and use. Prerequisites: CHM-111 and CHM-111L. Co-Requisite: CHM-350L.

CHM-350HN[†]: Fundamental Biochemistry **3 credits**

This course provides an introduction to the properties, structure, function, thermodynamics, and basic genetics of macromolecules, including proteins, enzymes, nucleic acids, carbohydrates, and lipids. The course also covers how living systems synthesize and utilize these macromolecules and how that relates to energy production and use. Prerequisites: CHM-111 and CHM-111L. Co-Requisite: CHM-350L.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CHM-350L^Δ: Fundamental Biochemistry Lab 1 credits

This laboratory course introduces techniques for analyzing macromolecules including carbohydrates, lipids, proteins, and nucleic acids. It also explores basic biochemical pathways utilized by living systems that enable cellular function. Prerequisites: CHM-111 and CHM-111L. Co-Requisite: CHM-350.

CHM-350LHN^Δ: Fundamental Biochemistry Lab 1 credits

This laboratory course introduces techniques for analyzing macromolecules including carbohydrates, lipids, proteins, and nucleic acids. It also explores basic biochemical pathways utilized by living systems that enable cellular function. Prerequisites: CHM-111 and CHM-111L. Co-Requisite: CHM-350.

CHM-360^Δ: Principles of Biochemistry 3 credits

The course objective is to survey basic biochemical principles, including the composition, structure, and function of proteins, nucleic acids, lipids, and carbohydrates. Important biochemical principles include structure-function correlation, chemical reactivity, kinetics and equilibrium, thermodynamics, membrane structure and function, and metabolic energy pathways. The application of biochemical concepts in the medical field is emphasized. Prerequisite: BIO-181, BIO-181L, CHM-231, CHM-231L. Co-Requisite: CHM-360L.

CHM-360HN^Δ: Principles of Biochemistry 3 credits

The course objective is to survey basic biochemical principles, including the composition, structure, and function of proteins, nucleic acids, lipids, and carbohydrates. Important biochemical principles include structure-function correlation, chemical reactivity, kinetics and equilibrium, thermodynamics, membrane structure and function, and metabolic energy pathways. The application of biochemical concepts in the medical field is emphasized. Prerequisite: BIO-181, BIO-181L, CHM-231, CHM-231L. Co-Requisite: CHM-360L.

CHM-360L^Δ: Principles of Biochemistry - Lab 1 credits

This laboratory course covers modern biochemical laboratory techniques and their theoretical foundations. Topics include methods for protein, nucleic acid, and lipid isolation and characterization; enzyme assays; chromatography; electrophoresis; and representing and manipulating proteins and nucleic acids. Experiments are designed for hands-on experimentation and students acquire practical techniques currently used in biochemistry laboratories. Prerequisite: BIO-181, BIO-181L, CHM-231, CHM-231L. Co-Requisite: CHM-360.

CHM-360LHN^Δ: Principles of Biochemistry - Lab 1 credits

This laboratory course covers modern biochemical laboratory techniques and their theoretical foundations. Topics include methods for protein, nucleic acid, and lipid isolation and characterization; enzyme assays; chromatography; electrophoresis; and representing and manipulating proteins and nucleic acids. Experiments are designed for hands-on experimentation and students acquire practical techniques currently used in biochemistry laboratories. Prerequisites: BIO-181 and BIO-181L, and one of the following combinations: 1) CHM-331 and CHM-331L or 2) CHM-231 and CHM-231L. Co-requisite: CHM-360.

CHM-365^Δ: Instrumental Analysis 3 credits

This course introduces students to the quantitative, qualitative, and instrumental analysis of various sample types. Methods for selecting proper techniques to answer various questions are discussed. Analytical methods for the qualitative and quantitative analyses of sample by gas chromatography, mass spectroscopy, infrared spectroscopy, fluorescence spectroscopy, capillary and gel electrophoresis, and ultraviolet and visible spectroscopy are also covered. Other techniques, such as high-pressure liquid chromatography and thin layer chromatography, are discussed as well. Prerequisites: 1) CHM-231 and CHM-231L, or 2) CHM-235 and CHM-235L. Co-Requisite: CHM-365L.

CHM-365HN^Δ: Instrumental Analysis 3 credits

This course introduces students to the quantitative, qualitative, and instrumental analysis of various sample types. Methods for selecting proper techniques to answer various questions are discussed. Analytical methods for the qualitative and quantitative analyses of sample by gas chromatography, mass spectroscopy, infrared spectroscopy, fluorescence spectroscopy, capillary and gel electrophoresis, and ultraviolet and visible spectroscopy are also covered. Other techniques, such as high-pressure liquid chromatography and thin layer chromatography, are discussed as well. Prerequisites: 1) CHM-231 and CHM-231L, or 2) CHM-235 and CHM-235L. Co-Requisite: CHM-365L.

CHM-365L^Δ: Instrumental Analysis Lab 1 credits

The laboratory section of CHM-365 reinforces and expands learning of principles introduced in the lecture course. This course allows students to apply quantitative, qualitative, and instrumental analysis of various sample types. Focus is on the validity of results. Analytical methods for the qualitative and quantitative analyses of sample by gas chromatography, mass spectroscopy, infrared spectroscopy, fluorescence spectroscopy, capillary and gel are also covered. Prerequisites: 1) CHM-231 and CHM-231L, or 2) CHM-235 and CHM-235L. Co-Requisite: CHM-365.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CHM-365LHN[♦]: Instrumental Analysis Lab 1 credits

The laboratory section of CHM-365 reinforces and expands learning of principles introduced in the lecture course. This course allows students to apply quantitative, qualitative, and instrumental analysis of various sample types. Focus is on the validity of results. Analytical methods for the qualitative and quantitative analyses of sample by gas chromatography, mass spectroscopy, infrared spectroscopy, fluorescence spectroscopy, capillary and gel are also covered. Prerequisites: 1) CHM-231 and CHM-231L, or 2) CHM-235 and CHM-235L. Co-Requisite: CHM-365.

CHM-420^{Δ♦}: Environmental Chemistry 3 credits

This writing intensive course focuses on the fundamental chemical principles involved in environmental phenomena and how they are influenced by human actions. Prerequisite: CHM-115.

CHM-440: Toxicology & Instrumental Analysis 4 credits

This course introduces students to the quantitative, qualitative, and instrumental analysis of various biological and non-biological sample types. Analytical methods for the qualitative and quantitative analyses of samples by various chromatography and spectroscopy techniques are detailed. The toxicological section of this course is designed to equip learners with general principles of toxicology, forensic toxicology, and drug metabolism. Topics include chemistry and biological activities, as well as types and effects of drugs of forensic interest in biological material. Prerequisites: CHM-231 and CHM-231L.

CHM-441[♦]: Physical Chemistry I 3 credits

A study of the physical and chemical behavior of substances at the macroscopic and molecular levels. Topics include behavior of single substances and mixtures, thermodynamics, chemical reactions, and equilibria. Prerequisites: CHM-115, CHM-115L, and MAT-262. Co-Requisite: CHM-441L.

CHM-441L[♦]: Physical Chemistry I Lab 1 credits

A laboratory course designed to complement and support the principles being learned in CHM-441 lecture. Prerequisites: CHM-115, CHM-115L, and MAT-262. Co-Requisite: CHM-441.

CHM-444[♦]: Physical Chemistry II 3 credits

This course is a study of the physical and chemical behavior of substances at the molecular level. Topics include quantum chemistry, molecular structure and spectra, molecular reaction dynamics, and statistical mechanics. Prerequisites: CHM-441, PHY-121 and PHY-121L. Co-Requisite: CHM-444L.

CHM-444L[♦]: Physical Chemistry II Lab 1 credits

This is a laboratory course designed to complement and support the principles being learned in CHM-444. Prerequisites: CHM-441, PHY-121 and PHY-121L. Co-Requisite: CHM-444.

CHM-448[♦]: Inorganic Chemistry 3 credits

The objective of this course is to provide basic principles and applications of inorganic chemistry. Students will learn about modern atomic structure, structure and bonding in molecules and simple solids, transition metals and coordination chemistry, molecular symmetry, descriptive chemistry of select elements, chemistry of materials, and catalysis. Prerequisites: CHM-444 and CHM-444L. Co-Requisite: CHM-448L.

CHM-448L[♦]: Inorganic Chemistry Lab 1 credits

The objective of this course is to learn about a variety of methods and techniques in the synthesis, isolation, characterization, and handling of inorganic and organometallic compounds. Students will also learn about proper interpretation of experimental data, and dissemination of experimental results through presentation and writing technical reports. Prerequisites: CHM-444 and CHM-444L. Co-Requisite: CHM-448.

CHM-451[♦]: Pharmacology I 4 credits

This course presents the foundational concepts of pharmacology emphasizing basic mechanisms of drug action. Pharmacodynamics and pharmacokinetics principles and theories are presented. The course details the development of the current understanding of receptor signal transduction in mammalian systems. The course introduces the molecular biochemistry of receptor structure; mass action considerations governing ligand-receptor binding interactions; molecular pharmacology associated with signal transduction; and specific considerations of receptors as pharmaceutical targets. Following this introduction, a systematic study of the effects of drugs on representative organ systems and disease processes, the mechanisms by which drugs produce their therapeutic and toxic effects, and the factors influencing their absorption, distribution, and biological actions. Prerequisites: CHM-232 and CHM-232L, CHM-360, and CHM-360L. BIO-205 and BIO-205L, or BIO-215 and BIO-215L.

CHM-451HN[♦]: Pharmacology I 4 credits

This course presents the foundational concepts of pharmacology emphasizing basic mechanisms of drug action. Pharmacodynamics and pharmacokinetics principles and theories are presented. The course details the development of the current understanding of receptor signal transduction in mammalian systems. The course introduces the molecular biochemistry of receptor structure; mass action considerations governing ligand-receptor binding interactions; molecular pharmacology associated with signal transduction; and specific considerations of receptors as pharmaceutical targets. Following this introduction, a systematic study of the effects of drugs on representative organ systems and disease processes, the mechanisms by which drugs produce their therapeutic and toxic effects, and the factors influencing their absorption, distribution, and biological actions. Prerequisites: CHM-232 and CHM-232L, CHM-360, and CHM-360L. BIO-205 and BIO-205L, or BIO-215 and BIO-215L.

CHM-452[♦]: Pharmacology II 4 credits

This course is a continuation of Pharmacology I. Concepts and principles learned in the previous course are applied to additional organ systems and disease processes. Topics include cardiovascular drugs, chemotherapeutic drugs, endocrine drugs, and drugs of abuse. Prerequisite: CHM-451.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CHM-460[♦]: Advanced Biochemistry 3 credits

This course presents advanced topics in biochemistry, including mechanisms of metabolic and environmental information transfer, cellular signal transduction mechanisms, metabolic pathway interrelationships and regulation, carbohydrate, lipid and nitrogen metabolism, and the cell cycle and regulation.

Prerequisites: CHM-360 and CHM-360L. Co-Requisite: CHM-460L.

CHM-460HN[♦]: Advanced Biochemistry 3 credits

This course presents advanced topics in biochemistry, including mechanisms of metabolic and environmental information transfer, cellular signal transduction mechanisms, metabolic pathway interrelationships and regulation, carbohydrate, lipid and nitrogen metabolism, and the cell cycle and regulation.

Prerequisites: CHM-360 and CHM-360L. Co-Requisite: CHM-460L.

CHM-460L[♦]: Advanced Biochemistry Lab 1 credits

This hands-on laboratory course is designed to provide a project-based experience utilizing modern biochemical techniques. This course will reinforce proper experimental design and control and will provide students with experience with several biochemical techniques, including DNA, RNA, and protein extraction from tissue and its analysis. This course will reinforce troubleshooting, confounds to analysis, and application of various techniques to reach a target goal. Co-requisite: CHM-460.

CHM-460LHN[♦]: Advanced Biochemistry Lab 1 credits

This hands-on laboratory course is designed to provide a project-based experience utilizing modern biochemical techniques. This course will reinforce proper experimental design and control and will provide students with experience with several biochemical techniques, including DNA, RNA, and protein extraction from tissue and its analysis. This course will reinforce troubleshooting, confounds to analysis, and application of various techniques to reach a target goal. Co-requisite: CHM-460.

CHM-470: Biochemical Applications & Lab 4 credits

This hands-on, experience-based course provides an interdisciplinary investigation of molecular, biochemical, and organic chemistry applications and techniques. This course prepares students in the design, performance, and analysis of a research-based project. Prerequisite: CHM-360, CHM-360L.

CHM-505: Concepts of Medicinal Chemistry 4 credits

This focus of the course is the fundamentals of medicinal chemistry. Medicinal chemistry is an organic-chemistry-based discipline that interfaces strongly with the biological and pharmaceutical sciences. The field of medicinal chemistry includes the discovery and preparation of biologically active compounds; the study of their metabolism; the mechanism of action at the molecular level; and the construction of structure-activity relationships. This course includes the process of drug design, the structure and function of macromolecular drug "targets" (receptors, enzymes, nucleic acids), as well as the mechanisms by which drugs interact with their targets. Also, the complexity of human physiology and its effects which on the physical and chemical properties of a drug candidate can influence its absorption, distribution, and metabolism in a human patients will be discussed. Prerequisites: Students should have completed a year of organic chemistry and a course in biochemistry.

CHM-510: Concepts of Physical Chemistry 4 credits

The objective of this course is to provide a foundational knowledge on basic principles and applications of physical chemistry. The following topics will be covered: chemical kinetics, chemical equilibrium, and thermodynamics. Additional topics will include applications of physical chemistry principles towards chemical and biological systems including enzymatic reactions; time-dependent chemical and nuclear reactions; electrochemistry; and equilibria related to acids, bases, buffers, and solubility. Prerequisite: Students should have completed a year of general chemistry.

CHM-515: Concepts of Inorganic Chemistry 4 credits

The objective of this course is to provide a foundational knowledge on basic principles and applications of inorganic chemistry. The following topics will be covered: modern atomic structure, nomenclature of inorganic compounds, bonding theory, magnetism, periodic trends, and chemical reactivity. Additional topics include fundamentals of organometallic chemistry and transitional element chemistry and their application towards material properties, catalysis, and bioinorganic chemistry. Prerequisite: Students should have completed a year of general chemistry.

CHM-520: Concepts of Analytical Chemistry 4 credits

The objective of this course is to provide basic and advanced theories, techniques, and principles of qualitative and quantitative analysis. Additional topics may include application of concepts of analytical chemistry to the fields of environmental science, forensic science, and medicine. Students should have a prior understanding of basic quantitative statistics. Prerequisite: CHM-505, CHM-510, CHM-515.

CHM-525: Current Topics in Chemistry 4 credits

This course surveys the broad areas of contemporary chemistry research and illustrates the application of chemistry principles. The topics will be determined by current events, technology, faculty and student interest.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CHM-530: Concepts of Biochemistry 4 credits

The objective of this course is to survey basic biochemical principles, including the composition, structure, and function of proteins, nucleic acids, lipids, and carbohydrates. Important biochemical principles, including structure-function correlation, kinetics and equilibrium, thermodynamics, membrane structure and function, and metabolic energy pathways, will illustrate the key concepts of biology and chemistry.

Counseling (CNL)

CNL-500^Ω: Theories and Models of Counseling 3 credits

This course provides a comprehensive survey of the major counseling theories and principles. Coursework includes the following theories: psychoanalytic, Adlerian, existential psychotherapy, behavioral, cognitive behavioral, person-centered, reality therapy/choice theory, and rational emotive behavioral therapy (REBT).

CNL-501: Substance Use Disorders and Addictions 3 credits

This course provides a broad understanding of the stages, processes, and effects of substance use disorders, biological, social, and psychological dynamics of substance use disorders, and the professional's role in prevention, intervention, and aftercare, including recovery and relapse prevention. This course explores theories and models of treatment of addiction disorders to include understanding different types of addiction disorders, effective skills, drug classification, and assessment. It also continues building foundational knowledge, utilization of professional resources, and exploration of standards to help students prepare for licensure/certification within the counseling industry.

CNL-505^Ω: Professional Counseling, Ethical, and Legal Considerations 3 credits

This course provides a broad understanding of counseling ethics, legal standards, and responsibilities, including professional identity, report writing, record keeping, and service reimbursement for clinical mental health and school counselors. Additionally, the history of and current trends in counseling are addressed. Important goals of this course are to help students develop a strong personal and professional ethic, as well as an appreciation of the value of professional collaboration and identity.

CNL-509^Ω: Counseling the Culturally Diverse 3 credits

This course provides a broad understanding of issues and trends in a multicultural and diverse society. Studies in this area include the following: attitudes and behaviors based on such factors as age, race, religious preference, physical disability, sexual orientation, ethnicity and culture, family patterns, gender, socioeconomic status and intellectual ability; individual, family, group, and community strategies for working with diverse populations; theories of multicultural counseling and identity development; multicultural competencies; and issues such as substance use disorders. Students examine a variety of cultural populations in multiple regions of the United States, exploring issues and trends that are associated with each population. Cultural considerations for immigrants, refugees, and undocumented citizens are also addressed.

CNL-515^Ω: Counseling Skills 3 credits

This course provides a broad understanding of counseling processes, including characteristics and behaviors that influence the helping processes. Included are age, gender, ethnic differences, verbal and nonverbal behaviors, personal characteristics, and orientations. The development of counseling techniques is emphasized, including establishing and maintaining the counseling relationship; diagnosing and identifying the problem; formulating a preventative, treatment, or rehabilitative plan; facilitating appropriate interventions; and successfully terminating the counseling relationship.

CNL-518^Ω: Lifespan and Development 3 credits

This course provides an understanding of the nature, needs, and differing abilities of individuals at all developmental levels. Theories of individual and family development, transitions across the life span, theories of learning, theories of personality development, and ethical and cultural strategies for facilitating optimum development over the life span are addressed.

CNL-520^Ω: Group Counseling 3 credits

This course provides a broad understanding of group development, group dynamics, group counseling theories, and ethical standards with reference to professional and substance use disorders counseling. The course addresses group process components, appropriate selection criteria, developmental stage theories, group members' roles and behaviors; and group leadership styles and approaches. The course includes didactic and experiential group learning. Required synchronous group experience: 12 hours. Prerequisite: CNL-515.

CNL-521: Counseling Couples and Families 3 credits

This course provides a broad understanding of the structure and dynamics of the family, which includes theory, assessment, and methods of marital and family intervention and counseling.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CNL-523: Assessment, Tests, and Measurements 3 credits

This course provides an introduction to basic tests and appraisal in counseling. Individual and group approaches to testing, assessment, evaluation, behavioral observations, computer-managed and computer-assisted methods are addressed. The following statistical concepts are also addressed: scales of measurement, measures of central tendency, indices of variability, shapes and types of distributions, correlations, reliability, and validity.

CNL-525: Career Counseling 3 credits

This course provides a broad understanding of career development and related life factors including psychotherapy, career counseling techniques and processes, career development theories, decision-making models, issues of diversity, and interrelationships between work and family.

CNL-527: Principles of Psychopharmacology 3 credits

This course introduces students to the basic principles of psychopharmacology and the effects of psychoactive substances. Students examine the behavioral, psychological, physiological and social effects of psychoactive substance use, and learn to recognize symptoms of intoxication, withdrawal, and toxicity. The class covers various screening options, limitations, legal implications, and the utilization of pharmacotherapy as part of substance addiction treatment.

CNL-530: Human Sexuality and Issues of Aging 3 credits

This course is divided into two distinct and separate sections. The first part of the course examines human sexuality and systems of sexual therapy. Psychological, biological, social, and moral perspectives on sexual development and functioning are also examined. The last part of the course provides an understanding of the nature of aging and older adults. Theories and strategies for facilitating optimum care of older adults are addressed. Elder abuse, dependent adult abuse, and neglect of the aging and older adults are explored. Sexuality, mental health, physical health, the role of substance use disorders, and family issues are also addressed.

CNL-540^Δ: Research Methods and Program Evaluation 3 credits

This course introduces research methods and basic statistical analysis, including the following: the importance of research, opportunities for research, and difficulties in conducting research. Research methods such as qualitative, quantitative, single-case designs, action research, and outcome-based research are addressed.

CNL-542: Consulting in Counseling 3 credits

This course provides an overview of the consulting process and dynamics as they relate to the counseling field. The course covers theoretical approaches, models, strategies, and the use of psychoeducation in the consultation process in various settings including counseling. The course also reviews the various roles and functions of a counselor in multiple settings, including human services, education, multidisciplinary, and integrated behavioral health care system.

CNL-545: Abuse, Crisis, and Trauma Counseling 3 credits

This eight-topic course is divided into three distinct and separate sections. The first three topics examine crisis intervention and trauma counseling; Theories and strategies of trauma counseling and facilitating crisis interventions are also addressed. The second three topics examine spousal or partner abuse assessment, detection, and intervention strategies. The legal and ethical issues, the role of substance use disorders, and children in families where domestic violence and abuse occur are also addressed. The last two topics examine child abuse assessment and reporting. Legal and ethical issues and specific California child abuse assessment and reporting codes are also examined.

CNL-600: GCU NCE Readiness Course 0 credits

This course is designed for learners to prepare to take the National Counseling Exam (NCE). The instructor-led, virtual, accelerated course includes a review of the eight content areas of the NCE, knowledge of test structure, exposure to sample test questions, and an opportunity for learners to create an individualized action plan.

CNL-605: Psychopathology 3 credits

This course introduces the study of mental illnesses and the science of psychopathology. The goal is to provide counseling students a conceptual understanding of psychological and behavioral dysfunction that occurs in mental illnesses. The course includes a survey of major psychiatric disorders and their causes.

CNL-610: Clinical Assessment, Diagnosis, and Treatment 3 credits

This course provides a conceptual framework for the use of assessment and diagnostic tools for the development of appropriate treatment interventions for a variety of behavioral health and substance use disorders. Included is an introduction to the use of the diagnostic tools, including the DSM, and the integration of diagnostic and assessment information, in the development of treatment plans.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CNL-624: Counseling Practicum 2 credits

The practicum course is a distinctly defined, supervised clinical fieldwork experience in which the student develops basic counseling skills and integrates professional knowledge under the supervision of a faculty member or an on-site clinical site supervisor approved by the college or university with a minimum of 1 hour per week of individualized and/or triadic supervision throughout the practicum. Practicum students participate in an average of 1 ½ hours per week of group supervision via Zoom with a counseling faculty member or student supervisor who is under the supervision of a counselor education program faculty member on a regular schedule throughout the practicum. Documentation of a minimum requirement of 100 hours of counseling-related activities, which includes 40 direct client contact hours, is submitted directly to the college's Office of Field Experience for verification and tracking. The practicum is completed prior to the internship; therefore, students may not progress to CNL-664A without the required amount of hours submitted, the required amount of individual and group supervision, and proper approval. This course has multiple synchronous required activities. Students must be prepared to be flexible in meeting the demands of this course in order to progress to the internship. Practicum/field experience hours: 100. State licensure requirements may mandate additional hours. Students must review and adhere to their state board's additional requirements. Prerequisites: Completion of all didactic coursework in the program; a GPA of 3.0 or better; and maintenance of student professional liability insurance in the amount of \$1 million, \$3 million.

CNL-624A: Counseling Practicum II 2 credits

This is a continuation of the counseling practicum. The practicum course is a distinctly defined, supervised clinical fieldwork experience in which the student develops basic counseling skills and integrates professional knowledge under the supervision of a faculty member or an on-site clinical site supervisor approved by the college or university with a minimum of 1 hour per week of individualized and/or triadic supervision throughout the practicum. Practicum students participate in an average of 1 ½ hours per week of group supervision via Zoom with a counseling faculty member or student supervisor who is under the supervision of a counselor education program faculty member on a regular schedule throughout the practicum. Documentation of a minimum requirement of 100 hours of counseling-related activities, which includes 40 direct client contact hours, is submitted directly to the college's Office of Field Experience for verification and tracking. The practicum is completed prior to the internship; therefore, students may not progress to CNL-664A without the required amount of hours submitted, the required amount of individual and group supervision, and proper approval. This course has multiple synchronous required activities. Students must be prepared to be flexible in meeting the demands of this course in order to progress to the internship. Practicum/field experience hours: 100. Students must complete the minimum amount of hours required. State licensure requirements may mandate additional hours. Students must review and adhere to their state board's additional requirements. Prerequisites: CNL-624; a GPA of 3.0 or better; maintenance of student professional liability insurance in the amount of \$1 million, \$3 million; and college approval.

CNL-644: Assessment of Mental and Emotional Health Status 2 credits

Students in this course are introduced to a variety of testing instruments used to determine a client's emotional or mental status. Assessment procedures are explored within the context of diagnosis and treatment planning. This course focuses on the administration and interpretation of individual and group standardized tests of mental ability, personality, and measurement.

CNL-645: Telehealth/Telemedicine in the Helping Professions 2 credits

This course provides the foundation for utilizing telehealth/telemedicine in the helping professions, including technology evaluation, best practices, state and federal regulations, and ethics. In addition, the benefits and limitations of telehealth/telemedicine are discussed.

CNL-664A: Counseling Internship I 4 credits

The internship course is a distinctly defined, supervised clinical experience in which the student refines and enhances basic counseling and student development of knowledge and skills, and integrates and authenticates professional knowledge and skills related to program objectives. The internship is performed under the supervision of an on-site clinical site supervisor approved by the college or university with an average of 1 hour per week of individualized and/or triadic supervision throughout the internship. Internship students participate in a minimum of 1 ½ hours per week of group supervision via Zoom with a counseling faculty member or student supervisor who is under the supervision of a counselor education program faculty member on a regular schedule throughout the internship. Documentation of 300 hours of counseling-related activities, which includes a required minimum of 120 direct client contact hours, is submitted directly to the college's Office of Field Experience for verification and tracking. Internship hours: A minimum of 300 total hours of which 120 is total direct hours. Students must successfully complete CNL-624 before progressing to the internship. This course has multiple synchronous required activities. Students must be prepared to be flexible in meeting the demands of this course in order to meet the internship requirements. Practicum/field experience hours: 300. State licensure requirements may mandate additional hours. Students must review and adhere to their state board's additional requirements. Prerequisites: CNL-624; a GPA of 3.0 or better; maintenance of student professional liability insurance in the amount of \$1 million, \$3 million; and college approval.

Δ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

CNL-664B: Counseling Internship II 4 credits

The internship course is a distinctly defined, supervised clinical experience in which the student refines and enhances basic counseling and student development of knowledge and skills, and integrates and authenticates professional knowledge and skills related to program objectives. The internship is performed under the supervision of an on-site clinical site supervisor approved by the college or university with an average of 1 hour per week of individualized and/or triadic supervision throughout the internship. Internship students participate in a minimum of 1 ½ hours per week of group supervision via Zoom with a counseling faculty member or student supervisor who is under the supervision of a counselor education program faculty member on a regular schedule throughout the internship. Documentation of 300 hours of counseling-related activities, which includes a required minimum of 120 direct client contact hours, is submitted directly to the college's Office of Field Experience for verification and tracking. This course has multiple synchronous required activities. Students must be prepared to be flexible in meeting the demands of this course in order to meet the internship requirements. Practicum/field experience hours: 300. State licensure requirements may mandate additional hours. Students must review and adhere to their state board's additional requirements. Prerequisites: CNL-624 and CNL-664A; a GPA of 3.0 or better; maintenance of student professional liability insurance in the amount of \$1 million, \$3 million; and college approval.

CNL-664C: Counseling Internship III 1 credits

This is a continuation of the counseling internship. The internship course is a distinctly defined, supervised clinical experience in which the student refines and enhances basic counseling and student development of knowledge and skills, and integrates and authenticates professional knowledge and skills related to program objectives. The internship is performed under the supervision of an on-site clinical site supervisor approved by the college or university with an average of 1 hour per week of individualized and/or triadic supervision throughout the internship. Internship students participate in a minimum of 1 ½ hours per week of group supervision via Zoom with a counseling faculty member or student supervisor who is under the supervision of a counselor education program faculty member on a regular schedule throughout the internship. Documentation of a minimum of 300 hours of counseling-related activities, which includes a minimum of 40 direct client contact hours, is submitted directly to the college's Office of Field Experience for verification and tracking. This course has multiple synchronous required activities. Students must be prepared to be flexible in meeting the demands of this course in order to meet the internship requirements. Practicum/field experience hours: 300. State licensure requirements may mandate additional hours. Students must review and adhere to their state board's additional requirements. Prerequisites: CNL-664B; a GPA of 3.0 or better; maintenance of student professional liability insurance in the amount of \$1 million, \$3 million; and college approval.

Communications (COM)

COM-100♦: Fundamentals of Communication 4 credits

This course is an introduction to the field of communication with emphasis on the history of communication study, relevant communication theories guiding current research, the contexts in which communication occurs, and issues faced by students of communication. The course focuses on introducing students to various communication models as well as theories and skills in interpersonal communication, small group communication, mass communication, intercultural communication, and public communication.

COM-210♦: Public Speaking 4 credits

This basic course in oral communication uses focused content to practice the principles of effective oral presentation. The lectures, speaking assignments, and all written work will acquaint the student with the theory, practice, and necessary technological literacy required for effective message building and presentation.

COM-211HN[†]♦: Honors Public Speaking 4 credits

This basic course in oral communication uses focused content to practice the principles of effective oral presentation. The lectures, speaking assignments, and all written work will acquaint the student with the history, theory, practice, and necessary technological literacy required for effective message building and presentation.

COM-222♦: Small Group Communication 4 credits

This course examines the principles and processes of small groups and the development of skills for participation and leadership in small group settings, as well as practice in problem solving, decision making, critical reasoning, and information sharing.

COM-263[^]♦: Elements of Intercultural Communication 4 credits

This writing-intensive course focuses on improving communication among people with different racial, ethnic, cultural, and minority backgrounds. Students explore verbal and nonverbal communication behaviors in a variety of communication media and contexts. Communication styles, rituals, and traditions are explored through an examination of mass media, family structure, religion, politics, education, social life, art, and literature.

COM-302♦: Writing for the Media 4 credits

This course is a study of the content, styles, and formats of media writing, with an emphasis on the differences in writing across diverse media modalities.

COM-312♦: Conflict and Negotiation 4 credits

This course is designed to introduce the concepts and theories relevant to understanding conflict communication and the negotiation process. In this course, students are introduced to various elements of conflict and negotiation communication across a variety of contexts including interpersonal, organizational, and international. Upon completion of this course, students will be able to analyze power dynamics in relationships, identify conflict styles and tactics, and apply intervention techniques in contexts that are relevant to their future relationships and careers.

[^] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

COM-333: Communication Ethics 4 credits

This course introduces students to the study of ethics as it applies in the communication field. As aspiring communication professionals, students need to learn how to engage in communication that is not only appropriate but also responsive to sound ethical principles. In this course, students learn about major ethical theories and explore how these theories are applied in workplace communication, interpersonal relationships, mass media, and intercultural communication contexts.

COM-355[♦]: Communication Research Methods 4 credits

This course provides an overview of the concepts, methods, and tools for communication research design, implementation, interpretation, and critical evaluation in communication research. Prerequisite: COM-100.

COM-355HN[♦]: Communication Research Methods 4 credits

This course provides an overview of the concepts, methods, and tools for communication research design, implementation, interpretation, and critical evaluation in communication research. Prerequisites: ENG-106, COM-100, and MAT-144.

COM-362[♦]: Argumentation and Advocacy 4 credits

This course introduces students to the relationship between argumentation and advocacy as well as the role of worldviews in shaping the arguments surrounding relevant social issues. This course presents the concepts and skills related to the study of argumentation. Students are introduced to the principles and elements of argumentation in everyday communication across contexts, as well as the skills necessary in constructing and evaluating written and oral arguments.

COM-362HN[♦]: Argumentation and Advocacy 4 credits

This course introduces students to the relationship between argumentation and advocacy as well as the role of worldviews in shaping the arguments surrounding relevant social issues. This course presents the concepts and skills related to the study of argumentation. Students are introduced to the principles and elements of argumentation in everyday communication across contexts, as well as the skills necessary in constructing and evaluating written and oral arguments.

COM-370[♦]: Principles of Public Relations 4 credits

This course investigates the principles and theories of public relations. Students receive an overview of the function and practices of the growing public relations industry in both profit and nonprofit contexts. This course examines the relationships between the public relations practitioner and various groups including clients, consumers, employees, and media.

COM-451^{Δ♦}: Relational Communication 4 credits

This writing-intensive course focuses on the communication processes in personal relationships such as romantic relationships, family relationships, and friendships. Through quantitative and qualitative methods and other theoretical perspectives, students in this class examine the expression and interpretation of messages in everyday personal interactions as well as significant relational events. Students also explore communication processes involved in developing, maintaining, and dissolving relationships, how communication impacts partners and their relationships, and how to improve relational quality or individual well-being through communication.

COM-451HN^{Δ♦}: Relational Communication 4 credits

This writing intensive course focuses on the communication processes in personal relationships such as romantic relationships, family relationships, and friendships. Through quantitative and qualitative methods and other theoretical perspectives, students in this class examine the expression and interpretation of messages in everyday personal interactions as well as significant relational events. Students also explore communication processes involved in developing, maintaining, and dissolving relationships, how communication impacts partners and their relationships, and how to improve relational quality or individual well-being through communication. Prerequisite: COM-355.

COM-453[♦]: Darkside Communication and Forgiveness in Relationships 4 credits

In this course, students explore the dark side communication behaviors that lead to relational dissolution and the communication behaviors that can facilitate relational repair or restoration. Students explore the impact of deception, betrayal, and aggression in more depth and research the process elements of forgiveness and reconciliation in order that they might be a redeeming influence in their personal relationships.

COM-455[♦]: Nonverbal Communication in Relationships 4 credits

In this course, students explore the unique impact that nonverbal communication has in creating and maintaining interpersonal relationships. Building upon knowledge of interpersonal communication gained in previous courses, students in this course dive deeper into how nonverbal choices influence intimacy, self-disclosure, relational satisfaction and maintenance, conflict resolution, and a range of other interpersonal topics of current research in order to become more effective communicators in their close personal relationships. Prerequisite: COM-100.

COM-456[♦]: Organizational Communication 4 credits

The course covers historical and contemporary organizational theory and application across organizational contexts of corporate communication, team/small group communication, and interpersonal communication. Organizational theory and application topics, including leadership, are covered within each major area.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

COM-456HN♦: Organizational Communication 4 credits

The course covers historical and contemporary organizational theory and application across organizational contexts of corporate communication, team/small group communication, and interpersonal communication. Organizational theory and application topics, including leadership, are covered within each major area.

COM-457♦: Workplace Relationships 4 credits

In this course, students learn what it takes to build healthy relationships in the workplace. Students investigate the role of motivation, emotional intelligence, diversity, and ethical behavior in promoting effectiveness at work. The class focuses on “people” skills and utilizing these skills in an increasingly team-based and customer-oriented workplace. Content provides opportunities to become more effective in discerning, ethical, flexible, and perceptive behaviors while working with people. Special attention is given to the challenges students will face in interpersonal communication at work and the opportunities that a workplace environment offers in building social virtuosity.

COM-461♦: Media Theory 4 credits

This course provides students with an overview of media effects and the complex relationship of media producers and users (audiences). Students examine the role of media and media messages in both traditional and new media platforms, learning about different forms of storytelling to influence audiences.

COM-463♦: Broadcasting and Podcasting 4 credits

In this course, students learn the basic knowledge and skills necessary for creating broadcast and podcast messages. Students acquire a better understanding of the communication necessary in the preproduction, production, and postproduction stages of broadcasting and podcasting. Course materials include a special focus on auditory and audiovisual presentation elements for presentation on screen and support roles off camera and off air.

COM-465♦: Digital Media and Culture 4 credits

This course provides students the opportunity to acquire a deeper understanding of how digital technologies are transforming our society and culture. It also offers them the tools to analyze a wide variety of media texts targeted to multiple audiences while exploring the cultural issues raised by new communication technologies.

COM-471♦: Communication Theory of Political Campaigns 4 credits

Through an examination of relevant philosophical theories, students examine the concept of power and how it influences political communication strategies. Students learn how to apply theories to current political situations.

COM-472♦: Training and Development 4 credits

This course is designed to help students develop an understanding of training and development in an organizational setting with a particular focus on teaching communication skills and learning the art and science of designing, developing, delivering, and evaluating training and development programs. Training and development as a career field is a significant focus. Prerequisite: COM-355.

COM-473♦: Political Address 4 credits

In this course, students learn how to create and transmit messages designed for a political campaign. Students, either as a future candidate or speechwriter, analyze and create political addresses, speak and debate with limited preparation, and respond to different crisis that arise in campaigns.

COM-475♦: Communication Campaigns 4 credits

Communication campaigns use a myriad of persuasive strategies to reach a specified audience. This course emphasizes the theoretical art of persuasion and strategic applications in communication campaigns. Students analyze a variety of social, political, environmental, health, and marketing campaigns. Additionally, students design and institute a communication campaign of their choosing. Prerequisite: COM-355.

COM-477♦: Political Campaign Management 4 credits

In this course, students learn how to successfully manage a political campaign office. Through examination of group dynamics and management techniques, students gain practical skills such as analyzing community demographics, appropriately communicating, and adapting to the community.

COM-490♦: Communication Capstone 4 credits

This course includes a culminating reflection and collection of integral works from students' time in the major. Students engage in research specific to their career or graduate school goals and develop a project that displays what they have learned while in the program. Students are exposed to practitioners in the communication field. Students are taught how to effectively communicate their research and develop other skills that support a successful transition into the workforce or graduate school. Prerequisite: COM-333, COM-355.

COM-496♦: Special Topics in Communication 4 credits

In this course, students explore contemporary issues in communication theory, research, and practice. It features subjects of importance in communications that involve research, reading, presentations, and discussions in a seminar format. Featured subjects could be culture, mass media, interpersonal relationships, business, politics, faith, or such other subjects that invite scholarly communication inquiry and serious, focused discussion.

COM-500: Relationships in the Workplace 4 credits

This course focuses on theories of interpersonal communication and their application in a variety of professional contexts. The course builds upon a foundation of relational communication theories to address problems that arise in workplace relationships, including leadership communication, managing emotions at work, working in groups, and becoming social influencers. The course builds skills in direct and indirect messaging, listening, managing perceptions and workplace identity, negotiating conflict, and more.

Δ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

COM-505: Organizations, Culture, and Society 4 credits

This course covers theoretical approaches to organizational culture; the processes by which organizations, create, manage, and modify organizational culture; and the ways in which organizational culture is communicated to both internal and external audiences. The course also investigates organizations' larger relationships with society through examining corporate social responsibility, public policy, and ethics and by considering how organizations manage these spheres of influence and weigh business decisions in the larger context of the collective community in which organizations operate.

COM-510: Strategic Communication 4 credits

This course focuses on the concepts and theories of strategic communication and their relevance for constructing effective and ethical organizational messages for diverse audiences. The course prepares communicators to make organizational messages meaningful to stakeholders within organizations as well as stakeholders outside organizations. Through an emphasis on real-world applications, students learn how to ethically and effectively persuade through carefully crafted, contextually sensitive messages. The course does so by examining principles and theories of argumentation, persuasion, and behavior change. Students practice skills associated with these concepts as they apply to future career contexts.

COM-515: Training, Learning and Pedagogy 4 credits

This course emphasizes principles of pedagogy and student learning in the context of communication studies. Students are encouraged to apply education frameworks and praxis-based training to a communication classroom. Through an emphasis on real-world organizational development, traditional theories of student comprehension, and modern pedagogy, this course prepares students to teach a diverse and eclectic range of communication courses.

COM-520: Media Literacy 4 credits

Students in this course learn the underlying theories, methodologies, and effects of media consumption. This course emphasizes the role and influence of television, radio, social media, internet blogs and websites, and other media outlets on a globalized, interconnected world. The course builds on these concepts by encouraging students to critically evaluate ever-present media messages through applied projects and group work.

COM-525: Organizational Communication 4 credits

This course investigates the interactions between organizational structure and communication within organizations. Theoretical and methodological analyses are emphasized. Specifically, students in the course examine how discourse, meanings, symbols, and information flow in organizational context.

CST-105♦: Computer Programming I 4 credits

This course introduces the fundamental concepts and syntax of the Java programming language. The course focuses on object-oriented techniques in Java with an emphasis on problem solving and fundamental algorithms.

CST-105N♦: Computer Programming I 4 credits

This course introduces the fundamental concepts and syntax of the Java programming language. The course focuses on object-oriented techniques in Java with an emphasis on problem solving and fundamental algorithms.

CST-111♦: Introduction to Computer Science and Information Technology 4 credits

This course provides a foundation for programming and problem solving using computer programming, as well as an introduction to the academic discipline of IT. Topics include variables, expressions, functions, control structures, and pervasive IT themes: IT history, organizational issues, and relationship of IT to other computing disciplines. The course prepares students for advanced concepts and techniques in programming and information technology, including object-oriented design, data structures, computer systems, and networks. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing code that implements concepts discussed in lecture and on gaining initial exposure to common operating systems, enterprise architectures, and tools commonly used by IT professionals. Prerequisite: MAT-154 or MAT-261.

CST-120: Introduction to Web Development 4 credits

This course introduces the fundamental concepts and syntax of the web development languages including HTML, CSS, and JavaScript. The course focuses on foundation required to build complex dynamic web applications.

CST-135♦: Computer Programming II 4 credits

This course focuses on software development using the Java programming language. The course exposes the relationships between machine architecture and data organization through Java-based projects, including algorithmic machines. Prerequisite: CST-105.

CST-135N♦: Computer Programming II 4 credits

This course focuses on software development using the Java programming language. The course exposes the relationships between machine architecture and data organization through Java-based projects, including algorithmic machines. Prerequisite: CST-105N.

CST-150: Programming in C# I 4 credits

This course provides an introduction to the fundamentals of C# programming language. The course covers program design and development, debugging techniques, structured and object-oriented programming and basic GUI elements.

Computer Science (CST)

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

CST-201[♦]: Algorithms and Data Structures 4 credits

This course covers classical algorithms and data structures, with an emphasis on implementation and application in solving real-world computational problems. The course focuses on algorithms for sorting, searching, string processing, and graphs. Students learn basic strategies to evaluate divide-and-conquer, recursive backtracking, and algorithm efficiency. Hands-on activities focus on writing code that implements concepts and algorithm implementation techniques. Prerequisite: CST-210 or CST-239 or CST-135 or CST-250 or CST-227.

CST-210[♦]: Object-Oriented Programming Lecture & Lab 4 credits

This course provides an in-depth coverage of object-oriented programming using most current application programming methods, languages, and tools. Students will design, create, run, and debug applications. The course emphasizes the development of correct, well-documented programs using object-oriented programming concepts. Prerequisite: CST-111 or CST-105.

CST-211[♦]: Programming for Engineering & Lab 4 credits

This course provides students with the basic concepts of programming. Students will solve engineering problems by designing and modularizing solutions with proper use of functions and objects. They will understand good techniques of programming style, as well as have the ability to design, code, debug, and document program solutions. Prerequisite: MAT-261.

CST-213HN[♦]: Computer Programming III & Lab 4 credits

This course covers user interfaces, event and exception handling, Java I/O, and the collection framework. Students build applications using software engineering methods including design models and implementation/testing strategies, while learning to assume professional responsibilities. Prerequisite: CST-115.

CST-215[♦]: Digital Logic and Design Lecture & Lab 4 credits

This is an introductory course in discrete mathematics with digital logic. Topics covered include Boolean algebra, circuits, number theory, sequences, recursion, sets, functions, and counting. An emphasis will be placed on writing computer programs that address key concepts discussed in lecture. Prerequisite: MAT-261 or CST-111 or CST-105.

CST-217[♦]: Principles of Database Design and Programming Lecture & Lab 4 credits

This course provides students with the technical skills required to design and implement a database solution using a SQL server. Students use data definition language (DDL) to create and delete database objects, and data manipulation language (DML) to access and manipulate those objects. Students gain hands-on experience with database design, data normalization, SQL sub-queries, creating and using views, understanding and working with data dictionaries, and loading and unloading databases. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing code that implements concepts discussed in the lecture course, specifically creating databases and SQL queries. Prerequisite: CST-105.

CST-217HN[♦]: Principles of Database Design and Programming Lecture & Lab 4 credits

This course provides students with the technical skills required to design and implement a database solution using a SQL server. Students use data definition language (DDL) to create and delete database objects, and data manipulation language (DML) to access and manipulate those objects. Students gain hands-on experience with database design, data normalization, SQL sub-queries, creating and using views, understanding and working with data dictionaries, and loading and unloading databases. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing code that implements concepts discussed in the lecture course, specifically creating databases and SQL queries. Prerequisite: CST-110 or CST-111.

CST-221[♦]: Operating Systems Concepts 4 credits

This course is an introduction to UNIX-derived open-source operating systems. Students explore the history and development trends in open-source OS. The course covers the file system, user commands and utilities, graphical user interfaces, editors, manual pages, and shells. Prerequisite: CST-135 or CST-239.

CST-227N: Enterprise Applications Programming II 4 credits

This course combines coverage of advanced features of the C# programming language with building complex enterprise applications. Students acquire advanced techniques in managing program flow, the application lifecycle, security, and data access. Prerequisite: CST-117N.

CST-235[♦]: Computer Programming III 4 credits

This course covers user interfaces, event and exception handling, Java I/O, and the collection framework. Students build applications using software engineering methods including design models and implementation/testing strategies, while learning to assume professional responsibilities. Prerequisite: CST-135.

CST-235HN[♦]: Computer Programming III 4 credits

This course covers user interfaces, event and exception handling, Java I/O, and the collection framework. Students build applications using software engineering methods including design models and implementation/testing strategies, while learning to assume professional responsibilities. Prerequisite: CST-135.

CST-235N[♦]: Computer Programming III 4 credits

This course covers user interfaces, event and exception handling, Java I/O, and the collection framework. Students build applications using software engineering methods including design models and implementation/testing strategies, while learning to assume professional responsibilities. Prerequisite: CST-135N.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CST-236♦: Database Application Programming II 4 credits

This course focuses on the development of dynamic web applications using frameworks such as PHP and Python to interact with MySQL and web servers. Students learn to design, prototype, and deploy dynamic, database-driven websites with basic security layers. Prerequisite: CST-126.

CST-239: Programming in Java II 4 credits

This course focuses on software development using the Java programming language. The course focuses on advanced object-oriented techniques in Java along with advanced topics including file I/O, generics, collections, multi-threading, networking, and unit testing. Prerequisite: CST-105.

CST-239N: Programming in Java II 4 credits

This course focuses on software development using the Java programming language. The course focuses on advanced object-oriented techniques in Java along with advanced topics including file I/O, generics, collections, multi-threading, networking, and unit testing. Prerequisite: CST-105.

CST-239XV: Programming in Java II 4 credits

This course focuses on software development using the Java programming language. The course focuses on advanced object-oriented techniques in Java along with advanced topics including file I/O, generics, collections, multi-threading, networking, and unit testing. Prerequisite: CST-105.

CST-247N: Enterprise Applications Programming III 4 credits

This course focuses on the development of dynamic web applications using ASP.NET and C#. Students employ test-driven programming methodologies to develop secure, high-performance, database driven applications. Prerequisite: CST-227N.

CST-250: Programming in C# II 4 credits

This course combines coverage of advanced features of the C# programming language with building complex desktop applications. Students acquire advanced techniques in managing program flow, the application lifecycle, security, and data access. Prerequisite: CST-150 or CST-117.

CST-256♦: Database Application Programming III 4 credits

This course focuses on the design and implementation of complex, secure, optimized, and scalable MySQL databases. Students develop high performance database applications using frameworks such as PHP and Python. Prerequisite: CST-236.

CST-301: Principles of Programming Languages Lecture and Lab 4 credits

This course introduces the syntax and semantics of programming languages, program construction and software design. Lab activities will focus on analyzing the characteristics of context-free languages and solving a variety of languages construction challenges. Prerequisite: CST-201, CST-307.

CST-305♦: Principles of Modeling and Simulation Lecture & Lab 4 credits

This course covers applications of differential equations in modeling and simulation. Students use mathematical models for continuous and discrete simulation, and develop applications for complex systems across a variety of domains. Students learn how to represent a system by a model and then execute the model to generate and statistically analyze data. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing code that implements differential equation based modeling algorithms and visual simulations. Prerequisite: CST-201, CST-215, MAT-264.

