

Section along line A-B

No. 1. I have indicated how I think this used to project
 Also that it extends back into the hill only to end somewhere abruptly on bedrock.
 I have shown the "Exposed thickness". The base may be actually way down the hill as indicated by the
 black line, but if so, I have no evidence either to support or indicate the fact

No 3+5 The true base of these deposits may where the red line is, or where the black line is, or anywhere
 between. Either extreme is logical in the light of the data available.
