

East Umatilla County Chemical Control District

Due to the sensitive nature of crops in the East Umatilla County, Oregon area, this notice is a reminder that East Umatilla County has chemical application restrictions as follows. See Oregon Administrative Rules 634.206 through 242 online: <https://oda.fyi/OAR603-057>

Protected Area (committee must be notified within 48 hours of any hormone type application)

All hormone-type herbicides are prohibited at all times, except that:
 Amine and sodium salts 2-4D, & MCP may be applied: October 1 through May 1.
 Amine and sodium salts, low volatile formulations in Group 4 Synthetic Auxins, and other herbicide groups with different modes of action may be applied: October 1 through May 1.
 Low volatile esters may be applied for brush control: November 1 through February 1.
 The active ingredient Picloram (Tordon) may not be applied at any time in the protected area.

Methods of application allowed:
 Backpack or hand sprayers.
 Boom-type when nozzles direct spray at right angles to the boom with no more than 25 lbs. of pressure per square inch.

Two-mile Perimeter of Protected Area

Inside radius of two miles boom-type equipment only: October 1 through March 25, except Barrett Station area as described.
 Outside radius of two miles: Low volatile esters may be applied by helicopter or ground equipment: October 1 through April 1.
 Outside radius of five miles: Low volatile esters may be applied by fixed-wing aircraft: October 1 through April 1.

Methods of application allowed:
 Backpack or hand sprayers.
 Boom-type when nozzles direct spray at right angles to the boom with no more than 25 lbs. of pressure per square inch.

Primary Restricted Area (permits must be obtained if applied by aircraft)

Hormone-type herbicides prohibited at all times, except that:
 Amine and sodium salt forms 2-4D & MCP may be applied during the entire year.
 Amine and sodium salts, low volatile formulations in Group 4 Synthetic Auxins, and other herbicide groups with different modes of action may be applied during the entire year.
 Low volatile esters may be applied for brush control: November 1 through March 1.

Methods of application allowed:
 Backpack or hand sprayers.
 Boom-type when nozzles direct spray at right angles to the boom with no more than 50 lbs. of pressure per square inch.

Protected Area and Primary Restricted Areas

Oil type carriers prohibited at all times, except: For brush control after November 1 or before March 1. Oil type emulsifiers and oil type adjuvants may be used when not in excess of one pint per acre.
 Hormone-type herbicides may not be applied when wind velocity exceeds five miles per hour, unless the application is conducted greater than 5-miles from the outer edge of the Protected area.

Secondary Restricted Area

High volatile ester formulations of 2,4-D, and MCP may not be used during the entire year.
 Hormone-type herbicides in Group 4 Synthetic Auxins may not be applied when wind velocity exceeds ten miles per hour.