CST-307♦: Introduction to Computer Architecture Lecture & Lab 4 credits

This course introduces current trends in computer architecture with a focus on performance measurement, instruction sets, computer arithmetic, design and control of a data path, pipelining, memory hierarchies, input and output, and a brief introduction to multiprocessors. The laboratory reinforces and expands learning of principles introduced in the lecture course. Hands-on activities focus on writing assembly language code that implements concepts discussed in the lecture course, focusing on registers, processes, threads, and I/O management. Prerequisites: (CST-210 and CST-215), or EEE-315.

CST-310♦: Computer Graphics Lecture & Lab 4 credits

This course covers 2D and 3D concepts, algorithms, and implementation methods using shader-based programming. Main topics covered include coordinate systems, transformations, material simulation, and animation. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing vertex shaders and fragment shaders to implement light equations for coloring effects, textures, materials, and animation. Prerequisites: CST-201, MAT-262, and MAT-345.

CST-315♦: Operating Systems Lecture & Lab 4 credits

This course explains the concepts, structure, and mechanisms of modern operating systems. The course covers computational resources, such as memory, processors, networks, security, and how the programming languages, architectures, and operating systems interact. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing a shell that implements process management, file management, and I/O management. Prerequisite: CST-307.

CST-320^A♦: Human-Computer Interaction and Communication Lecture & Lab 4 credits

This course reviews the basic principles, tools, and techniques used in computer applications that enable communication, visualization, access to information, learning and entertainment. Students learn the methods of designing, implementing and evaluating techniques for effective communication in a technical, business, education or entertainment context. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on experiencing and implementing concepts discussed in the lecture. Students create applications that communicate ideas efficiently and are easy to use. This is a writing intensive course. Prerequisites: CST-201, MAT-262, and (CST-217 or CST-341).

^A Writing intensive course | ♦ Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CST-321: Operating Systems Fundamentals 4 credits

This course is an introduction to UNIX-derived open-source operating systems. Students explore the history and development trends in open-source OS. The course covers the file system, user commands and utilities, graphical user interfaces, editors, manual pages, and shells. Prerequisite: CST-239 or CST-135 or CST-250 or CST-227.

CST-323♦: Cloud Computing 4 credits

This course examines cloud computing and its transformative impact on the IT industry. Students develop applications using a Software-as-a-Service (SaaS) model. The course examines the most important APIs used in leading industry cloud service providers. Students will learn how to use the cloud as the infrastructure for existing and new services. Prerequisite: CST-339 or CST-341 or CST-235 or CST-391.

CST-326[△]: Written and Verbal Communication for Software Development 4 credits

This course focuses on gathering User Stories and decomposing them into a requirements document, design spec, and technically managing activities associated with software development. Topics cover the managerial aspect of the software development life cycle, delivery, and integration. Hands-on activities focus on communication using professional Agile-based project management software to implement a system for planning, tracking, and auditing the use of resources within the context of a software project. This is a writing intensive course. Prerequisite: CST-239 or CST-135 or CST-250 or CST-227.

CST-339: Programming in Java III 4 credits

This course focuses on the development of dynamic web applications using the Spring framework and the Java programming language. Students employ design and programming methodologies to develop secure, high-performance, database driven applications. Prerequisite: CST-239 or CST-135.

CST-339N: Programming in Java III 4 credits

This course focuses on the development of dynamic web applications using the Spring framework and the Java programming language. Students employ design and programming methodologies to develop secure, high-performance, database driven applications. Prerequisite: CST-239 or CST-135.

CST-341[♦]: Open Source Computing 4 credits

This course covers the concepts, tools, and frameworks of Open Source software development. Using open source operating systems like Linux, students develop an acquaintance with compilers, scripting languages, frameworks, build tools, APIs, version control software, and their licensing constraints. Students also learn how to participate in and contribute to open-source projects. Prerequisite: CST-135 or CST-235.

CST-341HN[♦]: Open Source Computing 4 credits

This course covers the concepts, tools, and frameworks of Open Source software development. Using open source operating systems like Linux, students develop an acquaintance with compilers, scripting languages, frameworks, build tools, APIs, version control software, and their licensing constraints. Students also learn how to participate in and contribute to open-source projects. Prerequisite: CST-135 or CST-235.

CST-341N[♦]: Open Source Computing 4 credits

This course covers the concepts, tools, and frameworks of Open Source software development. Using open source operating systems like Linux, students develop an acquaintance with compilers, scripting languages, frameworks, build tools, APIs, version control software, and their licensing constraints. Students also learn how to participate in and contribute to open-source projects.

CST-345[†]: Database Design & Development 4 credits

This course provides students with the technical skills required to design and implement a database solution using both relational and non-relational databases. Students use data definition language (DDL) to create and delete database objects, and data manipulation language (DML) to access and manipulate those objects. Students gain hands-on experience with database design, data normalization, SQL sub-queries, creating and using views, understanding and working with data dictionaries, and loading and unloading databases. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing code that implements concepts discussed in the lecture course, specifically creating databases and SQL queries. Prerequisite: CST-105 or CST-150.

CST-345N: Database Design & Development 4 credits

This course provides students with the technical skills required to design and implement a database solution using both relational and non-relational databases. Students use data definition language (DDL) to create and delete database objects, and data manipulation language (DML) to access and manipulate those objects. Students gain hands-on experience with database design, data normalization, SQL sub-queries, creating and using views, understanding and working with data dictionaries, and loading and unloading databases. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing code that implements concepts discussed in the lecture course, specifically creating databases and SQL queries. Prerequisite: CST-105.

CST-350: Programming in C# III 4 credits

This course focuses on the development of dynamic web applications using the ASP.NET framework and the C# programming language. Students employ design and programming methodologies to develop secure, high-performance, database driven applications. Prerequisite: CST-250 or CST-227.

[△] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CST-361[♦]: Design Patterns in Java 4 credits

This course builds upon prior foundations in computer programming by presenting advanced concepts and techniques for improving new code and refactor existing code for simplicity, manageability, and performance. Students expand their skills in object oriented analysis and design, and learn to apply classical design patterns to a variety of object oriented programming challenge. Prerequisite: CST-135.

CST-361HN[♦]: Design Patterns in Java 4 credits

This course builds upon prior foundations in computer programming by presenting advanced concepts and techniques for improving new code and refactor existing code for simplicity, manageability, and performance. Students expand their skills in object oriented analysis and design, and learn to apply classical design patterns to a variety of object oriented programming challenge. Prerequisite: CST-235.

CST-381: Web Application Development 4 credits

Using current development trends, students examine several front-end and back-end frameworks used to build web applications. Students learn how to program these modern frameworks, as well as how to integrate them using traditional enterprise technologies. Prerequisites: CST-235 or CST-247 or CST-256 and CST-341. Prerequisites: CST-235 or CST-247 or CST-256 and CST-341.

CST-391: JavaScript Web Application Development 4 credits

Using current development trends, students examine several front-end and back-end frameworks used to build web applications. Students learn how to program these modern frameworks, as well as how to integrate them using traditional enterprise technologies. Prerequisites: CST-120 and (CST-239 or CST-135) and (CST-345 or CST-236).

CST-403: Computer Science Internship I 2 credits

The optional internship provides students the opportunity to work as practitioners within their field and to practice principles learned in their major area of study by working in an outside organization under the supervision of a professional. The internship enables students and organizations to benefit from real-world application of classroom instruction. The internship can substitute for one of the following: STG-451. Prerequisite: Permission of the Director of the Internship Program.

CST-404: Computer Science Internship II 2 credits

The optional internship provides students the opportunity to work as practitioners within their field and to practice principles learned in their major area of study by working in an outside organization under the supervision of a professional. The internship enables students and organizations to benefit from real-world application of classroom instruction. The internship can substitute for one of the following: STG-452. Prerequisite: Permission of the Director of the Internship Program.

CST-405[♦]: Principles of Compiler Design 4 credits
Lecture & Lab

This course reviews the concepts and tools used in the development of compilers. Students synthesize topics covered in previous courses: formal languages, data structures, and computer architecture. The course reinforces the principles of software engineering and development through a complete cycle of building a working compiler. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on writing a compiler including a lexer, parser, semantic analyzer, code generator, and optimizer. Prerequisites: CST-301 and MAT-374.

CST-407: Application Security Foundations 4 credits

This course examines security principles for application developers. The course also examines common security vulnerabilities found in modern dynamic web applications, secure programming practices, and how to avoid and illuminate the common security vulnerabilities. Prerequisite: CST-350 or CST-247 or CST-339 or CST-341 or CST-235 or CST-391.

CST-410[♦]: Game Design and Game Play 4 credits
Lecture & Lab

This course covers conceptual models for game design. Students analyze various computer games and develop an understanding of game concepts like history, genres, storylines, gameplay elements and challenges, and the design process. Students survey several modern tools and technologies used to create games. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on creating game storyboards, designing game levels with increasing complexity, and representations of real life phenomena and processes. Prerequisite: CST-320.

CST-410HN[♦]: Game Design and Game Play 4 credits
Lecture & Lab

This course covers conceptual models for game design. Students analyze various computer games and develop an understanding of game concepts like history, genres, storylines, gameplay elements and challenges, and the design process. Students survey several modern tools and technologies used to create games. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on creating game storyboards, designing game levels with increasing complexity, and representations of real life phenomena and processes. Prerequisites: CST-305, CST-310, CST-320, and MAT-374.

CST-415[♦]: AI in Games and Simulations 4 credits
Lecture & Lab

The course introduces basic concepts of AI in the gaming context such as finite state machines, fuzzy logic, architectures, planning, and search. Students will work with implementations of common game AI algorithms for behaviors such as path finding, behavior selection, and learning. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on implementing algorithms for flocking, A* path finding, decision trees, and deterministic finite state machines. Prerequisites: MAT-345, and MAT-374, CST-320.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CST-416[♦]: Mobile Game Development Lecture & Lab 4 credits

This course explores iterative, rapid application development techniques, and cross platform development environments, to produce and publish a game for a mobile operating systems. Topics covered include performance profiling and optimization, hardware acceleration, designing for small screens, and interaction via mobile device specific inputs. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on creating a complete application for a mobile device and publish it on an online store. The application will utilize the key APIs provided on the device, including location awareness, motion detection, networking, and tactile user interface. Prerequisite: CST-320, MAT-374.

CST-416HN[♦]: Mobile Game Development Lecture & Lab 4 credits

This course explores iterative, rapid application development techniques, and cross platform development environments, to produce and publish a game for a mobile operating systems. Topics covered include performance profiling and optimization, hardware acceleration, designing for small screens, and interaction via mobile device specific inputs. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on creating a complete application for a mobile device and publish it on an online store. The application will utilize the key APIs provided on the device, including location awareness, motion detection, networking, and tactile user interface. Prerequisite: CST-305, CST-310, CST-320, MAT-374.

CST-424[♦]: Research Methods 4 credits

This course prepares students to conduct research across a range of IT disciplines. The course introduces students to research methods, research design, research ethics, and techniques of data collection and analysis appropriate to IT. While interpreting others' research, students acquire the skills and knowledge to conduct and communicate their own research. Prerequisite: MAT-134 or MAT-154.

CST-425[♦]: Very Large Information Systems Lecture & Lab 4 credits

This course introduces modern theories of machine learning and design & implementation models for large scale quantitative, image, and text information systems. The machine learning and information retrieval methodologies include Boolean, vector space, probabilistic, inference net, and language modeling. Students will acquire hands-on experience by implementing models such as clustering algorithms, automatic text categorization, and experimental evaluation. As an introduction to data science theory and techniques, students will experiment with supervised and unsupervised learning algorithms, intelligent text summarization, topic detection, tagging, and tracking. The laboratory reinforces and expands learning of principles introduced in the lecture. Hands-on activities focus on implementing techniques for efficiently managing and manipulating very large data sets and build machine learning models. Prerequisites: MAT-374 and (CST-217 or SYM-400) and MAT-345.

CST-435[♦]: Search Engines and Data Mining Lecture & Lab 4 credits

This course provides a comprehensive introduction to neural networks and deep learning. The location, retrieval, and conversion of raw data into usable information is accomplished by implementing a variety of neural network models. Students implement deep learning algorithms for organizing and searching very large data collections, like those typically found in enterprise databases and on websites. Students use clustering and categorization to generate various information taxonomies based on document ranking, evaluation, and classification. The laboratory reinforces and expands deep learning principles introduced in the lecture. Hands-on activities focus on using neural networks for performing data mining on a large business database and extracting trends and actionable information. Prerequisites: MAT-374 and (CST-217 or SYM-400) and MAT-345.

CST-435HN[♦]: Search Engines and Data Mining Lecture & Lab 4 credits

This course provides a comprehensive introduction to neural networks and deep learning. The location, retrieval, and conversion of raw data into usable information is accomplished by implementing a variety of neural network models. Students implement deep learning algorithms for organizing and searching very large data collections, like those typically found in enterprise databases and on websites. Students use clustering and categorization to generate various information taxonomies based on document ranking, evaluation, and classification. The laboratory reinforces and expands deep learning principles introduced in the lecture. Hands-on activities focus on using neural networks for performing data mining on a large business database and extracting trends and actionable information. Prerequisites: MAT-374 and (CST-217 or SYM-400) and MAT-345.

CST-440[♦]: Analytics for Dynamic Social Networks Lecture & Lab 4 credits

This course focuses on very large web-based sources of information such as social networks and semantic networks. Students analyze dynamic data and trends, connections (links), and patterns of self-organization. Students then utilize intelligent inferential techniques to interpret patterns in the collected information and translate them into actionable items. Hands-on experiences include marketing, organizational structure, security, and human analytics. Prerequisites: MAT-374 and (CST-217 or SYM-400) and MAT-345.

CST-440HN[♦]: Analytics for Dynamic Social Networks Lecture & Lab 4 credits

This course focuses on very large web-based sources of information such as social networks and semantic networks. Students analyze dynamic data and trends, connections (links), and patterns of self-organization. Students then utilize intelligent inferential techniques to interpret patterns in the collected information and translate them into actionable items. Hands-on experiences include marketing, organizational structure, security, and human analytics. Prerequisites: CST-217, CST-305, CST-307, CST-310 and MAT-374.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CST-451^{ΔΩ}: Senior Project I 2 credits

The first capstone course provides students the opportunity to work in teams to tackle real world applied research and design projects in their chosen area of interest. Students develop a project proposal, conduct a feasibility study, learn to protect intellectual property, develop teamwork skills, budgets, and a schedule for completing the project. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revisions. Students use this course to further develop technical writing and business presentation skills. This is a writing intensive course. Prerequisite: CST-339 or CST-341 or CST-235 or CST-350 or CST-247 or CST-391.

CST-451HN^{Δ†}: Senior Project I 2 credits

The first capstone course provides students the opportunity to work in teams to tackle real world applied research and design projects in their chosen area of interest. Students develop a project proposal, conduct a feasibility study, learn to protect intellectual property, develop teamwork skills, budgets, and a schedule for completing the project. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revisions. Students use this course to further develop technical writing and business presentation skills. This is a writing intensive course. Prerequisite: CST-410 or CST-424.

CST-452^{ΔΩ}: Senior Project II 2 credits

The second capstone course provides students the opportunity to implement and present the applied research project designed, planned, and started in the first capstone course. The capstone project is a culmination of the learning experiences while a student in the Computer Science program. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revision. This is a writing intensive course. Prerequisite: Successful completion of CST-451 with a grade of C or better.

CST-452HN^{Δ†}: Senior Project II 2 credits

The second capstone course provides students the opportunity to implement and present the applied research project designed, planned, and started in the first capstone course. The capstone project is a culmination of the learning experiences while a student in the Computer Science program. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revision. This is a writing intensive course. Prerequisite: Successful completion of CST-451 with a grade of C or better.

CST-461: Current Trends in Computer Science Lecture and Lab 4 credits

This course surveys current advances in computer science. Topics vary by semester and include current and emerging practice in computer science. Lab activities will focus on hands-on projects with a variety of technologies, devices, and programming languages. Prerequisite: CST-315, CST-301.

CST-520: Design and Analysis of Algorithms 4 credits

The course covers the theoretical fundamentals of computing, and analysis of the inherent capabilities and limitations of computation. Topics include advanced techniques in formal algorithm analysis, classical and modern algorithms, P and NP, polynomial-time reduction, NP-completeness and NP-hardness. Prerequisite: DSC-510.

CST-530: Advanced Operating Systems 4 credits

This course covers essential concepts in the design and implementation of advanced modern operating systems. Focus areas may include distributed systems and computer networks, interprocess communication, distributed processing, multi-core processors, sharing and replication of data and files. Prerequisite: CST-520.

CST-540: Programming Languages 4 credits

This course focuses on theoretical models for advanced programming paradigms: functional, imperative, concurrent, and probabilistic programming. Various models of programming languages and type systems are discussed. Students learn to apply programming methodology, transformations, and logic. Prerequisite: DSC-510.

CST-550: Parallel Programming 4 credits

This course introduces programming models and languages for programming parallel platforms. Additional topics may include parallel and distributed platforms, parallel and distributed algorithms, message passing, shared memory, and parallel programming applications in a variety of domains. Prerequisite: CST-540.

CST-560: Research Methods in Computational Sciences 4 credits

This course prepares students for the research process in computational sciences, while developing an appreciation for the philosophy and ethics related to how research is conducted. Students learn how to design experiments, how to test the results using statistical methods, and communicate the findings. Prerequisite: DSC-510.

CST-570: Machine Learning for Computer Science 4 credits

This course covers fundamental techniques in statistical machine learning, focusing on computational methods for supervised and unsupervised data analysis. Topics may include classification, regression, dimensionality reduction, and clustering. Students will learn and apply a variety of training models and algorithms. Prerequisite: CST-560.

CST-580: Artificial Intelligence 4 credits

This course covers key areas of AI focusing on theoretical and practical approaches to designing intelligent systems. Central themes include search, neural networks, probabilistic modeling, and game theory. Students explore specific algorithms and applications in depth, using modern programming paradigms. Prerequisite: CST-570.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CST-590: Computer Science Capstone Project 4 credits

Students conceptualize, design, and present an innovative idea, process, or a product in the field of computer science. Projects synthesize and apply knowledge from previous courses and include a scientific report anchored in current theory and research. Prerequisite: CST-580.

Continuing Education (CTE)

ATP-5600TE: Prevention and Treatment of Athletic Injuries 3 credits

This course provides an opportunity for future and current coaches to acquire and apply knowledge of the prevention and treatment of athletic injuries. Coaches will develop an understanding how to train athletes to prevent injuries and the importance of long-term care when an injury does occur. Additionally, coaches will explore how to recognize an injury, the appropriate response and treatment, medical professional coaches may need to collaborate with, and what to do in an emergency situation.

BIO-5200TE: Anatomy and Physiology for Coaching 3 credits

This course provides an opportunity for future and current coaches to acquire and apply knowledge of anatomy and physiology. Coaches will develop an understanding of the basic terminology, body organization, and organs. Additionally, coaches will look at how the body works together to maximize performance and promote overall health.

COA-5300TE: Signs of Physical, Emotional, Sexual Abuse, Neglect, and Bullying 1 credits

Students spend a large amount of time with their teachers, coaches, and educational mentors in various settings. As such, educators can often be one of the first persons to witness and identify the signs and symptoms of abusive settings. This course focuses on identifying and responding to signs of child abuse and bullying. Physical abuse, emotional abuse, sexual abuse, neglect, bullying, and cyberbullying are explored.

EAD-5050TE: Education Law for K-12 School Administrators 3 credits

This course will introduce practitioners to the laws and policies governing and relating to PreK-12 education in the United States. Through case studies and scenarios, a broad range of topics will be examined including, discipline, school safety, religion in schools, and personnel issues. These and other topics will be framed in context to inform the future administrator's role in improving outcomes for all students.

EAD-5100TE: Education Finance for Current Practitioners 3 credits

This course examines PK-12 education finance with a fundamental focus on issues and practices that directly affect the operation of the school and local education agency (LEA). Practitioners will be exposed to the regulations encompassed in the Uniform System of Financial Records (USFR) and the implications of these regulations at the school site level. School finance topics related to education at the federal, state, and local levels will be examined. Practitioners will explore school budget and accounting principles, fiscal responsibility, resource allocation, basic administrative theories, processes, and techniques, as well as discuss the major challenges facing them in the daily operation of local schools.

EAD-5130TE: Shaping School Culture for Current Practitioners 3 credits

This course emphasizes the critical role of the leader in creating and sustaining a positive school culture and shared vision. Given diverse settings, contexts and leadership situations, educators will explore how various leadership styles, philosophies and behaviors can promote or hinder the development of a quality learning culture and positive workplace conditions. Additionally, supervisory processes and strategies by which educational leaders can empower teacher self-efficacy and promote instructional improvement that enriches the outcomes for all students will be examined.

EAD-5200TE: Strengthening Curricular Programs for Continuous School Improvement 3 credits

This course prepares educators to become effective educational leaders in the evaluation of schoolwide curricular programs to promote continuous school improvement. Course content includes processes in planning, implementation, and the evaluation of programs and curriculum. Focus is placed on ensuring that curricular design, instructional strategies, and learning environments maximize learning and integrate appropriate technologies. Data-driven analysis is emphasized throughout.

EAD-5300TE: Improving Teacher Performance and Self-Efficacy 3 credits

This course prepares current practitioners to become effective building-level instructional leaders who are able to positively enrich teaching and learning experiences/outcomes through leadership practices that improve teacher performance, self-efficacy, and morale. Course topics promote improved instructional performance, including growth-focused coaching, collaborative learning and decision-making, safe and supportive professional learning culture, and reflective practice. Practitioners will examine current policy and practice in the areas of teacher observation, evaluation, and teacher performance ratings.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

EAD-5330TE: Developing and Empowering Instructional Leaders for Current Practitioners 3 credits

This course prepares educators to employ leadership and mentoring strategies that promote the development of quality teachers into effective instructional leaders. Course topics promote the learning of distributed leadership practices and identifying and empowering instructional leaders within a faculty. Educators will be prepared to foster an understanding of leading the evaluation of assessment data, components of peer observation, and strategies to provide feedback to teachers relevant to instructional planning and delivery.

EAD-5350TE: Supervision for Instructional Improvement 3 credits

This course prepares candidates to become effective building-level supervisors of instructional leaders. Emphasis is placed on improving instruction, teacher practices, and effective communication. Candidates will examine institutional change, school improvement, staff development, and teacher evaluation. Supervision techniques will be explored, including: mentoring and peer coaching, as well as clinical supervision. Special emphasis will be placed on the skills and strategies needed to develop learning organizations that build an appropriate curriculum, support instructional improvement, and incorporate best practices.

EAD-5360TE: Crisis Management in Schools for Current Practitioners 3 credits

This course provides participants with the skills needed to prepare for different types of emergencies in K-12 schools and to respond appropriately. Topics are related to response on a personal, classroom and schoolwide crises, are geared towards helping K-12 personnel survive and assist during traumatic situations. Topics addressed include safety procedures, student and staff trauma, crisis response, bullying, and mandatory reporting laws. Incorporating district policy, ethics, and school law are also covered in relation to emergency situations.

EAD-5370TE: Leadership and Management in the Principalship 3 credits

This course will explore critical issues facing school principals, including the challenge of attracting and retaining a quality work force, managing and allocating resources, innovative instructional leadership, creating community partnerships, and meeting the myriad of district, state and federal policies and laws. With a focus on all Professional Standards for Educational Leaders (PSEL), educators will holistically analyze a school's Continuous Improvement Plan (CIP) and focused action plans in various contexts. This analysis will solidify understanding of the important implications of managing school resources in order to meet operational needs and improve outcomes for all students.

EAD-5505TE: Christian Philosophy in Education 3 credits

This course includes a study of the philosophy, principles, and practices of teaching and learning applied to Christian leadership in the Christian school setting. Emphasis is placed on self-analysis of leadership skills, strengths, and styles. A critical review and examination of contemporary leadership, management, and administration practices in light of a Christian worldview model is also emphasized. Practicum/field experience hours: None. Fingerprint clearance not required.

ECE-5010TE: Foundations of Early Childhood 3 credits

Practitioners survey the philosophical foundations upon which early childhood educational theories and practices are constructed. Current educational models, including the Montessori education model, are explored. Practitioners examine the application of educational philosophies and theories to the early childhood classroom and evaluate their contemporary usefulness in maximizing learning outcomes for young children. Practitioners will also examine the roles and expectations of early childhood educators and have the opportunity to reflect on and plan for their own professional development.

ECE-5100TE^A: Typical and Atypical Behaviors of Young Children 3 credits

Practitioners survey how young children grow and develop, recognizing that patterns of learning and development vary individually across the cognitive, linguistic, physical, social, and emotional areas while understanding the implications for designing and implementing developmentally appropriate and challenging learning experiences. This survey of the seminal concepts, principles, theories, and research related to development of young children will allow practitioners to build foundational knowledge for constructing differentiated learning opportunities that support individual students' development, acquisition of knowledge, and motivation. Practitioners review atypical development, early intervention, and Parts A and B of IDEA to develop IFSP, IEPs, and 504s for young children.

ECE-5200TE: Instruction, Assessment and Reporting in Early Childhood Education 3 credits

Practitioners examine a variety of instructional strategies that encourage young children to build reading, writing, and oral language skills in meaningful ways. Emphasis is placed on integrating the creative arts throughout language arts curriculum that practitioners will develop, teach, and assess. Practitioners will also practice differentiation strategies that make instructional decision to address individual student needs.

ECE-5230TE: Instructional Methods: Language Arts and Creative Arts for Practitioners 3 credits

Practitioners examine a variety of instructional strategies that encourage young children to build reading, writing, and oral language skills in meaningful ways. Emphasis is placed on integrating the creative arts throughout language arts curriculum that practitioners will develop, teach, and assess. Practitioners will also practice differentiation strategies to make instructional decisions to address individual student needs. Practicum/field experience hours: None. Prerequisite: none. Co-Requisite: none.

^A Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECE-5235TE: Early Childhood Instructional Methodologies: Mathematics 3 credits

Practitioners research instructional methodologies for teaching mathematics to young children. Emphasis is placed on hands-on and inquiry- and manipulative-based learning in mathematics curriculum that practitioners will develop, teach, and assess. Practitioners will also gather and analyze performance data to make instructional decisions. In addition, they will build skills to integrate literacy, science, social studies, and the creative arts into mathematics lessons while strengthening mathematical connections at home.

ECE-5240TE: Early Childhood Instructional Methodologies: Science and Social Studies 3 credits

Practitioners research instructional methodologies for teaching science and social studies to young children. Emphasis is placed on inquiry-based learning and real-world connections to science and social studies curriculum that Practitioners will develop, teach, and assess. Candidates will also gather and analyze performance data to make instructional decisions. In addition, Practitioners will build skills to integrate literacy, mathematics, and the creative arts into science and social studies lessons while strengthening connections at home. Practicum/field experience hours: None. Fingerprint clearance not required. Prerequisite: None. Co-Requisite: None.

ECE-5300TE: Health, Safety, and Nutrition in Growth and Development in Early Childhood 3 credits

Practitioners explore child growth and development, including developmental milestones that must be met with regard to physical, cognitive, and social-emotional development, as well as adaptability and approaches to learning for young children. This course emphasizes safety, health, and nutrition with a focus on the special health care needs of young children. Aspects of physical development, including fitness and movement, gross and fine motor skills, and fostering physical development within the community are discussed. Practicum/field experience hours: None. Fingerprint clearance not required. Prerequisite: None. Co-Requisite: None.

ECE-5400TE: Developing Language and Early Literacy in Young Children For Practitioners 3 credits

This course examines the foundations for early language development in young children. Practitioners build knowledge regarding whole language, phonics, emergent literacy, and the integration of literary elements. Practitioners focus on the assessment of literacy abilities, meeting the literacy needs of small groups, and literacy in the classroom and at home.

ECE-5600TE: Engaging the Family and Cultural Awareness in Early Childhood 3 credits

Practitioners examine the family, community, and cultural influences that affect young children. Practitioners identify factors that put young children at risk as well as resources to support various types of families and structures. Practitioners also identify ways to meet community needs while promoting cultural awareness and competence.

ECE-5660TE: Creating an Engaging Early Childhood Learning Environment 3 credits

Practitioners use the guidance approach to create environments that support individual and collaborative learning, encourage positive social interaction, facilitate active engagement in learning, and promote self-motivation. Montessori classroom management philosophies are explored. Practitioners develop skills related to establishing and maintaining organized, safe, inclusive, respectful, challenging, and positive early childhood environments with rules and expectations that are clearly communicated. Practitioners also examine how to help students overcome challenging behavior and learn from mistakes.

ECH-5210TE: Early Literacy Development for Current Practitioners 3 credits

This course addresses early language development and teaching strategies, supporting literacy development for those working with students from birth to age 8. The stages of oral and emergent language are addressed through language and literacy development. Application of phonemic and alphabetic principle skills is addressed through hands-on assignments. The course allows learners to demonstrate how an effective literacy environment can be developed.

ECS-5010TE: Foundational Studies in Early Childhood Special Education 3 credits

This course places primary focus on the fundamental basis of the field of early childhood education and early childhood special education, Birth to Age 5/Pre-K to K to Age 8/Grade 3, including historical and philosophical foundations, current practices, ethics, models of teaching, and application in early childhood education/early childhood special education settings. Additionally, professional preparation requirements and professional development opportunities in the field are explored.

ECS-5550TE: Child Development Including Health, Safety, and Nutrition 3 credits

This course explores child growth and development, including developmental milestones that must be met with regards to physical, cognitive, and social-emotional development. The course emphasizes health, safety, and nutrition with a focus on special health care needs for young children. Educators will use data to analyze the development of the whole child and consider best practices for family involvement.

ECS-5600TE: Child, Family, Cultural, Community Relationships, and Advocacy 3 credits

This course examines historical foundations, theories, and models of child development, including family characteristics, diversity, multicultural factors, and community relationships. Educators will identify community organizations that support children with exceptionalities and their families. In addition, they will also identify ways to use those resources to advocate for children and their families.

.....
^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECS-5700TE: Language & Communication Development in Early Childhood/Special Education 3 credits

This course examines the foundations for early language development for children, from Birth to Age 8/Grade 3. Focus is placed on the use of technology with receptive and expressive language, early literacy development, and communication methods in early childhood education/early childhood special education.

EDU-5050TE: Influences of Family and Community Engagement For Current Practitioners 3 credits

Educators will explore how issues related to family relationships and community environments interplay to influence classroom dynamics. Special attention is given to family interaction patterns, including communication processes, power relationships, open and closed family systems, parent-child relationships, and conflict resolution processes. Emphasis is placed on frameworks, materials, and strategies for building relationships with family and community members as well as the development of successful family and community involvement in the classroom. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-5100TE: Professional, Ethical, and Legal Practices and Policies in Education 3 credits

This course examines PreK-12 education policy from historical, political, economic, and social perspectives. The effects of federal and state laws and policies on the rights and responsibilities of all stakeholders within education will be examined. Emphasis will be placed on educational leadership in the areas of advocacy, community relations, and equitable access to education.

EDU-5220TE: K12 Curriculum Design and Development For Current Practitioners 3 credits

This course offers an overview of the factors, principles, and elements of curriculum development in the elementary and secondary school. Emphasis is on philosophical and psychological influences in education, as well as designing and evaluating curricular patterns for urban schools.

EDU-5330TE: Social Justice for Educators 3 credits

In this course, participants examine the foundations and dimensions of social justice in education, with the goal of becoming culturally competent educators while integrating faith, learning, and work. Participants reflect on their own worldview and perceptions, and how those influence professional practice. Emphasis is placed on developing cultural competence and promoting positive relationships both in the classroom and throughout the educational community.

EDU-5370TE: Leadership and Instructional Coaching for Current Practitioners 3 credits

Educators will learn and apply coaching techniques in school and community settings. Emphasis is placed on improving teacher practices, school culture, and effective communication. Educators will use cognitive coaching and teacher leadership skills.

EDU-5510TE: Differentiated Instruction for Current Practitioners 3 credits

Educators will use data to differentiate curriculum, instruction, and assessments to foster learning for all students. Focus will be on patterns of learning and development, using technology to differentiate instruction, and developing an engaging classroom environment.

EDU-5540TE: Methods of Instruction and Assessment for Current Practitioners 3 credits

In this course, educators will develop skills in aligning objectives, instruction, and assessments. Special attention is given to differentiating curriculum for diverse students and using assessment data to guide instruction. In addition, collaboration with peers and colleagues will be used to achieve instructional goals through action planning. Review of current trends in instruction and assessment are presented to guide instructional decisions with a special focus on the needs of diverse students.

EDU-5550TE: Classroom Assessment for Mathematics 3 credits

This course promotes the understanding of theories and strategies guiding math instruction within the framework of the Common Core State Standards (CCSS) and National Council of Teachers of Mathematics (NCTM) principles and standards. Practitioners will analyze and integrate multiple methods of K-12 mathematics assessment that support equity, student engagement, and differentiation to meet various student needs. Particular emphasis is given to monitoring student progress to guide instructional practices and decision-making in the mathematics classroom.

EDU-5600TE: Language and Literacy Development: Phonics and the Science of Reading 3 credits

Practitioners will examine how to teach foundational skills to develop proficient readers with the capacity to comprehend a range of texts across various disciplines. In addition, practitioners will build additional knowledge regarding print concepts, phonological awareness, phonics and word recognition, and fluency to promote early literacy and independent readers. With this foundational knowledge, the science surrounding reading instruction is explored and put into practice. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-5650TE: Differentiated Literacy Instruction: Assessment, Intervention, Remediation 3 credits

Practitioners explore proficient reading and writing, instructional models that integrate listening, speaking, reading, and writing. Theoretical principles of the elements of reading instruction are examined to inform assessment, intervention, and remediation practices. In addition, disabilities, such as dyslexia, are reviewed to understand how they affect the acquisition of reading skills and how they vary in presentation and degree. From this foundational knowledge, practitioners will select, adapt, and use research-based instructional strategies and interventions in academic curricula to advance the learning for all students, with attention focused on reading. Practicum/field experience hours: None. Fingerprint clearance not required.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

ELM-5050TE: Foundational Literacy Skills and Phonics For Current Practitioners 3 credits

Educators will examine tools and strategies for effective research-based phonics instruction. Topics include assessment in and instruction of phonemes, phonemic awareness, graphemes, phonics, spelling, and word recognition for reading and writing. The relation of deficits in phonemic awareness, decoding, spelling, and word recognition will also be explored.

ELM-5100TE: Creating and Managing Engaging Learning Environments 3 credits

Educators examine how to create environments that support individual and collaborative learning, encourage positive social interaction, active engagement in learning, and self-motivation. Teacher candidates build foundational knowledge regarding the importance of establishing and maintaining positive collaborative relationships with families, school colleagues, and agencies in the larger community to promote the intellectual, social, emotional, physical growth, and well-being of children.

ELM-5400TE: Foundational Literacy Skills and Phonics for Current Practitioners 3 credits

Practitioners will examine how to teach foundational skills to develop proficient readers with the capacity to comprehend texts across a range of texts and disciplines. Practitioners will build additional knowledge regarding print concepts, phonological awareness, phonics and word recognition, and fluency to promote early literacy and independent readers. Fingerprint clearance is not required.

ELM-5500TE: Methods of Teaching & Integrating Social Studies & the Arts 3 credits

Educators examine a variety of instructional strategies to encourage learners to develop deep understanding of the major concepts and modes of inquiry from the integrated study of history, geography, the social sciences and other related areas. Educators build foundational knowledge on promoting elementary students' abilities to make informed decisions as citizens of a culturally diverse democratic society and interdependent world. Educators integrate the content, functions and achievements of the performing and visual arts as primary media for communication, inquiry and engagement among elementary students.

ELM-5600TE: Methods and Strategies of Teaching Elementary Mathematics 3 credits

Educators examine a variety of instructional strategies to encourage learners to develop deep understanding of the major concepts and procedures that define number and operations, algebra, geometry, measurement, and data analysis and probability and to build skills to apply knowledge in meaningful ways. Educators build foundational knowledge on engaging problem solving, reasoning and proof, communication, connections and representations to help students successfully apply their developing skills to many different situations, materials, and ideas.

ELM-5700TE: Methods of Teaching and Integrating Science and Health for Practitioners 3 credits

Elementary educators examine fundamental concepts of physical, life, earth/space sciences and health education. Within this course, educators will build foundational knowledge on a variety of age-appropriate inquiry-based instructional strategies to teach science, build student understanding of personal and social applications, to convey the nature of science and student development for the practice of skills that contribute to good health.

ELM-5800TE: Methods of Teaching Elementary English Language Arts 3 credits

Educators examine a variety of instructional strategies to encourage learners to develop deep understanding of reading, writing, and oral language and their connections, and to build skills to apply knowledge in meaningful ways. Educators build foundational knowledge on how to use the concepts from reading, language, and child development to teach reading, writing, speaking, viewing, listening, and thinking skills, and to help students successfully apply their developing skills to many different situations, materials, and ideas.

ESL-5400TE: Methods of Structured English Immersion for Elementary Current Practitioner 3 credits

This course examines the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for K-8 English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Strategies to promote English language development and improve academic achievement are identified. Students plan standards-based instruction for K-8 English language learners. This course satisfies the requirements for SEI Endorsement and is approved by the Arizona Department of Education.

ESL-5450TE: Methods of Structured English Immersion for Secondary Current Practitioners 3 credits

This course examines the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners in secondary education settings. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Strategies to promote English language development and improve academic achievement are identified. Students plan standards-based instruction for English language learners in secondary education settings. This course satisfies the requirements for SEI Endorsement and is approved by the Arizona Department of Education.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

PED-5100TE: Methods of Teaching Physical Education at the Elementary Level 3 credits

This course will introduce practitioners to the constructs and instructional practices within physical education (PE) at the elementary level. Emphasis is placed on instructional planning and sequencing, assessment, differentiation, and student engagement. Classroom management is also addressed within the context of elementary physical education instruction.

PED-5150TE: Methods of Teaching Physical Education at the Secondary Level 3 credits

This course will introduce practitioners to the constructs and instructional practices within physical education (PE) at the secondary level. Emphasis is placed on instructional planning and sequencing, assessment, differentiation, and student engagement. Classroom management, including rules and procedures, is also addressed within the context of secondary PE instruction.

PED-5450TE: Methods of Coaching 3 credits

This course provides an opportunity for future and current coaches to acquire and apply knowledge of methods and theories for coaching adolescent athletes. Participants apply these to develop a personal coaching philosophy and design a practice session in a specific sport. Additionally, coaches explore the social-emotional development of athletes, including promoting a growth mindset and reflective practice and coaching diverse populations.

POS-5300TE: Arizona and Federal Government for Current Practitioners 1 credits

This course is a survey of Arizona history and government as well as of American government. It meets the teacher certification requirement for the study of Arizona government and American government.

POS-5305TE: US Constitution for Current Practitioners 1 credits

This course is a survey US Constitution and American government. It meets the teacher certification requirement for the study of US Constitution and American government.

POS-5400TE: AZ Constitution for Current Practitioners 1 credits

This course is a survey of Arizona history and government. It meets the teacher certification requirement for the study of Arizona government.

PSY-5300TE: Signs of Physical, Emotional, Sexual Abuse, Neglect, and Bullying 1 credits

Students spend a large amount of time with their teachers, coaches, and educational mentors in various settings. As such, educators can often be one of the first persons to witness and identify the signs and symptoms of abusive settings. This course focuses on identifying and responding to signs of child abuse and bullying. Physical abuse, emotional abuse, sexual abuse, neglect, bullying, and cyberbullying are explored.

PSY-5350TE: Adolescent Psychology for Coaches 3 credits

This course provides an opportunity for future and current coaches to acquire and apply knowledge of adolescent psychology. Coaches will develop an understanding of typical adolescent physical, intellectual, emotional, and social development, as well as the effects of that development on their overall growth. Additionally, coaches will consider how to apply ethical decision making when working with developing adolescents.

PSY-5360TE: Sports Psychology for Coaches 3 credits

This course provides an opportunity for future and current coaches to acquire and apply knowledge of sports psychology for adolescent athletes. Coaches will develop their own coaching philosophy by building knowledge of how to support athletes in setting goals, preparing mentally for performance, and managing stress and anxiety. Additionally, coaches will use knowledge of sports psychology to cultivate an effective team culture and promote the overall student-athlete well-being.

REA-5000TE: Foundations in Reading for Current Practitioners 3 credits

Educators survey the theoretical and evidence-based foundations of reading and writing processes and instruction. This survey includes an exploration of the historical foundations of reading through current reading and writing development, processes, and components. Educators are introduced to ethical and professional roles of reading specialists and literacy coaches.

REA-5005TE: Instructional Methods for Students with Dyslexia 3 credits

Educators survey how dyslexia occurs in people of all backgrounds and intellectual levels. This includes early intervention to promote student success throughout school and life. Educators recognize the signs of dyslexia, participate in the identification and assessment process and provide students needed supports through proper instructional strategies, assistive technology, accommodations, and modifications. Practicum/field experience hours: None. Fingerprint clearance not required.

REA-5100TE: Survey of Reading Assessments for Current Practitioners 3 credits

Practitioners research and describe best practices regarding standardized reading assessments. Educators evaluate effective formative and summative reading assessments to plan and evaluate instruction and identify appropriate interventions that optimize student learning. This survey prepares educators to develop strategic interventions to effectively meet reading and writing needs, communicate assessment results to key stakeholders, and effectively use progress-monitoring tools to address the learning needs of struggling readers and writers.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

REA-5200TE: Introductory Instructional Methods for Elementary Reading and Writing 3 credits

Educators examine instructional methodology and resources that support effective research-based literacy instruction in reading and writing. This survey prepares elementary educators to design an integrated, comprehensive, and balanced literacy curriculum. Topics include instruction of phonics, phonemic awareness, vocabulary, comprehension and fluency in reading, writing, listening and speaking. Identification of struggling readers and differentiation of instructional strategies will also be explored.

REA-5250TE: Introductory Instructional Methods for Secondary Reading and Writing 3 credits

Educators survey instructional approaches and materials that support middle and secondary student learning in reading and writing. This survey prepares middle and secondary educators to design an integrated, comprehensive, and balanced literacy curriculum.

REA-5400TE: Advanced Studies in Elementary Content Reading and Writing 3 credits

Educators engage in advanced studies of instructional approaches and materials at the building and district level that support student learning in reading and writing across content areas. From this advanced study, educators work with their colleagues to design an integrated, comprehensive, and balanced literacy curriculum.

REA-5450TE: Advanced Studies in Methods for Secondary Content Reading and Writing 3 credits

Educators engage in advanced studies of instructional approaches and materials at the building and district level that support secondary students' learning in reading and writing across content areas. From this advanced study, educators work with their colleagues to design an integrated, comprehensive, and balanced literacy curriculum.

REA-5500TE: Literate Environments for Current Practitioners 3 credits

Educators create a literate environment that fosters reading and writing by integrating foundational knowledge, instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessments.

REA-5700TE: Elementary Education Reading Practicum for Current Practitioners 3 credits

The practicum experience requires educators to implement literacy intervention instruction that is designed to meet the specific needs of Elementary students in grades 1-8 and engage in research and analysis to support the compilation and creation of a Literacy Work Sample (LWS). In addition, the candidates coach and provide support to other teachers to think reflectively about improving student learning and implementing various instructional practices. Practicum/field experience hours: 75. Fingerprint clearance required.

REA-5800TE: Secondary Education Reading Practicum for Current Practitioners 3 credits

The practicum experience requires educators to implement literacy intervention instruction that is designed to meet the specific needs of Secondary students in grades 6-12 and engage in research and analysis to support the compilation and creation of a Literacy Work Sample (LWS). In addition, the candidates coach and provide support to other teachers to think reflectively about improving student learning and implementing various instructional practices. This course requires access to a PK-12 school for practicum experiences. Practicum/field experience hours: 75. Fingerprint clearance required. Practicum/field experience hours: 75. Fingerprint clearance required.

REA-5850TE: Children's Literature for Current Practitioners 3 credits

Educators will evaluate types and purposes of literature based on the developmental literacy needs of elementary-aged children. Particular emphasis is dedicated to the various genres that exist within the literature spectrum and how to utilize the different genres to meet specific instructional needs, including the use of digital text, to meet literacy goals.

SEC-5060TE: Early Adolescent and Adolescent Psychology for Current Practitioners 3 credits

This course is a survey of early adolescent and adolescent growth and development, recognizing that patterns of learning and development vary individually within and across the cognitive, social/emotional, and physical areas. This overview of the seminal concepts, principles, theories, and research related to development of adolescents will allow educators to build foundational knowledge for constructing learning opportunities that support individual students' development, acquisition of knowledge, and motivation.

SEC-5100TE: Creating and Managing Engaging Secondary Learning Environments 3 credits

This course is designed to allow the educator the opportunity to learn techniques involved in the successful engagement and management of a learning environment. Major emphasis is placed to the establishment of a realistic discipline plan to manage student behavior, as well as engagement and management techniques and strategies to maximize instructional time, classroom procedures, and physical space.

SEC-5150TE: Assessment and Evaluation for Middle and High School Teachers 3 credits

Educators will investigate multiple methods of assessment that support student engagement, monitoring student progress, and guiding decision-making. Educators will build foundational knowledge regarding formal and informal assessment strategies for planning, evaluating, and strengthening instruction to promote continuous intellectual, social, emotional, and physical development of each student.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

SEC-5250TE: Methods and Strategies for Middle and High School Teachers 3 credits

This course is designed to foster application of proven teaching and learning methodologies for both instructor and student in order to make appropriate and data-driven decisions about all aspects of teaching. Major emphasis is focused on planning instructional objectives and lessons, assessing objectives, and developing teaching methodology that encourages problem solving, active participation, and assessment.

SEC-5400TE: Adolescent Literacy for Current Practitioners 3 credits

This course is designed to develop a broad range of research-based reading methodologies to enhance the learning strategies of middle and secondary school students. Major emphasis is placed on the use of reading strategies for culturally and socially diverse classrooms, including the use of literacy-based instruction in all content areas and understanding, evaluating, and promoting effective pedagogy in adolescent literacy. The development and use of integrated and thematic approaches of instruction are addressed.

SEC-5800TE: Curriculum Design for Middle and High School Teachers 3 credits

This course focuses on the principles and practices involved in curriculum design. Various orientations to curriculum development and assessment are investigated and elements of model curricula are examined. Emphasis is placed on understanding current structures and trends in high schools, as well as critical issues, as these relate to curriculum and assessment. Course content is strategically planned to enable participants to make informed curriculum decisions to meet the needs of a diverse student population. Also emphasized is the alignment of educational objectives to standards and building both formative and summative assessments, including rubrics to analyze student learning. During the course, educators will develop their own curriculum unit.

SPD-5000TE: Survey of Special Populations: Mild to Moderate Disabilities 3 credits

Participants are introduced to the educational needs of students with mild to moderate disabilities and their families, including the definitions, characteristics, prevalence, causes and educational approaches to these disabilities and disorders. Participants will identify cognitive, linguistic, social and emotional patterns of learning and development for students with mild to moderate disabilities. Participants also survey the special education process involving the application of various laws and regulations.

SPD-5020TE: Characteristics of Students with Mild to Moderate Exceptionalities 3 credits

In this course, educators focus on the key characteristics of K-12 students with mild to moderate exceptionalities including specific learning disabilities, emotional and intellectual disabilities, Autism Spectrum Disorder, language, visual, hearing, orthopedic, and other health impairments, Traumatic Brain Injury, and multiple disabilities. Educators will learn the definition, causes, prevalence of, and potential effects that each exceptionality can have on students' learning. They will also identify research-based instructional and behavior management strategies that can be effective when working with students with these exceptionalities.

SPD-5030TE: Foundations of Gifted Education for Current Practitioners 3 credits

Participants will explore the historical foundations and evolution of gifted education, including definitions of giftedness. Participants will compare and contrast perspectives of giftedness, and describe characteristics of gifted, talented, and creative students and their implications for academic instruction. Emphasis is placed on identifying major contributors and their contributions to the field of gifted education, as well as major theories of intelligence and their relevance to gifted education. Participants will also examine equity, diversity, and bias in gifted education.

SPD-5040TE: Autism Spectrum Disorder: Survey of Special Education 3 credits

This course orients educators to the theoretical foundations of autism spectrum disorder (ASD). Educators will focus on the unique needs of students with ASD and their responsibilities to respond to those needs. This course also examines legal and ethical considerations when collaborating and advocating for students with ASD and families in the school environment.

SPD-5050TE: Foundations in Autism Spectrum Disorder 3 credits

This course orients special educators to the theoretical foundations of autism spectrum disorders (ASD). Special educators will focus on the exceptional needs of students with ASD and teacher's responsibilities to determining eligibility and assessment. This course also examines diagnoses and implications in the school environment.

SPD-5060TE: Survey of Moderate to Severe Special Education for Current Practitioners 3 credits

Current practitioners are introduced to the educational needs of students with moderate to severe exceptionalities including the definitions, characteristics, prevalence, causes and educational approaches to these disabilities and disorders. Candidates define low-incidence disabilities and identify cognitive, linguistic, social, emotional and behavioral patterns of learning and development for individuals with moderate to severe exceptionalities.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

SPD-5070TE: Autism Spectrum Disorder: Inclusive Practices 3 credits

In this course, educators will look at how individuals with autism spectrum disorders (ASD) experience difficulties in the areas of social acceptance and social communication. Emphasis is placed on how interactions with their typically developing peers can allow for opportunities to learn social skills and increase communication skills. Educators will determine the definition of inclusion and research how it impacts students with disabilities. Specific focus is placed on how to support students with ASD in an inclusive environment, including supports in the areas of environmental, social/emotional, behavioral and communication.

SPD-5100TE: Professional, Ethical, and Legal Practices and Policies in Special Ed 3 credits

Educators survey professional ethical principles, professional practice standards, law and regulations that guide special educators. Educators build upon the foundational knowledge to understand the multiple roles and complex situations of professional practice that require attention to a variety of legal, professional, and ethical issues.

SPD-5110TE: Autism Spectrum Disorder: Instructional Strategies and Interventions 3 credits

Educators will determine strategies to align with the different ways individuals with autism spectrum disorder (ASD) think, learn, and behave in the classroom. Educators will use differentiated instruction and Universal Design for Learning (UDL) strategies to design interventions based on process, content and product, including specific strategies for engagement and speech and language support. Educators will support an inclusive environment with all instructional strategies.

SPD-5130TE: Instructional Methods in Gifted Education for Current Practitioners 3 credits

This course outlines instructional techniques used to address the individual learning needs, strengths, styles, and preferences of gifted, talented, and creative students in K-12 classrooms. Participants explore the design of differentiated curriculum and instruction for gifted learners. Emphasis is placed on differentiation strategies that improve student achievement through use of instructional strategies targeting large groups, small groups, and individuals.

SPD-5150TE: Assessing Instructional Methods for Autism Spectrum Disorders 3 credits

The focus of this course is to provide methods for improvement of instruction, based on assessment for students with autism spectrum disorders (ASD). Special educators will focus on instructional planning, adaptive practices, and intervention strategies established through assessment analysis.

SPD-5170TE: Autism Spectrum Disorder: Data-Driven Assessment 3 credits

This course provides educators the opportunity to explore how behavioral, academic, and social assessments are used when determining effective instructional strategies and interventions for students with autism spectrum disorders (ASD). A focus is placed on synthesizing data to make instructional decisions that support students in a variety of settings. Educators will look at how to gather data during instruction and monitor progress of students' IEP goals.

SPD-5200TE: Collaborations and Communications in Special Education 3 credits

Educators survey theories and models for effective collaboration and communication with students with exceptionalities, colleagues, other school professionals, families and community members. In addition, educators will apply collaboration and communication theories and models, incorporating technology, across a wide range of contexts to ensure active involvement in the education process for students with exceptionalities.

SPD-5230TE: Creativity and Talent Development in Gifted Education for Practitioners 3 credits

In this course, participants study the theoretical and practical aspects of creativity and explore how it can be developed in gifted, talented, and creative students. Participants analyze definitions of creativity and learn techniques for stimulating creative thinking as well as strategies for adapting existing curricula to develop creative thinking abilities in students. Emphasis is placed on the assessment of creative thinking, methods for enhancing personal creative abilities, and techniques for examining the creative process.

SPD-5250TE: Applied Behavior Analysis and Autism Spectrum Disorder 3 credits

The focus of this course is to provide special educators with advanced knowledge of applied behavior analysis in regards to accommodations for students with autism spectrum disorder. Special educators will focus on assessing individual needs, tools for intervention, and evaluating strategies and student progress.

SPD-5270TE: Autism Spectrum Disorder: Positive Behavior Support 3 credits

Special educators will explore the behavioral needs of students with autism spectrum disorder (ASD) and learn about positive behavior supports that can be used to address these behavioral needs. Special educators will focus on the specific sensory, communication, and behavior supports that can be applied to address and change behavior. The course also examines environmental factors affecting the behavior of students with ASD and the responsibility of teachers in determining and implementing evidence-based practices to address the unique behavioral needs of students with ASD.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

SPD-5300TE: Assessment and Eligibility in Special Education: Mild to Moderate 3 credits

Educators will investigate diagnostic and assessment tools. Educators will build foundational knowledge regarding the use of multiple methods of assessment and data-sources for diagnostic and educational decisions for individuals with mild to moderate disabilities.

SPD-5370TE: Autism Spectrum Disorder: Advocacy, Policy, and Ethics 3 credits

Practitioners will acquire knowledge of legal policy and ethical practices associated with students with autism spectrum disorder (ASD). This course focuses on rights and responsibilities, trends, and advocacy for students with ASD. Topics including implicit bias, equity, and inclusion are also addressed. Practitioners will review collaborative practices and relationship building techniques to foster sharing as part of the IEP process when working with students with ASD.

SPD-5400TE: Managing Learning Environments for Special Ed Mild to Moderate 3 credits

Educators examine how to create safe, inclusive, culturally responsive learning environments through collaboration with colleagues so that individuals with exceptionalities become active and effective learners and develop emotional well-being, positive social interactions, and self-determination. Educators focus on behavior management, functional behavior assessments, adaptive behaviors, positive behavior interventions and supports, and behavior improvement plans.

SPD-5411TE: Assistive Technology for Current Practitioners 3 credits

Practitioners examine a variety of assistive technology (AT) devices used to support differentiated instruction and Universal Design for Learning (UDL) for students with disabilities. Practitioners investigate methods of integrating high- and low-tech AT resources to support the reading, writing, and communication needs of students who may need modifications and accommodations to meet learning goals in all content areas.

SPD-5470TE: Autism Spectrum Disorder: Collaboration and Leadership 3 credits

This course addresses collaboration and leadership opportunities for practitioners working with the many stakeholders involved in the delivery of services for students with autism spectrum disorders. Practitioners will complete needs assessment activities and explore collaborative practices, problem-solving techniques, and conflict resolution strategies with stakeholders to promote the advancement of the profession. Leadership, creation and facilitation of professional development activities, and creating and sustaining productive work environments will be emphasized.

SPD-5500TE: Instructional and Transitional Planning for Students with Mild to Moderate 3 credits

Educators will examine how instructional planning advances the learning of students with mild to moderate disabilities by drawing upon knowledge of central concepts, structures of the discipline, and tools of inquiry of the academic subject-matter content areas and a variety of specialized curricula. Educators build foundational knowledge about individualized education plans and transition plans for a wide range of settings and different learning experiences. Educators engage in organizing knowledge, integrating cross-disciplinary skills, and developing meaningful individualized learning progressions through drafting an IEP.

SPD-5505TE: Transition Planning to Support Post-Secondary Goals 3 credits

Educators will examine curriculum needs of individuals with mild to moderate disabilities to develop and integrate the skills needed to transition students from the educational environment into successful postsecondary opportunities. Candidates focus on writing measurable postsecondary goals, creating aligned activities, and identifying the importance of family and interagency involvement.

SPD-5510TE: Professional, Ethical, and Legal Practices for Moderate to Severe 3 credits

Current practitioners survey professional ethical principles, professional practice standards, laws, and regulations that guide special educators. Practitioners build upon this foundational knowledge to examine the multiple roles and complex situations of professional practice related to individuals with moderate to severe exceptionalities.

SPD-5530TE: Assessing and Identifying Gifted Learners for Current Practitioners 3 credits

This course focuses on developing skills to assess intelligence, achievement, creativity, and other dimensions of giftedness. Educators evaluate assessment procedures of gifted and talented students, including identification, placement and programming. Emphasis is placed on reviewing the principles of assessment and evaluation that apply to the education of gifted, talented, and creative students, including testing, performance-based assessments, and other methods of observations and student evaluations in K-12 classrooms.

SPD-5560TE: Assessment and Eligibility for Moderate to Severe 3 credits

Current practitioners investigate diagnostic and assessment tools for determining student eligibility and monitoring for progress. Foundational knowledge is built regarding the use of multiple methods of assessment and data sources for diagnostic and educational decisions for individuals with moderate to severe exceptionalities. Practitioners analyze assessment data and develop an individualized education plan (IEP) for a student. Ongoing collaboration with IEP team members and external stakeholders is emphasized.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

SPD-5570TE: Autism Spectrum Disorder: Transitions and Life Skills 3 credits

This course addresses key requirements of the postsecondary transition plan and collaboration with stakeholders in school and the community. Practitioners will learn about appropriate transition assessments, aligned activities, and preparation for adult life. In addition, practitioners explore postsecondary options, adult services, and living options for adults with autism spectrum disorder.

SPD-5580TE: Care, Collaboration, and Communication for Moderate to Severe 3 credits

Teacher practitioners explore effective collaboration and communication techniques and strategies used in moderate to severe special education settings. Collaboration among teachers, other school professionals, families, and outside service agencies is analyzed to meet the individual needs of this special population. In addition, evaluation of the techniques and strategies used to meet the unique medical and educational needs of students within the moderate to severe classroom setting is addressed. Practicum/field experience hours: None. Fingerprint clearance not required.

SPD-5600TE: Enhancing Communication Skills for Mild to Moderate Disabilities 3 credits

Educators examine typical and atypical language development, and associated disabilities and disorders. Educators investigate the use of augmentative and alternative assistive technology, modifications and accommodations to enhance the communication skills of students with mild to moderate disabilities.

SPD-5620TE: Instructional Planning, Strategies, and Assessment for Moderate-Severe 3 credits

Current practitioners examine how instructional planning advances the learning of students with moderate to severe disabilities by creating a variety of specialized curricula aligned to content standards. Practitioners are guided in designing engaging instruction that meets the needs documented in a student's individualized education plan. Plans for accommodations, differentiated instruction, and strategies are identified in the lesson planning process. Formative and summative assessments are created to evaluate student progress and identify whether instructional adjustments are necessary.

SPD-5630TE: Gifted Programming and Environments for Current Practitioners 3 credits

This course explores the development of effective programs in gifted education. Educators evaluate gifted education programming related to gifted curriculum models, focus on the development of a well-founded rationale for gifted programming, compare appropriate delivery models for gifted programs, and identify comprehensive services for gifted, talented, and creative students. Emphasis is placed on evaluating and modifying learning environments and classroom climates to assist students who are gifted, talented, and creative to adapt to their environment, as well as advocating for gifted programs.

SPD-5640TE: Classroom Management and Behavior Analysis for Moderate to Severe 3 credits

Current practitioners examine how to create safe, inclusive, culturally responsive learning environments through collaboration with colleagues and other professionals so individuals with disabilities become active and effective learners. Strategies to develop students' emotional well-being, positive social interactions, and self-determination are emphasized. Practitioners focus on functional behavioral assessments, behavior improvement plans, activities of daily living, and positive behavior interventions and supports.

SPD-5650TE: Effective Communication and Assistive Tech for Autism Spectrum Disorders 3 credits

This course explores functional communication training and specific strategies to promote effective communication behaviors or skills of students with ASD. In addition, educators will survey assistive technology in relation to enhancing communication of students with autism spectrum disorders.

SPD-5660TE: Post-Secondary Transitional Planning - Moderate to Severe Disabilities 3 credits

Participants examine curriculum needs of individuals with moderate to severe disabilities to develop and integrate the skills needed to transition students from the educational environment into successful postsecondary opportunities. Participants focus on writing meaningful transition plans, aligning transition goals to appropriate instruction, and identifying the importance of family and interagency involvement. While helping families navigate their local and state level resources, participants learn to best support students with moderate and severe disabilities after graduating high school.

SPD-5670TE: Autism Spectrum Disorder: Assistive Tech and Communication Strategies 3 credits

This course explores functional communication training and specific strategies to promote effective communication behaviors or skills of students with autism spectrum disorder (ASD). Practitioners will survey assistive technology in relation to enhancing communication of students with autism spectrum disorders. Consideration of how to manage challenging expectations, show respect and improve ethical practice to promote advocacy and collaboration will extend to the home environment for life-skill application.

SPD-5680TE: Adaptive Communication for Moderate to Severe 3 credits

Current practitioners examine typical and atypical language development, and associated disabilities and disorders. Practitioners investigate how speech-language pathologists, special education teachers and others assist individuals with moderate to severe exceptionalities in the use of augmentative and alternative assistive technology, modifications, and accommodations to enhance their communication skills.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

SPD-5700TE: Methods of Teaching Math to Students with Mild to Moderate Disabilities **3 credits**

Educators build foundational knowledge on a variety of research-based instructional strategies to encourage individuals with mild to moderate disabilities to develop understandings and connections within content areas and to build skills to apply knowledge in meaningful ways. From this foundational knowledge, teacher candidates select, adapt and use research-based instructional strategies and interventions in academic and specialized curricula to advance the learning of students with mild to moderate disabilities with focused attention upon mathematics.

SPD-5705TE: Methods of Teaching Secondary Math to Students with Mild-Mod Disabilities **3 credits**

Practitioners build foundational knowledge on a variety of research-based instructional strategies to encourage individuals with mild to moderate disabilities to develop understandings and connections within content areas and to build skills to apply knowledge in meaningful ways. From this foundational knowledge, practitioners select, adapt and use research-based instructional strategies and interventions in academic and specialized curricula to advance the learning of students with mild to moderate disabilities with focused attention upon mathematics at the secondary level.

SPD-5720TE: Methods of Teaching Functional Mathematics & Science for Moderate to Severe **3 credits**

Current practitioners build foundational knowledge on a variety of research-based instructional strategies to provide individuals with moderate to severe exceptionalities appropriate access to content areas. From this foundational knowledge, practitioners select, adapt, monitor, and adjust standards, instruction, and assessments with focused attention on functional mathematics and sciences. Emphasis is placed on utilizing relevant resources and technology and communicating with other education stakeholders to support standards-based instruction for students with moderate to severe disabilities.

SPD-5730TE: Social and Emotional Needs of Gifted Learners **3 credits**

In this course educators use current research and material relevant to assisting gifted, talented, and creative students in addressing social- and emotional issues that may arise. Emphasis is placed on topics pertinent to gifted education, including students who are twice- exceptional, or profoundly gifted, and issues related to perfectionism, gender, underachievement, and special populations.

SPD-5800TE: Methods of Teaching English Language Arts to Students with Mild to Moderate **3 credits**

Educators select, adapt, and use research-based instructional strategies and interventions in academic and specialized curricula to individualize meaningful and challenging learning for students with mild to moderate disabilities, with an emphasis on literacy.

SPD-5820TE: Methods of Teaching Functional Language Arts for Moderate to Severe **3 credits**

Current practitioners select and adapt research-based instructional strategies, including the use of assistive and adaptive technology, to provide individuals with moderate to severe exceptionalities access to language arts content. With this foundational knowledge, practitioners plan a functional approach to literacy instruction and transition planning.

SPD-5850TE: Educational Psychology for Special Education for Current Practitioners **3 credits**

This course provides a thematically arranged study of the theories and principles of psychology that have influenced instructional practices. Behavioral and cognitive approaches to learning, motivation, and instruction are explored.

SPD-5930TE: Practicum I: Gifted Education **3 credits**

This course provides a reflective, experience-based integration of theory and practice. Candidates develop a useful, meaningful, and practical project that includes a schoolwide needs assessment and program development that will be presented to their peers. This course requires access to a K-12 school with a gifted program for practicum experiences. Practicum/field experience hours: 60. Fingerprint clearance required. Practicum/field experience hours: 60. Fingerprint clearance required.

SPD-5940TE: Practicum II: Gifted Education **3 credits**

This practicum course engages teachers in a field-based action research project. Each participant assesses students exhibiting gifted characteristics, then creates and implements individualized one-on-one action plans with the students based on their assessment results. Practicum/field experience hours: 60. Fingerprint clearance required.

SPD-5950TE: Methods of Educating Learners with Diverse Needs **3 credits**

Emphasis is placed on definitions, etiology, characteristics, and prevalence of various exceptionalities; laws and litigation protecting the rights of students with special needs and their families; current issues affecting persons with special needs; social perceptions, assessment, inclusion, and transition; and basic curriculum accommodations and supportive services for teaching students with special needs in the general classroom.

TEC-5160TE: Instructional Technology for Educators **3 credits**

This course introduces students to ISTE·S and ISTE·T standards for students and teachers; digital citizenship and responsibility; legal and ethical use guidelines; and transitioning instruction to integrate technology. Technology dispositions, expectations, and guidelines are emphasized for being a 21st century educator. Educators apply an understanding of design principles in visual communication theory and incorporate multiple intelligences and constructivist theories into an interactive environment. In addition, attention is given to instructional technology tools and resources.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

TEC-5210TE: Digital Literacies, Virtual Tools, and New Media **3 credits**

This course focuses on the organization and integration of media in school curricula. Learners identify instructional purposes and define roles for technology and media in learning and teaching. An emphasis is placed on the processes for selecting and implementing meaningful technologies, virtual tools and other electronic learning resources, and the development of digital literacies in teaching and learning.

TEC-5300TE: Ethics, Culture, and Equity with Technology **3 credits**

This course examines current educational practices and policies related to technology integration in schools so that practicing educators may determine what level of support these policies provide, regardless of student population. Educator participants will also examine legal standards for fair use of materials, digital citizenship, and authenticating sources. Emphasis is placed on the critical examination of social and cultural implications of information technologies and media, issues of cultural bias, equity, and international applications and implications of information technologies.

TEC-5360TE: Assessment and Instructional Technology **3 credits**

This course focuses on various technology-based assessment tools used for formative and summative assessments. Learners use tools to make data-driven decisions to drive curriculum and differentiate instruction. The content of this course includes use of digital media for progress monitoring or as assessment tools and creating and using alternative assessments. An emphasis is placed on understanding assistive technology and application in instructional programs and assessment for individuals with exceptionalities.

TEC-5410TE: Distance Learning **3 credits**

This course expands educator's knowledge of lesson preparation and activities, as well as basic curriculum development and design principles for distance education. The course explores distance education and online instruction, including history, theories, and practical applications. A variety of online facilitation techniques are explored in this course. An emphasis is placed on understanding distance education development and delivery, exploring the complexities of designing instruction in various distance contexts and applying these concepts in a real-world context through online facilitation.

TEC-5440TE: Leadership and Technology Coaching **3 credits**

This course examines the role of leadership as it relates to the implementation of educational technologies and media. An emphasis is placed on knowledge, and skills necessary to use, evaluate, plan, manage, and implement technologies effectively. Participants will learn and apply professional development techniques to include andragogy, coaching, improving teacher practices, school culture, and effective communication.

TEC-5610TE: Multimedia Instructional Strategies and Methods **3 credits**

This course provides participants with instructional strategies using learning theories. Focus is placed on developing knowledge and skills to create multiple types of web-based assignments and units for K-12 students using web authoring software. Participants learn to select and evaluate appropriate multimedia resources, and examine steps for planning, creating, and managing curriculum using software and tools for a variety of platforms. Emphasis is placed on project-based learning.

TSL-5320TE: Foundations of Instruction for English Language Learners **3 credits**

This course provides the historical, sociological, political, and legal foundations of policies and methodologies for English Language Learners (ELLs) in the United States. Emphasis is placed on understanding, comparing, and evaluating current language models as well as examining the learner and the influences on his/her language development. This course focuses on current instructional practices, adapting lesson structure and delivery to meet the needs of learners, and emphasizes the importance of continuing professional development associated with teaching practices.

TSL-5410TE: Linguistics for Current Practitioners **3 credits**

In this course, educators become familiar with the fundamentals of linguistics. Emphasis will be placed on phonology, morphology, syntax, semantics, pragmatics, sociolinguistics, historical linguistics, and first and second language acquisition theories. Educators will synthesize research-based methods of incorporating linguistic principles into their teaching practice.

TSL-5500TE: School, Community, and Family Culture for Current Practitioners **3 credits**

In this course educators will explore school, community, and family culture. Emphasis will be placed on the major goals, principles, and concepts of multicultural education, including multiple perspectives in culture and history as well as understanding cultural and individual differences in teaching and learning. Research is utilized to investigate the social, community, cultural, and familial contexts that influence learning and development.

TSL-5501TE: School, Community, and Family Culture **3 credits**

In this course, practitioners will explore school, community, and family culture. Emphasis will be placed on the major goals, principles, and concepts of multicultural education, including multiple perspectives in culture and history and understanding cultural and individual differences in teaching and learning. Research is utilized to investigate the social, community, cultural, and familial contexts that influence learning and development. Practicum/field experience hours: 15. Fingerprint clearance required.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

TSL-5520TE: Literacy in Bilingual Settings for Current Practitioner 3 credits

In this course, educators will examine approaches to developing literacy in second and native language P-12 schools. Emphasis will be placed on techniques for developing listening, speaking, reading, and writing skills; developing language and literacy through the content areas; using children's and young adult multicultural literature; and assessing students' literacy development in the second and native language. Strategies to develop biliteracy in dual language programs will also be discussed.

TSL-5580TE: ELL and Bilingual Curriculum and Methods of Instruction 3 credits

In this course, educators will review curricula and methods appropriate for the teaching of subject areas in ELL and dual language educational settings. Emphasis is placed on linguistic, cognitive, developmental, and socio-cultural considerations in the design of culturally responsive curricula; exploration of culturally responsive instructional methods and materials for use in language arts and content areas; and critique of current commercially prepared products.

TSL-5650TE: ELL and Bilingual Assessment for Current Practitioners 3 credits

In this course, educators will explore the principles of evaluating and structuring assessments. Educators will design rubrics and examine assessment for the purposes of identification, placement, and instructional delivery. Emphasis will be placed on learning ways to integrate assessment procedures into any curriculum, and designing assessment tasks that allow for improved learning.

TSL-5670TE: Methods of Teaching and Evaluating Special Needs ELLs 3 credits

In this course, educators will be introduced to the field of bilingual and English language learners in special education. They will engage in the study of the nature, psycho-social and emotional needs of bilingual individuals and English learners with disabilities. Emphasis will be given to the research in bilingual and English language learner education in relation to the complexity of the over- and-under-representation of bilingual students in special education, issues in relation to differentiating cultural and linguistic-related learning variations from special education issues, and instructional implications.

TSL-5750TE: Spanish for Educators – Basic 3 credits

In the course, current practitioners develop strategies for communicating with Spanish-speaking students and families. Beginning Spanish grammar and basic phrases are used to communicate in the educational environment and support students' wholistic growth. Current practitioners review methods and resources for supporting Spanish-speaking students and families.

TSL-5752TE: Spanish for Educators – Advanced 3 credits

In this course, current practitioners continue to work towards effective communication with Spanish-speaking students and families in the educational environment. Practitioners advance their ability to use a variety of phrases and conjugated verbs. Additionally, they will practice multiple forms of communication with families in a variety of academic situations to support student success.

TSL-5900TE: TESOL or BLE Practicum 3 credits

In this course educators have direct participation and experience with ELLs or bilingual/dual language students at their chosen level of instruction, within a P-12 educational setting. Educators will practice teaching and management skills, conduct assessments, and learn to communicate effectively with students, parents, colleagues, administrators, and the larger community. Practicum/field experience hours: 60. Fingerprint clearance required.

Christian Worldview (CWV)

CWV-101^{Ω♦}: Christian Worldview 4 credits

A worldview acts like glasses through which one views the world. In this course, students explore the big questions that make up a worldview, questions like “Why are we here?” and “What is my purpose?” Students examine how Christians answer these questions and work on exploring their own worldviews, as well as learning how worldview influences one's perceptions, decision making, and everyday life.

CWV-106HN^{Ω♦}: Christianity: Story, Theology and Mission 4 credits

This honors course is an introduction to the Christian worldview and how it shapes beliefs, identity, values, ethics, and cultural awareness. The focus of this honors course is to engage students in discourse about what it means to think and live as a follower of Christ within a historical, global, and social context. Prerequisite: Acceptance into the honors program.

CWV-301^{Ω♦}: Christian Worldview 4 credits

A worldview acts like glasses through which one views the world. In this course, students explore the big questions that make up a worldview, questions like “Why are we here?” and “What is my purpose?” Students examine how Christians answer these questions and work on exploring their own worldviews, as well as learning how worldview influences one's perceptions, decision making, and everyday life.

CWV-316[‡]: Christian Life: The Way of Jesus 4 credits

This course is an advanced exploration of the Christian worldview that shows how the Christian life provides true identity, meaning, peace, and joy. Students learn how to authentically follow Jesus in a way that will transform their lives through intentional practices and life together in community. Focus is also placed on human value, human dignity, and ethical reasoning in academic studies and careers. Prerequisite: CWV-101, CWV-301, or CWV-106HN.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

Cybersecurity (CYB)

CYB-201: Algorithms and Discrete Mathematics for Cybersecurity 4 credits

This is an introductory course in algorithm analysis with applications in discrete mathematics. Topics covered include complexity analysis, finite logic, Boolean algebra, sets, functions, counting, finite state machines, automata, regular expressions, and cryptography. Learners will determine how variability affects outcomes and assess the suitability of an algorithm to solve a given problem. Practicum/field experience hours: None. Algorithms and Discrete Mathematics for Cybersecurity. Prerequisites: MAT-154 and CST-111 or ITT-111.

CYB-220: Cyberlaw and Privacy in a Digital Age 4 credits

The Internet Age has introduced myriad legal challenges on a global level. Students will explore the emerging specialty within law that is cyber law. Topics will expose the reality that our legal system has evolved in a physical and visual world, but cyber space is largely invisible and virtual. Students will learn that past legal decisions or legal precedence has been important in our system and reasoning by analogy has been used extensively. In many cases the laws applied in the physical realm do not translate equally well into cyber space. This course will discuss the importance of this area introduce legal issues that need to be addressed.

CYB-300^Δ: Fundamentals in Cyber Security 4 credits

This course provides a fundamental understanding of the importance of cybersecurity through a broad range of cybersecurity topics. The course introduces core concepts and terminology used in cybersecurity and information systems security. Students learn concepts related to identifying common attack vectors, threats, preventive tools, and keeping information secure as it travels across a network. Students also gain a basic understanding of how cybersecurity threats and social engineering impact society.

CYB-320: Malware Analysis 4 credits

In this course students will explore the world of malware through meticulous analysis and binary reverse engineering techniques. This is a skill-based course with hands on labs that focus on both static and dynamic malicious code analysis. Upon successful completion of this course, students will be able to apply the tools and methodologies to safely perform analysis on common malware samples in a control environment. Practicum/field experience hours: None. Malware Analysis. Prerequisite: ITT-310 & ITT-307.

CYB-350: Social Aspects of Cybersecurity 4 credits

This course explores how end users can pose a threat to the security of an organization by falling victim to even simple traps. Students will learn that human manipulation creates a whole school of cybercrime opportunities such as phishing, “watering hole attacks” and other social engineering tactics. These threats are directed to the human psyche - not sophisticated malware or technical vulnerabilities, but rather the psychology and behavior of people. Students will see that a malicious actor – or “hacker” - need not be involved; an uneducated or careless employee or an unwieldy procedure can result in sensitive information leaking and potentially falling into the hands of an attacker. Prerequisite: ITT-307.

CYB-420^{Δ♦}: Global Perspectives on Cyberwarfare 4 credits

This course covers an analysis of Cyberwarfare in the 21st Century and beyond. Cyberspace is a complex environment that controls every aspect of a country’s Economy, Communication, and Infrastructure. This course will examine cyber warfare from a case-study perspective, applying the battlespace doctrine developed by military cyber operations teams. At the conclusion of this course students will have a fundamental understanding of the cyberspace threatscape, ethical challenges, and be able to strategize and implement cyberwarfare operations. Prerequisite: ITT-340 or SWE-310.

CYB-420HN^Δ: Global Perspectives on Cyberwarfare 4 credits

This course covers an analysis of Cyberwarfare in the 21st Century and beyond. Cyberspace is a complex environment that controls every aspect of a country’s Economy, Communication, and Infrastructure. This course will examine cyber warfare from a case-study perspective, applying the battlespace doctrine developed by military cyber operations teams. At the conclusion of this course students will have a fundamental understanding of the cyberspace threatscape, ethical challenges, and be able to strategize and implement cyberwarfare operations. Practicum/field experience hours: None. Global Perspectives on Cyberwarfare. Prerequisite: ITT-340 or SWE-310.

CYB-505: Cyber Warfare and Applications 4 credits

With a brief introduction to cybercrime and cybersecurity, this course will provide students with an overview of the various attacks and the countermeasures organizations can use to defend themselves. Exploring concepts such as defense-in-depth, layered security, vulnerability assessments, risk management, governance and compliance, and encryption; students will become familiar with prevention and protection theories, best practices, and strategies to securing corporate data (intellectual property). This course will conclude with an exploration of the various hacker psychologies and the differences between black-hat, grey-hat, and white-hat (Hackers with Halos) hackers. Prerequisite: UNV-504 or UNV-507.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

CYB-515: Enterprise Security Infrastructure Design 4 credits

This course introduces enterprise infrastructure design; including hardware, software, policies, and business processes. Emphasis is placed on integrating security solutions and theories in alignment with business objectives to achieve sustainability, reliability, and availability while deterring threats from cyber-attacks. This course also introduces students to the NIST Cybersecurity Framework, providing a foundation to formulating a strategy for cybersecurity program design. Prerequisite: CYB-505.

CYB-525: Technology Implementation of Security Solutions 4 credits

This course examines the tools and technologies used to secure an organization's intellectual property. Students will consider encryption, hardware security, software vulnerabilities, remote access technologies, and layered security defense strategies in the development of secure architectures. A technology-focused course, students will provide effective solutions around firewalls, networking, server security, database and website protocols, and VPN configurations. Prerequisites: CYB-505 and CYB-515.

CYB-535: Policy Management for Security Solutions 4 credits

This course introduces a policy perspective on security design. Students will consider cyber security frameworks, policies, cyber law, regulations, and standards in the configuration, development, and design of an enterprise policy infrastructure. In addition, students will examine the impact of policy implementation on enterprise systems and personnel management. Prerequisite: CYB-505.

CYB-610: Penetration Testing and Risk Management 4 credits

This intensive hands-on course will provide with students the experience of working with various cybersecurity technologies and techniques that hackers and malicious actors use to scan, identify, and exploit vulnerabilities in an organization. Students will also formulate strategies of protection from such threats by identifying risks, countermeasures, security policies, frameworks, and best practices to align and enhance an organization's security posture through the development of a risk management plan. Prerequisites: CYB-515 and CYB-525.

CYB-630: Enterprise Cyber Law and Compliance Strategies 4 credits

This course explores the human and enterprise aspects of cybersecurity management. From information security awareness to strategic planning; students will begin with the examination of the ideologies behind cybercrime, where attacks come from and why, followed by implementation techniques to best align cybersecurity applications with business objectives. This course provides a look at the strategies security professionals use to identify the attack vectors and plan accordingly to secure information systems using various industry compliances, regulations, and standards to design and implement cost effective controls, policies, and training to implement defense-in-depth techniques. This course ends with an impact analysis of when security measures fail, which includes legal elements and liability and ethical issues relating to forensic investigations. Prerequisite: CYB-535.

CYB-650: Innovation in Security Frameworks 4 credits

This course reinforces the significance, use, and deployment of security frameworks from a small-to-medium sized business (SMB) perspective to increase visibility, reduce risk from malicious activity, improve security posture, and enhance infrastructure to secure a company's intellectual property. Using various controls, policies, best practices, and implementation guides, students will establish a security framework for an organization that secures and aligns with an appropriate regulation (e.g., PCI DSS, HIPAA, SOX, GLBA). Prerequisite: CYB-535.

CYB-690: Cybersecurity Program Development 4 credits

This course culminates the entire program by requiring students to develop a comprehensive cybersecurity program. Evaluating the legal and ethical challenges; incorporating the policies, frameworks, and methodologies; and identifying the hardware, software, and application requirements to secure an organization's intellectual property, customer data, and resources. Students will apply managerial and leadership skills to develop and communicate an effective cybersecurity program. Prerequisites: CYB-610, CYB-630, and CYB-650.

Dance (DAN)

DAN-100♦: Introduction to Ballet Technique 1 credits

This course is an introduction to the techniques of the classical ballet, including alignment, positions, port de bras, and allegro combinations. It includes fundamental concepts, skills, movement vocabulary, and artistic expression specific to ballet.

DAN-101♦: Introduction to Jazz Technique 1 credits

This course is an introduction to the style, technique, and rhythmic structures of jazz dance with emphasis on increasing movement capabilities and personal expression. It includes fundamental concepts, skills, movement vocabulary, and artistic expression specific to jazz.

DAN-120♦: Introduction to Modern Technique 1 credits

This course is an introduction to the movement techniques of modern dance. It includes fundamental concepts, skills, movement vocabulary, and artistic expression specific to modern dance.

DAN-130A♦: Dance Ensemble I 0.5 credits

This course is designed to prepare the student for a dance concert production in a theatrical setting. Through the rehearsal process and culminating performances, students gain dance proficiency by working in a range of styles and choreographic approaches. Students audition choreography and may be cast as dancers, understudies, stage managers, and production assistants. Prerequisite: Audition.

Δ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

DAN-130B♦: Dance Ensemble I 0.5 credits

This course is designed to prepare the student for a dance concert production in a theatrical setting. Through the rehearsal process and culminating performances, students gain dance proficiency by working in a range of styles and choreographic approaches. Students audition choreography and may be cast as dancers, understudies, stage managers, and production assistants. Prerequisite: Audition.

DAN-180A♦: Elementary Dance Tour 0 credits

This course is designed to prepare the student for the GCU Elementary Dance Tour, a multi-media production composed through collaboration by faculty and students. Topics include choreography, dramatic dialogue, elementary teaching methods, technical production, and artistic expression in a range of different dance styles. Participation is determined by audition.

DAN-180B♦: Elementary Dance Tour 0 credits

This course is designed to prepare the student for the GCU Elementary Dance Tour, a multi-media production composed through collaboration by faculty and students. Topics include choreography, dramatic dialogue, elementary teaching methods, technical production, and artistic expression in a range of different dance styles. Participation is determined by audition.

DAN-200♦: Somatics for the Dancer 2 credits

This course is a study of somatic practices in dance. Students explore and discuss issues related to one body practice. Topics include body awareness, alignment, injury prevention, and movement observation.

DAN-200HN♦: Somatics for the Dancer 2 credits

This course is a study of somatic practices in dance. Students explore and discuss issues related to one body practice. Topics include body awareness, alignment, injury prevention, and movement observation.

DAN-210♦: Improvisation for Dance 1 credits

This course focuses on creating and developing movement through dance improvisation in solos, duets, and groups. Contact improvisation and partnering, the uses of improvisation in choreography and performance, and the creative process are explored. Students are guided toward finding their own artistic voice through movement, discussion, and writing.

DAN-250♦: Ballet Technique II 1 credits

This technique course is designed to increase skill in classical ballet. It includes intermediate concepts, skills, movement vocabulary, and artistic expression specific to ballet. Prerequisite: DAN-100.

DAN-260♦: Jazz Technique II 1 credits

This course is a refinement of beginning skills, with an emphasis on development of technical abilities and performance qualities. It focuses on intermediate concepts, skills, movement vocabulary, and artistic expression specific to jazz. Prerequisite: DAN-101.

DAN-270♦: Modern Technique II 1 credits

This course is a refinement of beginning skills with an emphasis on development of technical abilities and performance qualities. It includes intermediate concepts, skills, movement vocabulary, and artistic expression specific to modern dance. Prerequisite: DAN-120.

DAN-280A♦: Dance Ensemble II 0.5 credits

This course is designed to prepare the student for a dance concert production in a theatrical setting. Through the rehearsal process and culminating performances, students gain dance proficiency by working in a range of styles and choreographic approaches. Students audition choreography and may be cast as dancers, understudies, stage managers, and production assistants.

DAN-280B♦: Dance Ensemble II 0.5 credits

This course is designed to prepare the student for a dance concert production in a theatrical setting. Through the rehearsal process and culminating performances, students gain dance proficiency by working in a range of styles and choreographic approaches. Students audition choreography and may be cast as dancers, understudies, stage managers, and production assistants.

DAN-300♦: Alignment and Pilates for Dance 2 credits

This course addresses alignment for dancers, using Pilates mat exercises. The course addresses how breath, strength, and coordination may facilitate greater ease and efficiency in movement.

DAN-310♦: Technology for Dance Educators 3 credits

Students study and utilize a variety of dance technologies, such as computer software, hardware, networking, multimedia, interactive media, and the Internet in order to foster inquiry, collaboration, and interaction in the classroom in order to meet the needs of a diverse student population.

DAN-312♦: Vernacular Dance: Tap I 1 credits

This course is an introduction to the style, technique, and rhythmic structures of tap dance with emphasis on increasing movement capabilities and personal expression. It includes fundamental concepts, skills, movement vocabulary, and artistic expression specific to tap. Students will explore tap dance through historical, social, and improvisational contexts. This course is available for non-majors.

DAN-313♦: Vernacular Dance: Urban & Hip Hop I 1 credits

This course is an introduction to the style, technique, and rhythmic structures of urban dance. Students will explore street dance styles with emphasis on increasing movement capabilities and personal expression. Development of proficiency includes fundamental concepts, skills, movement vocabulary, and artistic expression specific to Urban dance. Students will explore urban dance through historical, social, aesthetic, and improvisational contexts as well as most current forms found in popular urban culture. This course is available for non-majors.

Δ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

DAN-315[△]: Dance History I 4 credits

This writing intensive course is a study of the histories and aesthetic systems of selected world dance traditions emphasizing interconnections between aesthetic practice, religious and social needs, and the impact of cultural convergence on dance.

DAN-320[◆]: Technology for Dance Educators 2 credits

Students study and utilize a variety of dance technologies, such as computer software, hardware, networking, multimedia, interactive media, and the internet in order to foster inquiry, collaboration, and interaction in the classroom to meet the needs of a diverse 21st century student population.

DAN-320HN[∇]: Technology for Dance Educators 2 credits

Students study and utilize a variety of dance technologies, such as computer software, hardware, networking, multimedia, interactive media, and the Internet in order to foster inquiry, collaboration, and interaction in the classroom to meet the needs of a diverse 21st century student population.

DAN-325: Dance Integration 4 credits

This course explores an integrative arts model using methods and assessments for dance in elementary curriculum. Practicum/field experience hours: 10. Fingerprint clearance required.

DAN-335[◆]: Foundations of Dance and Culture for Diverse Learners 4 credits

Students study the historical, philosophical, and sociological influences that have shaped dance, dance education, and the issues faced by educators today, as well as the challenges of the future that await persons now entering the teaching profession. The course also examines the unique learning needs of exceptional students. Emphasis is placed on definitions, etiology, characteristics, and prevalence of various exceptionalities; laws and litigation protecting the rights of students with special needs and their families; current issues affecting persons with special needs; social perceptions, assessment, inclusion, and transition; and basic curriculum accommodations and supportive services for teaching students with special needs in the dance classroom. Practicum/field experience hours: 10. Fingerprint clearance required.

DAN-335N: Foundations of Dance and Culture for Diverse Learners 4 credits

Students study the historical, philosophical, and sociological influences that have shaped dance, dance education, and the issues faced by educators today, as well as the challenges of the future that await persons now entering the teaching profession. The course also examines the unique learning needs of exceptional students. Emphasis is placed on definitions, etiology, characteristics, and prevalence of various exceptionalities; laws and litigation protecting the rights of students with special needs and their families; current issues affecting persons with special needs; social perceptions, assessment, inclusion, and transition; and basic curriculum accommodations and supportive services for teaching students with special needs in the dance classroom. Practicum/field experience hours: 20.

DAN-340[△]: Dance History II 4 credits

This writing intensive course is a comprehensive comparative study of Western theatrical dance forms. The focus is on significant trends and individuals who shaped the development of modern dance, ballet, jazz, and vernacular dance, from ancient Greece to the modern era.

DAN-350[◆]: Ballet Technique III 1 credits

This course is designed to increase skill in classical ballet technique. It includes advanced concepts, skills, movement vocabulary, and artistic expression specific to ballet. Prerequisite: DAN-250.

DAN-353[◆]: Ballet Technique IV 1 credits

This advanced course is designed to increase technical proficiency and performance skill in classical ballet technique. It includes advanced concepts, skills, movement vocabulary, and artistic expression specific to classical ballet. Prerequisite: DAN-350.

DAN-355[△]: Dance Kinesiology and Injury Prevention 4 credits

This writing intensive course focuses on the anatomical and mechanical principles that relate to human movement; the analysis, management, and prevention of dance injuries; the analysis of body types and technical ability; and the means by which to improve dance ability. Aspects of teaching safe technique classes and alternative methods will also be explored.

DAN-360[◆]: Jazz Technique III 1 credits

This course is designed to increase skill in jazz technique. It includes advanced concepts, skills, movement vocabulary, and artistic expression specific to jazz. Prerequisite: DAN-260.

DAN-363[◆]: Jazz Technique IV 1 credits

This advanced course is designed to increase technical proficiency and performance skill in jazz technique. It includes advanced concepts, skills, movement vocabulary, and artistic expression specific to jazz. Prerequisite: DAN-360.

DAN-370[◆]: Modern Technique III 1 credits

This course focuses on the exercises and activities necessary to develop strength, flexibility, endurance, and technical dance skill. It includes advanced concepts, skills, movement vocabulary, and artistic expression specific to modern dance. Prerequisite: DAN-270.

DAN-373[◆]: Modern Technique IV 1 credits

This advanced course is designed to increase technical proficiency and performance skill in modern technique. It includes advanced concepts, skills, movement vocabulary, and artistic expression specific to modern dance. Prerequisite: DAN-370.

DAN-380[◆]: Dance Ensemble III 0.5 credits

This course is designed to prepare the student for a dance concert production in a theatrical setting. Through the rehearsal process and culminating performances, students gain dance proficiency by working in a range of styles and choreographic approaches. Students audition choreography and may be cast as dancers, understudies, stage managers, and production assistants.

[△] Writing intensive course | [◆] Fulfills General Education requirement | [∇] Honors Major Course | ^Ω Non-Transferable

DAN-380B[♦]: Dance Ensemble III **0.5 credits**

This course is designed to prepare the student for a dance concert production in a theatrical setting. Through the rehearsal process and culminating performances, students gain dance proficiency by working in a range of styles and choreographic approaches. Students audition choreography and may be cast as dancers, understudies, stage managers, and production assistants.

DAN-385[♦]: Choreography I: Space and Time/Design and Dance **2 credits**

This course focuses on the elements of time, space, and energy as related to choreographic design. It is a study of these primary dance elements and their intrinsic role in developing diverse understandings of dance. The course considers design in the related fields of music and art as relevant to choreographic design and communication in dance. Practicum/field experience hours: None. Students needing field experience hours should take DAN-385N.

DAN-385N[♦]: Choreography I: Space and Time/Design and Dance **2 credits**

This course focuses on the elements of time, space, and energy as related to choreographic design. It is a study of these primary dance elements and their intrinsic role in developing diverse understandings of dance. The course considers design in the related fields of music and art as relevant to choreographic design and communication in dance. Practicum/field experience hours: 10. Fingerprint clearance required.

DAN-390[♦]: Choreography II: Process **2 credits**

This course is a study of and experience in various approaches to the choreographic process as related to artistic concepts and to the philosophy of art as espoused by various traditional and contemporary dance artists and as developed by the individual student. Prerequisite: DAN-385.

DAN-390HN[♦]: Choreography II: Process **2 credits**

This course is a study of and experience in various approaches to the choreographic process as related to artistic concepts and to the philosophy of art as espoused by various traditional and contemporary dance artists and as developed by the individual student. Prerequisite: DAN-385.

DAN-395[♦]: Dance Production **4 credits**

This course is designed to introduce students to the elements of technical theater specific to a dance production and to prepare students to organize a production in a variety of media. The course covers the fundamentals of lighting and costume design; sound/music/video recording and other multimedia devices; and basic elements of production management, such as contracts, labor issues, budgets, facility rentals, marketing and fundraising.

DAN-395HN[♦]: Dance Production **4 credits**

This course is designed to introduce students to the elements of technical theater specific to a dance production and to prepare students to organize a production in a variety of media. The course covers the fundamentals of lighting and costume design; sound/music/video recording and other multimedia devices; and basic elements of production management, such as contracts, labor issues, budgets, facility rentals, marketing and fundraising.

DAN-398[♦]: Dance Methods and Assessment in the Secondary School **4 credits**

This course is a study of methods for developing and conducting the dance program in middle schools and high schools. Methods, materials, topics, and issues in dance education are used to prepare dance education majors to enter the teaching profession. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: DAN-390.

DAN-398N[♦]: Dance Methods and Assessment in the Secondary School **4 credits**

This course is a study of methods for developing and conducting the dance program in middle schools and high schools. Methods, materials, topics, and issues in dance education are used to prepare dance education majors to enter the teaching profession. Practicum/field experience hours: 25. Fingerprint clearance required.

DAN-412[♦]: Vernacular Dance: Tap II **1 credits**

This course is a continuation of the style, technique, and rhythmic structures of tap dance. Students will explore various tap styles with emphasis on increasing movement capabilities and personal expression. Development of proficiency includes fundamental concepts, skills, movement vocabulary, and artistic expression specific to tap dance. Students will explore tap dance through historical, social, aesthetic and improvisational contexts. Prerequisite: DAN-312.

DAN-413[♦]: Vernacular Dance: Urban & Hip Hop II **1 credits**

This course is a continuation of the style, technique, and rhythmic structures of urban and hip hop dance. Students will explore various urban styles with emphasis on increasing movement capabilities and personal expression. Development of proficiency includes fundamental concepts, skills, movement vocabulary, and artistic expression specific to urban dance. Students will explore urban dance through historical, social, aesthetic and improvisational contexts. Prerequisite: DAN-313.

DAN-430: Dance Research Seminar I **2 credits**

This course provides an opportunity for students to define their career goals and to network in preparation for a career and/or further dance studies. Students will explore current issues and career trends in dance. Topics will include professional portfolio creation, statement of artistic philosophy, academic research skills and business applications.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DAN-435: Dance Research Seminar II 2 credits

This course is a continuation of Dance Research Seminar I, which provides an opportunity for students to define their career goals and to network in preparation for a career and/or further dance studies. Students will explore current issues and career trends in dance. Topics will include professional portfolio creation, statement of artistic philosophy, academic research skills and business applications.

DAN-450♦: Dance Pedagogy 2 credits

This course encompasses traditional and contemporary approaches of dance education and examines effective teaching practices in settings including elementary and secondary schools, private dance organizations, and community-based settings. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: DAN-355.

DAN-453♦: Ballet Technique V 1 credits

In this course, ballet technique will be studied to enhance mastery in technical and artistic expression. This course will examine pointe for women and conditioning for men, in preparation for partnering work. Partnering skills and classical ballet variations will be included for both men and women.

DAN-465A♦: Master Class: Ballet, Jazz 1 credits

This course is designed for the pre-professional dancer. Students will further their studies in each dance form to enhance mastery in technical and artistic expression. Jazz studies in this course will include mock auditions and informal performance opportunities to reflect professional contexts such as commercial dance and musical theatre. Ballet studies will include pointe for women and conditioning for men, in preparation for partnering work. Partnering skills and classical ballet variations will be included for both men and women. Prerequisites: DAN-353 and DAN-363.

DAN-465B♦: Master Class: Modern 1 credits

This course is designed for the pre-professional dancer. Modern dance technique will be studied with faculty and guest artists to enhance mastery in technical and artistic expression. Students choose either DAN-465A or DAN-465B. Prerequisite: DAN-373.

DAN-470♦: Choreography III: Performance 2 credits

This course is a supervised experience in choreographing a dance for public performance arranged through a cooperative effort of the student and supervisor. Prerequisite: DAN-390.

DAN-475♦: Dance in Sacred Contexts 4 credits

This course will examine dance within both Christian and non-Christian contexts. Students will apply this knowledge to design dances, text and other materials for ministry, worship services, workshops, and outreach.

DAN-480♦: Dance Ensemble IV 1 credits

This course is designed to prepare the student for a dance concert production in a theatrical setting. Through the rehearsal process and culminating performances, students gain dance proficiency by working in a range of styles and choreographic approaches. Students audition choreography and may be cast as dancers, understudies, stage managers, and production assistants.

DAN-485♦: Creative Practices 4 credits

In this course, students conduct artistic research through the practices of improvisation, choreographic choice making, and interdisciplinary collaboration. Students will engage in various creative projects with dance faculty, scholars, performers, and researchers across the College of Fine Arts and Production.

Doctoral Business Administration (DBA)

DBA-805: Management Theory in a Global Economy 3 credits

This course provides an overview of seminal management theories and their relevance, applicability, and/or divergence from current business practice. Students focus on understanding the application of management theories to support organizational sustainability in a global economy.

DBA-815: Economics for Business Decisions 3 credits

This course provides the student with the skills and competencies needed to be able to apply microeconomic principles to the solution of business problems. Specifically, the course examines the four market structures focusing on competition and utilizes microeconomic theory to provide solutions to business problems.

DBA-820: Emerging Issues in Financial Management 3 credits

This course explores the theories and frameworks that drive financial decision making in organizations today. Students focus on issues facing administrators in the changing business environment.

DBA-830: Statistics for Business Research 3 credits

This course provides an overview of preparing, analyzing, and interpreting data using statistical techniques. Topics include data preparation and statistics basics, as well as factor analysis, t-testing, ANOVA, and correlation and regression.

DBA-831: Analytic Foundations for Business Leaders 3 credits

This course addresses the foundations of data mining. The course provides tools and techniques to determine whether data is appropriate for analysis. Learners will interact with a multi-year integrated business case as a means of exploring applications of analytics.

DBA-833: Predictive Modeling 3 credits

This course addresses predictive modeling techniques that leverage enterprise data to create competitive advantage. Methods of creating and communicating predictive modeling solutions are also discussed.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

DBA-835: The Sustainable Future 3 credits

This course examines organizational sustainability through the lenses of competitive advantage and innovation. It addresses the leadership skills and capabilities required to foster, lead, and sustain innovation in organizations, and it explores how these ideas can be applied to create competitive advantage leading to a sustainable organization.

DBA-837: Prescriptive Modeling for Business Decisions 3 credits

This course addresses prescriptive modeling techniques that leverage previously gained predictive enterprise data to create competitive advantage. Technological and organizational supports for prescriptive modeling are discussed as are methods of communicating prescriptive modeling solutions.

DBA-839: Enterprise Data Complexity 3 credits

Business is routinely using enterprise data to create competitive advantage. This course addresses the complexity of implementing enterprise data solutions and the related infrastructure considerations. In this course, learners will interact with a multi-year integrated business case to experience the complex interactions associated with exploiting enterprise data for competitive advantage.

DBA-885: Developing the Research Proposal 3 credits

In this course, learners formalize their research proposal specific to their topic. Emphasis is placed on fully developing Chapter 1 and incorporating Chapters 2 and 3 (drafts) from previous research courses. This proposal becomes the first three chapters of the dissertation upon approval of the final draft by the College of Doctoral Studies. Prerequisite: RES-880.

DBA-955^Ω: Dissertation I 3 credits

In this course, learners apply the skills of the practitioner-scholar. They are self-motivated and committed to reflective practice. They actively seek input from other scholars while continuing to design independent research under the guidance of the dissertation committee. Prerequisite: RES-871 or RES-885 or RSD-883 or RSD-884.

DBA-960^Ω: Dissertation II 3 credits

In this course, learners apply the skills of the practitioner-scholar. They are self-motivated and committed to reflective practice. They actively seek input from other scholars while continuing to design and/or conduct independent research under the guidance of the dissertation committee. Prerequisite: DBA-955.

DBA-965^Ω: Dissertation III 3 credits

In this course, learners apply the skills of the practitioner-scholar. They are self-motivated and committed to reflective practice. They actively seek input from other scholars while continuing to design and/or conduct independent research under the guidance of the dissertation committee. Prerequisite: DBA-960.

DBA-966E: Research Continuation I 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-965.

DBA-967E: Research Continuation II 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-966 or DBA-966E.

DBA-968E: Research Continuation III 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-967 or DBA-967E.

DBA-969E: Research Continuation IV 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-968 or DBA-968E; RSD-951.

DBA-970E: Research Continuation V 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-969 or DBA-969E.

DBA-971E: Research Continuation VI 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-970 or DBA-970E.

DBA-972E: Research Continuation VII 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-971E.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DBA-973E: Research Continuation VIII 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-972E.

DBA-974E: Research Continuation IX 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DBA-973E.

DBA-975^Ω: Dissertation Research Continuation 0 credits

This course emphasizes the finalization of the dissertation and provides learners guidance for finding the appropriate venues and approaches in publishing their research findings. This will include the final steps necessary in pulling together what might have been earlier versions of chapters 1, 2, and 3, as well as the proofing and dissertation editing strategies that are required and the steps scholars can take to make sure their results are, in fact, shared with other scholars. This includes an exploration of writing research articles, preparing to present scholarly papers, as well as other publication venues. Prerequisites: DBA-966E or DBA-970 and either RSD-951 or D-35 status.

Digital Design (DDN)

DDN-100[♦]: Survey of the Visual Arts 4 credits

This survey course introduces majors to theoretical foundations of the visual arts and cultures. Modes of cultural production are explored—including art, photography, film, and design—with focus on influential artists, critics, and theoreticians. Students begin to identify, form, and critically support their own visual interests and opinions in relation to the diverse and changing nature of contemporary culture. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud.

DDN-101[♦]: Design Thinking 4 credits

This survey course introduces students to basic design thinking, including principles and elements of design, and concepts of composition. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student artwork. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu.

DDN-105[♦]: Drawing for the Visual Arts 4 credits

Drawing, sketching, conceptualization for clients, and preparing storyboards are essential communication skills in a visual world. This introductory drawing course teaches students about rendering spatial relationships, perspective, light, shadow, texture, and forms. This foundational course includes still life, gesture, and perspective drawing as well as lectures, critiques, and discussions. This course does not require that students have an art background. All types of aspiring artists will benefit from the fundamental and techniques taught in this class. Students will provide drawing supplies and paper along with a portfolio to carry them.

DDN-110[♦]: Design Fundamentals 4 credits

This course is an introduction to the basic elements of design and processes of visual communication using graphic tools standard in the industry. The focus is on mastering pixel, vector, and layout tools to demonstrate two-dimensional graphics, images, symbols, color theory, typography, and composition. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu.

DDN-115: Raster and Vector Technologies 4 credits

This foundational studio course focuses on developing visual style and production workflows in the creation of raster- and vector-based graphics using industry-standard technologies. Students apply color theory and composition skills to create complex illustrations and advertisements. Multiple input sources are combined to create both original and derivative content: camera, scanner, mouse, tablet, traditional media, and stock photography. Students practice acquiring work at the correct PPI, retouching, tonal correction, and color profiling to create images compliant with industry standards. Emphasis is placed on selecting appropriate imagery by analyzing audience needs, which is then applied to developing creative and original work. Students also learn how to legally acquire stock imagery and the ethical obligations in its manipulation. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu.

DDN-120[♦]: Production Methods 4 credits

During this course students will apply the concepts of production management, including structuring and preparing electronic files through production for a variety of mediums. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: DDN-110 or DDN-115.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DDN-125: Layout and Composition 4 credits

This survey course reinforces the use of design elements and principles of composition to create compelling, marketable designs. Structures, grid systems, and more informal freeform techniques are investigated to solve hands-on design problems. The role of typography, color, and hierarchy for effective communication is explored. Students use rapid visualization to iterate and prototype multiple solutions using the design thinking process and learn how to document their processes for presentation. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-100 or DDN-101.

DDN-160: 2D Motion Design 1 4 credits

This foundational motion course examines the basics of 2D motion design as it relates to graphic design. Students examine 2D motion in the context of the 12 Principles of Animation, the foundation of motion. This course teaches students how to view graphic design with the addition of a timeline. Students are introduced to the production pipeline as it relates to 2D graphic design in the context of motion. During preproduction, students strategize how to complete 2D motion graphics. Students then start crafting the assets and 2D motion of their projects in production and present a finalized motion graphic during post-production. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-110 or DDN-115.

DDN-200: Creative Processes 4 credits

This course exposes students to a variety of artistic methods to generate concepts and content off-screen, using traditional rapid visualization and mixed media. Structures for experimentation -- both planned and spontaneous -- are explored. A focus on concept development and rigorous hands-on practice helps students develop their artistic voice. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu.

DDN-205♦: Figure Drawing 4 credits

This course teaches students the anatomy of figure drawing for animation and character modeling. Developed skill sets transfer to figure drawing of any organic being, whether human or animal. Class time consists of demonstrations, lectures, critiques, and drawing exercises using a variety of media and subject matter. Student will provide drawing supplies and paper, along with a portfolio to carry them. A supply list will be provided at the start of the course.

DDN-210♦: Designing with Type 4 credits

This course explores fundamentals and traditions for designing with type, as well as corporate design with an emphasis on typography with integration of vector designs and photography into promotional pieces. Students propose and create solutions for visual problems with type. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student artwork. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-120. Co-Requisite: DDN-120.

DDN-210HN♦: Designing with Type 4 credits

This course explores fundamentals and traditions for designing with type, as well as corporate design with an emphasis on typography with integration of vector designs and photography into promotional pieces. Students propose and create solutions for visual problems with type. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student artwork. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: DDN-110.

DDN-215♦: Digital Photography I 4 credits

In this introductory digital photography course, students explore basic camera operation, digital capture, photographic principles, lighting, and visual design elements. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student photography. This is not a photo manipulation course. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Students are required to provide their own DSLR camera and tripod.

DDN-220♦: 2D Animation Design 4 credits

This course introduces the principles of animation, bringing objects to life using established principles of squash and stretch, key framing, and basic timing techniques. Vector-based design tools are used to create moving design. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student artwork. Prerequisites: DDN-110. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud.

DDN-230♦: Sculpture 4 credits

This course introduces students to sculpture in various mediums, both traditional and nontraditional; provides practical and theoretical exploration of form, surface, mass, gravity, and structure; includes reading and writing assignments; and requires the creation and exhibition of student artwork. Students will provide their own sculpture tools. A supply list will be posted prior to the start of class.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

DDN-240♦: User Experience Design 4 credits

During this course students will apply theories of user experience and interaction to the design of web and mobile products. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud.

DDN-250: Interface Design 1: User Experience 4 credits

This course explores the fundamentals of User Experience as it applies to mobile applications through the use of prototyping and user testing. The historical context of User Experience is explored and as well as how it evolved into modern application design. During this course, students apply the Laws of UX to their designs. Various usability testing methods are implemented. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-125.

DDN-255: Interface Design 2: Web Design 4 credits

This course focuses on the web design prototyping process including research, wireframes, design comps, and interactive mock-ups that address a creative brief. Students learn website production, as well as Search Engine Optimization as it applies to design assets. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-250.

DDN-260‡: 2D Motion Design 2 4 credits

This course expands upon 2D motion design concepts as they relate to graphic design. Students continue exploring the 12 Principles of Animation and the production pipeline as a whole. Students explore audio, video, graphics, and type as assets for 2D motion graphics, and research industry trends in 2D motion and use that research to drive their work forward. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-160.

DDN-276: Portfolio 1 4 credits

This course requires students to research and build a self-marketing plan and curate a portfolio of work to use in a job search. Students examine their current work in order to accurately develop personal promotional assets, be introduced to design communities, identify industry networking opportunities, and begin to build a professional social network. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisites: DDN-120 and Sophomore standing.

DDN-300♦: Web Design I 4 credits

In this course, students learn visual design for the Web, building structure and presentation. Web layouts and style, artistic quality and performance, and navigation and accessibility are explored in the development of Web sites using HTML and CSS. The focus of the course is to develop a core foundation in HTML and CSS before the evaluation of other Web development tools. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: DDN-110 or DDN-115, or permission of instructor.

DDN-305♦: Drawing for Animation 4 credits

Students develop perspective and layout techniques for creating depth illusion as applied to principles of 3D modeling and animation. This course emphasizes the study of story, size relationships, values, lines, vanishing points, lighting, path direction, camera placements, and composition. Students also explore drawing media. Prerequisites: DDN-105. Technology requirement: Students provide their own laptop and subscription to Adobe Creative Cloud, a graphics tablet, Audacity sound editing software, and additional supplies as defined during the course.

DDN-306: 3D Motion Design 1 4 credits

This course focuses on introducing the principles and production of 3D modeling and 3D motion using industry standard software and processes. Students demonstrate three-dimensional concepts, theories, design, and application while creating products for use in motion graphics. Technology requirement: Students provide their own laptop, mouse, subscription to the Adobe Creative Cloud, and Maya software. Maya software is available as a student download from the Autodesk website. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-260.

DDN-310♦: Digital Painting 4 credits

This course is an advanced study in digital painting tools to support animation projects. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud, external drive for back-ups, mouse and/or graphics tablet for input.

DDN-312: Advanced Typography 4 credits

This studio-intensive course introduces a new dimension to typographic foundations through the inclusion of motion and interactivity in type. Students learn how to source web-compliant typography for inclusion in their own creative, strategy-driven design projects. Students explore grids, hierarchy, style, contrast, and basic animated transformations. Students apply the 12 Principles of Animation to kinetic typography compositions. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-210.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

DDN-315♦: Digital Photography II 4 credits

In this course, students shoot RAW and apply advanced photography techniques to create images used for a variety of commercial advertising, social media, and other marketing purposes. Natural and studio lighting techniques are studied as available methods for image creation. This course requires Web-based presentations, and the creation and exhibition of student artwork. Prerequisites: DDN-215. Technology requirement: Students must provide their own digital SLR or mirrorless camera, tripod, and connection cables or card readers to move the files between the camera and their computer. Personal laptop and Adobe Photoshop or Lightroom are required.

DDN-330♦: 3D Modeling Design I 4 credits

This course focuses on 3D modeling using a variety of media and processes. Students demonstrate three-dimensional concepts, theories, and application while creating products and package designs; photography and 3D model integration; and beginning character designs. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student artwork. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Maya software is available as a student download from the Autodesk website.

DDN-331: 3D Motion Design 2 4 credits

This course focuses on building creative skillsets, with an emphasis on developing the principles and processes of 3D motion graphics using industry standard tools and techniques. Students demonstrate the design aesthetics and practical technical skills needed to enter the field of motion graphics. Technology requirement: Students provide their own laptop, mouse, subscription to the Adobe Creative Cloud, and Maya software. Maya software is available as a student download from the Autodesk website. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-306.

DDN-335♦: Web Applications 4 credits

This course focuses on the planning, design, and implementation of dynamic websites. Using modern content management tools, HTML, CSS, and JavaScript, the course explores how to manage and distribute digital content, videos, photos, animations, and articles. Students explore website creation tools such as Wordpress, Joomla!, and Drupal, with a strong focus on creating and managing digital content for multiple platforms. Lastly, the course covers how to keep data safe and secure using cyber security best practices. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud. Prerequisite: DDN-300.

DDN-336: Front-End Development for Web Design 4 credits

In this course, students learn web design production and development. Web layouts, style, artistic quality, performance, navigation, and accessibility are explored in the development of websites using HTML and CSS. The focus of the course is to develop a core foundation in HTML and CSS, with an understanding of JavaScript. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Students also must purchase their own domain name and Internet-hosting services. Prerequisite: DDN-255.

DDN-340^A♦: History of Design 4 credits

This writing intensive course focuses on the history of visual arts, graphic design, and animation; genres of design; and the influence of artists, graphic artists, and animators through the ages. Emphasis is placed on the history of and current developments in the digital and information age. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud.

DDN-340HN^A♦: History of Design 4 credits

This writing intensive course focuses on the history of visual arts, graphic design, and animation; genres of design; and the influence of artists, graphic artists, and animators through the ages. Emphasis is placed on the history of and current developments in the digital and information age. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud.

DDN-350♦: Web Design II 4 credits

This course focuses on intermediate Web design from concept development—including roughs and wireframes—to design comps and interactive mock-ups. Students create sitemaps, flow diagrams, and basic user tests to help determine nomenclature, as well as wireframes that represent working models with page elements and functional specifications. Students learn to evaluate web site usability, as well as to conduct accessibility testing. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Students will also purchase their own domain name and internet hosting service. Prerequisite: DDN-300.

DDN-351^f: Interface Design 3: Application Design 4 credits

This course focuses on the planning, design, and implementation of dynamic applications using different project management methodologies. Due to the constant technological changes in screen sizes, students learn how to design and adapt to various devices. Types of applications designed include websites, mobile, and wearable technologies. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-255.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | ^f Honors Major Course | ^Ω Non-Transferable

DDN-355[♦]: Content Management Systems 4 credits

In this course, students will learn to use various content management systems for websites, blogs, e-mail marketing, and social media. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Students will also purchase their own domain name and internet hosting services. Prerequisite: DDN-300.

DDN-356: Interface Design 4: Content Management Systems 4 credits

In this course, students learn how to use various content-management systems including, but not limited to websites, blogs, e-mail marketing, and social media. Students design and produce strategic assets, and learn how to set up hosting and populate content inside an industry standard CMS. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Students also must purchase their own domain name and internet hosting services. Prerequisites: DDN-336 and DDN-351.

DDN-360[♦]: 3D Modeling Design II 4 credits

This course is a study of the tools used to convert two-dimensional hand drawings, photos, and other references into three-dimensional elements. Students employ the terminology, tools, and topology of animation and game industries while modeling polygons, NURBS, and SubDs. Students explore texturing methods, camera setups, lighting techniques, and rendering options. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student work. Prerequisites: DDN-330. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Maya software is available as a student download from the Autodesk website.

DDN-365[♦]: 3-D Animation and the Mechanics of Motion 4 credits

In this course, the principles of animation are explored in greater depth as they apply to 3D. Students learn about the production cycle of animation while planning models for future animation. Kinematics, rigging, and facial animation processes are explored as students demonstrate walk cycles, express emotions, and synchronize sound to animations. Students also create short animations and integrate basic sound and video compositing software. This course includes reading, writing, and lab assignments. Prerequisites: DDN-220 and DDN-330.

DDN-366: Advanced Motion Design 1 4 credits

In this advanced studio course, students plan and produce graphic design-based portfolio pieces that demonstrate an understanding of motion. Students examine industry trends as they relate to advertising and client storytelling and learn to craft motion graphic solutions centered around client needs. Technology requirement: Students provide their own laptop, mouse, subscription to the Adobe Creative Cloud, and Maya software. Maya software is available as a student download from the Autodesk website. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisites: DDN-260 and DDN-306.

DDN-370[♦]: Designing with Motion Graphics 4 credits

During this course students will create animated graphics in a variety of mediums to meet client business needs. This course includes reading, writing, and lab assignments and requires the creation and exhibition of student artwork. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud, external drive for back-ups, mouse and/or graphics tablet for input.

DDN-371: Motion Technologies 4 credits

In this course, students examine how graphic designers can use motion to create prototype conceptualizations. Students research emerging technologies to plan and create graphic design motion-based presentations for how these technologies are used in design-based problem solving. Technology requirement: Students provide their own laptop, mouse, subscription to the Adobe Creative Cloud, and Maya software. Maya software is available as a student download from the Autodesk website. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-260.

DDN-400^{Δ♦}: Business for the Design Professional 4 credits

This writing intensive course focuses on the essential business skills necessary for the design practice and professional. Business development, legal issues, project management, finances, human resources, and other management issues are explored as they relate to the design profession. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud.

DDN-400HN^{Δ♦}: Business for the Design Professional 4 credits

This writing intensive course focuses on the essential business skills necessary for the design practice and professional. Business development, legal issues, project management, finances, human resources, and other management issues are explored as they relate to the design profession. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DDN-405[△]: Design Professionalism 4 credits

This writing-intensive course focuses on the essential business skills necessary for the design professional. Personal branding and marketing, networking, industry landscape, professional advancement and career scaffolding, ethical and legal issues, project management, teamwork, professional communication, and other industry issues are explored as they relate to the design profession. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: Senior standing.

DDN-410[♦]: 3D Short Film Production 4 credits

This course explores the process of building a 3D short film as students are introduced to every aspect of the short-film production pipeline. From pre-production when the story and characters are developed to the final lighting, rendering, visual and sound effects, music, titles, and ending credits in post-production are completed, students prepare a production plan for their own animated 3D short film. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Maya software is available as a student download from the Autodesk website. Prerequisites: DDN-360 and DDN-365.

DDN-412[♦]: Short Film Production 4 credits

In this course students are introduced to every aspect of the short-film production pipeline, from pre-production when the story and characters are developed to the final lighting, rendering, visual and sound effects, music, titles, and ending credits in post-production. Students prepare a production plan for their own animated short film and create production quality scripts and storyboards. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud and Maya software. Maya software is available as a free student download from the Autodesk website. Check system requirements to run those programs at <https://knowledge.autodesk.com/support/maya/troubleshooting/caas/sfdcarticles/sfdcarticles/System-requirements-for-Autodesk-Maya.html>. Prerequisite: DDN-365.

DDN-415[♦]: 3D Visual Effects and Lighting 4 credits

In this course, students plan and visualize a special effects project by creating a shot-by-shot storyboard, building environmental sets and props, applying appropriate lighting and special effects, and rendering the solution. Sets are modeled with realistic texturing, lighting design, visual effects, and rendering solutions demonstrated. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Maya software is available as a student download from the Autodesk website. Prerequisite: DDN-360.

DDN-420[♦]: Advanced Animation 4 credits

This is a highly aesthetic and technical course in which students bring all design skills together, including pre-production, graphic design, modeling, animation, audio production, texturing, and rendering. Students must demonstrate composition, timing, and editing while producing a short, time-based project. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Maya software is available as a student download from the Autodesk website. Prerequisite: DDN-412.

DDN-421: Advanced Motion Design 2 4 credits

This course examines how to market oneself as a graphic designer who utilizes motion. Students examine their current portfolio of work and create supplemental graphic design pieces based in motion in order to enhance their portfolio. Students examine how to construct a demo reel and apply those concepts to the creation of their own demo reel. Technology requirement: Students provide their own laptop, mouse, subscription to the Adobe Creative Cloud, and Maya software. Maya software is available as a student download from the Autodesk website. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-366.

DDN-425: Advanced Motion Design 3 4 credits

This course focuses on the creation of a semester-long project that reflects an industry production schedule. Students will research and develop a primarily 2D graphic design-based motion graphic. Students' cumulative knowledge will be used to create a well-rounded portfolio piece for entry-level graphic design jobs that utilize motion. Students will also revisit their demo reel and make any necessary changes. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Maya software is available as a student download from the Autodesk website. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: DDN-421.

DDN-430[♦]: Programming for the Web I 4 credits

This course is an introduction to Web programming, Web server technologies, HTTP/HTTPS servers, Web security, PHP and ASP.net, and Unix/Linux open-source-based applications. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud. Additional programming tools will be assigned at the start of the course. Prerequisite: DDN-350.

DDN-440[♦]: Interactive Web Design 4 credits

This course explores the use of interactive Web and rich Internet applications, The integration of music, sound, video, and animation is considered in design. Students use object-oriented scripting language and standard Web tools to create dynamic Web sites. Prerequisites: DDN-430. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud. Additional programming tools will be assigned at the start of the course. Prerequisites: DDN-430. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud. Additional programming tools will be assigned at the start of the course.

[△] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DDN-450♦: Programming for the Web II 4 credits

This course focuses on advanced Web programming. Students work in a production environment resolving code issues, providing “work-arounds,” and improving Web design. Prerequisites: DDN-430. Technology requirement: Students provide their own laptop and subscription to the Adobe Creative Cloud. Additional programming tools will be assigned at the start of the course.

DDN-455♦: Designing for New Technologies 4 credits

During this course students will forecast new technologies in order to enhance user experience. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisite: DDN-356.

DDN-460♦: Advanced Web Projects 4 credits

During this course students will create self-directed web projects to meet client business needs. Technology requirement: Students provide their own laptop, a graphics tablet, external hard drive, and subscription to the Adobe Creative Cloud. Students will also purchase their own domain name and internet hosting service. Prerequisite: DDN-455.

DDN-475♦: Advanced Design Practicum 4 credits

In this advanced design course, students incorporate their personal style into the development of a portfolio. Professional design projects for a variety of campus and studio-based projects provide opportunities for students to fine-tune solutions for customer-driven, reality-based design problems. Students propose design solutions, practicing their communication and presentation skills while exploring career opportunities. The ethics of business practice is incorporated into studio projects. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: Senior standing.

DDN-475HN[†]: Advanced Design Practicum 4 credits

In this advanced design course, students incorporate their personal style into the development of a portfolio. Professional design projects for a variety of campus and studio-based projects provide opportunities for students to fine-tune solutions for customer-driven, reality-based design problems. Students propose design solutions, practicing their communication and presentation skills while exploring career opportunities. The ethics of business practice is incorporated into studio projects. Technology requirement: Students are responsible for providing their own laptop that is capable of running the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook available on www.gcu.edu. Prerequisite: Senior standing.

DDN-476: Portfolio 2 4 credits

This course requires students to implement a self-marketing plan and portfolio of work to launch a job search in their preferred industry. Students examine the current market, audit and improve past work to meet industry standards, then identify additional self-directed projects that help them reach their employment goals. Students refine their digital portfolio and publish all the assets needed to launch a personal brand complimented by a set of self-promotion materials, including a print portfolio. Technology requirement: Students provide their own laptop, mouse, and subscription to the Adobe Creative Cloud. Verify required technical specifications in the University Policy Handbook, which is available on www.gcu.edu. Prerequisites: DDN-405 and Senior standing.

Digital Film and Production (DFP)

DFP-101♦: Introduction to Cinema: History & Aesthetics 4 credits

This course covers multiple eras and movements throughout the age of film.

DFP-101HN♦: Introduction to Cinema: History & Aesthetics 4 credits

This course covers multiple eras and movements throughout the age of film.

DFP-111♦: Digital Video Production I 4 credits

This course introduces students to the technical and aesthetic aspects of small format digital production as well as the basic principles of motion picture production. Students learn the language of film/digital video and how its manipulation can express one’s individual message or purpose.

DFP-115♦: Acting for the Camera 4 credits

This introductory course helps digital film production students to develop skills and gain experience in acting and directing for the camera. Students participate on both sides of the camera. Course sessions include lecture, practical exercises, and preparation for analyzing and blocking a scene and working on a set. Students screen selected film clips to evaluate performances, explore methods to prepare for an audition, discuss the actor/director relationship, and examine the professional requirements of relating to a crew.

DFP-221^Δ♦: Screenwriting I 4 credits

Students in this writing intensive course learn storytelling for the screen through a managed regimen of in-class and out-of-class experiences that emphasize the essential mix of imagination and craft in writing. They hone their skills in observation, communication, and visualization, and receive instruction on structure for screenwriting and how to employ written language to articulate dramatic and visual expression.

^Δ Writing intensive course | ♦ Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DFP-223♦: Cinematography 4 credits

This course is an intensive exploration of the craft, technologies, and aesthetic principles of cinematography, lighting, and set design techniques. Lectures and in-class demonstrations cover video formats, cameras, exposure, lenses and optics, lighting units, lighting placement, lighting control, camera support, and camera movement.

DFP-225♦: Nonlinear Editing 4 credits

This course follows the general chronology of editing from capture and logging, through editing and effects, to final output of a finished program. The first half of the course is devoted entirely to a mastery of the editing software. The second half of the course is devoted to examining how and why editing is important. Different editing theories are explored, including montage, fast cut, long take, jump cut, and others.

DFP-230♦: Writing the Genre Film 4 credits

Understanding genre conventions and tropes is critical to a screenwriter's success. This course combines script analysis with the practice of writing short scripts for a variety of genres. Prerequisite: DFP-221.

DFP-235♦: Writing the Character-Centered Screenplay 4 credits

One of the greatest challenges for screenwriters is to create dynamic, believable characters. In this course, students will reflect on the role of character and the relationship between strong characters and a strong screenplay. Prerequisite: DFP-221.

DFP-301^Δ♦: Film Production Management 4 credits

In this writing intensive course, students will learn how to take a project from development into pre-production and then, how to effectively market and distribute the project. Although students will not be filming the project, students will utilize their production knowledge in building realistic schedules and budgets for their projects. Prerequisites: DFP-111 and DFP-221.

DFP-311^Δ♦: Cinema Directing 4 credits

This course utilizes techniques of directing, sound editing, lighting, and advanced editing programs. Several practical and written exercises lead to a short digital production. Students spend time working with actors in front of the camera as well as composing shots to convey a story visually. Prerequisites: DFP-111 and DFP-221.

DFP-311HN^Δ♦: Cinema Directing 4 credits

This course utilizes techniques of directing, sound editing, lighting, and advanced editing programs. Several practical and written exercises lead to a short digital production. Students spend time working with actors in front of the camera as well as composing shots to convey a story visually.

DFP-331♦: Visual Storytelling 4 credits

This course focuses on the elements that make up almost all storytelling. Students are encouraged to discover and develop their unique voices as writers and storytellers, while understanding the critical importance of working as part of a creative team. This course emphasizes the use of traditional storytelling, classic mythology, and the ways in which these devices apply to contemporary media.

DFP-331HN^Δ♦: Visual Storytelling 4 credits

This course focuses on the elements that make up almost all storytelling. Students are encouraged to discover and develop their unique voices as writers and storytellers, while understanding the critical importance of working as part of a creative team. This course emphasizes the use of traditional storytelling, classic mythology, and the ways in which these devices apply to contemporary media.

DFP-341♦: Writing Meaningful Dialogue 4 credits

Poorly written dialogue can remove a character's authenticity and diminish the audience's suspension of disbelief. This course explores what constitutes great dialogue and delves into techniques that allow writers to incorporate powerful subtext, craft honest and emotionally impactful dialogue, and integrate exposition seamlessly. Prerequisite: DFP-235.

DFP-346♦: Development and Production of TV Commercials 4 credits

In this course, students learn the entire process of creating television and Internet commercials. Students learn the skills of writing copy, developing ideas, researching the marketplace, working with client needs, pitching, and production of television commercials.

DFP-351♦: Audio Production for Cinema and Television 4 credits

This course introduces basic audio production skills and encourages students to face the challenges of audio production within the film and television industry. Students will learn how to capture clear sound as well as how to manipulate sound during the post-production stage. Prerequisite: DFP-111.

DFP-361♦: Music Video/Documentary Production 4 credits

This course is a survey of music video and documentary productions. Students study, analyze, and implement techniques in both types of productions. Prerequisite: DFP-111.

DFP-370♦: Creating Authentic Cinematic Conflict 4 credits

Maintaining interest while the story unfolds is an important task for the screenwriter. This course delves deeply into screenplay structure, analyzing dramatic strategies employed by successful screenwriters. Students will engage in various stages of the screenwriting process. Prerequisite: DFP-221.

DFP-451♦: Digital Production II 4 credits

This course exposes students to every aspect of media production. Students also learn how to work well in a team environment and to adhere to deadlines, time constraints, and medium limitations. Prerequisite: DFP-111.

DFP-455♦: Advanced Digital Post-Production 4 credits

This class is about developing students' understanding of the art of cinematic storytelling and montage and exposing them to the cueing, performing, and editing of Foley and Automated Dialogue Replacement. Students work on more advanced projects is integrated into the class as a means of mastering advanced editing tools and techniques.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DFP-455HN[♦]: Advanced Digital Post-Production 4 credits

This class is about developing students' understanding of the art of cinematic storytelling and montage and exposing them to the cueing, performing, and editing of Foley and Automated Dialogue Replacement. Students work on more advanced projects is integrated into the class as a means of mastering advanced editing tools and techniques. Prerequisites: DFP-225 and DFP-351, or DFP-227.

DFP-457^{▲♦}: Screenwriting II 4 credits

Students in this writing intensive course study, analyze, and implement advanced techniques in creating cinema screenplays. This course emphasizes the use of traditional storytelling and classic mythology, and how these devices apply to contemporary screenplays. Prerequisite: DFP-221.

DFP-460[♦]: Creating the Dramatic Television Series 4 credits

In this course, students will learn the entire process of creating a dramatic television series. Students learn the skills of developing ideas, researching the marketplace, creating character bios, writing pilots, and pitching. Prerequisite: DFP-221.

DFP-463[♦]: Adapting Media to Screenplays 4 credits

Students learn to adapt various forms of media to screenplays. Prerequisite: DFP-221.

DFP-470[♦]: Screenwriting Capstone 4 credits

Students participate in individually writing a full-length feature film. They also explore all aspects of structure, character, settings, theme, obstacle, and expressive writing storytelling. Prerequisites: DFP-457 and DFP-463.

DFP-480^{Ω♦}: Digital Production Practicum 4 credits

This practicum allows students to apply digital production principles. The course focuses on the process and completion of a short digital film. Prerequisite: DFP-451.

Design Studio (DGN)

DGN-210[♦]: Introduction to 3-D Animation 4 credits

This is an introductory course exploring 3D computer graphics using industry standard Maya software. Students research the history of computer graphics and the different media formats where 3D characters, objects, and sets are used. Students are introduced to the entire production pipeline of 3D animation, including modeling, texturing, rigging, lighting, and rendering. Coursework is a combination of lecture, critique, and lab work. Maya software is required for the online course.

Dissertation (DIS)

DIS-955^Ω: Dissertation I 3 credits

In this course, learners apply the skills of the practitioner-scholar. They are self-motivated and committed to reflective practice. They actively seek input from other scholars while continuing to design independent research under the guidance of the dissertation committee. Prerequisite: RES-871, RES-885, RSD-883, or RSD-884.

DIS-960^Ω: Dissertation II 3 credits

In this course, learners apply the skills of the practitioner-scholar. They are self-motivated and committed to reflective practice. They actively seek input from other scholars while continuing to design and/or conduct independent research under the guidance of the dissertation committee. Prerequisite: DIS-955.

DIS-965^Ω: Dissertation III 3 credits

In this course, learners apply the skills of the practitioner-scholar. They are self-motivated and committed to reflective practice. They actively seek input from other scholars while continuing to design and/or conduct independent research under the guidance of the dissertation committee. Prerequisite: DIS-960.

DIS-966E: Research Continuation I 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-965.

DIS-967E: Research Continuation II 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-966 or DIS-966E.

DIS-968E: Research Continuation III 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-967 or DIS-967E.

DIS-969E: Research Continuation IV 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-968 or DIS-968E; RSD-951.

DIS-970E: Research Continuation V 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-969 or DIS-969E.

[▲] Writing intensive course | [♦] Fulfills General Education requirement | ^Ω Honors Major Course | ^Ω Non-Transferable

DIS-971E: Research Continuation VI 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-970 or DIS-970E.

DIS-972E: Research Continuation VII 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-971E.

DIS-973E: Research Continuation VIII 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-972E.

DIS-974E: Research Continuation IX 3 credits

This course emphasizes the finalization of the dissertation and provides learners with individualized support for completing their dissertation journey. Learners continue to work directly with their dissertation chair and committee members based on their individual progress plan for completing their dissertation. Prerequisite: DIS-973E.

DIS-975^Ω: Research Continuation Course 0 credits

This course emphasizes the finalization of the dissertation and provides learners guidance for finding the appropriate venues and approaches in publishing their research findings. This will include the final steps necessary in pulling together what might have been earlier versions of chapters 1, 2, and 3, as well as the proofing and dissertation editing strategies that are required and the steps scholars can take to make sure their results are, in fact, shared with other scholars. This includes an exploration of writing research articles, preparing to present scholarly papers, as well as other publication venues. Prerequisites: DIS-966E or DIS-970 and either RSD-951 or D-35 status.

Doctor of Nursing Practice (DNP)

DNP-801A: Introduction to DNP Studies 3 credits

This course introduces learners to the skills and mindset necessary for success on the doctoral journey. These skills include critical thinking and analysis, navigating resources, academic writing for the doctoral level, identifying and understanding scholarly research, and the role of the practitioner-scholar.

DNP-805: Health Care Informatics 3 credits

This course provides the foundations for using information systems/technology to support and improve patient care and health care systems. The course is designed to provide the tools needed to manage individual and aggregate level information and use information systems/technology to evaluate programs of care, outcomes of care, and care systems using industry standards and related ethical, regulatory, and legal principles. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice. Prerequisite: DNP-801.

DNP-805A: Health Care Informatics 3 credits

This course provides the foundations for using information systems/technology to support and improve patient care and health care systems. The course is designed to provide the tools needed to manage individual and aggregate level information and use information systems/technology to evaluate programs of care, outcomes of care, and care systems using industry standards and related ethical, regulatory, and legal principles. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice. Prerequisite: DNP-801A.

DNP-810: Emerging Areas of Human Health 3 credits

Advanced nursing practice requires practice expertise and specialized knowledge in making diagnostic and practice management decisions. This science-based course gives learners insight into emerging areas of human health to improve health outcomes and establish programs of clinical excellence and emphasizes guidance and coaching of individuals and families through developmental, health-illness, and situational transitions from a holistic perspective. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice. Prerequisite: DNP-805.

DNP-810A: Emerging Areas of Human Health 3 credits

Advanced nursing practice requires practice expertise and specialized knowledge in making diagnostic and practice management decisions. This science-based course gives learners insight into emerging areas of human health to improve health outcomes and establish programs of clinical excellence and emphasizes guidance and coaching of individuals and families through developmental, health-illness, and situational transitions from a holistic perspective. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice. Prerequisite: DNP-805A.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DNP-815A: Scientific Underpinnings 3 credits

This course creates a base for the application of science into advanced nursing practice and includes philosophical, ethical, and historical foundations. Nursing science frames the development of theories and concepts to guide nursing practice and determine the nature and significance of health and health care delivery phenomena. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Practice immersion hours: Learners are required to document a minimum of 50 practice hours (25 direct and 25 indirect) in association with this course. Practicum/field experience hours: 50. Prerequisite: DNP-810A.

DNP-820⁰: Translational Research and Evidence-Based Practice 3 credits

This course focuses on a core set of skills and knowledge application activities related to the translation of research into practice, the evaluation of practice, and improvement of health care outcomes. Learners examine evidence to guide improvements in practice and outcomes of care. Literature reviews focus on gaps or tensions in the translation of research into practice. Ethical considerations are also examined in the context of health care research. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Practice hours: Learners must be able to document a minimum of 50 concurrently or previously logged practice hours in association with this course. Practicum/field experience hours: 50. Prerequisite: DNP-815.

DNP-820A: Translational Research and Evidence-Based Practice 3 credits

This course focuses on a core set of skills and knowledge application activities related to the translation of research into practice, the evaluation of practice, and improvement of health care outcomes. Learners examine evidence to guide improvements in practice and outcomes of care. Literature reviews focus on gaps or tensions in the translation of research into practice. Ethical considerations are also examined in the context of health care research. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice. Prerequisite: DNP-815A.

DNP-825: Population Management 3 credits

This course examines ideas that promote understanding of aggregate, community, environmental/occupational, and cultural/socioeconomic dimensions of health. Learners analyze epidemiological, biostatistical, occupational, and environmental data in the development, implementation, and evaluation of clinical prevention and population health. Evidence-based recommendations for health promotion and risk reduction for individuals and families and concepts of public health are emphasized. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Practice hours: Learners must be able to document a minimum of 50 concurrently or previously logged practice hours in association with this course. Practicum/field experience hours: 50. Prerequisite: DNP-820.

DNP-825A: Population Management 3 credits

This course examines ideas that promote understanding of aggregate, community, environmental/occupational, and cultural/socioeconomic dimensions of health. Learners analyze epidemiological, biostatistical, occupational, and environmental data in the development, implementation, and evaluation of clinical prevention and population health. Evidence-based recommendations for health promotion and risk reduction for individuals and families and concepts of public health are emphasized. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice. Prerequisite: DNP-820A.

DNP-830⁰: Data Analysis 3 credits

This course focuses on the analysis of data that is grounded in clinical practice and designed to solve practice problems or to inform practice directly. It emphasizes the use of analytic methods to critically appraise gathered evidence to determine and implement the best evidence for practice. Learners also learn to disseminate findings from evidence-based practice and research to improve health care outcomes. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Practice hours: Learners must be able to document a minimum of 50 concurrently or previously logged practice hours in association with this course. Practicum/field experience hours: 50. Prerequisite: DNP-825.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DNP-830A: Data Analysis 3 credits

This course focuses on the analysis of data that is grounded in clinical practice and designed to solve practice problems or to inform practice directly. It emphasizes the use of analytic methods to critically appraise gathered evidence to determine and implement the best evidence for practice. Learners also learn to disseminate findings from evidence-based practice and research to improve health care outcomes. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice. Practicum hours must include a minimum of 25 direct and a minimum of 25 indirect logged and approved practice hours in association with this course. Practicum/field experience hours: 125. Prerequisite: DNP-840A.

DNP-835: Patient Outcomes and Sustainable Change 3 credits

This course prepares learners to develop effective strategies to ensure safety and quality health care for patients and populations and includes evaluation of health care outcomes. Learners engage in inquiry into the state of health care delivery, patient-centered care, sustainable change, and ethical principles surrounding practice. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Practice hours: Learners must be able to document a minimum of 50 concurrently or previously logged practice hours in association with this course. Practicum/field experience hours: 50. Prerequisite: DNP-825.

DNP-835A: Patient Outcomes and Sustainable Change 3 credits

This course prepares learners to develop effective strategies to ensure safety and quality health care for patients and populations and includes evaluation of health care outcomes. Learners engage in inquiry into the state of health care delivery, patient-centered care, sustainable change, and ethical principles surrounding practice. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Prerequisite: DNP-825A.

DNP-836: Facilitation of Learning in Nursing Education 3 credits

This course explores the role of the nurse educator in higher education settings with specific emphasis on effective methods of facilitating learning and fostering critical thinking skills in diverse student populations. Learners are introduced to instructional strategies and methods grounded in evidence-based practice and learning theory and engage in the selection of appropriate strategies to facilitate learning. Learners also consider the effective integration of technology and simulation into teaching practice. Learners are expected to integrate the educational leadership competencies through completion of education practicum hours during this course. Practicum/field experience hours: 50. Prerequisite: DNP-810.

DNP-836A: Facilitation of Learning in Nursing Education 3 credits

This course explores the role of the nurse educator in higher education settings with specific emphasis on effective methods of facilitating learning and fostering critical thinking skills in diverse student populations. Learners are introduced to instructional strategies and methods grounded in evidence-based practice and learning theory and engage in the selection of appropriate strategies to facilitate learning. Learners also consider the effective integration of technology and simulation into teaching practice. Learners are expected to integrate the educational leadership competencies through completion of education practicum hours during this course. Practicum/field experience hours: 50. Prerequisite: DNP-810A.

DNP-837: Curriculum Design and Assessment 3 credits

This course focuses on curriculum design and assessment of student learning outcomes in nursing education. Learners examine best practices for curriculum development, including performing needs assessments, writing learning objectives, and creating formative and summative assessments. Learners also consider selection of content and instructional strategies based on diverse student needs and collecting and employing assessment data to improve teaching and learning outcomes. Learners are expected to integrate the educational leadership competencies through completion of education practicum hours during this course. Practicum/field experience hours: 50. Prerequisite: DNP-836.

DNP-837A: Curriculum Design and Assessment 3 credits

This course focuses on curriculum design and assessment of student learning outcomes in nursing education. Learners examine best practices for curriculum development, including performing needs assessments, writing learning objectives, and creating formative and summative assessments. Learners also consider selection of content and instructional strategies based on diverse student needs and collecting and employing assessment data to improve teaching and learning outcomes. Learners are expected to integrate the educational leadership competencies through completion of education practicum hours during this course. Practicum/field experience hours: 50. Prerequisite: DNP-836A.

DNP-838: Nursing Program Development and Educational Leadership 3 credits

In this course, learners examine issues related to nursing program development within the complex and highly regulated environment of nursing education. With a focus on regulatory and accrediting bodies, learners determine the best methods for designing, evaluating, and improving nursing education programs in order to meet the diverse needs of industry and other stakeholders. Learners also explore leadership issues in nursing education and the professional development and scholarly obligations of the nurse educator-scholar in the academic community. Learners are expected to integrate the educational leadership competencies through completion of education practicum hours during this course. Practicum/field experience hours: 50. Prerequisite: DNP-837.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DNP-838A: Nursing Program Development and Educational Leadership 3 credits

In this course, learners examine issues related to nursing program development within the complex and highly regulated environment of nursing education. With a focus on regulatory and accrediting bodies, learners determine the best methods for designing, evaluating, and improving nursing education programs in order to meet the diverse needs of industry and other stakeholders. Learners also explore leadership issues in nursing education and the professional development and scholarly obligations of the nurse educator-scholar in the academic community. Learners are expected to integrate the educational leadership competencies through completion of education practicum hours during this course. Practicum/field experience hours: 50. Prerequisite: DNP-837A.

DNP-840^Ω: Leadership for Advanced Nursing Practice 3 credits

Advanced nursing practice requires political skills, systems thinking, and the business and financial insight needed for the analysis of practice quality and costs related to caring for the needs of a panel of patients, a target population, a set of populations, or a broad community. Learners conceptualize new interprofessional care delivery models that are based in contemporary nursing science and that are feasible within current organizational, political, cultural, and economic perspectives. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Practice hours: Learners must be able to document a minimum of 50 concurrently or previously logged practice hours in association with this course. Practicum/field experience hours: 50. Prerequisite: DNP-835.

DNP-840A: Leadership for Advanced Nursing Practice 3 credits

Advanced nursing practice requires political skills, systems thinking, and the business and financial insight needed for the analysis of practice quality and costs related to caring for the needs of a panel of patients, a target population, a set of populations, or a broad community. Learners conceptualize new interprofessional care delivery models that are based in contemporary nursing science and that are feasible within current organizational, political, cultural, and economic perspectives. Learners are expected to integrate and synthesize core program competencies and specialty practice requirements necessary to demonstrate proficiency in advanced nursing practice in the DNP Practice Immersion Workspace. Practicum hours must include a minimum of 25 direct and a minimum of 25 indirect logged and approved practice hours in association with this course. Practicum/field experience hours: 100. Prerequisite: DNP-835A.

DNP-955^Ω: DPI Project: Part I 3 credits

Learners finalize an issue in health care that will become the basis of an evidence-based research project to be carried out prior to completion of the doctoral program. Learners leave this course with a project goal/topic, a literature review, a proposed methodology, and a clear description of how addressing the issue presented will improve patient care. A project proposal is written in preparation for the Institutional Review Board (IRB) review. Learners are required to plan and document their learning goals and activities using the DPI Project Milestone Guide. Learners also continue work as necessary in the DNP Practice Immersion Workspace to ensure that all programmatic requirements have been met. Practice hours: Learners must be able to document a minimum of 100 concurrently or previously logged practice hours in association with the three DPI Project courses. Practicum/field experience hours: 34. Prerequisite: DNP-840.

DNP-955A: DPI Project: Part I 4 credits

Learners finalize an issue in health care that will become the basis of an evidence-based research project to be carried out prior to completion of the doctoral program. Learners leave this course with a project goal/topic, a literature review, a proposed methodology, and a clear description of how addressing the issue presented will improve patient care. A project proposal is written in preparation for the Institutional Review Board (IRB) review. Learners are required to plan and document their learning goals and activities using the DPI Project Milestone Guide. Learners also continue work as necessary in the DNP Practice Immersion Workspace to ensure that all programmatic requirements have been met. Practicum hours must include a minimum of 75 direct and a minimum of 50 indirect logged and approved practice hours in association with this course. Practicum/field experience hours: 225. Prerequisite: DNP-830A.

DNP-960^Ω: DPI Project: Part II 3 credits

Learners submit a project for approval to the Institutional Review Board (IRB). Once IRB approval is obtained, the learner conducts the project. Data is appropriately gathered for future analysis to determine if the practice investigated in the project brought about improved outcomes. Learners are required to plan and document their learning goals and activities using the DPI Project Milestone Guide. Learners also continue work as necessary in the DNP Practice Immersion Workspace to ensure that all programmatic requirements have been met. Practice hours: Learners must be able to document a minimum of 100 concurrently or previously logged practice hours in association with the three DPI Project courses. Practicum/field experience hours: 33. Prerequisite: DNP-955.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DNP-960A: DPI Project: Part II 4 credits

Learners submit a project for approval to the Institutional Review Board (IRB). Once IRB approval is obtained, the learner conducts the project. Data are appropriately gathered for future analysis to determine if the practice investigated in the project brought about improved outcomes. Learners are required to plan and document their learning goals and activities using the DPI Project Milestone Guide. Learners also continue work as necessary in the DNP Practice Immersion Workspace to ensure that all programmatic requirements have been met. Practicum hours must include a minimum of 75 direct and a minimum of 50 indirect logged and approved practice hours in association with this course. Practicum/field experience hours: 225. Prerequisite: DNP-955A.

DNP-965^Ω: DPI Project: Part III 3 credits

Data gathered during the project is analyzed and evaluated to determine the outcomes garnered by the project. A proposal for dissemination and mass implementation is created. Learners identify areas of future research and practice change for the continued improvement of health care. Learners are required to plan and document their learning goals and activities using the DPI Project Milestone Guide. Learners also continue work as necessary in the DNP Practice Immersion Workspace to ensure that all programmatic requirements have been met. Practice hours: Learners must be able to document a minimum of 100 concurrently or previously logged practice hours in association with the three DPI Project courses. Practicum/field experience hours: 33. Prerequisite: DNP-960.

DNP-965A: DPI Project: Part III 4 credits

Data gathered during the project is analyzed and evaluated to determine the outcomes garnered by the project. A proposal for dissemination and mass implementation is created. Learners identify areas of future research and practice change for the continued improvement of health care. Learners are required to plan and document their learning goals and activities using the DPI Project Milestone Guide. Learners also continue work as necessary in the DNP Practice Immersion Workspace to ensure that all programmatic requirements have been met. Practicum hours must include a minimum of 50 direct and a minimum of 50 indirect logged and approved practice hours in association with this course. Practicum/field experience hours: 225. Prerequisite: DNP-960A.

DNP-966^Ω: Project Continuation I 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-965.

DNP-967^Ω: Project Continuation II 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-966.

DNP-968^Ω: Project Continuation III 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-967.

DNP-969: Project Continuation IV 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-968.

DNP-970: Project Continuation V 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-969.

DNP-971: Project Continuation VI 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-970.

DNP-972: Project Continuation VII 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-971.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

DNP-973: Project Continuation VIII 3 credits

This course emphasizes the finalization of the requirements needed to complete the DNP program and provides learners with individualized support for completing their program requirements. Learners continue to work directly with their chairperson and committee members based on their individual success plan for completing their programs. Prerequisite: DNP-972.

Data Science (DSC)

DSC-510: Advanced Probability and Statistics 4 credits

This course reviews probability, distributions, statistical methods, and data analysis, in the context of computational science. Students use statistical computing software to analyze, visualize, and communicate results.

DSC-520: Regression Analysis 4 credits

This course covers methods and applications of linear regression and multivariate analysis in predictive modeling. Students learn how to build and validate statistical models, using exploratory analysis, linear regression, principal components analysis, and cluster analysis. Prerequisite: DSC-510.

DSC-530: Predictive Modeling 4 credits

This course focuses on foundational principles and on the process of developing mathematical tools and models that generates accurate predictions. Students design, build, and validate software applications that implement supervised learning algorithms. Prerequisite: DSC-520.

DSC-540: Machine Learning for Data Science 4 credits

This course covers the use, analysis, design, and implementation of machine learning algorithms. Students acquire in depth understanding of theoretical underpinning of both simple and advanced algorithms. Prerequisite: DSC-520.

DSC-550: Neural Networks and Deep Learning 4 credits

This course introduces deep artificial neural networks, reviewing the theoretical concepts and practical applications in data science. Students design and implement ANNs, while learning methods for training, testing, and deployment. A distinction is made between neural networks, convolutional neural networks, and recurrent neural networks. Prerequisite: DSC-520.

DSC-570: Data Mining 4 credits

This course combines mathematical and theoretical aspects of data analytics towards implementations in a computational form. Data mining algorithms and related methods for knowledge representation and reasoning form the basis for the development of decision and analytics software tools. Prerequisite: CST-560.

DSC-580: Designing and Creating Data Products 4 credits

This course presents the process for designing and creating software applications that use data to achieve an end goal. Several software development tools and languages are used to build products that use data to accomplish a business analytics or scientific exploration task. Prerequisite: DSC-570.

DSC-590: Data Science Capstone Project 4 credits

Students conceptualize, design, and present an innovative idea, process, or a product in the field of data science. Projects synthesize and apply knowledge from previous courses and include a scientific report anchored in current theory and research. Prerequisite: DSC-580.

Digital Social Media (DSM)

DSM-101: Introduction to Social Media 4 credits

This course is an introduction and overview to social media tools and techniques. Students apply strategic thinking to the “why” and learn to plan, organize, and create digital content. Case studies will give reference and understanding of the changing landscape in this media market.

DSM-215[‡]: Photography and Video for Social Media 4 credits

This course builds technical knowledge and skills for creating and publishing photographic and video-based content for social media channels. Students learn how to create compelling visual stories for their brands using social media channels.

DSM-300: Social Media for Events, Entertainment, and Sports 4 credits

The coverage of events requires students to prepare a strategy against expected outcomes, have an equipment plan (and a backup plan), and often work in teams to create the volume of content required. Prerequisite: DSM-215.

DSM-320: Social Media Communities 4 credits

Communities are built from people sharing together. Students learn to build and evaluate communities using industry standard tools. They create content after understanding the personalities of those communities, and work to motivate those communities toward appropriate outcomes. Prerequisite: DSM-101.

DSM-340[‡]: Social Media Data and Analytics 4 credits

This course uses industry standard tools for planning and evaluation of social media campaigns. Students will learn how to collect data and learn how to make data-based decisions that affect the success of social campaigns. Prerequisite: DSM-101.

[‡] Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

DSM-400^Δ: Reputation Management 4 credits

The goal of reputation management is to positively shape the perception of a brand, business, or personality. This class teaches students the strategic process for content curation, monitoring and listening to social channels, then responding appropriately. Escalation policies are studied and created. Case studies of businesses as well as natural disasters inform these skills. Prerequisite: DSM-215, DSM-320, DSM-340.

DSM-420^Δ: Social Media Campaigns 4 credits

In this course students will activate all of their prior knowledge to strategize, concept, and create social campaigns that result in high levels of audience engagement. Prerequisite: DSM-215, DSM-320, DSM-340.

DSM-475: Social Media Capstone 4 credits

During this course students will research, plan, create, publish, and analyze the results of a self-directed social media campaign, including the creation and management of an online community. Prerequisite: Senior standing.

Educational Administration (EAD)

EAD-501^Ω: Educational Administration: Foundations for the Developing Leader 3 credits

This course begins by acquainting candidates with the GCU learning management system, while preparing them to be successful graduate-level students and future educational leaders. With an intense programmatic focus on developing people into leaders, this course examines the essential value of Leading with Purpose, a principal cornerstone of the College of Education's mission statement and Conceptual Framework. Major leadership styles, philosophies and the characteristic leadership behaviors will be a fundamental focus while candidates begin to understand and develop their own leadership style and philosophy. This development will occur in context as candidates are exposed to the leadership foundations provided through the professional standards and code of ethics for educational leaders. Practicum/field experience hours: 10. Fingerprint clearance not required.

EAD-505: Education Law 3 credits

This course will introduce candidates to the laws and policies governing and relating to PreK-12 education in the United States. Through case studies, a broad range of topics will be examined including, due process, discipline, freedom of speech, school safety, discrimination, religion in schools, and rights of students with disabilities. These and other topics will be framed in context to inform the future principal's role in improving outcomes for all students. Practicum/field experience hours: 10. Fingerprint clearance not required. Prerequisite: EAD-501.

EAD-510: Education Finance 3 credits

This course examines PK-12 education finance with a fundamental focus on issues and practices that directly affect the operation of the school and local education agency (LEA). Candidates will be exposed to the regulations encompassed in the Uniform System of Financial Records (USFR) and the implications of these regulations at the school site level. School finance topics related to education at the federal, state, and local levels will be examined. Candidates will explore school budget and accounting principles, fiscal responsibility, resource allocation, basic administrative theories, processes, and techniques, as well as discuss the major challenges facing them in the daily operation of local schools. Practicum/field experience hours: 10. Fingerprint clearance not required. Prerequisite: EAD-501.

EAD-513: Shaping School Culture 3 credits

This course emphasizes the critical role of the leader in creating and sustaining a positive school culture and shared vision. Given diverse settings, contexts and leadership situations, candidates will explore how various leadership styles, philosophies and behaviors can promote or hinder the development of a quality learning culture and positive workplace conditions. Additionally, candidates will examine supervisory processes and strategies by which educational leaders can empower teacher self-efficacy and promote instructional improvement that enriches the outcomes for all students. Practicum/field experience hours: 10. Fingerprint clearance required.

EAD-519: Clinical Internship I: Learner-Centered Leadership 3 credits

The Internship experience and course content bridge program knowledge and skills with a focus on observing, participating, and leading. Principal candidates will apply building-level leadership skills in a clinical practice designed to facilitate the candidate's ultimate success in improving the outcomes for all students as a school leader. The timeliness of the Internship promotes the authentic learning application of Block 1 tasks at a level of competence needed to ensure effective school leadership. Practicum/field experience hours: 90. Fingerprint clearance required. Prerequisites: EAD-501, EAD-505, and EAD-510.

EAD-520: Strengthening Curricular Programs to Promote Continuous School Improvement 3 credits

This course prepares candidates to become effective instructional leaders in the evaluation of school-wide curricular programs to promote continuous school improvement. Candidates will explore processes in planning, implementation, and evaluation of programs and curriculum, while ensuring that curricular design, instructional strategies, and learning environments integrate appropriate technologies that maximize learning and teaching. Data-driven analysis is emphasized throughout. Practicum/field experience hours: 10. Fingerprint clearance required.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EAD-523: Developing Professional Capacity 3 credits

This course prepares candidates to become effective building-level instructional leaders in the development of professional capacity. Candidates will investigate various school professional development program practices including Professional Learning Communities, Collaborative Learning Communities, beginning teacher induction, and mentor program models. Additionally, candidates will analyze theoretical models, research, and best practices for improving teaching as well as learning outcomes for all students, with a strong emphasis on data-driven, learner-centered decision-making. Practicum/field experience hours: 10. Fingerprint clearance required.

EAD-5230TE: Developing Professional Capacity for Current Practitioners 3 credits

This course prepares practitioners to become effective school-level instructional leaders in the development of professional capacity. Practitioners will evaluate the effectiveness of professional development practices, presentation and facilitation skills, professional learning communities, and mentor programs. Additionally, practitioners will analyze best practices for using technology to increase academic performance.

EAD-529: Clinical Internship II: Learner-Centered Leadership 3 credits

The Internship experience and course content bridge program knowledge and skills with a focus on observing, participating, and leading. Principal candidates will apply building-level leadership skills in a clinical practice designed to facilitate the candidate's ultimate success in improving the outcomes for all students as a school leader. The timeliness of the Internship promotes the authentic learning application of Block 2 tasks at a level of competence needed to ensure effective school leadership. Practicum/field experience hours: 90. Fingerprint clearance required. Prerequisites: EAD-519, EAD-513, EAD-520, and EAD-523.

EAD-530: Improving Teacher Performance and Self-efficacy 3 credits

This course prepares candidates to become effective building-level instructional leaders who are able to positively enrich teaching and learning experiences/outcomes through leadership practices that improve teacher performance, self-efficacy, and morale. Course topics promote the learning of strategies including coaching; collaborative learning and decision-making; creating a safe and supportive professional learning culture; and reflective practice. Candidates will examine current policy and practice in the areas of teacher observation, evaluation, and teacher performance ratings. Practicum/field experience hours: 10. Fingerprint clearance required.

EAD-533: Developing and Empowering Instructional Leaders 3 credits

This course prepares candidates to become effective building-level instructional leaders who are able to positively enrich teaching and learning experiences/outcomes through leadership practices that improve teacher performance, self-efficacy, and morale. Course topics promote the learning of strategies including cognitive coaching; collaborative learning/decision-making; creating a safe/supportive professional learning culture; and reflective practice. Candidates will examine current policy and practice in the areas of teacher observation, evaluation, value-added student growth models, and teacher performance ratings. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: EAD-501.

EAD-536: Strategic Leadership and Management in the Principalship 3 credits

This course will explore critical issues facing school principals, including the challenge of attracting and retaining a quality work force, managing and allocating resources, innovative instructional leadership, creating community partnerships, and meeting the myriad of district, state and federal policies and laws. With a focus on all six Interstate School Leaders Licensure Consortium (ISLLC) standards, candidates will holistically analyze a school's Continuous Improvement Plan (CIP) and focused action plans in various contexts. This analysis will inform the candidate's understanding of the important implications of managing school resources in order to meet operational needs and improve outcomes for all students. Practicum/field experience hours: 10. Fingerprint clearance required.

EAD-539: Clinical Internship III: Learner-Centered Leadership 3 credits

The Internship experience and course content bridge program knowledge and skills with a focus on observing, participating, and leading. Principal candidates will apply building-level leadership skills in a clinical practice designed to facilitate the candidate's ultimate success in improving the outcomes for all students as a school leader. The timeliness of the Internship promotes the authentic learning application of Block 3 tasks at a level of competence needed to ensure effective school leadership. Practicum/field experience hours: 90. Fingerprint clearance required. Prerequisites: EAD-529, EAD-530, EAD-533, and EAD-536.

EAD-609: Superintendent Internship 3 credits

This internship is designed to provide candidates interested in PK-12 district office leadership meaningful learning experiences needed to prepare for PK-12 district leadership positions. Designated field experience opportunities include orientation to district office organization, responsibilities of the superintendent, district office organizational structure, district governance, community relations, and personnel development. Practicum/field experience hours: 90. Fingerprint clearance required.

Early Childhood Education (ECE)

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECE-120: Early Childhood Foundations and the Teaching Profession 4 credits

This course focuses on foundations of early childhood education with an emphasis on the historical context, ethical practices, philosophical and psychological theories, and current early childhood educational models including the Montessori education model. Teacher candidates will also examine the roles and expectations of early childhood educators, and have the opportunity to reflect on and plan for their own professional development. Practicum/field experience hours: None. Fingerprint clearance not required.

ECE-130: Educational and Developmental Psychology for Early Childhood Educators 4 credits

This course focuses on theories of child development and learning. Teacher candidates will examine the application of those theories to traditional and Montessori early childhood models and evaluate their contemporary usefulness in supporting children's academic achievement, brain development, and social and emotional growth through early childhood. Practicum/field experience hours: None. Fingerprint clearance not required.

ECE-210: Instructional Planning for Young Children 4 credits

In this course, teacher candidates examine principles of instructional planning with an emphasis on alignment between content standards, objectives, and assessment. Additional focus is placed on meeting the needs of individual learners through differentiated instruction. Engagement methods, including the use of technology, are explored. Practicum/field experience hours: None. Fingerprint clearance not required.

ECE-220[‡]: Typical and Atypical Behaviors in Early Childhood 4 credits

This course focuses on the developmental milestones of typical and atypical students, as well as evaluating disabilities and gifted tendencies among students in Birth – Grade 3 settings. Teacher candidates will also examine early interventions for students who demonstrate atypical behaviors, and investigate the role IDEA plays in early childhood settings. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-220HN[‡]: Typical and Atypical Behaviors in Early Childhood 4 credits

This course focuses on the developmental milestones of typical and atypical students, as well as evaluating disabilities and gifted tendencies among students in Birth – Grade 3 settings. Teacher candidates will also examine early interventions for students who demonstrate atypical behaviors, and investigate the role IDEA plays in early childhood settings. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-230: Assessing, Monitoring, and Reporting Progress of Young Children 4 credits

In this course, teacher candidates will examine the learning cycle from the perspective of the student as well as the teacher. Key components include pre-assessment, analysis of data, lesson planning, instruction, post-assessment and reflection, and next steps. Assessing, monitoring, and reporting the performance and progress of young children is examined, as well as making educated projections for children's future performances based on age/grade level standards. Areas of focus in the course include the history and challenges of testing and the role of technology in assessment. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-300: Development of Health, Safety and Nutrition in Young Children 4 credits

The course examines child growth and development as they relate to the health, safety, nutrition and fitness of young children. Principles and practices of personal and community health and safety are explored. Teacher candidates also consider strategies for developing the motor skills, social skills, confidence and enjoyment of movement in young children. Practicum/field experience hours: 5. Fingerprint clearance required.

ECE-340: Language and Early Literacy Development 4 credits

This course examines current research in language and literacy development, with an emphasis on effective instructional strategies for developing oral language and pre-literacy skills (such as phonemic awareness and decoding) in young children. Teacher candidates will also research and consider tools used to assess language development skills. Practicum/field experience hours: 5. Fingerprint clearance required.

ECE-350: Literature as a Tool for Instruction 4 credits

This course is a study of children's literature and the reciprocal process between reading and writing. There is an emphasis on the genres, examining each one's characteristics and contexts for use in both reading and writing. Other topics covered in this course include criteria for evaluating, analyzing, and selecting children's literature, the integration of literature across the curriculum, and family involvement. Practicum/field experience hours: 5. Fingerprint clearance required.

ECE-360[‡]: Family, Community, and Cultural Awareness in Early Childhood 4 credits

In this course, teacher candidates examine cultural learning theories as well as the relationships and structures of family that make up the classroom and community. Emphasis is placed on identifying community, school, and familial needs maintaining open communication with families in order to enhance the learning environment. Practicum/field experience hours: 5. Fingerprint clearance required.

[‡] Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

ECE-360HN^Δ: Family, Community, and Cultural Awareness in Early Childhood 4 credits

In this course, teacher candidates examine cultural learning theories as well as the relationships and structures of family that make up the classroom and community. Emphasis is placed on identifying community, school, and familial needs maintaining open communication with families in order to enhance the learning environment. Practicum/field experience hours: 5. Fingerprint clearance required.

ECE-400: Child Guidance and Management in Early Childhood Education 4 credits

This writing intensive course focuses on creating a positive culture in the learning environment, implementing classroom management strategies, supporting students with challenging behaviors, and addressing young children's social and emotional needs. This course explores theories and models, including Montessori methodologies, which foster a safe and effective classroom environment. Special attention is placed on the guidance approach. Teacher candidates are introduced to the educational benefits of family involvement, addressing diverse learning needs, and developing realistic management policies and procedures that benefit the learning environment. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-450: Instructional Methodologies: Language Arts and the Creative Arts 4 credits

This course examines literacy methodologies for teaching children Kindergarten to Grade 3, with an emphasis in incorporating the arts. Teacher candidates apply the skills necessary to develop instruction for language arts and creative arts that is standards-based and data-driven. Candidates are also given the opportunity to deliver instruction and evaluate their professional practice. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ECE-230.

ECE-455: Instructional Methodologies: Mathematics 4 credits

This course examines mathematical methodologies for teaching children Pre-K to Grade 3, with an emphasis in hands-on and manipulative-based learning. Teacher candidates apply the skills necessary to develop a mathematical unit plan that is standards-based and data-driven. Candidates are also given the opportunity to deliver instruction and evaluate their professional practice. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ECE-230.

ECE-460: Instructional Methodologies: Science 4 credits

This course examines science methodologies for teaching children Birth to Grade 3, with an emphasis on inquiry-based learning. Teacher candidates apply the skills necessary to develop a science unit plan that is standards-based and data-driven. Candidates are also given the opportunity to deliver instruction and evaluate their professional practice. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ECE-230.

ECE-465: Instructional Methodologies: Social Studies 4 credits

This course examines social studies methodologies for teaching children Kindergarten to Grade 3, with an emphasis on connections to past, present, and future concepts and events. Teacher candidates apply the skills necessary to develop a social studies unit plan that is standards-based and data-driven. Candidates are also given the opportunity to deliver instruction and evaluate their professional practice. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ECE-230.

ECE-470: Birth through Preschool Early Childhood Practicum 4 credits

Teacher candidates spend time in a birth through preschool setting observing, working with small groups, and teaching. Emphasis will be placed on planning, implementing, and evaluating developmentally appropriate curricula, instruction, and adaptations based on knowledge of development and learning with young children, the family, and the community. The practicum/field experiences for this course are in a birth through preschool setting. Practicum/field experience hours: 30. Fingerprint clearance required. Prerequisite: ECE-230.

ECE-490: Student Teaching - Kindergarten to Age 8/Grade 3 8 credits

Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Evaluation of Performance (STEP) and an Individualized Education Program (IEP) Performance Template. Fingerprint clearance required.

ECE-501: Introduction to Early Childhood Foundations and Graduate Studies 3 credits

This course begins by acquainting teacher candidates with the GCU learning management system, while preparing them to be successful graduate-level students and future Early Childhood educators. Teacher candidates survey the philosophical and historical foundations upon which early childhood educational theories and practices are constructed. Current educational models, including the Montessori education model, are explored. Teacher candidates examine the application of theories to the early childhood classroom and evaluate their contemporary usefulness in supporting children's academic achievement, brain development, and social and emotional growth through early childhood. Practicum/field experience hours: None. Fingerprint clearance not required.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECE-510: Typical and Atypical Behaviors of Young Children 3 credits

Teacher candidates survey how young children grow and develop, recognizing that patterns of learning and development vary individually across the cognitive, linguistic, physical, social, and emotional areas while understanding the implications for designing and implementing developmentally appropriate and challenging learning experiences. This survey of the seminal concepts, principles, theories, and research related to development of young children will allow teacher candidates to build foundational knowledge for constructing differentiated learning opportunities that support individual students' development, acquisition of knowledge, and motivation. Teacher candidates review atypical development, early intervention, and Parts A and B of IDEA to develop IFSP, IEPs, and 504s for young children. Practicum/field experience hours: None. Fingerprint clearance not required.

ECE-520: Instructional Planning, Assessment and Reporting in Early Childhood 3 credits

Teacher candidates obtain a robust view of the learning cycle of teaching, which includes assessment, evaluation, data analysis, reflection, and next steps, to develop lessons aligned to state and national standards. Data are used to assess, monitor, and report the progress of young children. Teacher candidates analyze and integrate multiple methods of assessment that support monitoring student progress and guiding decision making. Assessment and instruction will support foundational knowledge regarding the importance of planning instruction based on the knowledge of students, learning theory, connection across the curriculum, curricular goals, with focused attention on formative and summative assessment. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-530: Health, Safety, and Nutrition in Growth and Development of Early Learners 3 credits

Teacher candidates explore child growth and development, including developmental milestones that must be met with regards to physical, cognitive, and social-emotional development, as well as adaptability and approaches to learning for young children. This course emphasizes safety, health, and nutrition with a focus on the special health care needs for young children. Aspects of physical development, including fitness and movement, gross and fine motor skills, and fostering physical development within the community are discussed. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-540: Developing Language and Early Literacy in Young Children 3 credits

This course examines the foundations for early language development in young children. Teacher candidates build knowledge regarding whole language, phonics, emergent literacy, and the integration of literary elements. Teacher candidates focus on the assessment of literacy abilities, meeting the literacy needs of small groups, and literacy in the classroom and at home. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-560: Family Engagement and Cultural Awareness in Early Childhood 3 credits

Teacher candidates examine the family, community, and cultural influences that affect young children. Teacher candidates identify factors that put young children at risk as well as resources to support various types of families and structures. Teacher candidates also identify ways to meet community needs while promoting cultural awareness and competence. Practicum/field experience hours: 10. Fingerprint clearance required.

ECE-568: Birth through Preschool Early Childhood Practicum 3 credits

Teacher candidates explore a birth through preschool setting observing, working with small groups, and teaching developmentally appropriate instruction. Emphasis will be placed on examining developmental and academic content domains while planning, implementing, and evaluating curricula, instruction, and strategies based on evidence-based practices with young children, the family, and the community. The practicum/field experiences for this course are in a birth through preschool setting. Practicum/field experience hours: 30. Fingerprint clearance required. Prerequisites: ECE-630 and ECE-640.

ECE-598: Student Teaching - Kindergarten to Age 8/Grade 3 8 credits

Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Evaluation of Performance (STEP) and an Individualized Education Program (IEP) Performance Template. Fingerprint clearance required.

ECE-600: Creating and Managing the Early Childhood Environment 3 credits

Teacher candidates use the guidance approach to create environments that support individual and collaborative learning, encourage positive social interaction, facilitate active engagement in learning, and promote self-motivation. Montessori classroom management philosophies are explored. Teacher candidates develop skills related to establishing and maintaining organized, safe, inclusive, respectful, challenging, and positive early childhood environments with rules and expectations that are clearly communicated. Teacher candidates also examine how to help students overcome challenging behavior and learn from mistakes. Practicum/field experience hours: 15. Fingerprint clearance required.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

ECE-620: Instructional Methodologies: 3 credits
Language Arts and the Creative Arts

Teacher candidates examine a variety of instructional strategies that encourage young children to build reading, writing, and oral language skills in meaningful ways. Emphasis is placed on integrating the creative arts throughout language arts curriculum that teacher candidates will develop, teach, and assess. Candidates will also gather and analyze performance data to make instructional decisions. In addition, teacher candidates will build skills to integrate math, science, and social studies into language arts lessons while strengthening literacy connections at home. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisites: ECE-520 and (ECE-540 or ECS-575).

ECE-622: Research Based Instruction, 3 credits
Remediation, and Intervention in ELA

Teacher candidates examine a variety of instructional strategies that encourage young children to build reading, writing, and oral language skills in meaningful ways. Emphasis is placed on integrating the creative arts throughout language arts curriculum that teacher candidates will develop, teach, and assess. Teacher candidates will explore research-based intervention and remediation strategies to select, differentiate, and implement instruction to advance the learning for all students. Candidates will also gather and analyze performance data to make instructional decisions that support the process of implementing developmentally appropriate interventions and remediations to serve the diverse needs of all students. In addition, teacher candidates will build skills to integrate math, science, and social studies into language arts lessons while strengthening literacy connections at home. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ECE-520 or ECS-575.

ECE-630: Instructional Methodologies: 3 credits
Mathematics

Teacher candidates research instructional methodologies for teaching mathematics to young children. Emphasis is placed on hands-on and inquiry- and manipulative-based learning in mathematics curriculum that teacher candidates will develop, teach, and assess. Candidates will also gather and analyze performance data to make instructional decisions. In addition, teacher candidates will build skills to integrate literacy, science, social studies, and the creative arts into mathematics lessons while strengthening mathematical connections at home. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ECE-520.

ECE-640: Instructional Methodologies: 3 credits
Science and Social Studies

Teacher candidates research instructional methodologies for teaching science and social studies to young children. Emphasis is placed on inquiry-based learning and real-world connections to science and social studies curriculum that teacher candidates will develop, teach, and assess. Candidates will also gather and analyze performance data to make instructional decisions. In addition, teacher candidates will build skills to integrate literacy, mathematics, and the creative arts into science and social studies lessons while strengthening connections at home. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ECE-520.

Early Childhood Education (ECH)

ECH-130[♦]: Educational Psychology in Early 4 credits
Childhood

This course focuses on theories of learning and motivation, including young children's physical, cognitive, and social-cultural development from Birth to Age 5/Pre-K and K to Age 8/Grade 3. Students apply the theories to the early childhood classroom and examine their contemporary usefulness in supporting children's academic achievement and emotional development through the early childhood years.

ECH-130HN[♦]: Educational Psychology in Early 4 credits
Childhood

This course focuses on theories of learning and motivation, including young children's physical, cognitive, and social-cultural development from Birth to Age 5/Pre-K and K to Age 8/Grade 3. Students apply the theories to the early childhood classroom and examine their contemporary usefulness in supporting children's academic achievement and emotional development through the early childhood years.

ECH-325HN[♦]: Child, Family, Community, and 4 credits
Culture

This course covers historical foundations, theories, and models of child development for the Birth to Age 5/Pre-K and K to Age 8/Grade 3 populations that specifically address diversity, multicultural assimilations, and human change. Practicum/field experience hours: None. Fingerprint clearance not required.

ECH-360: Instructional Methodologies for 4 credits
Teaching: Arts

This course examines instructional methodologies for teaching children Birth to Age 5/Pre-K and K to Age 8/Grade 3 with emphasis on the arts. Practicum/field experience hours: 10. Fingerprint clearance required.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECH-480^Ω: Student Teaching: Birth to Pre-School 6 credits

Session A is one of two 8 week sessions of the student teaching experience. Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Performance of Evaluation (STEP). Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 2.8 GPA; successful completion of NES or your state's mandated content area exams; and approval and placement by the College of Education Office of Clinical Practice. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching. Fingerprint clearance required.

ECH-485^Ω: Student Teaching: K-3 6 credits

This course is the second of two 8-week sessions of the student teaching experience in a classroom. The student teacher is assigned to an approved school with a certified cooperating teacher, a university supervisor, and a Grand Canyon University course instructor. The course includes practical classroom experiences, research and analysis, and teaching duties that will support the compilation and creation of a Student Teaching Evaluation of Performance (STEP). The teacher candidates are required to complete their internship experiences in a K-3 classroom. Fingerprint clearance required.

ECH-515: Early Literacy Development 4 credits

This course reviews research in language and literacy development with an emphasis on effective strategies (such as phonemic awareness and decoding) in Birth to Age 5/Pre-K and K to Age 8/Grade 3. NAEYC Standards 1-5 will be the focus of study.

ECH-520: Foundations of Early Childhood 4 credits

This course investigates the fundamental basis of the early childhood field, Birth to Age 5/Pre-K and K to Age 8/Grade 3, including historical and philosophical foundations, current practices, ethics, models of teaching, child growth and development, health and fitness, and application in early childhood settings. Professional preparation requirements and professional development opportunities for early childhood educators will be explored. Practicum/field experience hours: 20. Fingerprint clearance required.

ECH-525: Child Guidance, Management, and the Environment 4 credits

This course focuses on analyzing theories of child development, Birth to Age 5/Pre-K and K to Age 8/Grade 3, the components of positive classroom environments, and classroom management programs, including the framework for the Guidance Approach. Research will be utilized to investigate the social, cultural and familial contexts which influence learning and development. Practicum/field experience hours: 20. Fingerprint clearance required. Prerequisite: ECH-520.

ECH-530: Introduction to the Exceptional Learner 4 credits

This course explores characteristics and quality practices for typical and atypical behaviors of young children in the Birth-PK and K-3 populations. Differentiated instruction and evaluation measures will be examined in relation to meeting the needs of all learners. Practicum/field experience hours: 20. Fingerprint clearance required.

ECH-635: Developmental and Functional Assessment: Birth to Age 8 4 credits

This course leads the teacher through the process of assessing, monitoring, and reporting the progress of young children. Practicum/field experience hours: 20. Fingerprint clearance required.

ECH-640: Instructional Teaching Methodologies: Language, Math, Science, Social Studies, and the Arts 4 credits

This course examines instructional methodologies for teaching young children, with a specific emphasis on language, math, science, social studies, and the arts. Practicum/field experience hours: 20. Fingerprint clearance required.

ECH-680^Ω: Student Teaching: Birth to Pre-School 6 credits

Session A is one of two 8 week sessions of the student teaching experience. Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Evaluation of Performance (STEP). Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 3.0 GPA; successful completion of NES or your state's mandated content area exams; and approval and placement by the College of Education Office of Clinical Practice. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching. Fingerprint clearance required.

ECH-685^Ω: Student Teaching: K-3 6 credits

This course is the second of two 8-week sessions of the student teaching experience in a classroom. The teacher candidate is assigned to an approved school with a certified cooperating teacher, a university supervisor, and a student teaching course instructor. The course includes practical classroom experiences, research and analysis, and teaching duties that will support the compilation and creation of a Student Teaching Evaluation of Performance (STEP). The teacher candidates are required to complete their internship experiences in a K-3 classroom. Fingerprint clearance required.

Economics (ECN)

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECN-351[♦]: Essentials of Economics 4 credits

This survey course covers the basic concepts of microeconomics and macroeconomics. The course begins by addressing the fundamental concepts of scarcity, choice, opportunity cost, and comparative advantage. The course builds on these fundamentals to explain the market forces of supply and demand, market efficiency, the economics of the public sector, and the firm's behavior under competitive market conditions. The second half of the course focuses on basic macroeconomic concepts, including measurement of national income, economic growth, and productivity. In addition, this course covers the monetary system and the classical theory of inflation.

ECN-351HN[♦]: Essentials of Economics 4 credits

This survey course covers the basic concepts of microeconomics and macroeconomics. The course begins by addressing the fundamental concepts of scarcity, choice, opportunity cost, and comparative advantage. The course builds on these fundamentals to explain the market forces of supply and demand, market efficiency, the economics of the public sector, and the firm's behavior under competitive market conditions. The second half of the course focuses on basic macroeconomic concepts, including measurement of national incomes, economic growth, and productivity. In addition, this course covers the monetary system and the classical theory of inflation. Prerequisites: ACC-240 and BUS-352.

ECN-360[♦]: Intermediate Economics 4 credits

This course focuses on microeconomic principles and techniques of analysis from the perspective of the firm and the study of the national economy. Topics include the costs of production, market structures, profit maximization, regulation and deregulation of business, labor markets, GDP and measures of economic well-being, national income accounting, the effects of business cycles, an overview of fiscal, monetary and supply side policies, and role of money, banks, and the Federal Reserve System in the United States. Prerequisite: ECN-220.

ECN-361[♦]: Microeconomics 4 credits

This course focuses on the fundamental ideas of microeconomics. Students examine the market forces of supply and demand under different market structures in order to understand how economic agents make decisions about both consumption and production. The structure, conduct, and performance of markets are evaluated through analysis of consumer, producer, and societal welfare. Students explore the topic of factor markets in which the incomes of most workers and owners of capital and property are determined. Prerequisites: ACC-240 or ACC-250 and BUS-352.

ECN-361HN[♦]: Microeconomics 4 credits

This course focuses on the fundamental ideas of microeconomics. Students examine the market forces of supply and demand under different market structures in order to understand how economic agents make decisions about both consumption and production. The structure, conduct, and performance of markets are evaluated through analysis of consumer, producer, and societal welfare. Students explore the topic of factor markets in which the incomes of most workers and owners of capital and property are determined. Prerequisites: ACC-240 or ACC-250 and BUS-352.

ECN-362[♦]: Macroeconomics 4 credits

This course focuses on the national economy by examining macroeconomic data measuring national income, the cost of living, production and growth, and unemployment. Students examine the basic functions of the monetary system and analyze the macro economy in terms of long-run economic productivity and growth and in terms short-run fluctuations. The influence and effect of macroeconomic policy is studied within the context of current events. Prerequisite: ECN-361.

ECN-449[♦]: A Poverty of Nations 2 credits

This course will review economic systems, government laws and policies, and national cultural values and beliefs. The course will address alleviating poverty in poor countries through the lens of economics and a Christian worldview.

ECN-450[♦]: International Trade and Finance 4 credits

This course provides a study of interrelationships between the international monetary environment and financial planning for corporations with overseas operations. The topics covered include the international monetary system, the foreign exchange market, managing exchange exposure, political risk management, import/export financing, and international performance evaluation. Prerequisites: FIN-350 and either ECN-362 or ECN-351.

ECN-460[♦]: Economics of Money, Banking, and Financial Markets 4 credits

This course is an overview of the modern monetary system as the informal infrastructure for a dynamic and decentralized global economy. Students examine this system by looking at a variety of markets where deal making activities take place between central banks, traditional banks, and "near banks" that act as deal-makers in both capital and money markets by supplying liquidity to the system. Innovative central bank policies and activities intended to stabilize the system are discussed. Prerequisites: ECN-362 and FIN-350.

ECN-601: Economics 4 credits

This course introduces microeconomic and macroeconomic concepts that are relevant to contemporary business. Emphasis is placed on using economic data for business decision making.

Early Childhood Special Education (ECS)

ECS-125[♦]: Foundations of Early Childhood and Special Education 4 credits

This course focuses on the fundamental basis of the field of early childhood education and early childhood special education. This course includes historical and philosophical foundations, current practices, ethics, advocacy, models of teaching, and application in early childhood/special education settings. Professional responsibilities for early childhood/early childhood special education educators are explored. Practicum/field experience hours: None. Fingerprint clearance not required.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECS-220♦: Legal Aspects of Special Education with an Emphasis in Early Childhood 4 credits

This course examines current special education laws and professional practices. Emphasis is placed on Individuals with Disabilities Education Act (IDEA), assessment, identification, and implementation of services. Candidates also incorporate data-based decision making and utilization of assistive technology in instruction. Practicum/field experience hours: None. Fingerprint clearance not required.

ECS-235♦: Child Development Including Health, Safety, and Nutrition 4 credits

This course examines child growth and development, including milestones regarding physical, cognitive, and social-emotional development in order to align program and instructional planning with state guidelines and regulations in health, safety, and nutrition for young children with and without exceptionalities. Family education and communication are also emphasized. Practicum/field experience hours: None. Fingerprint clearance not required.

ECS-320^Δ♦: Child Guidance and Classroom Management for Typical and Atypical Behaviors 4 credits

This writing intensive course uses theories of child guidance and development for young children with and without exceptionalities as a basis for creating a safe and supportive classroom environment. Candidates create a classroom management plan and use student data to create a Behavioral Intervention Plan (BIP). The practicum/field experiences for this course are in an inclusive K-3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-320HN^Δ♦: Child Guidance and Classroom Management for Typical and Atypical Behaviors 4 credits

This writing intensive course uses theories of child guidance and development for young children with and without exceptionalities as a basis for creating a safe and supportive classroom environment. Candidates create a classroom management plan and use student data to create a Behavioral Intervention Plan (BIP). The practicum/field experiences for this course are in an inclusive K-3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-325♦: Child, Family, Cultural, Community Relationships, and Advocacy 4 credits

This course explores historical foundations, theories, and models of building relationships within families and schools, including family characteristics, diversity, advocacy, and community relationships. The course emphasizes community organizations that support and assist children with and without exceptionalities and their families, and advocacy for families with young children. Practicum/field experience hours: None. Fingerprint clearance not required.

ECS-425♦: Language, Literacy and Communication in Early Childhood/Special Education 4 credits

This course explores the foundations for early language and literacy development for children Birth to Age 8/Grade 3. Teacher candidates focus on the essential components of literacy and communication methods in early childhood special education, utilizing assistive technology to enhance communication. Practicum/field experience hours: None. Fingerprint clearance not required.

ECS-430: Early Childhood Phonics and Science of Reading Development 4 credits

This course explores components of typical and atypical literacy development for children Birth to Age 8/Grade 3. Coursework emphasizes the science of reading and components of literacy development, including phonics, phonemic awareness, vocabulary, fluency, and comprehension. Teacher candidates focus on assessing developmental and other literacy concerns, through differentiation strategies to support literacy learning in young children, including dyslexia. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: ECS-425 or ECE-120.

ECS-435♦: Assessment, Evaluation and Reporting for Early Childhood/Special Education 4 credits

In this course, teacher candidates examine assessment, evaluation, and early identification for young children to develop IFSP's and IEP's, Birth to Age 8. The processes of using data in assessing, monitoring, and reporting the progress of young children's performances are investigated, in addition to early identification of children with special needs. The practicum/field experiences for this course are in an inclusive K-3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-435HN♦: Assessment, Evaluation and Reporting for Early Childhood/Special Education 4 credits

In this course, teacher candidates examine assessment, evaluation, and early identification for young children to develop IFSP's and IEP's, Birth to Age 8. The processes of using data in assessing, monitoring, and reporting the progress of young children's performance are investigated, in addition to early identification of children with special needs. The practicum/field experiences for this course are in an inclusive K-3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-450: Developmentally Appropriate Instruction: ELA, Social Studies, and Arts 4 credits

This course examines instructional methodologies for teaching children with and without exceptionalities, emphasizing instruction in language arts, social studies, and the arts. Candidates consider the developmental continuum of literacy instruction based on student data and individual needs. The practicum/field experiences for this course are in an inclusive preschool-Grade 3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

^Δ Writing intensive course | ♦ Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECS-455[†]: Developmentally Appropriate Instruction: STEM Subjects 4 credits

This course examines instructional methodologies for teaching children with and without exceptionalities with an emphasis on STEM (science, technology, engineering, and math) content instruction. Candidates develop a unit plan that incorporates all STEM components and use data to identify areas to differentiate instruction to meet the needs of individual students. The practicum/field experiences for this course are in an inclusive preschool-Grade 3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-455HN[†]: Developmentally Appropriate Instruction: STEM Subjects 4 credits

This course examines instructional methodologies for teaching children with and without exceptionalities with an emphasis on STEM (science, technology, engineering, and math) content instruction. Candidates develop a unit plan that incorporates all STEM components and use data to identify areas to differentiate instruction to meet the needs of individual students. The practicum/field experiences for this course are in an inclusive K-3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-460^Ω: Birth – Pre-K Practicum I 4 credits

Teacher candidates spend time in an inclusive Birth-Pre-K setting observing, working with small groups of children with and without exceptionalities, and interviewing teachers. Emphasis will be placed on the management and guidance of young children, and child initiated learning. Special attention is given to the effect of children's abilities, social and emotional needs, and characteristics on development and learning across the span of birth through age 2. The practicum/field experiences for this course are in a general education or inclusive Birth - Pre-K setting. Practicum/field experience hours: 60. Fingerprint clearance required.

ECS-470^Ω: Birth – Pre-K Practicum II 4 credits

Teacher candidates spend time in an inclusive Birth-Pre-K setting observing, working with small groups, and teaching. Emphasis will be placed on individual education planning, implementing, and evaluating developmentally appropriate curricula, instruction, and adaptations based on knowledge of children with exceptionalities, the family, and the community. Special attention is placed on exceptionalities and medical conditions that influence care, resources, and priorities for children ages 2 through 4. The practicum/field experiences for this course are in an inclusive or developmental Birth – Pre-K setting. Practicum/field experience hours: 60. Fingerprint clearance required.

ECS-475: K-3 Literacy Intervention Practicum II 4 credits

Teacher candidates spend time in an inclusive setting observing and evaluating students with and without exceptionalities in the area of literacy. Elements of reading and writing instruction are examined as a part of instructional practice with a focus on assessment, intervention, and remediation. Teacher candidates will explore research-based instructional strategies and interventions to select, adapt, and implement instruction to advance the learning for all students. The process of implementing literacy intervention and remediation strategies to support readers of varying ages and ability levels, including students with dyslexia will be explored. Emphasis will be placed on identifying development as a part of the instructional design process, as well as partnering with families to promote development in young children. The practicum/field experiences for this course are in an inclusive Kindergarten to Grade 3 setting. Practicum/field experience hours: 40. Fingerprint clearance required.

ECS-480A^Ω: Student Teaching- Kindergarten to Age 8/Grade 3: General Education Setting 6 credits

Session A is one of two 8 week sessions of the student teaching experience. Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Performance of Evaluation (STEP). Fingerprint clearance required.

ECS-480B^Ω: Student Teaching- Kindergarten to Age 8/Grade 3: Special Education Setting 6 credits

This course supports the early childhood special education clinical field experience through an eight-week full-time student teaching experience in a kindergarten through age 8/grade 3 early childhood special education classroom. Candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of an Individualized Education Program (IEP) Performance Template. Fingerprint clearance required.

ECS-501^Ω: Foundational Studies in Early Childhood and Special Education 3 credits

This course begins by acquainting candidates with the GCU learning management system, while preparing them to be successful graduate-level students and future teachers. The course places primary focus on the fundamental basis of the field of early childhood education and early childhood special education, Birth to Age 5/Pre-K to K to Age 8/Grade 3, including historical and philosophical foundations, current practices, ethics, models of teaching, and application in early childhood education/early childhood special education settings. Additionally, professional preparation requirements and professional development opportunities in the field are explored. Practicum/field experience hours: None. Fingerprint clearance not required.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECS-550^Ω: Child Guidance and Classroom Management for Typical and Atypical Behaviors 3 credits

Teacher candidates research theories and models of classroom management and consider the development and characteristics of young children with and without exceptionalities. The course emphasizes data collection, social/emotional development, and behavioral and crisis intervention, with a focus on evidence-based practices for creating safe, inclusive, respectful, challenging, and positive classroom environments. Candidates create a classroom management philosophy and plan and use student data to create a behavioral intervention plan (BIP). The practicum/field experiences for this course are in inclusive birth to Grade 3 settings. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-555: Child Development Including Health, Safety, and Nutrition 3 credits

This course explores child growth and development, including developmental milestones that must be met with regards to physical, cognitive, and social-emotional development. The course emphasizes health, safety, and nutrition with a focus on special health care needs for young children. The candidate will use data to analyze the development of the whole child and consider best practices for family involvement. Practicum/field experience hours: None. Fingerprint clearance not required.

ECS-560: Child, Family, Cultural, Community Relationships, and Advocacy 3 credits

This course examines historical foundations, theories, and models of child development, including family characteristics, diversity, multicultural factors, and community relationships. Teacher candidates identify community organizations that support children with exceptionalities and their families. Candidates also identify ways to use those resources to advocate for children and their families. Practicum/field experience hours: None. Fingerprint clearance not required.

ECS-565^Ω: Birth – Pre-K Practicum I 4 credits

Teacher candidates spend time in an inclusive Birth-Pre-K setting observing, working with small groups of children with and without exceptionalities, and interviewing teachers. Emphasis will be placed on the management and guidance of young children, and child initiated learning. Special attention is given to the effect of children's abilities, social and emotional needs, and characteristics on development and learning across the span of birth through age 2. The practicum/field experiences for this course are in a general education or inclusive Birth – Pre-K setting. Practicum/field experience hours: 60. Fingerprint clearance required.

ECS-567^Ω: Birth – Pre-K Practicum II 4 credits

Teacher candidates spend time in an inclusive Birth-Pre-K setting observing, working with small groups, and teaching. Emphasis will be placed on individual education planning, implementing, and evaluating developmentally appropriate curricula, instruction, and adaptations based on knowledge of children with exceptionalities, the family, and the community. Special attention is placed on exceptionalities and medical conditions that influence care, resources, and priorities for children ages 2 through 4. The practicum/field experiences for this course are in an inclusive or developmental Birth – Pre-K setting. Practicum/field experience hours: 60. Fingerprint clearance required.

ECS-568: Early Childhood Special Ed. Literacy Practicum II: Kindergarten - Grade 3 3 credits

Teacher candidates spend time in an inclusive Kindergarten to Grade 3 setting observing and evaluating students with and without exceptionalities. Practical application of the elements of reading and writing instruction are examined to inform assessment, intervention, and remediation. Teacher candidates select, adapt, and implement research-based instructional strategies and interventions to advance the learning for all students. Particular focus is placed on literacy intervention and remediation to support readers of varying ages and ability levels, including students with dyslexia. Emphasis will be placed on developmentally appropriate instruction, as well as partnering with families to promote development in young children. The practicum/field experiences for this course are in an inclusive Kindergarten to Grade 3 setting. Practicum/field experience hours: 40. Fingerprint clearance required. Prerequisite: ECS-562 or ECS-575.

ECS-569: Literacy Intervention Practicum II: Kindergarten - Grade 3 4 credits

Teacher candidates spend time in an inclusive Kindergarten to Grade 3 setting observing and evaluating students with and without exceptionalities. Practical application of the elements of reading and writing instruction are examined to inform assessment, intervention, and remediation. Teacher candidates select, adapt, and implement research-based instructional strategies and interventions to advance the learning for all students. Particular focus is placed on literacy intervention and remediation to support readers of varying ages and ability levels, including students with dyslexia. Emphasis will be placed on developmentally appropriate instruction, as well as partnering with families to promote development in young children. The practicum/field experiences for this course are in an inclusive Kindergarten to Grade 3 setting. Practicum/field experience hours: 40. Fingerprint clearance required. Prerequisite: ECS-575.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ECS-570: Language, Literacy, and Communication in Early Childhood/Special Education 3 credits

This course explores the foundations of early language acquisition and literacy development for children Birth to Grade 3/Age 8. Teacher candidates focus on the essential components of oral language development and early literacy in the context of creating research-based instruction that is developmentally appropriate for the early childhood special education setting. In addition, teacher candidates explore assistive technology, including the use of augmentative and alternative communication systems, to enhance communication and learning. Practicum/field experience hours: None. Fingerprint clearance not required.

ECS-575: Early Childhood Phonics and Science of Reading Development 3 credits

This course explores components of typical and atypical literacy development for children Birth to Age 8/Grade 3. Coursework emphasizes research-based phonics development and the science of reading, including phonics, phonemic awareness, vocabulary, fluency and comprehension. Teacher candidates focus on assessing developmental and other literacy concerns, including dyslexia, with an emphasis on intervention, remediation, and differentiation strategies to support literacy development in young children. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: ECS-570 or ECE-501.

ECS-580: Developmentally Appropriate Instruction: ELA, Social Studies, and Arts 3 credits

This course examines cross-content instructional methodologies for teaching language arts, social studies, and the arts to children with and without exceptionalities. Candidates consider the developmental continuum of literacy instruction based on student data and individual needs. Emphasis is placed on creating project-based instruction that integrates language arts, social studies, and the arts. The practicum/field experiences for this course are in an inclusive preschool-grade 3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-585: Developmentally Appropriate Instruction: STEM Subjects 3 credits

Teacher candidates research instructional methodologies to include inquiry-based and hands-on learning for teaching children with and without exceptionalities with an emphasis on STEM content (science, technology, engineering, and math) instruction. Candidates use data to differentiate learning outcomes to meet the needs of individual students, and develop a unit plan that incorporates all STEM components. The practicum/field experiences for this course are in an inclusive K-3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-590: Assessment, Evaluation, and Reporting for Early Childhood/Special Education 3 credits

This course provides teacher candidates with a robust view of assessment, evaluation, and reporting in early childhood education, including for early identification and developing IFSPs and IEPs for young children, birth to grade 3/age 8. Data are used to assess, monitor, and report the progress of young children with and without exceptionalities. The practicum/field experiences for this course are in an inclusive K-grade 3 setting. Practicum/field experience hours: 20. Fingerprint clearance required.

ECS-595A^Ω: Student Teaching- Kindergarten to Age 8/Grade 3: General Education Setting 6 credits

This course supports the early childhood clinical field experience through an eight-week full-time student teaching experience in a kindergarten through age 8/grade 3 general education classroom. Candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Teacher Work Sample (TWS). Fingerprint clearance required. Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 3.0 GPA; successful completion of state mandated basic skills and content area exams; and approval and placement by Office of Field Experience. Arizona residents will be required to take the Arizona professional knowledge and subject knowledge exams for Early Childhood and Early Childhood Special Education. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching.

ECS-595B^Ω: Student Teaching- Kindergarten to Age 8/Grade 3: Special Education Setting 6 credits

This course supports the early childhood special education clinical field experience through an eight week full-time student teaching experience in a kindergarten through age 8/grade 3 early childhood special education classroom. Candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of an Individualized Education Program (IEP) Performance Template. Fingerprint clearance required.

Instructional Leadership (EDL)

EDL-609: Superintendent Internship 3 credits

This internship is designed to provide candidates interested in PK-12 district office leadership meaningful learning experiences needed to prepare for PK-12 district leadership positions. Designated field experience opportunities include orientation to district office organization, responsibilities of the superintendent, district office organizational structure, district governance, community relations, and personnel development. Practicum/field experience hours: 90. Fingerprint clearance required.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EDL-805: Training and Collaboration for Learning 3 credits

Clearly, instructional leadership today is driven to a great extent by the capacity to lead teaming and collaboration. This course will explore the leadership required to support teaming at all levels. For example, horizontal teams are required in schools today in order to be thoughtful about the instructional leadership decisions that must be made on a consistent basis. This requires strategic grade-level collaboration that helps to ensure horizontal alignment of the curriculum and consistency in instructional practice. Furthermore, vertical collaboration includes teachers and administrators from different levels—perhaps from central office, etc.—all working together toward instituting a more comprehensive implementation of the instructional plan. This exploration will include an examination of Professional Learning Communities and the mechanisms used to make this reform model successful.

EDL-807: History and Politics of K-12 Education 3 credits

This course provides a broad, global overview of the history and politics of K-12 education and examines the political landscape and ethics surrounding K-12 education. A brief overview of governmental interventions is also presented.

EDL-812: Governance and Structures in K-12 Education 3 credits

This course examines internal and external governance and structures in K-12 education. The course emphasizes analysis of the leadership practices necessary to guide construction of appropriate internal and external frameworks. Prerequisite: RES-850.

EDL-817: Building a K-12 Community 3 credits

This course examines relations with K-12 education stakeholders, including boards, learners, parents, faculty, staff, and the community at large. Attention is given to creating and sustaining a diverse learning infrastructure through faculty and staff professional development, alumni relations, and the building of a learning community.

EDL-822: Trends and Issues in K-12 Education 3 credits

This course examines the current and emerging leadership strategies and classroom practices in K-12 education. Topics are placed in the context of improved student outcomes.

EDL-827: Strategic Planning in K-12 Education 3 credits

This course addresses the establishment of a shared mission, vision, and goals among both internal and external stakeholders as the foundation for long-range strategic planning in K-12 education. Professional and facilities development is addressed in the context of K-12 education master planning.

EDL-861^Δ: Analysis of Educational Research 3 credits

This course is designed to train learners in the conduct of a systematic literature review related to their research topic or area of interest. Emphasis is placed on creating structure for reading, analyzing, synthesizing, and organizing prior research for educational purposes.

EDL-910: EDS Capstone 3 credits

This capstone course provides learners the opportunity to apply skills related to their professional interests and goals. Learners demonstrate competency through the development of a written project suitable for inclusion in a professional portfolio.

EDL-912: EDS K-12 Capstone 3 credits

This capstone course provides learners the opportunity to apply skills related to their leadership and professional interests and goals. Learners demonstrate competency through the development of a written project suitable for inclusion in a professional portfolio.

Education (EDU)

EDU-210: Foundations of Education 4 credits

This course is designed to provide an overview of the education profession for students who are inspired to be teachers. A brief survey of the philosophical, historical, and sociological influences upon which educational theories and practices are constructed is presented. Students explore a variety of the common issues, trends, and opportunities that professional educators face in the field. Fingerprint clearance not required.

EDU-215^Δ: Education Foundations and Framework 4 credits

This writing intensive course provides a study of the historical, philosophical, and sociological influences that have shaped American education; the issues faced by educators today; and the challenges of the future that await people now entering the teaching profession. Fingerprint clearance not required.

EDU-225: Instructional Technology 4 credits

This course provides future teachers the opportunity to examine the use of technology in the 21st century classroom. In addition to studying and utilizing a variety of technologies, such as computer software and hardware, students develop a personal technology philosophy and classroom technology plan designed to enhance and shape their teaching skills and knowledge to better utilize emerging technology. Fingerprint clearance not required.

EDU-315^{Δ♦}: Family and Community in a Supportive Learning Environment 3 credits

In this course, candidates will identify the value family relationships and the community environment contribute to the classroom environment. Emphasis is placed on building relationships with families, caregivers, and other stakeholders in order to influence children, build productive learning environments, and create a positive culture for schools. Focus is placed on creating an inviting atmosphere for families and caregivers, and an inclusion of community organizations and businesses to support this family connection. Candidates research ways to utilize community resources to empower families and include them in communication, learning, and collaborative opportunities that foster a healthy home and school connection. Practicum/field experience hours: None. Fingerprint clearance not required.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EDU-330^{△♦}: Social Justice for Educators 4 credits

In this writing intensive course, teacher candidates study how to teach a diverse population of students by examining the foundations and dimensions of social justice in education, social constructs, privilege, prejudice, and oppression with the goal of becoming culturally competent educators. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-330HN^{△♦}: Social Justice for Educators 4 credits

In this writing intensive course, teacher candidates study how to teach a diverse population of students by examining the foundations and dimensions of social justice in education, social constructs, privilege, prejudice, and oppression with the goal of becoming culturally competent educators. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-354: Child Development: Prenatal to Adolescence 4 credits

In this course, candidates identify the developmental milestones of children, prenatal to adolescence. Students examine the progression of these milestones in all areas of development, including psychological, social, emotional, linguistic, cognitive, and physical. Additional focus is placed on typical and atypical child development, and analyzing the effects of environment, trauma, and family dynamics on the development progression. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-410: Bullying 1 credits

This course will assist educators in identifying and recognizing strategies to proactively guide and prevent the possible harmful effects of bullying, including cyber bullying, verbal harassment, and physical harassment. The course is intended to increase awareness and the effects inside and outside the classroom.

EDU-455: Christian Education: Philosophies and Methods 4 credits

This course is an introduction to the philosophy, theory, and practice of teaching in Christian schools. A basic analysis of educational philosophies within the framework of a Christian worldview is central to the course. Candidates construct a personal and guiding philosophy of Christian education incorporating biblical principles, and develop lesson plans using biblical integration and perspectives. Candidates may also have an opportunity to participate in observing and delivering instruction in an ACSI or CCSC approved K-12 education setting. This course provides required components as a part of the ACSI certification application process. Practicum/field experience hours: 10. Fingerprint clearance required.

EDU-5010TE: Teacher Induction Internship 6 credits

In this course, practitioners will demonstrate evidence of job-embedded induction training and reflection. Focus will be on evidence of inquiry engagement, goal-setting, demonstration and exploration of change in practice, reflection on impact of changes, and peer collaboration. Field experience hours for this course are determined by the State of California and partnering California Induction institution. Completed hours will be tracked by the Induction partner and shared with a GCU liaison for processing purposes. The required field experience hours for this course are unspecified by GCU as these will be dependent on external partners.

EDU-518: Introduction to Student Affairs 3 credits

Candidates survey the responsibilities and functions of the departments of student affairs in a higher education setting. This survey includes developing a broad understanding of how foundational knowledge of the theories of student affairs apply to the functioning of student affairs on a higher education campus. Focus is placed on the scope and delegation of the functions of student affairs, and the responsibilities of student affairs professionals. Practicum/field experience hours: None. Fingerprint clearance not required. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-522: Curriculum Design Theories 3 credits

Candidates will be introduced to current theories of learning and approaches to curriculum design. The emphasis will be on examining and identifying the concepts, principles, and models of curriculum design. Candidates will evaluate curriculum based on learning theories and approaches to curriculum.

EDU-524: Culturally Responsive Curriculum and Instruction 3 credits

Candidates will examine frameworks, materials, and strategies for translating the principles of culturally responsive pedagogy into effective educational practice. The emphasis will be on developing curriculum considering culturally responsive pedagogy, family and community engagement, and global education. Practicum/field experience hours: 10. Seek out instructional specialists at the school or district level that have insight into what professional development is available and how the topics are chosen. K-12. Fingerprint clearance required.

EDU-525^Ω: Foundations in Elementary Education Graduate Studies 3 credits

Teacher candidates prepare for the graduate learning experience at Grand Canyon University by developing and strengthening the skills necessary to succeed as graduate students in the College of Education. Teacher candidates survey the philosophical, historical, and sociological influences upon which educational theories and practices are constructed and explore a variety of the common issues, trends, and opportunities that professional educators face in the field. Practicum/field experience hours: None. Fingerprint clearance not required.

[△] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EDU-526: Family and Community Engagement 3 credits

In this course, candidates explore how issues related to family relationships and community environments influence classroom dynamics. Emphasis is placed on promoting an equal partnership between families and schools to make collaborative decisions that support student learning outcomes and school policies, practices, and programs. Candidates explore how to create a welcoming classroom and school atmosphere where families feel valued, connected to the school staff, and engaged in the education of their children. Candidates also investigate strategies for collaborating with community resources that can assist families and schools to foster a healthy home and school connection. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-528: Laws and Ethics in Student Affairs 3 credits

In this course, candidates examine laws applicable to higher education, including HIPPA, FERPA, Title IX, and ADA. Coursework focuses on ethical application of laws and policies in the higher education setting as well as preparing to navigate ethical decision making in a Higher Education Student Affairs setting. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-534: Effective Pedagogy for Higher Education 4 credits

This course covers adult learning theory and instructional practices that are research-based and proven effective in higher education. Technology, online learning, and effective instructional methods for online and traditional instruction are emphasized. Participants research learning models, personalized learning and andragogy and apply their knowledge to improve student engagement and achievement in higher education.

EDU-537: Leadership and Instructional Coaching 3 credits

Candidates will apply coaching techniques in academic and professional settings. Emphasis is placed on improving professional practices, workplace culture, and effective communication. Candidates will focus on professional coaching and leadership skills. Practicum/field experience hours: 10. Fingerprint clearance required.

EDU-538: Servant Leadership in Student Affairs 3 credits

In this course, candidates focus on servant leadership in the area of higher education student affairs, and examine how this connects to ethics, accountability, and being a responsible leader. Candidates will learn to lead with kindness, compassion and justice for the good of all stakeholders within the campus community. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-546: Curriculum Mapping 3 credits

Candidates develop year-long units of study based on identified goals and professional standards. Curriculum mapping analysis skills will be developed to align program objectives systematically to achieve learning goals. Emphasis is placed on backwards design and inquiry-based learning. Practicum/field experience hours: 10. Fingerprint clearance required.

EDU-547: Student Development 3 credits

This course examines theories of student development and multicultural diversity. Candidates will develop programming to engage students in building and maintaining university community, and to promote individual self-efficacy that meets the needs of students from diverse backgrounds. Candidates will identify strategies to assist students in developing their worldview and personal potential.

EDU-548: Curricular and Instructional Methods in Higher Education 4 credits

This course applies learning theories to classroom instructional methods and strategies. Effective communication, creating learning goals, developing student outcomes and assessments, and giving effective feedback are emphasized. Participants are asked to develop activities, assessments, and lesson plans that would be appropriate for a course taught at a community college or university. Prerequisite: EDU-534.

EDU-551: Differentiated Instruction 3 credits

Candidates will use data to differentiate curriculum, instruction, and assessments to foster learning for all students. Focus will be on principles of learning, using technology to differentiate instruction, and developing an engaging classroom environment. Practicum/field experience hours: 10. Fingerprint clearance required.

EDU-554: Methods of Instruction and Assessment 3 credits

Candidates will develop skills in aligning objectives, instruction, and assessments. Special attention is given to differentiating curriculum for diverse students and using assessment data to guide instruction. Candidates will collaborate with peers and colleagues to achieve instructional goals through action planning. Review of current trends in instruction and assessment are presented to guide instructional decisions with a special focus on the needs of diverse students. Practicum/field experience hours: 10. Fingerprint clearance required.

EDU-558: Crisis Management and Intervention 3 credits

In this course, students will identify the legal, ethical, logistical, and psychological implications of student crises within the context of a Higher Educational setting. Candidates will learn proactive and reactive risk management resources and strategies to respond to student crises on campus and address the implications of student crisis specific to Student Affairs within the context of a Higher Educational landscape. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-567: Developing Student Leaders 3 credits

In this course, candidates will develop strategies to model and coach student leaders, equipping them to engage their peers in building and maintaining healthy campus community. Candidates learn to effectively select and train potential student leaders, and provide opportunities for student leaders to participate in leadership experiences within the higher education community. Practicum/field experience hours: None. Fingerprint clearance not required.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EDU-568: Operational Resource Management 3 credits

In this course, students will learn how to ethically identify and utilize university resources while maximizing effectiveness within Student Affairs. Students will gain a working knowledge of how to advocate for needed resources and track expenses. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-578: Culture and Team Building 3 credits

In this course, candidates identify the importance of building effective teams stemming from a healthy organizational structure and emotionally intelligent culture in student affairs. Candidates initiate and participate in strategic team development for the benefit of student affairs, as well as the higher education community. Practicum/field experience hours: 26. Fingerprint clearance required. Prerequisite: All previous coursework must be completed.

EDU-585: Designing Effective Professional Development 3 credits

Candidates survey effective professional development strategies and practices. Special focus is placed upon researching theories and models, including andragogy, that enhance knowledge and skill development for adult learners. Candidates develop professional learning activities aligned with the identified needs that ensure participant growth and advancement in their profession. Practicum/field experience hours: None. Fingerprint clearance not required.

EDU-586: Developing and Implementing Professional Development 3 credits

This course surveys effective strategies and practices in professional development. Special focus is placed upon theories and models, including andragogy, that enhance knowledge and skill development for adult learners in educational settings. Candidates develop and implement professional learning activities aligned with the needs of learners, schools and systems that ensure learner growth and advance the profession by leading collaborative interactions. Fingerprint clearance not required.

EDU-587: Community Development and Engagement on a University Campus 3 credits

In this course candidates will deepen their understanding of the structure of the university system, providing leadership to ensure effective application of initiatives that enhance and maintain the campus community. Candidates will collaboratively establish and maintain an effective educational environment and evaluate the effects of professional decisions and actions on students, families, and other professionals in the learning community. Practicum/field experience hours: 26. Fingerprint clearance required. Prerequisite: EDU-578.

EDU-588^Ω: Curriculum and Instruction Capstone 3 credits

Candidates deliver, evaluate, and revise a professional development presentation, and incorporate peer interaction with feedback to assure timeliness and relevance. Candidates create a year-long professional development plan based on instructional needs identified by an organization. Practicum/field experience hours: 30. Fingerprint clearance required. Prerequisite: EDU-585 OR EDU-586.

EDU-595: Higher Education Student Affairs Capstone 3 credits

This is the culminating course in the Master of Arts in Higher Education Student Affairs. This course combines the information and skills presented in prior courses in the program. In a 48-hour on-campus practicum/field experience, candidates apply their knowledge and skills in a specific area or department within student affairs. Candidates have the opportunity to synthesize and practice what they have learned in the program. Emphasis is on critical thinking and problem-solving skills through leadership and collaboration. Practicum/field experience hours: 48. Fingerprint clearance required. Prerequisite: EDU-587.

EDU-805: History and Politics of Higher Education 3 credits

This course provides a broad, global overview of the history and politics of higher education and examines the political landscape and ethics surrounding higher education. A brief overview of governmental interventions is also presented. Prerequisite: RES-811 or RES-850.

EDU-812: Governance and Structures in Higher Education 3 credits

This course examines the internal and external governance and structures in higher education. The course emphasizes analysis of the leadership practices necessary to guide construction of appropriate internal and external frameworks. Prerequisite: RES-850.

EDU-817: Building a Community of Scholars in Higher Education 3 credits

This course examines relations with higher education stakeholders, including boards, learners, parents, faculty, staff, and the community at large. Attention is given to creating and sustaining a diverse learning infrastructure through faculty and staff professional development, alumni relations, and the building of a scholarly community. Prerequisite: RES-861.

EDU-822: Fiscal Management in Higher Education 3 credits

This course examines budgeting, fundraising, fiscal planning, and capital asset management in the higher education setting. Leadership skills for fiscal management and fiscal integrity are addressed.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EDU-827: Strategic Planning in Higher Education 3 credits

This course addresses the establishment of a shared mission, vision, and goals among both internal and external stakeholders as the foundation for long-range strategic planning in higher education. Professional and facilities development is addressed in the context of higher education master planning.

Elementary Education (EED)

EED-480NA^Ω: Student Teaching: Elementary Session A 6 credits

Session A is one of two 8 week sessions of the student teaching experience. Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Performance of Evaluation (STEP). Fingerprint clearance required.

EED-480NB^{ΔΩ}: Student Teaching: Elementary Session B 6 credits

This session is a continuation of Session A. Prerequisite: EED-480NA.

Electrical Engineering (EEE)

EEE-202[♦]: Circuits 3 credits

This course provides students with a strong foundation in core areas of electrical engineering. Students will learn the main ideas of circuits and their enabling role in electrical engineering components, devices, and systems. The course offers in-depth coverage of AC & DC circuits, circuit analysis, filters, impedance, power transfer, applications of Laplace transforms, and op-amps. Prerequisites: MAT-262, PHY-121 and PHY-121L. Co-Requisite: PHY-122, PHY-122L, EEE-202L.

EEE-202L[♦]: Circuits Lab 1 credits

The laboratory section of EEE-202 reinforces and expands learning of principles introduced in the lecture course. Hands-on activities focus problem solving using scientific computation tools, simulations, and various programming languages. Prerequisites: MAT-262, PHY-121 and PHY-121L. Co-Requisite: PHY-122, PHY-122L, EEE-202.

EEE-212: Embedded Systems and Assembly Language & Lab 2 credits

This project-based course will cover the design and implementation of a microcontroller embedded system. Students will learn embedded system architecture, assembly language programming, interfacing to peripherals, interrupt handling, and debugging/troubleshooting techniques and tools. Prerequisite: ESG-111.

EEE-213[♦]: Signals and Systems 3 credits

This course bridges theoretical mathematical foundations and practical implementation of circuits and computer algorithms. The course presents applications in engineering, physics, feedback and control, communications, and signal processing. Topics covered include: CT and DT signals and systems, linearity, time-invariant systems, causality, transient and steady state responses, Fourier transforms, Laplace transforms, Z transforms, sampling, state variables, and feedback systems. Prerequisites: MAT-364, EEE-202 and EEE-202L. Co-Requisite: MAT-345, EEE-213L.

EEE-213L[♦]: Signals and Systems Lab 1 credits

The laboratory section of EEE-213 reinforces and expands learning of principles introduced in the lecture course. Hands-on activities focus problem solving using scientific computation tools, and various programming languages. In particular, students work on system simulation and real-time signal processing. Prerequisites: MAT-364, EEE-202 and EEE-202L. Co-Requisite: MAT-345, EEE-213.

EEE-302[♦]: Advanced Circuits & Lab 4 credits

This course focuses on the analysis and design of filters, circuits, converter modeling, and signal transfer functions. Additional topics covered include non-ideal active devices, and an introduction to digital circuits. The laboratory reinforces and expands learning of principles introduced in the lecture course. Hands-on activities engage students in projects such as the design, analysis, simulation, and construction of a switched-mode power supply; solve complex design problems, or the use of modern analog circuits. Prerequisites: MAT-364, EEE-202 and EEE-202L.

EEE-302HN[♦]: Advanced Circuits & Lab 4 credits

This course focuses on the analysis and design of filters, circuits, converter modeling, and signal transfer functions. Additional topics covered include non-ideal active devices, Cauer design, and an introduction to digital circuits. The laboratory reinforces and expands learning of principles introduced in the lecture course. Hands-on activities engage students in projects such as the design, analysis, simulation, and construction of a switched-mode power supply; solve complex design problems, or the use of modern analog circuits. Prerequisites: MAT-364, EEE-202 and EEE-202L.

EEE-315: Digital Circuits & Lab 4 credits

This class will cover the design and application of digital logic circuits, including combination and sequential logic. Students will analyze, design, verify, and test logic circuits as applied to solve engineering problems. The class will cover a range of mathematical objects, algorithms, number theory, and counting. Prerequisites: MAT-262 and EEE-212.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EEE-320[♦]: Electronics and Devices & Lab 4 credits

This course builds on knowledge acquired in previous courses on advanced circuits to expand the coverage of the design and analysis of integrated circuit amplifiers and the design and analysis of feedback amplifiers. Specific topics covered in this course may include: electronics and manufacturing of integrated circuits, microwave/RF amplifiers, linear amplifiers, mixers, and advanced digital and analog circuits. The laboratory reinforces and expands learning of principles introduced in the lecture course. Hands-on activities focus on the design, assembly, and testing electronic circuits that use diodes, transistors, and operational amplifiers. This is a writing intensive course. Prerequisites: EEE-302, STG-242, and STG-242L.

EEE-431[♦]: Communications Signal Processing & Lab 4 credits

This course develops the foundations of electrical communications and differences between analog and digital modulation. Main topics covered include: analog signal transmission and reception, effects of noise in analog communications, sampling, digital information sources, entropy, source coding, waveform coding, and PCM Digital transmission through AWGN through band-limited channels. The laboratory reinforces and expands learning of principles introduced in the lecture course. Hands-on activities include channel coding, wireless and mobile networks, and signal processing using Matlab. Prerequisites: EEE-213 and EEE-213L, EEE-302, and MAT-374 OR ESG-374 and ESG-384.

EEE-431HN[♦]: Communications Signal Processing & Lab 4 credits

This course develops the foundations of electrical communications and differences between analog and digital modulation. Main topics covered include: analog signal transmission and reception, effects of noise in analog communications, sampling, digital information sources, entropy, source coding, waveform coding, and PCM Digital transmission through AWGN through band-limited channels. The laboratory reinforces and expands learning of principles introduced in the lecture course. Hands-on activities include channel coding, wireless and mobile networks, and signal processing using Matlab. Prerequisites: EEE-213 and EEE-213L, EEE-302, and MAT-374 OR ESG-374 and ESG-384.

EEE-473: Electrical Design Principles I & Lab 2 credits

This course introduces students to the principles of electrical engineering design. It provides a solid foundation in electrical engineering design. Students will learn to produce great electrical engineering designs taking into consideration requirements, standards and regulatory compliance. Design of electrical and electronic devices, circuits, and systems by the application of the engineering sciences, economics, and national and international standards. Hands-on activities focus on the design and integration of different subsystems. Topics include electrical engineering modeling, simulations, and integration. Prerequisite: EEE-302, ESG-395. Co-Requisite: ESG-451.

EEE-474[‡]: Electrical Design Principles II & Lab 2 credits

This project-based course will consolidate the student's knowledge of the electrical engineering design process from concept/idea to manufacturing. It provides sufficient depth of the design process to enable students to contribute in the solution of real-world engineering problems. Prerequisite: EEE-473. Co-Requisite: ESG-452.

EEE-480[‡]: Linear and Nonlinear Control Systems Design & Lab 4 credits

This course presents the fundamentals of analog and digital control systems. Analysis and design of linear control systems using physical system models. Analysis and control of nonlinear systems are introduced. Hands-on activities focus on the design, assembly and testing of electronic control systems. Prerequisites: EEE-213 and EEE-213L.

Electrical Engineering Technology (EET)

EET-202[♦]: Applied Circuits I 3 credits

This course introduces students to the fundamentals of electric circuits. Students will learn methods for analyzing DC networks under different loading conditions. Topics include Kirchoff's voltage and current laws, node analysis, mesh analysis, impedance, series and parallel load combinations, transient analysis, operational amplifiers (op-amps), and Simulation Program with Integrated Circuit Emphasis (SPICE) modeling. Students also develop skills in PCB fabrication and soldering. Prerequisites: PHY-111 and PHY-111L or PHY-121 and PHY-121L. Co-Requisite: EET-202L.

EET-202L[♦]: Applied Circuits I Lab 1 credits

This laboratory-based course reinforces the analysis of DC networks by providing additional hands on experience in breadboarding, modeling, and measuring inputs and outputs for a given circuit. Prerequisites: PHY-111 and PHY-111L or PHY-121 and PHY-121L. Co-Requisite: EET-202.

EET-302[♦]: Applied Circuits II & Lab 4 credits

This course builds on the topics of EET-202 and introduces more advanced circuit analysis concepts. Topics include complex impedance, AC steady-state response, resonance, passive and active filters, Bode plots, and magnetic circuits. Students practice circuit design and verification in MATLAB. Prerequisites: PHY-111 and PHY-111L or PHY-121 and PHY-121L.

EET-320[♦]: Digital Electronics and Integrated Circuits & Lab 4 credits

This course teaches students about digital electronics and semiconductor-based devices. Topics include diodes, bipolar and field-effect transistors, logic gates, combinational and sequential logic, amplifier circuits, and microcontrollers. Prerequisite: EET-302.

[♦] Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

EET-325♦: Embedded Systems 4 credits

This course covers topics in electrical and mechanical instrumentation and data acquisition. Topics include gauges and transducers, calibration, signal noise and conditioning, computerized data acquisition (DAQ) systems, results documentation, and statistical analysis of data. Prerequisite: PHY-111, PHY-111L, PHY-112, PHY-112L, EET-202.

EET-330♦: Communication Networks & Lab 4 credits

This course covers topics in communications and networking. Students will study methods for analyzing continuous and discrete signals, sampling, noise, and data transmission protocols. Lab activities may include wireless networking, modulating radio signals, and system modeling in MATLAB. Prerequisite: EET-302.

EET-425♦: Industrial Automation 2 credits

This course introduces students to topics in industrial automation such as the electrical systems that power and control modern robotics, the programming logic that directs their behavior, design and implementation challenges, automated metrology, safety protocols, and environmental considerations. Systems of focus may include electrical power generation, automotive manufacturing, and circuit board manufacturing and assembly, and silicon wafer handling. Prerequisite: ETG-415. Co-Requisite: ETG-410.

EET-430♦: Electrical Troubleshooting and Maintenance & Lab 4 credits

This course teaches preventative maintenance and fault isolation. Students learn about common failure modes and ways to increase system reliability. Topics include safety, test equipment, troubleshooting methodology, interpreting schematics, power distribution, common control circuits, and motor maintenance. Prerequisite: EET-302.

Instructional Design (EID)

EID-500: Introduction to Instructional Design 3 credits

This course introduces the field of instructional design, its history, research based structures, and practical strategies. This course prepares future Instructional Design professionals to advocate for the use of a systematic approach to meeting organizational learning needs. Students explore the instructional design life cycle through the ADDIE model, culminating in a design document that guides a training intervention. Specifically, students learn to write measurable objectives and instructionally aligned, meaningful assessments.

EID-505: Multimedia for Learning 3 credits

This course provides hands-on work with multimedia tools, informed by multimedia learning principles and visual graphics guidelines. Learners use an empathetic process to determine training needs, and assess the use of media products in meeting those needs. In the process of developing various multimedia eLearning modules, students investigate industry standards and emerging technologies. Technology Requirement: Students are responsible for providing their own Adobe Captivate software and a computer that meets the technical requirements to run the software. The version of Adobe Captivate should not be older than the 2019 release. Verify the University Technology Requirements and Programmatic Technology Requirements in the University Policy Handbook available on www.gcu.edu. Prerequisite: EID-500.

EID-510: Systematic Design of Instruction 3 credits

This course covers the theoretical underpinnings of instructional design. Students explore several instructional design models, as well as strategies for managing instructional design and development projects. Students use various systematic processes to design training interventions and present justifications for the design decisions they make. Technology Requirement: Students are responsible for providing their own Adobe Captivate software and a computer that meets the technical requirements to run the software. The version of Adobe Captivate should not be older than the 2019 release. Verify the University Technology Requirements and Programmatic Technology Requirements in the University Policy Handbook available on www.gcu.edu. Prerequisite: EID-500. Prerequisite: EID-500.

EID-515: Learning Experience Design and Development 3 credits

Designing effective instruction requires a focus on learner needs and outcomes. This course focuses on using an empathetic design process to prioritize and organize learning and organizational outcomes to create instructional strategies and sequences comprised of multiple mediums. Students practice leveraging the strengths of each medium to serve learner needs and scaffold desired outcomes. Technology Requirement: Students are responsible for providing their own Adobe Captivate software and a computer that meets the technical requirements to run the software. The version of Adobe Captivate should not be older than the 2019 release. Verify the University Technology Requirements and Programmatic Technology Requirements in the University Policy Handbook available on www.gcu.edu. Prerequisite: EID-500 & EID-505.

EID-520: Research and Evaluation for Systems and Experiences 3 credits

In the ever-evolving digital transformation age it is vital to understand a variety of people and design experiences that support what they need and want to do. In this course, students develop an experimental mindset as well as the basics of gathering, analyzing, and synthesizing a variety of evidence to inform design decisions and lay the ground work for evaluating effective instructional and learning experiences. Prerequisites: TCH-539 and EID-500.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EID-525: Organizational Performance and Workplace Learning 3 credits

Organizations face obstacles, such as disruptive innovation which threaten their ability to stay competitive in a rapidly evolving market place. This course explores the latest skills and strategies instructional designers can use to influence vision and strategy and assist in creating a learning organization that tracks soft and technical skills development for organizational impact and return on investment. Technology Requirement: Students are responsible for providing their own Adobe Captivate software and a computer that meets the technical requirements to run the software. The version of Adobe Captivate should not be older than the 2019 release. Verify the University Technology Requirements and Programmatic Technology Requirements in the University Policy Handbook available on www.gcu.edu. Prerequisite: EID-500.

EID-590: Instructional Design Capstone 3 credits

This course is a culmination of all instructional design knowledge and skills students have developed throughout the instructional design program. Students are stretched to demonstrate their ability to be a professional instructional designer. Students also develop a professional portfolio to show their preparation to work in the instructional design field. Technology Requirement: Students are responsible for providing their own Adobe Captivate software and a computer that meets the technical requirements to run the software. The version of Adobe Captivate should not be older than the 2019 release. Verify the University Technology Requirements and Programmatic Technology Requirements in the University Policy Handbook available on www.gcu.edu. Prerequisite: EID-500, EID-505, EID-510, EID-515, EID-520, EID-525.

Elementary Education (ELM)

ELM-200[♦]: Child and Early Adolescent Development and Psychology 4 credits

Teacher candidates survey how children and early adolescents grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas while understanding the implications for designing and implementing developmentally appropriate and challenging learning experiences. This survey of the seminal concepts, principles, theories, and research related to development of children and young adolescents allows teacher candidates to build foundational knowledge for constructing learning opportunities that support individual student's development, acquisition of knowledge, and motivation. Practicum/field experience hours: None. Fingerprint clearance not required.

ELM-200HN[♦]: Child and Early Adolescent Development and Psychology 4 credits

Teacher candidates survey how children and early adolescents grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas while understanding the implications for designing and implementing developmentally appropriate and challenging learning experiences. This survey of the seminal concepts, principles, theories, and research related to development of children and young adolescents allows teacher candidates to build foundational knowledge for constructing learning opportunities that support individual student's development, acquisition of knowledge, and motivation. Practicum/field experience hours: None. Fingerprint clearance not required.

ELM-210: Instructional Planning and Assessments for Elementary Teacher Candidates 4 credits

Teacher candidates build foundational knowledge on planning instruction and formal and informal assessment strategies. Teacher candidates will examine instructional planning based on knowledge of students, learning theory, connection across the curriculum, curricular goals, and community. Formal and informal assessment strategies for planning, evaluating, and strengthening instruction for elementary students are also examined. Practicum/field experience hours: 5. Fingerprint clearance required.

ELM-250^Δ: Creating and Managing Engaging Learning Environments 4 credits

In this writing intensive course, teacher candidates examine how to create environments that support individual and collaborative learning, and encourage students' positive social interaction, active engagement in learning, and self-motivation. Teacher candidates build foundational knowledge regarding the importance of establishing and maintaining positive collaborative relationships with families, school colleagues, and agencies in the larger community to promote the intellectual, social, emotional, physical growth, and well-being of children. Practicum/field experience hours: 5. Fingerprint clearance required.

ELM-250HN^Δ: Creating and Managing Engaging Learning Environments 4 credits

In this writing intensive course, teacher candidates examine how to create environments that support individual and collaborative learning, encourage positive social interaction, active engagement in learning, and self-motivation. Teacher candidates build foundational knowledge regarding the importance of establishing and maintaining positive collaborative relationships with families, school colleagues, and agencies in the larger community to promote the intellectual, social, emotional, physical growth, and well-being of children. Practicum/field experience hours: 5. Fingerprint clearance required.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ELM-305: Foundational Literacy Skills and Phonics 4 credits

Teacher candidates will examine how to teach foundational skills to develop proficient readers with the capacity to comprehend texts across a range of texts and disciplines. Teacher candidates will build additional knowledge regarding print concepts, phonological awareness, phonics and word recognition, and fluency to promote early literacy and independent readers. Practicum/field experience hours: 20. Fingerprint clearance required. Prerequisite: ELM-210 or ECS-125.

ELM-315: Foundational Literacy Skills: Phonics and the Science of Reading 4 credits

Teacher candidates examine how to teach foundational skills to develop proficient readers with the capacity to comprehend texts across a range of texts and disciplines. Teacher candidates build additional knowledge regarding print concepts, phonological awareness, phonics and word recognition, and fluency to promote early literacy and independent readers. The science surrounding reading instruction is explored and put into practice with this foundational knowledge. Practicum/field experience hours: 20. Fingerprint clearance required. Prerequisite: ELM-210 or ECS-125.

ELM-351: Methods and Strategies for Integrating Social Studies and the Arts 4 credits

Teacher candidates will examine a variety of instructional strategies to encourage students to develop deep understanding of the major concepts and modes of inquiry from the integrated study of social studies and other related areas. Teacher candidates will build foundational knowledge on promoting elementary students' abilities to make informed decisions as citizens of a culturally diverse democratic society and interdependent world. Teacher candidates will integrate the content, functions and achievements of the performing and visual arts as primary media for communication, inquiry and engagement among elementary students. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ELM-210.

ELM-357: Fostering Student Engagement 4 credits

In this course, teacher candidates examine how to foster and support student autonomy in the classroom. Candidates analyze how to provide purposeful feedback and establish a learning environment in which students participate in their own learning and engage in collaborative goal setting, self-assessment of progress, reflective thinking, and questioning with intention. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: ELM-210.

ELM-361: Instructional Methods and Strategies for Integrating Science and Health 4 credits

Teacher candidates will examine fundamental concepts of physical, life, earth and space sciences, and health education. Teacher candidates will build foundational knowledge on a variety of age-appropriate inquiry-based instructional strategies to teach science, to build student understanding of personal and social applications, to convey the nature of science, and student development for the practice of skills that contribute to good health. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ELM-210.

ELM-461: Instructional Methods for Science and Engineering 4 credits

Teacher candidates will learn how to utilize instructional methods for science and engineering to actively engage students with challenges that are real-world and relevant. In this course, teacher candidates will explore how students learn utilizing authentic problems and participating in projects, with an emphasis on STEM education. Practicum/field experience hours: 10. Fingerprint clearance required.

ELM-462: Interdisciplinary Teaching and Learning in STEM 4 credits

Teacher candidates will explore the importance and methodologies for developing innovative science, technology, engineering, and mathematics (STEM) curricula that integrates all academic areas in a relevant and cohesive manner. In this course, teacher candidates will examine the various aspects of STEM that can be integrated across content areas and disciplines. Practicum/field experience hours: None. Fingerprint clearance not required.

ELM-463: STEM Tools in the Modern Classroom 4 credits

Teacher candidates, particularly those who intend to teach courses focused on science, technology, engineering, and mathematics (STEM), need to be equipped with technological skills in order to meet the demands and expectations of the changing educational environment. In this course, teacher candidates will research current and emerging technologies, examine their use in enhancing teaching and learning, and explore approaches to equip students with the necessary knowledge and skills to utilize them appropriately. Practicum/field experience hours: None. Fingerprint clearance not required.

ELM-464: Three Dimensional Teaching in STEM Classrooms 4 credits

In this course, teacher candidates will examine the fundamentals of three dimensional teaching and learning and how to integrate these concepts into the planning and implementation of curricula. Teacher candidates evaluate the elements of three-dimensional learning: practices, crosscutting concepts, and disciplinary core ideas. Practicum/field experience hours: 5. Fingerprint clearance required.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | ^Ω Non-Transferable

ELM-470: Methods and Strategies for Teaching Mathematics 4 credits

Teacher candidates examine a variety of instructional strategies to encourage students to develop a deep understanding of the major concepts and procedures that define number and operations, algebra, geometry, measurement and data, and probability. From this foundational knowledge, candidates select, adapt and use research-based methods, instructional strategies, and interventions to advance the mathematical abilities of students and have them apply their knowledge and abilities in meaningful ways. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisite: ELM-210.

ELM-480^Δ: Methods and Strategies for Teaching English Language Arts 4 credits

Teacher candidates will build foundational knowledge on how to use concepts from reading, language, and child development to teach reading, writing, speaking, viewing, listening, and thinking skills. Teacher candidates select, adapt and use research-based methods, instructional strategies, and interventions to individualize meaningful and challenging learning for students, with an emphasis on literacy. Practicum/field experience hours: 15. Fingerprint clearance required. Prerequisites: ELM-210 and (ELM-305 or ELM-315).

ELM-490^Ω: Student Teaching for Elementary Education Teacher Candidates 8 credits

Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Performance of Evaluation (STEP). Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 2.8 GPA; successful completion of NES or your state's mandated content area exams; and approval and placement by the College of Education Office of Clinical Practice. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching.

ELM-490A: Student Teaching for Elementary Education: Session A 6 credits

Session A is the first of two 8-week sessions of the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Performance of Evaluation (STEP). Practicum/field experience hours: None. Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 2.8 GPA; successful completion of state-mandated NES content area exams; and approval and placement by the College of Education Office of Field Experience. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching.

ELM-500: Child and Early Adolescent Development and Psychology 3 credits

Teacher candidates survey how children and early adolescents grow and develop, recognizing that patterns of learning and development vary individually within and across the cognitive, linguistic, social, emotional, and physical areas while understanding the implications for designing and implementing developmentally appropriate and challenging learning experiences. This survey of the seminal concepts, principles, theories, and research related to development of children and young adolescents will allow teacher candidates to build foundational knowledge for constructing learning opportunities that support individual students' development, acquisition of knowledge, and motivation. Practicum/field experience hours: None. Fingerprint clearance not required.

ELM-510: Creating and Managing Engaging Learning Environments 3 credits

Teacher candidates examine how to create environments that support individual and collaborative learning, encourage positive social interaction, active engagement in learning, and self-motivation. Teacher candidates build foundational knowledge regarding the importance of establishing and maintaining positive collaborative relationships with families, school colleagues, and agencies in the larger community to promote the intellectual, social, emotional, physical growth, and well-being of children. Practicum/field experience hours: 6. Fingerprint clearance required.

ELM-525: Middle Grade Curriculum and Instructional Planning 3 credits

Teacher candidates examine how instructional planning supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of students and the community context. Teacher candidates build foundational knowledge regarding the importance of planning instruction based on knowledge of students, learning theory, connection across the curriculum, curricular goals, and community, with focused attention upon middle grade curriculum. Practicum/field experience hours: 6.

ELM-526: Literacy Intervention and Remediation 3 credits

Teacher candidates develop strategies for literacy intervention and remediation to foster and support student autonomy in the classroom. Teacher candidates build knowledge and skills to plan literacy supports in all content areas, promote self-directed learning, and empower students to take control and set goals for their own learning outcomes. Teacher candidates design and plan a learning environment that allows active participation from students in their own learning, collaborative goal setting with students and other stakeholders, self-assessment of progress, reflective thinking, questioning with intention, and purposeful feedback. Practicum/field experience hours: 8. Fingerprint clearance required. Prerequisite: ELM-545.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ELM-530: Assessment and Evaluation for Elementary Teacher Candidates 3 credits

Teacher candidates investigate multiple methods of assessment that support student engagement, monitoring student progress, and guiding decision making. Teacher candidates build foundational knowledge regarding formal and informal assessment strategies for planning, evaluating, and strengthening instruction to promote continuous intellectual, social, emotional, and physical development of each elementary student. Practicum/field experience hours: 6. Fingerprint clearance not required. Prerequisite: ELM-520.

ELM-535: Strategies for Student Engagement 3 credits

Teacher candidates develop strategies to foster and support student autonomy in the classroom. Teacher candidates build knowledge and skills to promote self-directed learning and empower students to take control and set goals for their own learning outcomes. Teacher candidates design and plan a learning environment that allows active participation from students in their own learning, collaborative goal setting with students and other stakeholders, self-assessment of progress, reflective thinking, questioning with intention, and purposeful feedback. Practicum/field experience hours: 10. Fingerprint clearance required.

ELM-540: Foundational Literacy Skills 3 credits

Teacher candidates examine how to teach foundational skills to develop proficient readers with the capacity to comprehend texts across a range of texts and disciplines. Teacher candidates build additional knowledge regarding print concepts, phonological awareness, phonics and word recognition, and fluency to promote early literacy and independent readers. Practicum/field experience hours: 6. Fingerprint clearance required. Prerequisite: ELM-530 or ECS-501 or ELM-555.

ELM-545: Phonics and the Science of Reading 3 credits

Teacher candidates examine how to teach foundational skills to develop proficient readers with the capacity to comprehend texts across a range of texts and disciplines. Teacher candidates build additional knowledge regarding print concepts, phonological awareness, phonics and word recognition, and fluency to promote early literacy and independent readers. With this foundational knowledge, the science surrounding reading instruction is explored and put into practice. Practicum/field experience hours: 8. Fingerprint clearance required. Prerequisite: ECS-501 or ELM-555.

ELM-550: Methods & Strategies of Teaching & Integrating Social Studies & the Arts 3 credits

Teacher candidates examine a variety of instructional strategies to encourage learners to develop deep understanding of the major concepts and modes of inquiry from the integrated study of history, geography, the social sciences and other related areas. Teacher candidates build foundational knowledge on promoting elementary students' abilities to make informed decisions as citizens of a culturally diverse democratic society and interdependent world. Teacher candidates integrate the content, functions and achievements of the performing and visual arts as primary media for communication, inquiry and engagement among elementary students. Practicum/field experience hours: 12. Fingerprint clearance required. Prerequisite: ELM-530 or ELM-570.

ELM-555: Instructional Planning and Assessment for Elementary Teacher Candidates 3 credits

Teacher candidates examine how instructional planning supports every student in meeting rigorous learning goals by drawing upon knowledge of content areas, curriculum, cross-disciplinary skills, and pedagogy, as well as knowledge of students and the community context. Teacher candidates analyze and integrate multiple methods of assessment that support student engagement, monitoring student progress, and guiding decision making. Assessment and instruction will support foundational knowledge regarding the importance of planning instruction based on knowledge of students, learning theory, connection across the curriculum, curricular goals, and community, with focused attention on formative and summative assessments. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: ELM-500.

ELM-560: Methods and Strategies of Teaching Mathematics 3 credits

Teacher candidates examine a variety of instructional strategies to encourage learners to develop deep understanding of the major concepts and procedures that define number and operations, algebra, geometry, measurement, and data analysis and probability and to build skills to apply knowledge in meaningful ways. Teacher candidates build foundational knowledge on engaging problem solving, reasoning and proof, communication, connections and representations to help students successfully apply their developing skills to many different situations, materials, and ideas. Practicum/field experience hours: 12. Fingerprint clearance required. Prerequisite: ELM-530 or ELM-570.

ELM-570: Methods and Strategies of Teaching and Integrating Science and Health 3 credits

Teacher candidates examine fundamental concepts of physical, life, earth/space sciences and health education. Teacher candidates build foundational knowledge on a variety of age-appropriate inquiry-based instructional strategies to teach science, to build student understanding of personal and social applications, to convey the nature of science, and student development for the practice of skills that contribute to good health. Practicum/field experience hours: 12. Fingerprint clearance required. Prerequisite: ELM-530 or ELM-555.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ELM-580: Methods and Strategies of Teaching 3 credits
English Language Arts

Teacher candidates examine a variety of instructional strategies to encourage learners to develop deep understanding of reading, writing, and oral language and their connections, and to build skills to apply knowledge in meaningful ways. Teacher candidates build foundational knowledge on how to use the concepts from reading, language, and child development to teach reading, writing, speaking, viewing, listening, and thinking skills, and to help students successfully apply their developing skills to many different situations, materials, and ideas. Practicum/field experience hours: 12. Fingerprint clearance required. Prerequisite: ELM-530 or ELM-570.

ELM-590^Ω: Student Teaching for Elementary 8 credits
Teacher Candidates

Teacher candidates are engaged in the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Evaluation of Performance (STEP). Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 3.0 GPA; successful completion of NES or your state's mandated content area exams; and approval and placement by the College of Education Office of Clinical Practice. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching.

ELM-593A: Student Teaching for Elementary 6 credits
Teacher Candidates: Session A

Session A is the first of two 8-week sessions of the student teaching experience that includes practical classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Performance of Evaluation (STEP). Practicum/field experience hours: None. Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 3.0 GPA; successful completion of state-mandated NES content area exams; and approval and placement by the College of Education Office of Field Experience. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching. Practicum/field experience hours: None. Fingerprint clearance required.

Emergency Management (EMM)

EMM-301: Introduction to Homeland Security 4 credits
and Emergency Management

This course provides an overview of the Department of Homeland Security and the national preparedness goal, including its mission areas and core capabilities. Students learn the key principles, participants, functions, structures, and challenges within the discipline with a focus on a systematic, community-based, all-hazard approach to emergency management. This course also includes concepts related to accreditation of emergency management programs and professional associations, credentials, and certifications.

EMM-306^Δ: Protection and Security 4 credits

This writing-intensive course focuses on the mission area of protection, with an emphasis on the capabilities necessary to protect the country from acts of terrorism and manmade and natural disasters. Students integrate knowledge of risk and vulnerability assessment and operational structures, resources, and processes to develop comprehensive measures to secure the nation and its interests against varied threats. Prerequisite: EMM-301.

EMM-311: Hazard Mitigation Planning 4 credits

This course examines the processes and principles of mitigation planning for emergency management. Students examine the benefits of mitigation and the development and implementation of appropriate mitigation measures to reduce the impact of disasters on people and the environment. Prerequisite: EMM-301.

EMM-400: Terrorism Prevention 4 credits

This course explores the dimensions of domestic and international terrorism and focuses on the core capabilities necessary for preventing terrorist acts. Students examine the role of intelligence and information sharing, security measures, and methods of disruption used for impeding and/or responding to terrorism. Prerequisite: EMM-301.

EMM-412: Emergency Response Operations 4 credits
and Techniques

The knowledge and practice gained in this course provide the emergency manager with management and supervision skills and techniques critical to success in the emergency services environment. Focus is on practices necessary for saving lives, protecting the built and natural environment, and providing for the populace following a disaster. Prerequisite: EMM-301.

EMM-450: Disaster Recovery 4 credits

This course addresses disaster recovery and the core capabilities required to promote comprehensive recovery within communities impacted by disaster. Students examine issues related to restoring infrastructure, businesses and the economy, and human and environmental health. Prerequisite: EMM-301.

EMM-485^{ΔΩ}: Emergency Management Capstone 4 credits

In this writing-intensive course, students demonstrate competence in emergency management through the development of an individual project. Students select an aspect of emergency management and complete a continuity of operations plan (COOP) using critical thinking to demonstrate knowledge of core capabilities and account for the complexities of dealing with emergencies and disasters. Prerequisites: EMM-306, EMM-311, EMM-400, EMM-412, EMM-450, and MGT-440.

EMM-600: Emergency Planning and 4 credits
Management

This course is designed to teach students the planning and management processes and the issues involved in large-scale emergencies. The nature of natural and technological risk and emergency are explored via case studies. Public sector roles in contingency planning and response are also discussed and assessed.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EMM-605: Economics and Human Issues 4 credits

This course provides an overview of the strategic, political, economic, and human issues encountered in the management of disasters or major traumatic public events. This knowledge gives the emergency manager a realistic view of the issues to expect in a disaster, how to plan accordingly, and how to manage resources and people more effectively in emergency situations.

EMM-610: Law and Legal Issues 4 credits

This course analyzes the federal, state, and local legislation related to emergency management in various types of disasters. Guaranteed rights under the U.S. Constitution and the legal and ethical application of measures within the parameters of these rights in emergency situations are also discussed.

EMM-641: Understanding Terrorism's Threat 4 credits

This course explores modern terrorism and terrorist behavior, including cyberterrorism, the role of the media, the private sector, and implications in a global society.

EMM-685: Leadership in Emergency Management Capstone 4 credits

This capstone course provides students the opportunity to synthesize their advanced knowledge and experiences in the field of emergency management through the development of a research or applied project focused on improving practice. Projects require students to demonstrate the critical thinking skills, professional acumen, and knowledge base that characterize successful leadership in the field. Prerequisites: EMM-600, EMM-605, and EMM-610.

English (ENG)

ENG-105^{△♦}: English Composition I 4 credits

This is a writing-intensive course in writing academic prose, including various types of essays, arguments, and constructions.

ENG-106^{△♦}: English Composition II 4 credits

This course explores various types of research writing, with a focus on constructing essays, arguments, and research reports based on primary and secondary sources. A writing intensive course. Prerequisite: ENG-105.

ENG-107[♦]: Introduction to Writing for the Sciences 4 credits

This course is an introduction to technical and scientific writing in fields such as engineering, biology, computer science, and other STEM disciplines, and provides students with a background in logic and communication. In accordance with the Council of Writing Program Administrators Outcomes Statement and the Elon Statement on Learning Transfer, this course provides practice with a variety of scientific genres of communication, including their expected writing styles and structures. This course supports students in the ability to transfer knowledge of writing across technical and scientific disciplines and adapt to new and different writing tasks throughout their careers in the sciences.

ENG-130[♦]: Introduction to Young Adult Literature 4 credits

This course delves into critical approaches to literature that are of interest to young adult readers. Themes such as identity, culture, ethnicity, race, values, gender, and censorship are among those explored through close readings and textual analysis of popular and historical fiction, nonfiction, graphic novels, and dystopian literature.

ENG-135^{△♦}: Lifelong Learning Assessment 4 credits

This writing intensive course enables qualifying adult learners to translate their real-life learning experiences into credits that can be applied toward general education and elective course requirements. Students who pass this course earn four credits and can earn up to eight additional credits by writing full-length Lifelong Learning Assessment (LLA) papers that are assessed by LLA evaluators.

ENG-206HN^{△♦}: The Power of Media: Social and Critical Approaches 4 credits

This writing intensive honors course continues the themes of knowledge, argument, and logic from previous honors courses. Students cover effective communication and making sound arguments based on logic and research. Parallel events from history are used as a vehicle to show how communication affects society. Prerequisite: Acceptance into the honors program.

ENG-240^{△♦}: Writing for the 21st Century Workplace 4 credits

This writing intensive introductory course provides students with experience in typical workplace genres and written communication practices. Emphasizing the roles genres play in organizational communication, this course also provides students with practical, procedural knowledge that will help them adapt their writing to new contexts and audiences. Prerequisite: ENG-105.

ENG-240HN^{△♦}: Writing for the 21st Century Workplace 4 credits

This writing intensive introductory course provides students with experience in typical workplace genres and written communication practices. Emphasizing the roles genres play in organizational communication, this course also provides students with practical, procedural knowledge that will help them adapt their writing to new contexts and audiences. Prerequisite: ENG-105.

ENG-245^{△♦}: Introduction to Basic Grant Writing 4 credits

This course examines the processes, purposes, and practicalities of grant writing with an emphasis on communication between funding sources and grant seekers. Students learn about funding sponsors and their concerns, the parts of grant proposals, and techniques for successful grant research and writing. The course culminates in the students' completion of a grant proposal.

[△] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ENG-250♦: Analysis of World Literature 4 credits

This course is a study of some diverse works in world literature. It introduces all advanced English course offerings. Students will also be introduced to methods of literary criticism and analysis. All students who plan to major in English should earn a 3.00 or above in this course before taking any upper division English courses. Prerequisites: ENG-105 and ENG-106.

ENG-353♦: American Literature II 4 credits

This course is a survey of realism, naturalism, modernism, and postmodernism in American fiction, drama, and poetry of the 19th and 20th centuries. Prerequisites: ENG-105 and ENG-106 and ENG-250.

ENG-353HN♦: American Literature II 4 credits

This course is a survey of realism, naturalism, modernism, and postmodernism in American fiction, drama, and poetry of the 19th and 20th centuries. Prerequisites: ENG-105 and ENG-106 and ENG-250.

ENG-355♦: Multicultural Literature 4 credits

This course explores multicultural texts from a variety of genres. Students in this course focus on awareness of diversity in culture and in written expressions by analyzing textual features and cultural/historical context. Prerequisite: ENG-105.

ENG-355HN♦: Multicultural Literature 4 credits

This course explores multicultural texts from a variety of genres. Students in this course focus on awareness of diversity in culture and in written expressions by analyzing textual features and cultural/historical context. Prerequisite: ENG-105.

ENG-356♦: The Short Story 4 credits

This course is a study of the short story in English and in translation, its development, the different types, and an analysis of technique. Prerequisite: ENG-250.

ENG-357♦: Foundational Texts of British Literature 4 credits

This course interprets and analyzes important texts of the British tradition from approximately A.D. 500 to 1800. Special attention is paid to the importance of cultural context, close textual analysis, and literary terms and concepts, especially concepts of poetic meter and rhyme. Prerequisite: ENG-105.

ENG-358♦: Introduction to English Grammar and Linguistics 4 credits

This course is a review of basic English syntax, form, and mechanics. It also introduces principles of grammar and linguistics and explores the historical development of English and its variations across social contexts. Prerequisites: Grade of 2.00 or higher in ENG-105 and ENG-106, or satisfactory completion of GCU's written communication competency.

ENG-359♦: Transatlantic Literature 4 credits

This course explores the literatures and cultural exchange of America and Britain from the Romantic Era to the present day. Students develop an understanding of themes, genres, and literary techniques that inform present-day literary and communicative strategies. Prerequisite: ENG-105.

ENG-360♦: American Encounter Narratives 4 credits

This course explores the earliest American literatures to American Romanticism with an emphasis on narratives of cultural encounter. Students examine representative poetry and prose with attention to themes, rhetoric, and narrative form. Prerequisite: ENG-105.

ENG-361♦: The Art and Craft of Creative Writing 4 credits

In this course, students explore creative writing through an examination of craft and strategies, readings and discussion, writing across the major genres (poetry, fiction, and creative nonfiction), and the editorial process, which includes critiquing and revision. In addition, students consider the application of creative writing techniques to arenas in the professional writing world. Prerequisite: ENG-105.

ENG-365♦: Multi-Media Journalism in the 21st Century 4 credits

In this course, students learn to identify news, develop story ideas, conduct research on stories, write in a journalistic style, and report information in a variety of media. Prerequisite: ENG-105.

ENG-381♦: Writing for Advertising and PR 4 credits

This course exposes students to the various types of writing tasks utilized by PR and advertising professionals. In addition to enabling students to write with clarity and skill for various media and contexts, this course encourages students to use strategy, creativity, and critical thinking in composing advertising and public relations material. Prerequisite: ENG-105.

ENG-424^A♦: Literary Movement 4 credits

This writing-intensive course surveys the major works and figures of a literary movement, including examining that movement's historical and cultural contexts.

ENG-425♦: Major Author 4 credits

This course focuses upon the study of the works of a major author, with emphasis on the author's seminal works and with suitable reference to the author's biography and other works of merit.

ENG-450♦: Shakespeare 4 credits

This course is a study of Shakespeare's major plays and his development as a dramatist, including some consideration of Shakespeare's cross-cultural reception.

ENG-450HN♦: Shakespeare 4 credits

This course is a study of Shakespeare's major plays and his development as a dramatist, including some consideration of Shakespeare's cross-cultural reception.

^A Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ENG-451[♦]: Shakespeare and the History of Drama 4 credits

This course explores the history of the dramatic medium through the lens of plays from Ancient Greece to 20th-century Europe, concentrating primarily on the plays and cultural context of William Shakespeare. Prerequisite: ENG-105.

ENG-451HN[♦]: Shakespeare and the History of Drama 4 credits

This course explores the history of the dramatic medium through the lens of plays from Ancient Greece to 20th-century Europe, concentrating primarily on the plays and cultural context of William Shakespeare. Prerequisite: ENG-105.

ENG-456^{Δ/♦}: Communicating Scientific Ideas to Popular Audiences 4 credits

This writing intensive course prepares students to interpret scientific ideas for lay audiences. Drawing from best practices of writers from popular sources such as magazines, news articles, blogs, and other forms of popular writing designed for wide consumption, students learn to convey scientific ideas through various genres for various purposes and audiences. Prerequisite: ENG-105.

ENG-456HN^{Δ/♦}: Communicating Scientific Ideas to Popular Audiences 4 credits

This writing intensive course prepares students to interpret scientific ideas for lay audiences. Drawing from best practices of writers from popular sources such as magazines, news articles, blogs, and other forms of popular writing designed for wide consumption, students learn to convey scientific ideas through various genres for various purposes and audiences. Prerequisite: ENG-105.

ENG-460[♦]: The Novel 4 credits

This course is a study in the development of the novel focusing primarily on the reading and discussion of 19th and 20th century British and American works. Prerequisites: ENG-105 and ENG-106.

ENG-460HN[♦]: The Novel 4 credits

This course is a study in the development of the novel focusing primarily on the reading and discussion of 19th and 20th century British and American works. Prerequisites: ENG-105 and ENG-106.

ENG-466^{Δ/♦}: Technical Writing 4 credits

This writing-intensive course provides an overview of technical writing and focuses on the production of informative practical texts such as instructions, manuals, and process descriptions. Prerequisite: ENG-105.

ENG-470: Methods for Teaching Writing, Grammar & Linguistics for Secondary Education 4 credits

This course is designed to help prospective teachers develop the knowledge and skills needed to teach writing, grammar, and linguistics at the middle and secondary levels. Emphasis is given to teaching methodologies that encourage effective implementation of writing, grammar, and linguistics instruction in middle and secondary English classrooms. Course content is strategically planned to enable students to make informed, context-based decisions about writing and language instruction. Practicum/field experience hours: 15. Fingerprint clearance required.

ENG-472: Methods for Teaching Literature for Secondary Education 4 credits

This course is designed to help prospective teachers develop the knowledge and skills needed to teach literature and other texts at the middle and secondary levels. Emphasis is given to teaching methodologies that encourage effective implementation of reading instruction in middle and secondary English classrooms. Course content is strategically planned to enable students to make informed, context-based decisions about instruction of literature and other texts. Practicum/field experience hours: 15. Fingerprint clearance required.

ENG-477^Ω: Professional Writing Capstone 4 credits

This course critically surveys the broad competencies and understandings covered in the major, critically analyzes ethical issues in the writing professions, considers intersections between worldviews (particularly Christian worldviews) and the rhetorical and communications professions, and facilitates the creation of student portfolios of material and *résumés/curriculum vitae*. This capstone course needs to be completed at the end of program. Prerequisites: ENG-381, ENG-365, and ENG-466.

ENG-503: Writing Theory: An Applied Approach to Rhetoric and Composition 4 credits

This course provides historical, theoretical, and practical knowledge in rhetoric and writing. By studying classical and modern theories of rhetoric, contemporary theories of writing, and relationships between the two, students develop an understanding of key ways to think about writing today. To that end, this course emphasizes praxis: the relationship between practical and theoretical ways of knowing in the discipline. This course also offers an opportunity to practice rhetorical analysis, which is an important skill that will help students become effective, dynamic writers in their professions of choice.

ENG-505: Critical Practices for Teaching Literature 4 credits

This course focuses on techniques and theoretical approaches foundational to teaching literary texts. Techniques include close reading, passage analysis, and mastering critical nomenclature. Critical theories pertinent to contemporary scholarship are explored.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ENG-506: Social and Technological Contexts of Writing 4 credits

This course covers theoretical and practical scholarship about the social and technological dimensions of writing practices. At its core, this course explores writing as a situated social and technological act. To that end, students explore important theories of writing and technology that have impacted the discipline. This course demonstrates the relationship between theory and practice by considering how disparate peoples may think about the strategies and agendas embodied in various technologies and the artifacts that they produce. Electronic media are considered, as well as the artifacts individuals and organizations produce with them, such as Internet memes and viral videos. Students apply theories discussed in this course to analyze the sociotechnological contexts that give rise to artifacts from their professions.

ENG-507: Grant Writing 4 credits

This course examines the process, purpose, and practicalities of grant writing with emphasis on the electronic nature of current communication between funding foundations and grant seekers. Students will learn about funders and their concerns, the parts of grant proposals, and techniques for successful grant research and writing. The course will culminate in the student's completion of a grant proposal.

ENG-508: Multimedia Writing: Creating a Campaign for Social Media 4 credits

This course introduces learners to writing in various electronic modalities, with the aim of creating a campaign for social media. Informed by current theories of rhetoric and technology, learners create an original social media campaign and design appropriate supporting artifacts, including tweets, status updates, or other language for sharing via social media; supporting video and audio content; infographics; Web pages; and pictures, logos, or other supporting graphics.

ENG-509: Applied Theories of Rhetoric and Organizational Communication 4 credits

This course investigates organizational communication practices and how they are informed by contemporary rhetorical theories of ethics, identity, and work. Learners analyze the roles of ethics, constructions of power, difference, and persuasion both within and across organizations, as well as in communication practices that address the ways in which organizations present themselves to the public.

Entrepreneurship (ENT)

ENT-320♦: Public Relations and Networking Skills 4 credits

This course is designed to build effective communication and networking skills so that students can leverage contacts and relationships to create business opportunities. The importance of building a professional and trustworthy business reputation is also addressed. Prerequisite: ENT-436 or ESG-210.

ENT-420♦: New Venture Financing 4 credits

This course examines the growth of the venture capital market and provides students with an understanding of the advantages and risks associated with venture capital financing. Both start-up and growth needs are explored. The course focuses on the more practical aspects of structuring transactions that add value for the firm, owners, and financial backers. Prerequisite: ENT-445 or ENT-446.

ENT-435^f: Intrapreneurship and Innovation 4 credits

This course examines the importance of creating innovative work environments in small-, medium-, and large-scale organizations in order to ensure the long-term competitiveness of the firm. Innovation is explored from the perspectives of product development, internal process improvements, and strategic shifts. Students have the opportunity to participate in an experiential innovation project. Also AMP-435.

ENT-435HN^f: Intrapreneurship and Innovation 4 credits

This course examines the importance of creating innovative work environments in small-, medium-, and large-scale organizations in order to ensure the long-term competitiveness of the firm. Innovation is explored from the perspectives of product development, internal process improvements, and strategic shifts. Students have the opportunity to participate in an experiential innovation project. Also AMP-435.

ENT-436^{Δf}: Entrepreneurship and Innovation 4 credits

This writing-intensive course teaches students to develop innovative solutions to real-world problems, developing and testing hypotheses as they learn to create a new product or service.

ENT-436HN^{Δf}: Entrepreneurship and Innovation 4 credits

This writing-intensive course teaches students to develop innovative solutions to real-world problems, developing and testing hypotheses as they learn to create a new product or service.

ENT-446^f: Business Execution 4 credits

In this course, students test hypotheses or develop new hypotheses, cycling through a series of tests to develop a scalable business model, culminating in the development of a pitch for potential investors. Prerequisite: ENT-436 or STG-110 or ESG-210.

ENT-495: Research for Angel Investors 1 credits

Students will engage on a weekly basis with Entrepreneurs building scalable companies that are in the early stage of a capital raise. These are companies from across the country that have some technological component to their service or product and are presenting to the Angel Investor community to raise between \$250k and \$5 million. Students will investigate these companies side by side with our Investor members and learn how investment decisions are made. Student leadership in the research of each company is a critical insight to our members.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | ^f Honors Major Course | ^Ω Non-Transferable

ENT-496A: Entrepreneurial Studies Capstone Project I 1 credits

This course serves as the capstone experience in entrepreneurial studies which includes the gradual development of a strategic business model canvas to further evaluate business opportunities. Business students will begin their collaboration with engineering and technology students to establish market viability and explore product market fit. Prerequisite: ENT-436 or ESG-210.

ENT-496B: Entrepreneurial Studies Capstone Project II 1 credits

This course serves as the capstone experience in entrepreneurial studies which includes the gradual development of a strategic business model canvas to further evaluate business opportunities. Business students will complete their collaboration with engineering and technology students to establish market viability and explore product market fit. Prerequisite: ENT-436 or ESG-210.

Environmental Science (ENV)

ENV-220^Δ: Essentials of Environmental Science 4 credits

This course is an exploration into the science that directly affects us all on a daily basis, and that will likely increase in its significance to us with time. Students will gain an awareness of the importance of Earth's systems in sustaining our daily lives, plus the scientific foundation and tools needed to apply critical thought to contemporary environmental issues.

ENV-300[♦]: Environmental and Human Health Risk Assessment 4 credits

This course introduces students to the concepts, data sources, and methodologies used in the field of human risk assessment, including environmental hazard identification, dose-response assessment, exposure assessment, risk characterization, and risk communication. Prerequisite: ENV-220 or BIO-220.

ENV-300HN[♦]: Environmental and Human Health Risk Assessment 4 credits

This course introduces students to the concepts, data sources, and methodologies used in the field of human risk assessment, including environmental hazard identification, dose-response assessment, exposure assessment, risk characterization, and risk communication. Prerequisite: ENV-220 or BIO-220.

ENV-301[♦]: Environmental Law 4 credits

This course will introduce students to the fundamentals of environmental protection laws in the United States, including environmental law in the areas of case law, common law and administrative law. Topics include air and water quality, toxic and hazardous substances, endangered species and wetlands, and coastal management issues.

ENV-303[♦]: Environmental Geology 4 credits

A study of the interaction between people and the geologic environment. Emphasis will be placed on catastrophic geologic processes, earth resources, pollution, and regional planning. Principles of Geographic Information System (GIS) will also be included. Prerequisite: ENV-220 or BIO-220.

ENV-305[♦]: Environmental Management and Sustainability 4 credits

This course will introduce students to environmental management practices and sustainability practices. Prerequisite: ENV-220 or BIO-220.

ENV-402[♦]: Chemical Investigation and Remediation Strategies 3 credits

This course introduces students to various strategies that exist for remediating contaminated environmental samples, including air, water, and land. The following will also be discussed -- methods of site analysis, toxicology of chemical contamination, use of chemical fingerprinting, determination of exposure methods and exposure routes, analysis of epidemiological data, general methods for remediation of toxic and hazardous wastes, and use of both technical and moral considerations in decision making. Prerequisites: BIO-181, BIO-181L, CHM-315, CHM-315L, ENV-300 and one of the following combinations: 1) CHM-231, CHM-231L, or 2) CHM-235, CHM-235L. Co-Requisite: ENV-402L.

ENV-402HN[♦]: Chemical Investigation and Remediation Strategies 3 credits

This course introduces students to various strategies that exist for remediating contaminated environmental samples, including air, water, and land. The following will also be discussed -- methods of site analysis, toxicology of chemical contamination, use of chemical fingerprinting, determination of exposure methods and exposure routes, analysis of epidemiological data, general methods for remediation of toxic and hazardous wastes, and use of both technical and moral considerations in decision making. Prerequisites: BIO-181, BIO-181L, CHM-315, CHM-315L, ENV-300 and one of the following combinations: 1) CHM-231, CHM-231L, or 2) CHM-235, CHM-235L. Co-Requisite: ENV-402L.

ENV-402L[♦]: Chemical Investigation and Remediation Strategies Lab 1 credits

This course introduces students to various strategies that exist for remediating contaminated environmental samples, including air, water, and land. The following will also be discussed -- methods of site analysis, toxicology of chemical contamination, use of chemical fingerprinting, determination of exposure methods and exposure routes, analysis of epidemiological data, general methods for remediation of toxic and hazardous wastes, and use of both technical and moral considerations in decision making. Prerequisites: BIO-181, BIO-181L, CHM-315, CHM-315L, ENV-300 and one of the following combinations: 1) CHM-231, CHM-231L, or 2) CHM-235, CHM-235L. Co-Requisite: ENV-402.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ENV-402LHN[♦]: Chemical Investigation and Remediation Strategies Lab 1 credits

This course introduces students to various strategies that exist for remediating contaminated environmental samples, including air, water, and land. The following will also be discussed -- methods of site analysis, toxicology of chemical contamination, use of chemical fingerprinting, determination of exposure methods and exposure routes, analysis of epidemiological data, general methods for remediation of toxic and hazardous wastes, and use of both technical and moral considerations in decision making. Elementary - Special Education (ESD)

ESD-501: Foundations in Elementary and Special Education Graduate Studies 3 credits

Teacher candidates survey the philosophical, historical, and sociological influences upon which educational theories and practices are constructed, and explore a variety of the common issues, trends, and opportunities that professional educators face in the field. Teacher candidates prepare for the graduate learning experience at Grand Canyon University by developing and strengthening the skills necessary to succeed as graduate students, including graduate level writing and research. Practicum/field experience hours: None. Fingerprint clearance not required.

ESD-530: Instructional Planning and Assessment in the Inclusive Classroom 3 credits

Teacher candidates build foundational knowledge of planning instruction and assessment strategies designed to meet the needs of all students in an inclusive setting. Teacher candidates examine instructional planning based on the curriculum, knowledge of students, assessment data, learning theory, use of technology, and connections across the community. Formal and informal assessment strategies for planning, evaluating, and strengthening instruction for K-12 students are also examined. Practicum/field experience hours: 6. Fingerprint clearance required. Prerequisites: ESD-501 and SPD-521.

ESD-540: Assessment, Eligibility, and Transition Planning 3 credits

Teacher candidates examine the process of assessment and eligibility in the inclusive classroom, along with the stakeholders involved. Teacher candidates build foundational knowledge of interventions such as RTI, MTSS, and the eligibility requirements for the disability categories identified by IDEA. This course reviews diagnostic assessments and how to incorporate the data for planning effective special education programs. Teacher candidates also develop knowledge and skills related to planning transitions for students with disabilities after high school, including legal requirements. Practicum/field experience hours: 6. Fingerprint clearance required. Prerequisite: ESD-530.

ESD-550: Classroom Guidance, Management, and Behavior 3 credits

Teacher candidates examine how to create safe, inclusive, culturally responsive and engaging learning environments so that all students become active and effective learners and develop emotional well-being, positive social interactions, and self-determination. Teacher candidates focus on classroom procedures, physical classroom space, positive behavior interventions and supports, functional behavior assessments, adaptive behaviors, behavior improvement plans, and collaboration with colleagues. Practicum/field experience hours: 8. Fingerprint clearance required. Prerequisite: ESD-530.

ESD-560: Language Development, Phonics, Reading Elements, and Remediation 3 credits

Teacher candidates explore the language processing requirements of proficient reading and writing, including explicit, systematic, cumulative, and multisensory instruction that integrates listening, speaking, reading, and writing. Theoretical principles of the elements of reading instruction are examined. In addition, disabilities, such as dyslexia, are reviewed to understand how they affect the acquisition of reading skills and how they vary in presentation and degree. From this foundational knowledge, teacher candidates select, adapt, and use research-based instructional strategies and interventions in academic and specialized curricula to advance the learning for all students, including those with mild to moderate disabilities, with attention focused on reading. Practicum/field experience hours: 9. Fingerprint clearance required. Prerequisite: ESD-530.

ESD-565: Methods for Teaching Science and Health in the Inclusive Classroom 3 credits

Teacher candidates examine fundamental concepts of physical, life, earth/space sciences, and health education. Teacher candidates build knowledge on a variety of age-appropriate inquiry-based instructional strategies to teach science, to build student understanding of personal and social applications, and to convey the nature of science for the practice of skills that contribute to good health. Practicum/field experience hours: 12. Fingerprint clearance required. Prerequisite: ESD-530.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ESD-585: Methods for Teaching Social Studies and the Arts in the Inclusive Classroom 3 credits

Teacher candidates examine a variety of instructional strategies to encourage learners to develop deep understanding of the major concepts and modes of inquiry from the integrated study of history, geography, the social sciences, and other related areas. Teacher candidates build foundational knowledge on promoting students' abilities to make informed decisions as citizens of a culturally diverse democratic society and interdependent world. Teacher candidates integrate the content, functions, and achievements of the performing and visual arts as primary media for communication, inquiry, and engagement among students. Practicum/field experience hours: 12. Fingerprint clearance required. Prerequisite: ESD-530.

Engineering Science General (ESG)

ESG-111: Introduction to Engineering Programming & Lab 4 credits

This course introduces students to the basics of computer programming. Students will learn to develop algorithms to solve engineering problems, and the implementation of those algorithms in the C language. This course will include using C program for embedded devices for interacting with the world around them. Topics include assembly language, C programming language, and real time programming. MATLAB will be taught in the course to introduce students to rapid development tools and allow for flexibility in prototyping. Concepts of Object Oriented (OO) programming will be included in the MATLAB section of this course. Hands-on activities focus on writing code that implements concepts discussed in lecture and on gaining initial exposure to common microcontrollers. Prerequisites: ESG-162 and ESG-162L or MAT-261.

ESG-162: Engineering Math 3 credits

This course is founded in the application of mathematics to engineering problems and processes. The course begins with foundations in algebraic manipulation, progresses into trigonometric models, complex numbers, signal processing, introduction to matrices and system equations, differentiation and integration, and differential equations all applied to the solution to engineering problems. Course content cannot be met by a transfer course. Prerequisite: MAT-154. Co-Requisite: ESG-162L.

ESG-162L: Engineering Math Lab 1 credits

The engineering math labs are the hands on applications of the foundational mathematics concepts applied to engineering problems in the engineering math course. The labs will apply algebra, trigonometry, matrices, differential and integral calculus, and differential equations to various engineering problems. Course content cannot be met by a transfer course. Prerequisite: MAT-154. Co-Requisite: ESG-162.

ESG-202[♦]: Electrical & Electronic Circuits 3 credits

This course includes DC and AC electrical circuit analysis methods, and analog and digital circuit design and analysis, including operational amplifier linear circuits, and digital combinational logic circuits. Computer interface circuits which combine both digital and analog devices for interfacing physical systems will be introduced in the context of computer based hardware. Prerequisites: PHY-122 and PHY-122L. Co-requisite: ESG-202L.

ESG-202HN[♦]: Electrical & Electronic Circuits 3 credits

This course includes DC and AC electrical circuit analysis methods, and analog and digital circuit design and analysis, including operational amplifier linear circuits, and digital combinational logic circuits. Computer interface circuits which combine both digital and analog devices for interfacing physical systems will be introduced in the context of computer based hardware. Prerequisites: PHY-122 and PHY-122L. Co-requisite: ESG-202L.

ESG-202L[♦]: Electrical & Electronic Circuits Lab 1 credits

The laboratory section of ESG-202 supports and extends principles learned in the lecture course. Students will design and create circuits then test the input-output characteristics and compare to analysis. In addition, they will design circuits to interface with computer based electronic boards. Prerequisites: PHY-122, and PHY-122L. Co-Requisite: ESG-202.

ESG-202LHN[♦]: Electrical & Electronic Circuits Lab 1 credits

The laboratory section of ESG-202 supports and extends principles learned in the lecture course. Students will design and create circuits then test the input-output characteristics and compare to analysis. In addition, they will design circuits to interface with computer based electronic boards. Prerequisites: PHY-122, and PHY-122L. Co-Requisite: ESG-202.

ESG-209L: Introduction to Product Design Lab for Non-Engineers 1 credits

This is a course for non-engineering majors. The course introduces students to engineering product design and build in mechanical, electrical, and biomedical disciplines. Students learn engineering communication, reverse engineering, and the assessment of low and large volume manufacturability of product design. General makerspace equipment is utilized. The students conduct hands-on projects throughout the course. Prerequisite: MAT-154. Co-Requisite: ESG-210.

ESG-210: Engineering Innovation & Lab 2 credits

This course introduces the fundamentals of the engineering design methodology and the product development process. Students will learn the importance of listening to the voice of the customer and how to incorporate those desires into a product using design for X principles. Students will develop verification and validation tests and learn how those become formalized qualification or acceptance processes. Prerequisites: ESG-162 and ESG-162L or MAT-154.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ESG-220: Introduction to Engineering Design and Prototyping & Lab 2 credits

This course introduces students to engineering documentation, tolerances, and standards. Typical fabrication tools common in a machine shop and the impact those tools have on design details will be covered. The students will work on several multi-disciplined projects through the semester. Prerequisites: ESG-162 and ESG-162L. Co-Requisites: ESG-210 and ESG-251.

ESG-250♦: Computer Aided Engineering & Lab 4 credits

This course introduces CAD features, including fundamentals of 3D modeling for design. Includes overview of modeling, graphical manipulation, part structuring, coordinate system, and developing a strategy of modeling. CAD software enables students to make the transition from 2D drafting to 3D modeling. Students use symbolic math software and 3D modeling tools to visualize and solve engineering problems. The course emphasizes industry practices for modeling parts, extracting drawings, and creating assemblies. Prerequisite: MAT-261.

ESG-251: Computer Aided Design & Lab 2 credits

This course introduces students to the basics of computer-aided design. Students will learn to produce great designs using computer-aided design software. Topics include 2-D and 3-D design and modeling, mechanical tolerances, and electrical and mechanical design integration. Hands-on activities focus on the design and integration of different subsystems, electrical and mechanical. Prerequisites: ESG-162 and ESG-162L.

ESG-260: Statics 4 credits

This course focus is on the analysis of two- and three-dimensional forces on a system in an equilibrium (static) state. Further, it discusses real world applications for static analyses via simple trusses, frames, machines, and beams. Additional topics covered include properties of areas, second moments, internal forces in beams, laws of friction, and static simulation in Solidworks. Prerequisite: PHY-121, PHY-121L, ESG-251.

ESG-330♦: Introduction to Robotics & Lab 4 credits

This course covers the basics of robotic design using concepts from computer, electrical, and mechanical engineering. Topics covered may include modeling of dynamic systems, utilizing sensors and actuators, interfacing computer hardware, and developing simple control algorithms. This course is a team and project based course where multiple robots will be designed and tested. Prerequisite: MAT-345, MEE-360.

ESG-345: Fluid Mechanics & Lab 4 credits

This course is an introduction to fluid statics, laminar and turbulent flow, pipe flow, lift and drag and measurement technics. Students will learn control volume analysis. Prerequisites: ESG-251, PHY-122, PHY-122L, STG-330, and MAT-364.

ESG-360♦: Statics and Dynamics & Lab 4 credits

This course covers force and moment vectors, resultants, and principles of statics and free-body diagrams. The course presents students with applications to simple trusses, frames, and machines. Additional topics covered include properties of areas, second moments, internal forces in beams, laws of friction, principles of particle dynamics, mechanical systems and rigid-body dynamics, kinematics and dynamics of plane systems, and energy and momentum of 2-D bodies and systems. Prerequisites: PHY-121, PHY-121L, ESG-250, and MAT-264.

ESG-374: Design of Experiments and Quality Analysis 2 credits

This class will introduce statistical process control and teach proper engineering experimental design and analysis techniques. Concepts introduced will include process variability, statistical controls, factorial, blocking and confounding as applied to engineering problems. Prerequisite: MAT-262.

ESG-384: Applied Engineering Stochastic Processes 2 credits

Apply the stochastic process to the modeling and solution of the engineering problems. The course introduces the students to modeling, quantification, and analysis of uncertainty in engineering problems; all building into an introduction to Markov chains, random walks, and Galton-Watson tree and their applications in engineering. Prerequisite: MAT-364.

ESG-395: Engineering Economics and Project Management 4 credits

This course covers the basics of managing an engineering project, including: project planning, initiating of the project, implementation of the project plan, and completion of the project. Students will learn how to pitch their idea for funding, both in written form and in oral form, as well as how to prepare a formal written funding proposal. The class will cover the basics of engineering economics and introduce how this topic is covered on the Fundamentals of Engineering (FE) exam. Throughout the semester, the students will use the management and economic concepts learned to develop a portfolio and proposal for a capstone project to be completed in the following year. This is a writing intensive course. Prerequisites: ESG-210 and ESG-220.

ESG-421♦: Advances in Computer Design & Lab 4 credits

his course describes and analyzes recent developments in computer design and architectures. Course topics focus on current research and tools that push the performance limits of advanced computer systems. Prerequisites: CST-307, and EEE-302.

ESG-430♦: Advanced Robotics & Lab 4 credits

This course covers advanced topics in robotic design using concepts from computer, electrical, and mechanical engineering. Topics covered may include advanced modeling of dynamic systems; tactile, force, and proximity sensors; computer vision; and power electronics associated with various actuators. This course is a team and project based course where multiple robots will be designed and tested. Prerequisites: ESG-330, MAT-345, and STG-330.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ESG-435[♦]: Control Systems and Robotics & Lab 4 credits

This course synthesizes applications of linear algebra to modal analysis of dynamical systems, controllability-observability, pole-placement design, separation principle, design of model-based compensators, frequency domain multiple-input multiple-output (MIMO) singular value analysis, linear quadratic regulator (LQR), Kalman filter, state estimation, and linear quadratic Gaussian (LQG) control system design. The course also presents an introduction to H-infinity/H-2 control system design, with applications to real-world control system design problems, robot dynamics, and robot control. The laboratory is designed to reinforce principles learned in the lecture and to apply these principles and theories to the design, assembly and control of a robot. All computational aspects of this project will be performed in Matlab. Prerequisite: EEE-213 or ESG-455.

ESG-440: Applied Robotics & Lab 4 credits

The objective of this course is to give students hands on experience in the application of robotics. Students will conduct a series of projects, some of which they will scope, that will explore various robotic test beds. Students will become well versed in the program and control of various robotic systems. Analytical tools such as MATLAB/Simulink will be used to model and simulate robots. Prerequisite: ESG-330.

ESG-441[♦]: Power & Energy Systems 3 credits

This course presents basic principles, technical details, and recent advances in power and sustainable energy systems. The course focuses on the generation of electrical power using a variety of energy sources such as fossil, nuclear, and renewables. The course introduces students to power plant thermal cycle analysis. Prerequisites: PHY-122, PHY-122L, MAT-364, and EEE-202 and EEE-202L. Co-Requisite: ESG-441L.

ESG-441L[♦]: Power & Energy Systems Lab 1 credits

The laboratory section of ESG-441 reinforces and expands learning of principles introduced in the lecture course. Hands-on activities include research projects aimed at suggesting solutions to problems in the areas of electrical power generation using a variety of energy sources such as fossil, nuclear and renewables. Prerequisites: PHY-122, and PHY-122L, MAT-364, and EEE-202 and EEE-202L. Co-Requisite: ESG-441.

ESG-451^{ΔΩ}: Capstone Project I 2 credits

The first capstone course provides students the opportunity to work in teams to tackle real world applied research and design projects in their chosen area of interest. Students develop a project proposal, conduct a feasibility study, learn to protect intellectual property, develop teamwork skills, budgets, and a schedule for completing the project. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revisions. Students use this course to further develop technical writing and business presentation skills. This is a writing intensive course. Prerequisite: ESG-395.

ESG-451HN^{Δ†}: Capstone Project I 2 credits

The first capstone course provides students the opportunity to work in teams to tackle real world applied research and design projects in their chosen area of interest. Students develop a project proposal, conduct a feasibility study, learn to protect intellectual property, develop teamwork skills, budgets, and a schedule for completing the project. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revisions. Students use this course to further develop technical writing and business presentation skills. This is a writing intensive course. Prerequisite: STG-430.

ESG-452^{ΔΩ}: Capstone Project II 2 credits

The second capstone course provides students the opportunity to implement and present the applied research project designed, planned, and started in the first capstone course. The capstone project is a culmination of all the learning experiences in an engineering program. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revision. Prerequisite: ESG-451.

ESG-452HN^{Δ†}: Capstone Project II 2 credits

The second capstone course provides students the opportunity to implement and present the applied research project designed, planned, and started in the first capstone course. The capstone project is a culmination of the learning experiences in an engineering program. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revision. This is a writing intensive course. Prerequisite: ESG-451.

ESG-455[♦]: Dynamic Systems & Lab 4 credits

This course introduces students to the processes of mathematical modeling and analysis of dynamic systems with mechanical, thermal, electrical and fluid elements. Topics covered include: time domain solutions, analog computer simulation, linearization techniques, block diagram representation, numerical methods and frequency domain solutions. Hands-on lab activities enhance students' ability to mathematically analyze components and systems for mechanical performance. Prerequisites: ESG-345 or ESG-330 or STG-345, and EEE-202/EEE-202L.

ESG-461: Manufacturing Processes 2 credits

This course is an overview of manufacturing processes and methods. Processes may include casting and molding, forming, machining, metrology, welding, joining, and computer-aided manufacturing. Additional topics include product design, material selection, process planning, and manufacturing automation. Process capabilities, limitations, and design for manufacturability will be examined. Prerequisite: ESG-220.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

ESG-462♦: Current Topics in Biomedical Engineering & Lab 4 credits

This course surveys the main areas of biomedical engineering and illustrates the application of engineering principles for the design of biomedical innovations. Topics focus on the various products and processes related to the health science industries, which may include concepts such as: diagnostic instruments, artificial organs, biomedical devices, bio-signaling, and health monitoring and information integration. The laboratory is designed to reinforce principles learned and to apply these principles and theories to design systems and devices that integrate mechanical, electronic, and biological elements. Computational software will be used to support laboratory data analyses.

ESG-485: Feedback Control Theory and Design & Lab 4 credits

This course examines the control of dynamic systems through classical methods. Topics include analysis of open- and closed-loop systems in both the time and frequency domains, feedback-control methods, and the design of controllers for system stability, speed of response, and accuracy. Analytical tools such as MATLAB/Simulink will be used to simulate the modeled systems and to determine controller parameters. Prerequisites: ESG-455 and ESG-330.

English as a Second Language (ESL)

ESL-223N: SEI English Language Teaching: Foundations & Methodologies 3 credits

This course presents the historical, legal, theoretical, and sociological foundations of programs of instruction for English language learners. It includes an examination of the role of culture in learning and instructional program models, with a focus on Structured English Immersion. Teacher candidates are instructed in immersion strategies and the use of assessment data. Practicum/field experience hours: 10. Fingerprint clearance required.

ESL-250: School, Community, and Family Culture 4 credits

In this course, candidates will explore school, community, and family culture. Emphasis will be placed on the major goals, principles, and concepts of multicultural education, including multiple perspectives in culture, history, and understanding cultural and individual differences in teaching and learning. Research is utilized to investigate the social, community, cultural, and familial contexts that influence learning and development. Practicum/field experience hours: 10. Fingerprint clearance required.

ESL-341: Linguistics 4 credits

In this course, candidates become familiar with the fundamentals of linguistics. Emphasis will be placed on phonology, morphology, syntax, semantics, pragmatics, sociolinguistics, historical linguistics, and first and second language acquisition theories. Candidates will synthesize research-based methods of incorporating linguistic principles into their teaching practice.

ESL-352: Literacy Development for English Language Learners 4 credits

In this course, candidates will examine approaches to developing literacy for second language learners in K-8 schools. Emphasis will be placed on instructional and practice strategies for developing listening, speaking, reading, and writing skills; developing language and literacy through the content areas; using children's and young adult literature; and assessing students' literacy development in the second language. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: ESL-250.

ESL-358: ELL Curriculum and Methods of Instruction 4 credits

In this course, candidates will review curriculum and methods appropriate for the teaching of subject areas in an English language learner instructional setting. Emphasis is placed on: (a) linguistic, cognitive, developmental, and socio-cultural considerations in the design of multicultural curricula; (b) exploration of multicultural instructional methods and materials for use in language arts and content areas; (c) critique of current commercially prepared products. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: ESL-223N or ESL-440N.

ESL-365: ELL Assessment 4 credits

In this course, candidates will explore the principles of evaluating and structuring assessments. Candidates will design rubrics and examine assessments for the purposes of identification, placement, and instructional delivery. Emphasis will be placed on learning ways to integrate assessment procedures into any curriculum, and designing assessment tasks that allow for improved learning. Practicum/field experience hours: 10. Fingerprint clearance required. Prerequisite: ESL-358 or ESL-421.

ESL-410: Advanced Language Teaching Methodologies and Assessment 3 credits

This thorough examination of available methodologies, underlying philosophies, and assessment procedures includes lessons in teaching the four recognized skill areas (listening, speaking, reading, and writing) within the content areas and the use of standard tests. Prerequisite: ESL-423.

ESL-411: Language Teaching Curriculum and Materials Design 3 credits

This course integrates general school curriculum, materials, and the specific English language teaching goals with the actual design and rendering of instructional materials. Prerequisite: ESL-423.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | ^Ω Non-Transferable

ESL-414[♦]: English in its Social and Historical Setting 3 credits

This exploration of English language variation across sociocultural context and time discusses implications for building culturally appropriate ways of interacting in professional settings.

ESL-433N[‡]: Advanced Methodologies of Structured English Immersion 3 credits

In this course, teacher candidates continue to examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. They plan, deliver, and evaluate instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-433NHN[‡]: Advanced Methodologies of Structured English Immersion 3 credits

In this course, teacher candidates continue to examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. They plan, deliver, and evaluate instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-436N[‡]: Methods of Structured English Immersion for Early Childhood Education 3 credits

In this course, teacher candidates examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. Through Universal Design for Learning they plan, deliver, and evaluate standards-based instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-440N[‡]: Methods of Structured English Immersion for Elementary Education 3 credits

In this course, teacher candidates examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. Through Universal Design for Learning they plan, deliver, and evaluate standards-based instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-446N[‡]: Methods of Structured English Immersion for K-12 Education 3 credits

In this course, teacher candidates examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. Through Universal Design for Learning they plan, deliver, and evaluate standards-based instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-490^Ω: Student Teaching for Elementary Education with an ESL Emphasis 8 credits

Teacher candidates are engaged in the student teaching experience that includes practical ESL Elementary (K – 8) classroom experiences, research, analysis, and teaching to support the creation of a Student Teaching Evaluation of Performance (STEP). Practicum/field experience hours: None. Fingerprint clearance required. Prerequisites: Successful completion of all courses in POS and content area; a 2.8 GPA; successful completion of NES or your state’s mandated content area exams; and approval and placement by the College of Education Office of Clinical Practice. All paperwork for student teaching must be submitted by the due date the semester prior to student teaching.

ESL-533: Advanced Methodologies of SEI 3 credits

In this course, teacher candidates continue to examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. They plan, deliver, and evaluate instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

ESL-536: Methods of Structured English Immersion for Early Childhood Education 3 credits

In this course, teacher candidates examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. Through Universal Design for Learning they plan, deliver, and evaluate standards-based instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-540: Methods of Structured English Immersion for Elementary Education 3 credits

In this course, teacher candidates examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. Through Universal Design for Learning they plan, deliver, and evaluate standards-based instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-545: Methods of Structured English Immersion for Secondary Education 3 credits

In this course, teacher candidates examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. Through Universal Design for Learning they plan, deliver, and evaluate standards based instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

ESL-546: Methods of Structured English Immersion for K-12 Education 3 credits

In this course, teacher candidates examine the fundamentals of the legal, historical, and educational foundations of Structured English Immersion (SEI) and other instructional programs for English language learners. Theoretical principles of language acquisition and the role of culture in learning are examined. Methods of assessment are identified and analyzed. Teacher candidates identify strategies to promote English language development and improve student achievement. Through Universal Design for Learning they plan, deliver, and evaluate standards-based instruction for English language learners. Practicum/field experience hours: 15. Fingerprint clearance required.

Engineering Technology (ETG)

ETG-222[♦]: Experimental Methods 4 credits

This course covers topics in electrical and mechanical instrumentation and data acquisition. Topics include gauges and transducers, calibration, signal noise and conditioning, computerized data acquisition (DAQ) systems, results documentation, and statistical analysis of data. Prerequisite: PHY-111, PHY-111L & PHY-112, PHY-112L.

ETG-315[♦]: Materials and Microscopy & Lab 4 credits

This course teaches fundamental concepts of materials science as they apply to electric, magnetic, thermal, and optical properties. Students will study topics such as crystal structure, carrier transport, and solid-state physics. Laboratory exercises may focus on microscopy techniques and electro-plating. Prerequisites: PHY-112, PHY-112L, CHM-113, and CHM-113L.

ETG-333: Applications of Instrumentation & Lab 4 credits

This course covers topics in electrical and mechanical instrumentation and data acquisition. Topics include gauges and transducers, calibration, intelligent devices and sensor technologies, signal noise and conditioning, computerized data acquisition (DAQ) systems, results documentation, and statistical analysis of data. Prerequisites: EET-202 and EET-202L.

ETG-403: Principles of Mechatronics Design & Lab 4 credits

This course introduces students to electromechanical design principles in actuation and controls. Students will complete a semester-long hands-on, scaffolded project, with consideration for safety, cost and additional factors. Prerequisites: MET-302 and ETG-426.

ETG-410[♦]: Controls and Instrumentation & Lab 4 credits

This course examines the various methods of controlling electrical mechanical systems using lumped parameter models. Topics include interfacing with analog and digital sensors, motors, and actuators. Advanced control software will be used for programming the systems. Prerequisites: EET-202 and EET-202L.

.....
^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | ^Ω Non-Transferable

ETG-410HN[♦]: Controls and Instrumentation & Lab 4 credits

This course examines the various methods of controlling electrical mechanical systems using lumped parameter models. Topics include interfacing with analog and digital sensors, motors, and actuators. Advanced control software will be used for programming the systems. Prerequisites: EET-202 and ETG-222, or EET-325

ETG-415[♦]: Power and Energy Technologies 3 credits

This course examines methods of energy generation and delivery. Topics covered include motors and generators, power electronics, three-phase circuits, and power grid networks. Students will also contrast methods of power generation and storage as they consider their viability under different circumstances. Prerequisite: EET-302. Co-Requisite: ETG-415L.

ETG-415L[♦]: Power and Energy Technologies Lab 1 credits

This laboratory-based course reinforces the exploration of power and energy technologies by providing additional hands on experience with motors and generators, power electronics, three-phase circuits, and power grid networks. Prerequisite: EET-302. Co-requisite: ETG-415.

ETG-420[♦]: Quality Control 2 credits

This course will emphasize the necessary elements leading to quality production. Course topics will include Statistical Process Control (SPC) and Six-Sigma. Prerequisite: MAT-274 or ESG-374 or ISE-301.

ETG-426: Manufacturing Automation & Lab 2 credits

This course introduces students to manufacturing, assembly, and material handling processes through a prototype automation project. Areas of focus include the use of intelligent machines, cost and quality factors, safety protocols, control system design, device interfacing, and programming of electromechanical devices. Prerequisite: ETG-410. Co-Requisite: ETG-333.

ETG-498^{Δ/Ω}: Senior Project I 2 credits

The first senior project course provides students the opportunity to work in teams to tackle real world applied research and design projects in their chosen area of interest. Students develop a project proposal, conduct a feasibility study, learn to protect intellectual property, develop teamwork skills, budgets, and a schedule for completing the project. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revisions. Students use this course to further develop technical writing and business presentation skills. This is a writing intensive course.

ETG-498HN[♦]: Senior Project I 2 credits

The first senior project course provides students the opportunity to work in teams to tackle real world applied research and design projects in their chosen area of interest. Students develop a project proposal, conduct a feasibility study, learn to protect intellectual property, develop teamwork skills, budgets, and a schedule for completing the project. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revisions. Students use this course to further develop technical writing and business presentation skills. This is a writing intensive course.

ETG-499^{Δ/Ω}: Senior Project II 2 credits

The second senior project course provides students the opportunity to implement and present the applied research project designed, planned, and started in the first senior project course. The senior project is a culmination of the learning experiences while a student in the Engineering Technology programs. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revision. This is a writing intensive course. Prerequisite: Successful completion of ETG-498 with a grade of C or better.

ETG-499HN[♦]: Senior Project II 2 credits

The second senior project course provides students the opportunity to implement and present the applied research project designed, planned, and started in the first senior project course. The senior project is a culmination of the learning experiences while a student in the Engineering Technology programs. Students conduct extensive research, integrate information from multiple sources, and work with a mentor through multiple cycles of feedback and revision. This is a writing intensive course. Prerequisite: Successful completion of ETG-498 with a grade of C or better.

Exercise Science (EXS)

EXS-200: Resistance Training: Theory and Practice 3 credits

This is a course that introduces the principles and techniques of strength training. This includes exercise physiology, injury prevention, sport and activity specific program design, and implementation. Students will gain a complete foundation of the practical application of resistance training exercise. Knowledge gained in this course will contribute to student preparation for professional certification in the field. Co-requisite: EXS-200L.

EXS-200L: Resistance Training: Theory and Practice Lab 1 credits

This is a course of field and laboratory experiences designed to reinforce the practical application of strength training techniques, with an emphasis on injury prevention strategies. Co-requisite: EXS-200.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EXS-202: Cardiovascular Fitness: Theory and Practice 3 credits

This course introduces the principles and techniques of cardiovascular activities and training. This includes exercise physiology, injury prevention, sport and activity specific program design, and implementation. Topics will include pathophysiology on and for a variety of conditions. Knowledge gained in this course will contribute to student preparation for professional certification in the field. Co-Requisite: EXS-202L.

EXS-202L: Cardiovascular Fitness: Theory and Practice Lab 1 credits

This is a course of field and laboratory experiences designed to reinforce the practical application of cardiovascular training techniques, injury prevention strategies, program design, and implementation. Co-requisite: EXS-202.

EXS-210: Sports Performance Science and Coaching 3 credits

This course provides the knowledge necessary to enter the field of sports performance. The topics of movement preparation, plyometrics, acceleration, absolute speed, and multidirectional speed are introduced. Students are also introduced to testing, movement skills, nutrition, mindset, motivation science, exercise techniques, and regeneration, as well as program planning for energy system development designed to improve strength, power, sprint, and speed. The course includes a focus on the science of coaching and training tactical populations such as fire, police, and military.

EXS-210L: Sports Performance Science and Coaching Lab 1 credits

This course provides the skills necessary to enter the field of sports performance, with a focus on field and laboratory experiences designed to reinforce the practical application of the skills introduced in lecture.

EXS-235: Exercise Testing and Prescription 4 credits

This course incorporates the principles of assessment and program design for health and sport-specific analysis, static and functional exercise testing, and prescription of appropriate exercises. This includes exercise prescription for populations with various diseases and disabilities. Knowledge gained in this course will contribute to student preparation for professional certification in the field.

EXS-247: Health Risk Appraisal, Weight Control & Management 4 credits

This course incorporates professional guidelines for health risk appraisal, assessment and stratification for a variety of health conditions for the general population. This also includes principles and guidelines for safe and effective physical activity and weight loss management. Knowledge gained in this course will contribute to student preparation for professional certification in the field.

EXS-250: Resistance Training and Cardiovascular Fitness 3 credits

This course introduces the principles and techniques of strength and cardiovascular training. Musculoskeletal, cardiac, and respiratory anatomy are discussed, as well as how these systems adapt and manage the stress of regular exercise. Effective exercise programming is also discussed and applied to various physical abilities to develop a well-rounded program. Knowledge gained in this course prepares students for professional certification in the field of Resistance Training and Cardiovascular Fitness.

EXS-250L: Resistance Training and Cardiovascular Fitness Lab 1 credits

This field and laboratory experience course introduces exercises that target specific muscle groups and systems of the body to show students how to design an effective exercise program. Students are introduced to effective coaching strategies, including progression, regression, coaching cues, and proper evaluation; these skills can then be applied to the professional development and delivery of an exercise session. Co-Requisite: EXS-250.

EXS-305: Motor Control and Motor Learning 4 credits

This course provides the knowledge necessary to teach motor skills throughout the lifespan and apply current principles and theories of motor control and motor learning to exercise and rehabilitation populations. Content includes foundational neuroscience and connections with the musculoskeletal system, developmental motor milestones, motor control and motor learning principles, practice and feedback variables, teaching skill acquisition, and achieving maximum performance and retention.

EXS-316: Health Management and Administration 4 credits

This course focuses on business principles and procedures including fiscal resources, human resources, leadership skills, strategic planning, and facilitating partnerships with an emphasis in professionalism and an adherence to a code of ethics.

EXS-318: Principles of Corrective Exercises 4 credits

This course incorporates evidence-based concepts and application of corrective exercises to improve muscle imbalance and movement efficiency to decrease injury risk and promote recovery. Techniques include myofascial release, static and neuromuscular stretching, strength training, isometrics, and integrated dynamic movements. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L.

^ Writing intensive course | ♦ Fulfills General Education requirement | † Honors Major Course | Ω Non-Transferable

EXS-335[†]: Kinesiology 3 credits

This course is an analysis of human movement, integrating knowledge of the skeletal, muscular, and neurological systems with the effects that gravity, friction, internal and external forces, and the laws of motion have on their functions. Topics presented include biomechanics of human bone, joint, and skeletal muscle; structure and function of the upper extremity, lower extremity, and spine; concepts of linear and angular kinematics and kinetics as applied to human motion; equilibrium and stability on land; and motion through a fluid medium of air or water. Included is the application of these factors to various types of physical skills. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-335L.

EXS-335HN[‡]: Kinesiology 3 credits

This course is an analysis of human movement, integrating knowledge of the skeletal, muscular, and neurological systems with the effects that gravity, friction, internal and external forces, and the laws of motion have on their functions. Topics presented include biomechanics of human bone, joint, and skeletal muscle; structure and function of the upper extremity, lower extremity, and spine; concepts of linear and angular kinematics and kinetics as applied to human motion; equilibrium and stability on land; and motion through a fluid medium of air or water. Included is the application of these factors to various types of physical skills. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-335L.

EXS-335L[‡]: Kinesiology Lab 1 credits

This laboratory course is designed to apply the anatomical, kinesiological, and biomechanical principles learned in the lecture course to human body movement. Movement of all of the major joints of the body is analyzed by relative and absolute joint position and muscle action, and biomechanical terms - such as linear and angular kinematics, friction, work, power, energy, and torque - are applied to human motion. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-335.

EXS-335LHN[‡]: Kinesiology Lab 1 credits

This laboratory course is designed to apply the anatomical, kinesiological, and biomechanical principles learned in the lecture course to human body movement. Movement of all of the major joints of the body is analyzed by relative and absolute joint position and muscle action, and biomechanical terms - such as linear and angular kinematics, friction, work, power, energy, and torque - are applied to human motion. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-335.

EXS-340^Δ: Physiology of Exercise 3 credits

This writing intensive course is a study of the effects of exercise on the body. Topics include nutrition as the basis for physical activity; how energy is produced and utilized during physical activity; the energy delivery and vital functions of the respiratory, cardiovascular, muscular, and nervous systems during exercise; how these systems can be enhanced through training; the impact of ergogenic aids and environmental stress on performance; and the effect of exercise on body composition, weight control, aging, and disease prevention. The body's responses and adaptations to exercise at the systemic, as well as the subcellular level, are also discussed. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-340L.

EXS-340HN^Δ: Physiology of Exercise 3 credits

This writing intensive course is a study of the effects of exercise on the body. Topics include nutrition as the basis for physical activity; how energy is produced and utilized during physical activity; the energy delivery and vital functions of the respiratory, cardiovascular, muscular, and nervous systems during exercise; how these systems can be enhanced through training; the impact of ergogenic aids and environmental stress on performance; and the effect of exercise on body composition, weight control, aging, and disease prevention. The body's responses and adaptations to exercise at the systemic, as well as the subcellular level, are also discussed. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-340L.

EXS-340L[‡]: Physiology of Exercise-Lab 1 credits

This is a course of field and laboratory experiences designed to reinforce the basic principles learned in the lecture course. Skills of measurement and evaluation, including computerized methods employed to facilitate testing, are applied to physiological and systemic principles of exercise. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-340.

EXS-340LHN[‡]: Physiology of Exercise-Lab 1 credits

This is a course of field and laboratory experiences designed to reinforce the basic principles learned in the lecture course. Skills of measurement and evaluation, including computerized methods employed to facilitate testing, are applied to physiological and systemic principles of exercise. Prerequisites: BIO-155 and BIO-155L, or BIO-201 and BIO-201L, or BIO-210 and BIO-210L. Co-Requisite: EXS-340.

EXS-344: Exercise Science: Special Populations 4 credits

This course introduces analysis of special populations to assist in designing health education and physical fitness programs.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [‡] Honors Major Course | ^Ω Non-Transferable

EXS-353: Clinical Instruction in Athletic Training IV 4 credits

This 15-week-long course is designed to provide a clinical setting in which athletic training students clinically apply and demonstrate proficiency in the information learned in prior courses. This sequence allows students to apply what they have learned in class on real patients. Students are assigned to an approved clinical instructor who supervises students on a daily basis through constant visual and auditory interaction and provides feedback to students on their progression. The mode of delivery is student-to-student demonstration and a clinical exam testing students' proficiency at a clinical site (high school, college, and/or professional) on true patients. Students are evaluated at a clinical site weekly to ensure proficiency in these skills. Prerequisite: EXS-351.

EXS-356: Recognition and Evaluation of Athletic Injuries I 4 credits

This course is designed to provide students with specific knowledge and practical skills required to perform proper evaluation of the upper and lower body. Students learn to palpate body and soft tissue structures, and perform active, passive, and resistive range of motion testing, neurological testing, and special ligament tests for the major synovial joints in the body. Students are provided multiple opportunities to reinforce their knowledge with hands-on practice. Prerequisites: EXS-214 and EXS-214L.

EXS-357: Recognition and Evaluation of Athletic Injuries II 4 credits

Building on concepts of EXS-356, this course is designed to provide students the opportunity to further analyze and apply skills in the areas of evaluation of upper and lower body, palpation of body and soft tissue structures, range of motion testing, neurological testing, manual muscle testing, and special ligament tests for the major synovial joints in the body. Prerequisite: EXS-356.

EXS-366HN[†]: General Medical Conditions 4 credits

This course provides a broad discussion of general medical conditions and associated pathologies of the physically active, as well as applicable information to athletes, coaches, and athletic trainers of all levels. This course covers evaluation techniques and equipment, coverage of all body systems and conditions, as well as special populations. Prerequisites: EXS-214 and EXS-214L.

EXS-415HN^{Δ†}: Advanced Athletic Training 4 credits

This capstone course acts as a culmination of the learning experiences during the athletic training education program at Grand Canyon University. Students are challenged to demonstrate higher level thinking, review evidence-based literature, and display athletic training professional behaviors. This course focuses the student for preparation for the Board of Certification (BOC) examination and fulfills the writing intensive course requirement. Prerequisite: EXS-458.

EXS-426HN[†]: Theory of Prescribing Exercise 3 credits

This course covers the specific and applied use of exercise in prevention of injury, improvement of performance, and recovery from disability and dysfunction. Included are specific exercise routines, kinesiological principles, history and scope of rehabilitating exercise, abnormal clinical kinesiology, examination procedures, and reconditioning of specific disorders. Prerequisites: BIO-155 or BIO-201, and EXS-340HN. Co-requisite: EXS-426LHN.

EXS-426LHN[†]: Theory of Prescribing Exercise - Lab 1 credits

This course reinforces and expands learning gained in the lecture course. Practical applications and experiments include exercise prescription and rehabilitation techniques. Prerequisites: BIO-155 or BIO-201, and EXS-340HN. Co-requisite: EXS-426HN.

EXS-428[†]: Biomechanics and Sports Nutrition 4 credits

This course is a study of biomechanics which incorporates muscle and joint anatomy with functional movement analysis. Additional topics include interactions between nutrition and exercise concepts to enhance performance, as well as a study of ergogenic aids. Prerequisite: BIO-319.

EXS-428HN[†]: Biomechanics and Sports Nutrition 4 credits

This course is a study of biomechanics which incorporates muscle and joint anatomy with functional movement analysis. Additional topics include interactions between nutrition and exercise concepts to enhance performance, as well as a study of ergogenic aids. Prerequisite: BIO-319.

EXS-430^{Δ†}: Health Promotion 4 credits

This writing intensive course is designed to provide the foundation of healthy behavior change in relation to influential factors. Content includes motivation for physical activity and healthy choices, as well as an introduction to the psychology of sports.

EXS-430HN^{Δ†}: Health Promotion 4 credits

This writing intensive course is designed to provide the foundation of healthy behavior change in relation to influential factors. Content includes motivation for physical activity and healthy choices, as well as an introduction to the psychology of sports.

EXS-431: Health Assessment 4 credits

This course will include assessment of needs, assets, and capacity for Health Education programs. This course provides an overview of accessing information, collecting data, examining factors related to enhancement or compromise of health, and determining needs based on findings.

EXS-432[†]: Health Planning & Implementation 4 credits

This course will focus on planning, developing, implementing, monitoring, and evaluating health programs to meet the needs of an organization or population. An emphasis will be communication with all stakeholders throughout the process. Prerequisite: EXS-431.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

EXS-432HN^f: Health Planning & Implementation 4 credits

This course will focus on planning, developing, implementing, monitoring, and evaluating health programs to meet the needs of an organization or population. An emphasis will be communication with all stakeholders throughout the process. Prerequisite: EXS-431.

EXS-441^f: Epidemiological Research 4 credits

In this course, students learn to develop a research plan, collect, analyze, and interpret data, and apply findings. Conceptualization of the problem, development of the hypothesis, and literature review are emphasized.

EXS-441HN^f: Epidemiological Research 4 credits

In this course, students learn to develop a research plan, collect, analyze, and interpret data, and apply findings. Conceptualization of the problem, development of the hypothesis, and literature review are emphasized.

EXS-455^f: Advanced Principles of Sports Performance 3 credits

This course expands the principles and techniques of strength training including sport- and activity-specific program design and implementation. Knowledge gained in this course will contribute to student preparation for professional certification in the field. Prerequisites: EXS-340 and EXS-340L. Co-Requisite: EXS-455L.

EXS-455HN^f: Advanced Principles of Sports Performance 3 credits

This course expands the principles and techniques of strength training including sport- and activity-specific program design and implementation. Knowledge gained in this course will contribute to student preparation for professional certification in the field. Prerequisites: EXS-340 and EXS-340L. Co-Requisite: EXS-455L.

EXS-455L^f: Advanced Principles of Sports Performance Lab 1 credits

This course applies the principles and techniques of strength training including sport- and activity-specific program design and implementation. Prerequisites: EXS-340 and EXS-340L. Co-Requisite: EXS-455.

EXS-455LHN^f: Advanced Principles of Sports Performance Lab 1 credits

This course applies the principles and techniques of strength training including sport- and activity-specific program design and implementation. Prerequisites: EXS-340 and EXS-340L. Co-Requisite: EXS-455.

EXS-481^Ω: Sports Performance Capstone 4 credits

This capstone course acts as a culmination of the learning experiences during the exercise science program. A focus will be on career preparation including resume building, portfolio creation, and networking. Prerequisite: EXS-250 or EXS-318 or EXS-430 or EXS-485.

EXS-485[♦]: Research Methods in Exercise Science 4 credits

This course provides students with basic instruction in research methods needed to read and critique published research in physical activity, health, nutrition, and sports performance. The course will also provide you with the skills needed to design studies and develop a research proposal. Statistical terminology and calculations will be introduced in the context of evaluating research. Students will be required to use statistical software throughout the course.

EXS-491: Applied Exercise Science 4 credits

In this course, students learn how sports performance professionals engage with athletes to promote health and human performance and apply content knowledge to a sports performance experience. Knowledge gained in this course prepares students for certification exams and careers in the field of sports performance. Prerequisite: EXS-250 or EXS-318 or EXS-430 or EXS-485.

Finance (FIN)

FIN-210[♦]: Personal Finance 4 credits

This course provides students with skills to make rational, personal finance decisions. There is an emphasis on money management and the responsible use of credit. Strategies for wealth building and retirement planning are also introduced.

FIN-350[♦]: Fundamentals of Business Finance 4 credits

This course is an introduction to managerial finance and the financial markets, analysis of financial statements, time value of money, interest rates, asset valuation, assessment of risk, cost of capital, and capital budgeting. Prerequisites: ECN-220, ECN-351, or ECN-361; and ACC-240 or ACC-250.

FIN-355: Retirement Planning and Employee Benefits 4 credits

This course provides students with knowledge of the rules and options of qualified and nonqualified retirement plans, public plans (Social Security, Medicare, Medicaid), and employee benefit plans. Students learn to evaluate characteristics that are key in retirement plan selection for individuals and business owners. Distribution planning, tax implications, and regulatory considerations are discussed. Students analyze paths and tools toward financial independence and make recommendations within a financial planning context. Other employee benefits, such as medical plans, life insurance, disability insurance, and flexible spending accounts, are evaluated. Prerequisite: FIN-350.

FIN-375: Introduction to Investments 4 credits

This course studies stocks, bonds, mutual funds, exchange-traded funds, and other investment vehicles, and their application in investing. The securities market and trading procedures are discussed. The course introduces portfolio theory that is applicable to both professional portfolio management and individual investment decisions. The application of portfolio theory to corporate investments and diversification is also introduced. Prerequisite: FIN-350.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | ^f Honors Major Course | ^Ω Non-Transferable

FIN-431[♦]: Financial Risk Management and Insurance 4 credits

This introductory course explores fundamental concepts in risk management and insurance. Students learn to identify and mitigate commercial and personal risks through the use of financial products, including insurance and other financial instruments. Prerequisites: MAT-251 and FIN-350.

FIN-432[♦]: Real Estate 4 credits

In this introduction to the real estate industry, students learn about the risks and rewards associated with investing in and financing both residential and commercial real estate. This course includes concepts and techniques relevant to a variety of careers related to real estate. This course also provides students with a better understanding of real estate for their own personal investment and financing decisions. Prerequisite: FIN-350.

FIN-440: Estate Planning and Special Topics 4 credits

This course includes principles of family estate planning and client communication. Estate planning documents, gifting strategies, incapacity planning, property ownership, transfer methods, and taxation are covered. Students learn aspects of client communication and psychology, including principles of nonverbal communication, counseling, and the impact of planner and client values, attitudes, and biases. Money conflicts and crisis situations are also discussed. Prerequisite: FIN-350.

FIN-450[♦]: Intermediate Finance 4 credits

This course is an advanced study of the finance function within the modern corporation. Topics covered include financial analysis and planning, the valuation of financial assets, capital budgeting, capital structure, and working capital management. Prerequisites: ACC-240 or ACC-260 or ACC-350; and FIN-350.

FIN-451[♦]: Investments and Portfolio Management 4 credits

This course is an advanced study of investments and their application in investment portfolio management. The course develops and emphasizes portfolio theory that is applicable to both professional portfolio management and individual investment decisions. The application of portfolio theory to corporate investments and diversification is also discussed. Prerequisites: MAT-251; and FIN-450 or FIN-375.

FIN-490: Financial Planning Capstone 4 credits

This course is a synthesis of concepts learned throughout the financial planning program. A series of case studies enhances the ability to integrate and apply knowledge and skills from core financial planning domains. Students gain experience in the financial planning process, client biases and behavioral finance issues, professional standards, and ethics, and written and oral communication. Effective financial analysis techniques and client communication are employed to create and present a financial plan in accordance with a client's values and objectives. Implementation, evaluation, and updates of the plan are also addressed. Prerequisites: FIN-451, FIN-440, FIN-355, ACC-460, and FIN-431.

FIN-504: Finance Principles 4 credits

This course is designed for individuals who are preparing for more advanced coursework in accounting and is designed for students who have not had finance in undergraduate work. Topics covered include financial analysis, financial planning, asset evaluation, capital structure, and working capital management.

FIN-650: Managerial Finance 4 credits

This course discusses elements of business financial decisions, including financial forecasting and development of proformas, management of working capital, capital budgeting, capital structure, and raising funds in capital markets. Prerequisite: FIN-504.

FIN-655: Investments 4 credits

This course is a study of stocks, bonds, and derivatives, and their application in portfolio management. This course discusses securities market and trading procedures, and develops and emphasizes portfolio theory. Material in the course is applicable to both professional portfolio management and individual investment decisions. Prerequisite: FIN-650.

FIN-660: Advanced Financial Strategies 4 credits

A course studying more advanced business strategies including mergers and acquisitions, spin-offs, carve-outs, partnerships, cooperative agreements, and their business applications for strategic growth or survival. It will also cover business value issues, the role of investment bankers, M&A specialists, and the issues to consider in cross-border transactions. Prerequisite: FIN-650.

Family Nurse Practitioner (FNP)

FNP-630^Ω: Health Promotion and On-Campus Experience I 4 credits

This course covers preventive health care practices and integrates cultural and spiritual considerations, environmental factors, genetic influences, and national public health objectives. Emphasis is placed on development of the advanced practice registered nurse-patient relationship to enhance the effectiveness of patient education, counseling, and promotion of healthy lifestyle changes. Learners explore concepts relevant to primary care, including family systems theory and developmental theory. Learners are also introduced to well visits across the life span and build upon advanced health assessment skills in assessing the well child, adolescent, woman, and man. Specific emphasis is placed on clinical diagnostic reasoning and interpretation and the development of differential diagnoses based on clinical practice guidelines. Learners examine professional and patient community resources and evaluate the use of integrative healing strategies in assisting patients to achieve health goals using evidence-based research. This course includes a required 3-day, on-campus experience. Prerequisite: NUR-634.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

FNP-630CE^Ω: FNP-630 On-Campus Experience I 0 credits

This course covers preventive health care practices and integrates cultural and spiritual considerations, environmental factors, genetic influences, and national public health objectives. Emphasis is placed on development of the advanced practice registered nurse-patient relationship to enhance the effectiveness of patient education, counseling, and promotion of healthy lifestyle changes. Learners explore concepts relevant to primary care, including family systems theory and developmental theory. Learners are also introduced to well visits across the life span and build upon advanced health assessment skills in assessing the well child, adolescent, woman, and man. Specific emphasis is placed on clinical diagnostic reasoning and interpretation and the development of differential diagnoses based on clinical practice guidelines. Learners examine professional and patient community resources and evaluate the use of integrative healing strategies in assisting patients to achieve health goals using evidence-based research. This course includes a required 3-day, on-campus experience. Prerequisite: NUR-634.

FNP-630N: Health Promotion and On-Campus Experience I 4 credits

This course covers preventive health care practices and integrates cultural and spiritual considerations, environmental factors, genetic influences, and national public health objectives. Emphasis is placed on development of the advanced practice registered nurse-patient relationship to enhance the effectiveness of patient education, counseling, and promotion of healthy lifestyle changes. Students explore concepts relevant to primary care, including family systems theory and developmental theory. Students are also introduced to well visits across the life span and build upon advanced health assessment skills in assessing the well child, adolescent, woman, and man. Specific emphasis is placed on clinical diagnostic reasoning and interpretation and the development of differential diagnoses based on clinical practice guidelines. Students examine professional and patient community resources and evaluate the use of integrative healing strategies in assisting patients to achieve health goals using evidence-based research. This course includes a required 3-day, on-campus experience. Prerequisite: NUR-634.

FNP-630NCE: FNP-630 On-Campus Experience I 0 credits

This course covers preventive health care practices and integrates cultural and spiritual considerations, environmental factors, genetic influences, and national public health objectives. Emphasis is placed on development of the advanced practice registered nurse-patient relationship to enhance the effectiveness of patient education, counseling, and promotion of healthy lifestyle changes. Students explore concepts relevant to primary care, including family systems theory and developmental theory. Students are also introduced to well visits across the life span and build upon advanced health assessment skills in assessing the well child, adolescent, woman, and man. Specific emphasis is placed on clinical diagnostic reasoning and interpretation and the development of differential diagnoses based on clinical practice guidelines. Students examine professional and patient community resources and evaluate the use of integrative healing strategies in assisting patients to achieve health goals using evidence-based research. This course includes a required 3-day, on-campus experience. Prerequisite: NUR-634.

FNP-652^Ω: Family Primary Care I 7 credits

This course focuses on the three levels of prevention and comprehensive primary care management of individuals with common, acute, and chronic conditions across the life span within a culturally and spiritually diverse environment. Evidence-based research is utilized to develop comprehensive, cost-effective, least invasive, quality health care. Care includes health promotion counseling, screening, and patient education to optimize patient and family health. Emphasis is placed on critical thinking and diagnostic reasoning to guide clinical decision making. Management of patient illness includes ordering diagnostic tests, prescribing pharmacological and nonpharmacological integrative healing therapies, collaborating with other health professionals and community agencies, and pursuing appropriate follow-up. Practicum/field experience hours: 225. Prerequisite: FNP-630.

FNP-654^Ω: Family Primary Care II 7 credits

This course deepens its focus on the three levels of prevention and comprehensive primary care management of individuals with common, acute, and chronic conditions across the life span within a culturally and spiritually diverse environment. Learners integrate evidence-based research in the development of comprehensive, cost-effective, least invasive, quality health care. Care includes health promotion counseling, screening, and patient education to optimize patient and family health. Learners further advance their critical thinking and diagnostic reasoning skills to guide clinical decision making in the management of patient illness. Learners also further develop their competence in ordering appropriate diagnostic tests, prescribing pharmacological and nonpharmacological integrative healing therapies, collaborating with other health professionals and community agencies, and pursuing appropriate follow-up. Practicum/field experience hours: 225. Prerequisite: FNP-652.

FNP-690^Ω: Practicum and On-Campus Experience II 7 credits

This practicum course is the final synthesis of the theoretical and clinical foundation of advanced practice nursing in the primary care management of individuals and families across the life span. Emphasis is placed on scope of practice, roles, contract negotiation, prescriptive authority, licensure, certification, and credentialing. Updates on legislation and health policy are incorporated utilizing multidimensional clinical case studies. Learners also examine ethical issues that arise in clinical practice. This course includes a required 2-day, on-campus experience. Practicum/field experience hours: 225. Prerequisite: FNP-654.

FNP-690CE^Ω: FNP-690 On-Campus Experience II 0 credits

This practicum course is the final synthesis of the theoretical and clinical foundation of advanced practice nursing in the primary care management of individuals and families across the life span. Emphasis is placed on scope of practice, roles, contract negotiation, prescriptive authority, licensure, certification, and credentialing. Updates on legislation and health policy are incorporated utilizing multidimensional clinical case studies. Learners also examine ethical issues that arise in clinical practice. This course includes a required 2-day, on-campus experience. Practicum/field experience hours: 225. Prerequisite: FNP-654.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

FNP-690NCE: FNP-690 On-Campus Experience II 0 credits

This practicum course is the final synthesis of the theoretical and clinical foundation of advanced practice nursing in the primary care management of individuals and families across the life span. Emphasis is placed on scope of practice, roles, contract negotiation, prescriptive authority, licensure, certification, and credentialing. Updates on legislation and health policy are incorporated utilizing multidimensional clinical case studies. Students also examine ethical issues that arise in clinical practice. This course includes a required 1-day, on-campus experience. Practicum/field experience hours: 225. Prerequisite: FNP-654.

Forensic Science (FOR)**FOR-150: Critical Analyses in Forensic Science 4 credits**

This course introduces the analysis skills required for scientific problems. Critical thinking in relation to problem solving is practiced from the viewpoint of forensic scientists. Students will study approaches to inquiry, reasoning, and logic as applied to forensic science, the systematic use of data to make critical decisions, and the expectations of graduate schools and forensic science careers.

FOR-505: Ethical Principles in Forensic Science and the Role of QA and QC 4 credits

This course will cover the Code of Ethics statements published by major forensic science organizations. The role quality assurance and quality control (QA/QC) principles play in maintaining high ethical principles is discussed. Issues involving failure to maintain QA/QC and resulting ethical dilemmas will also be addressed. Accreditation and its place within the crime laboratory is included to provide students with a well-rounded understanding of the importance of maintaining quality within the laboratory.

FOR-515: Crime Scene Processing and Medicolegal Death Investigation 4 credits

This course introduces students to the various procedures used to document, collect, package, and preserve evidence found at crime scenes. The body as it pertains to medicolegal death investigation with an examination of the guidelines for death scene investigations is also discussed. Concepts such as maintaining chain of custody, ethical considerations, and report writing are also covered. Prerequisite: FOR-505.

FOR-525: Applied Statistics for Forensic Science 4 credits

This course provides an introduction to the use of statistics within various forensic disciplines. Analytical sampling, basic statistical analyses, and uncertainty measurements are covered with respect to comparative disciplines. Statistics as applied to the analysis of DNA evidence, including probability of inclusion, likelihood ratio, and random match probability are also covered. The impact of statistics on the valuation of evidence is included.

FOR-530: Microscopy and Instrumental Analysis Methods in Forensic Science 4 credits

This course provides an introduction to microscopy. Concepts such as compound, comparison, and scanning electron microscopy are covered. The course also covers instruments commonly used in the analysis of forensic evidence. Various chromatography, spectroscopy, and detection methods are covered in relation to the forensic evidence for which they are used. Prerequisite: FOR-515.

FOR-540: Advanced Body Fluid and DNA Analysis 4 credits

In this course serological testing of blood, semen, and saliva is introduced through a discussion of various presumptive and confirmatory chemical tests. DNA profiling of various samples types is covered, with a focus on the processes used to obtain a DNA profile: extraction, quantification, amplification, and electrophoresis. The comparison of DNA profiles, report writing, and DNA mixture interpretation are also discussed. Prerequisite: FOR-515, FOR-525.

FOR-560: General Principles of Drug Chemistry and Forensic Toxicology 4 credits

In this course students will learn various laboratory methods and procedures for the detection of drugs/controlled substances from both physical specimens and bodily fluids (blood and urine). Instrumental and chemical techniques used to separate, detect and quantitate controlled substances are discussed. The creation and detection of designer drugs is also covered. Prerequisite: FOR-515.

FOR-575: Comparative Methods 4 credits

This course is dedicated to forensic comparative methods used in pattern-based evidence analysis. Forensic disciplines addressed include firearms and toolmark analysis, fingerprint comparisons, and shoe print and tire tread evidence. Prerequisite: FOR-515, FOR-525.

FOR-600: Courtroom Presentation of Scientific Evidence 4 credits

This course focuses on the ways in which science is used by the criminal justice system and how to effectively present evidence in court. The impact of landmark court cases, including the Daubert and Frye decisions, are addressed in relation to expert witness testimony and the admissibility of scientific evidence. The role of the forensic scientist in relation to the Federal Rules of Evidence is also addressed. Students also learn how to be an effective expert witness, including how to prepare for testimony, how to properly convey scientific technology in layman's terms, and how to be perceived as a credible witness. Prerequisite: FOR-530, FOR-540, FOR-560, FOR-575.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

FOR-620: Advanced Topics in Forensic Science 2 credits

This course discusses various topics that students are likely to encounter as working forensic scientists. The ways in which the public views forensic science is addressed, with a focus on the CSI Effect and the publication of the National Academy of Sciences (NAS) Report and the President's Council of Advisors on Science and Technology (PCAST) Report. Ways in which to address conflicting results from multiple experts is discussed. Prerequisite: FOR-530, FOR-540, FOR-560, FOR-575.

Geography (GEO)

GEO-234[♦]: World Geography 4 credits

This course is a study of the physical environment and of the relationship of human cultures to each of the major geographic areas of the world, with special attention given to the United States.

Golf (GLF)

GLF-111: Player Development: The Full Swing I 1 credits

This course teaches students the principles and execution of the full swing. The course includes 45 hours of instruction, including both group and individual instruction. Students may use the golf course and practice facilities.

GLF-112: Player Development: The Full Swing II 1 credits

This course builds on GLF-111 and advances students' knowledge of the principles and execution of the full swing. The course includes 45 hours of group and individual instruction. Students are expected to use the golf course and practice facilities to improve their skills. Prerequisite: GLF-111.

GLF-211: Player Development: The Short Game I 1 credits

This course teaches students the principles and execution of the various elements of the short game. The course includes 45 hours of full-time instruction in areas such as pitching, chipping, sand shots, and putting. Both group and individual instruction methods are used. Students are expected to use the golf course and practice facilities to improve their skills.

GLF-212: Player Development: The Short Game II 1 credits

This course builds on GLF-211 and advances student's knowledge of the principles and execution of the various elements of the short game. The course includes 45 hours of full-time instruction in areas such as pitching, chipping, sand shots, and putting. Both group and individual instruction are used. Students are expected to use the golf course and practice facilities to improve their skills. Prerequisite: GLF-211.

GLF-311: Player Development: Playing Strategy I 1 credits

This course instructs students on the rules of golf, and course management strategy and techniques through a variety of instructional methods and on-course instruction. The course includes 45 hours of group and individual instruction. Students are expected to use the golf course and practice facilities to improve their skills. Prerequisites: GLF-112 and GLF-212.

GLF-312: Player Development: Playing Strategy II 1 credits

This course builds on the concepts of playing strategy discussed in GLF-311. It advances students' knowledge of playing strategy through a variety of instructional methods and on-course instruction. The course includes 45 hours of group and individual instruction. Students are expected to use the golf course and practice facilities to improve their skills. Prerequisite: GLF-311.

GLF-411: Player Development: Teaching the Full Swing 1 credits

This course teaches students the essential skills required to be an effective golf instructor and concentrates on teaching the full swing. The course includes 45 hours of instruction with a focus on the application of established teaching methods. Students are given the opportunity to gain hands-on teaching experience. Since the students' own playing ability will reflect on their ability to teach, they are also expected to use the golf course and practice facilities to continue to improve their skills. Prerequisites: GLF-112, GLF-212, and GLF-312.

GLF-412: Player Development: Teaching the Short Game 1 credits

This course builds on GLF-411 and further develops students' golf instructional skills. The course concentrates on methods for teaching the short game, including pitching, chipping, sand shots, and putting. Students are given the opportunity to gain hands-on teaching experience. Since the students' own playing ability will reflect on their ability to teach, they are also expected to use the golf course and practice facilities to continue to improve their skills. Prerequisites: GLF-112, GLF-212, and GLF-312.

GLF-450: Golf Course Management and Operations 4 credits

This course examines golf course operations with an emphasis on environmental sustainability, community development, customer relationships, and operational efficiencies. Course design and cost considerations involved in managing and improving golf course operations (including facilities, turf grass management, irrigation, and landscaping) are also included. Prerequisite: GLF-200.

GLF-460: Marketing and Revenue Generation in the Golf Industry 4 credits

This course introduces the unique features of services marketing with a focus on the importance of growing a customer base within the golf industry. There is specific emphasis on generating innovative revenue models through competitive analysis to identify market opportunities and develop innovative growth strategies. The applications of social media and integrated marketing communications in the golf industry are also covered.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

Government (GOV)

GOV-140[♦]: American Government and Politics 4 credits

This course is an introduction to American government and politics. It covers the constitutional foundations and governing institutions of the federal government. Throughout the course, students address common political themes, such as the nature and scope of governance, democracy, citizenship, and patterns of political behavior.

GOV-140XV: American Government and Politics 4 credits

This course is an introduction to American government and politics. It covers the constitutional foundations and governing institutions of the federal government. Throughout the course, students address common political themes, such as the nature and scope of governance, democracy, citizenship, and patterns of political behavior.

GOV-210[♦]: Introduction to Comparative Government and International Politics 4 credits

This course compares and contrasts various systems of government in Western and non-Western countries, and explores political and diplomatic processes and how they affect international relations, nations, and localities.

GOV-260: Arizona Constitution & Government 1 credits

This course is a survey of the Arizona constitution and government. It meets the teacher certification requirement for Arizona government.

GOV-307[♦]: Introduction to Political Theory 4 credits

This course examines the political processes that determine who gets what, when, and how in society, and explores the issues and concepts that are used to develop and critique political theories. The classics as well as the more contemporary expressions of political thought are introduced.

GOV-307HN[♦]: Introduction to Political Theory 4 credits

This course examines the political processes that determine who gets what, when, and how in society, and explores the issues and concepts that are used to develop and critique political theories. The classics as well as the more contemporary expressions of political thought are introduced.

GOV-351[♦]: Public Administration 4 credits

This course explores the theory and practice of governmental administration at the national, state, and local levels and the implementation of legislation. It examines the role of the bureaucracy in the federal government and the states. Prerequisite: GOV-366.

GOV-357[♦]: Philosophy of Law 4 credits

This course is an introduction to topics in legal philosophy, including but not limited to the foundations of law, the relation of law and morality, law and ethics, whether persons have a duty to obey the law, the nature of property, the reasonableness of punishment, and the role of constitutions in law. Readings will be drawn from both historical and contemporary sources.

GOV-358[♦]: Research Methods in Government and Politics 4 credits

This course introduces the qualitative and quantitative methods used to research and study politics including hypothesis testing, inference, and causal reasoning. Prerequisite: GOV-140.

GOV-358HN[♦]: Research Methods in Government and Politics 4 credits

This course introduces the qualitative and quantitative methods used to research and study politics including hypothesis testing, inference, and causal reasoning. Prerequisite: GOV-140.

GOV-360[♦]: Civil Law 4 credits

This course provides an overview of the broad field of civil law, giving students a contemporary, practical understanding of the different fields of civil law. The course also provides analytical techniques for resolving legal problems.

GOV-364[♦]: Public Policy Analysis 4 credits

This course covers public policymaking in American federal government. It focuses on the impact of policy on public opinion, the media, interest groups, and governing institutions within the executive, the legislative, and the judicial branches. Prerequisite: GOV-140.

GOV-364HN[♦]: Public Policy Analysis 4 credits

This course covers public policymaking in American federal government. It focuses on the impact of policy on public opinion, the media, interest groups, and governing institutions within the executive, the legislative, and the judicial branches. Prerequisite: GOV-140.

GOV-366[♦]: State and Local Government 4 credits

This course focuses on the structures, processes, and policy outputs of state and local governments in the United States, with special reference to Arizona political, social, and economic environments. Prerequisite: GOV-140.

GOV-376[♦]: Municipal Government and Administration 4 credits

This course studies the development of city government in the United States; the governmental organization of several typical cities; the problems of taxation, law enforcement, health, housing, welfare, planning, and zoning; and the future of cities. Prerequisite: GOV-366.

[♦] Writing intensive course | [♦] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

GOV-378^Δ♦: American Constitution 4 credits

This writing intensive course surveys the development of the American Constitution from colonial origins to the present. Constitutional law in the broader framework of political philosophy is discussed. Major themes in this course are federalism, the doctrine of separation of powers, and the impact of Supreme Court decisions on society. Prerequisite: GOV-140.

GOV-378HN^Δ♦: American Constitution 4 credits

This writing intensive course surveys the development of the American Constitution from colonial origins to the present. Constitutional law in the broader framework of political philosophy is discussed. Major themes in this course are federalism, the doctrine of separation of powers, and the impact of Supreme Court decisions on society. Prerequisite: GOV-140.

GOV-455^Δ: Practice of Law 4 credits

This course focuses on three major areas of success required to become a successful legal practitioner: legal reasoning and analysis, practical legal research and writing, and "soft" skills of the legal profession such as the ability to gather information from persons and to communicate with persons in the legal arena. Prerequisite: GOV-357.

GOV-459^{ΔΩ}: Government Capstone 4 credits

This writing intensive course provides a broad overview of careers at the federal, state, and local levels of governing bodies and agencies. The course explores the role of a bureaucrat, legislative aid, lobbyist, or campaign worker. Issues that are unique to legislatures that make the law, and to public agencies that implement and enforce the law are also explored. This course examines selected theoretical and empirical topics in government. This course represents the culmination of undergraduate study within government. This capstone course needs to be completed at the end of program. This capstone course needs to be completed at the end of program. Prerequisites: GOV-364, GOV-307, GOV-358, GOV-378, GOV-140, and GOV-210.

GOV-467^Δ: Special Topics in Federal-State-Local Relations 4 credits

This course analyzes contemporary topics in federalism. Topics will vary but may include case studies on environmental, health care, transportation, and homeland security policies. Prerequisite: GOV-351.

Greek (GRK)

GRK-501: Elementary Greek I 4 credits

This course introduces the grammar of New Testament Greek with an emphasis on the vocabulary and morphology of the New Testament and the use of linguistic tools for the translation and interpretation of selected passages.

Health Care Administration (HCA)

HCA-240^Δ♦: Health Care Accounting and Billing 4 credits

This course introduces students to the fundamental principles of finance, accounting, and budgeting within the context of the health care industry. Students examine the various business units, roles, and structures involved in health care planning, budgeting, and accounting. Financial measurements and data analytics for managing costs and productivity are also explored.

HCA-255^Δ♦: Health Care Policy and Economic Analysis 4 credits

This course offers a broad overview of health care policy and the impact of government legislation on health care delivery. Students explore ways that economic forces, political trends, and changing social priorities influence policy development that directly impacts health care access, cost, and quality.

HCA-360: Health Information Technology and Management 4 credits

This course provides information and skills the health care administrator will require to integrate information technology and systems within the health care environment. Students examine basic components and functions of health care management information systems (HMIS) that work to manage data and resources which influence point-of-care decision-making by providers. Issues surrounding privacy, security, efficiency, and effectiveness of health care operations are also explored.

HCA-450^Δ: Quality in Health Care 4 credits

This course focuses on the knowledge and skills necessary to achieve quality outcomes in patient care. Through analysis and interpretation of quality and performance data, students develop strategies for quality improvement. Emphasis is placed on performance management tools, patient safety protocols, and process controls to ensure both quality and efficiency.

HCA-450HN^Δ: Quality in Health Care 4 credits

This course focuses on the knowledge and skills necessary to achieve quality outcomes in patient care. Through analysis and interpretation of quality and performance data, students develop strategies for quality improvement. Emphasis is placed on performance management tools, patient safety protocols, and process controls to ensure both quality and efficiency.

HCA-455^Δ: Organizational Behavior and Leadership in Health Care 4 credits

This course introduces students to behavioral science concepts, as they apply to organizational structure, process, and function. Students explore the manager's role in relation to motivating teams and developing strategies for improving operational workflow and efficiencies. Effective communication, collaboration, negotiation, conflict resolution, and decision-making are emphasized.

^Δ Writing intensive course | [♦] Fulfills General Education requirement | ^Δ Honors Major Course | ^Ω Non-Transferable

HCA-455HN^Δ: Organizational Behavior and Leadership in Health Care 4 credits

This course introduces students to behavioral science concepts, as they apply to organizational structure, process and function. Students explore the manager's role in relation to motivating teams and developing strategies for improving operational workflow and efficiencies. Effective communication, collaboration, negotiation, conflict resolution and decision-making are emphasized.

HCA-460^Δ: Operations and Risk Management in Health Care 4 credits

This course introduces students to the roles of local, state, and federal regulatory agencies and accrediting bodies; the enforcement of federal guidelines, standards, and regulations; and the issues and demands of the regulatory environment that affect health care in the United States. Students explore the legal responsibility of providers and agencies to provide a safe environment while delivering health care services.

HCA-460HN^Δ: Operations and Risk Management in Health Care 4 credits

This course introduces students to the roles of local, state, and federal regulatory agencies and accrediting bodies; the enforcement of federal guidelines, standards, and regulations; and the issues and demands of the regulatory environment that affect health care in the United States. Students explore the legal responsibility of providers and agencies to provide a safe environment while delivering health care services.

HCA-465: Health Care Administration and Management 4 credits

This course introduces students to the management of human resources, with particular focus on resource decision making in health care environments. Students explore job market analysis, talent recruitment, training and development, revenue recovery efforts through retention initiatives, diversity training, and technology readiness. Students demonstrate health care management skills by utilizing tools used to manage staffing and work productivity.

HCA-470^{ΔΔ}: Strategic Planning and Implementation in Health Care 4 credits

This writing intensive course introduces students to key business functions that drive strategic planning. Models for developing, implementing, and evaluating effective programs across varied health care settings are explored along with the principles of merger, acquisition, reorganization, and joint venture. Students apply tools utilized in strategic management of health care programs such as balanced score cards, LEAN, and Six Sigma.

HCA-470HN^{ΔΔ}: Strategic Planning and Implementation in Health Care 4 credits

This writing intensive course introduces students to key business functions that drive strategic planning. Models for developing, implementing, and evaluating effective programs across varied health care settings are explored along with the principles of merger, acquisition, reorganization, and joint venture. Students apply tools utilized in strategic management of health care programs such as balanced score cards, LEAN, and Six Sigma.

HCA-515: Analysis of Contemporary Health Care Delivery Models 4 credits

This course allows learners to develop a comprehensive understanding of contemporary health care models from financial, economic, quality, access, and disparity perspectives, and to relate the ethical, cultural, political, and financial factors that drive and support them. It is from this broad, integrative, and comparative perspective that learners begin defining their role and perspective as administrators within the health care system. Learners begin to investigate their options and define their potential to serve as leaders of systematic improvement, within their health care discipline, based on changes in these driving factors.

HCA-530: Health Care Policies and Economics 4 credits

This course focuses on health care economics and policy. The core principles of health economics are studied, and students begin to explore practical financial-analysis skills that have immediate application within the health care industry. Students also study managerial decision-making processes based on cost, service, and other economic variables as well as how those decisions influence outcomes. Students will investigate health care policy and reform to understand the impact it makes on everyday practices of health care organizations.

HCA-540: Health Care Research Methods, Analysis, and Utilization 4 credits

This course focuses on the critical analysis of health care research and its application to the administration and delivery of health care services. Emphasis is placed on strategies to access current and relevant data, synthesize the information, and translate new knowledge into practice. Learners are introduced to concepts of measurement, reliability, and validity, as well as ethical issues in the design and conduct of research through an evaluative process of health care initiatives and projects.

HCA-545: Organizational Structure, Dynamics, and Effectiveness 4 credits

This course focuses on the analysis of health care organizational structure and effectiveness. Topics include the distributive leadership model, decision making through collaboration and teamwork, and the integrative analysis of how change impacts other components of the system.

HCA-610: Essential Health Care Business Analysis 4 credits

This course focuses on the critical analyses of health care business operations and performance. Topics include analysis of financial performance, operational process analysis, and quality of service evaluation.

^Δ Writing intensive course | [◆] Fulfills General Education requirement | [†] Honors Major Course | ^Ω Non-Transferable

HCA-615: Human Resource Management and Marketing Communication Strategies 4 credits

This course focuses on essential managerial communication skills. Human resource topics include conflict management, negotiation, mediation, and coaching, as well as change management principles and the types of communication required for paradigm modification. Interdepartmental, cross-discipline, and external partner marketing topics are included. Consumer communication and collaboration techniques are also discussed.

HCA-616: Networking and Professional Readiness 2 credits

This course is designed to prepare students to meet the professional standards of practice related to their future discipline within the industry. Emphasis is placed on critical thinking, utilization of resources, communication strategies, and goal setting. Students prepare a professional portfolio and resume. Students apply various networking techniques and practical interview skills to ensure professional readiness for their chosen health care careers.

HCA-620: Business/Project Plan Evaluation and Development 4 credits
