

Full List of Effective Disinfectants to Help Fight Novel Coronavirus Disease (COVID-19)

To be effective, disinfectants must be left on surfaces for a specific length of time (contact time), and concentrates (dilutables) must be diluted according to label directions. The required contact time and dilution are specific to each disinfectant and each virus to be controlled and are provided on the disinfectant product label. Reminder: Some products are Ready-to-Use (RTU) sprays or wipes and do not need to be diluted with water.

There are no disinfectant product labels that currently list the virus that causes COVID-19. However, the U.S. Environmental Protection Agency (EPA) has pre-approved certain products that are effective against similar viruses. All disinfectant products on this list meet this standard. However, use instructions, including use sites, on physical product labels can vary. Please check and follow the physical product labeling prior to use.

Alert: There are some product labels that list “human coronavirus.” Depending on the label, the directions for use for “human coronavirus” may not always meet EPA’s high standards for emerging pathogens, such as the novel coronavirus that causes COVID-19. However, you can ensure maximum virus-killing power through one of the following methods.

Ensuring Effective Disinfectant Use:

Option 1: Look for the “Disinfection” section on the label and use the maximum contact time and most concentrated dilution rate (largest amount of disinfectant to mix with water) that is listed in this section.

Option 2: If you are unsure about the contact time or proper dilution, contact the product manufacturer for assistance. Technical sheets describing effective use may also be available from the manufacturer.

Important: Read and follow all safety precautions and restrictions on disinfectant labels, paying special attention to the First Aid section. Do not use measuring tools that are used to prepare food.

| No. | Product Manufacturer / Distributor | Product Name | EPA Reg. No. | Product Type | Follow the disinfection labeling direction for: ¹ | Contact Time ¹ (how many minutes to keep surfaces wet with disinfectant) | Dilution Rate ^{2,3} (ounces or fluid ounces per gallon unless otherwise noted) |

| No. | Product Manufacturer / Distributor | Product Name | EPA Reg. No. | Product Type | Follow the disinfection labeling direction for: ¹ | Contact Time ¹ (how many minutes to keep surfaces wet with disinfectant) | Dilution Rate ^{2,3} (ounces or fluid ounces per gallon unless otherwise noted) |
|------|------------------------------------|---|--------------|--------------|--|---|---|
| 963. | TOMI ENVIRONMENTAL SOLUTIONS INC | Binary Ionization Technology (BIT) Solution | 90150-2 | Fog; Mist | Feline calicivirus | 15 | N/A |

¹ According to EPA Disinfectant List N on 3/22/2020 (<https://oda.fyi/EPADisinfectantListN>) unless otherwise noted. Read the product labeling to confirm contact time prior to use.

² According to the most recent EPA-approved disinfectant master label accessed on 3/24/2020. (<https://oda.fyi/EPAProductsLabels>). Read the product labeling on your container to confirm dilution rate prior to use.

³The table below and the following online tool can be used to convert from units listed in this table to other units that may be used on the physical product label (e.g. gallons, pints) as needed:

<https://oda.fyi/VolumeUnitConverter>

LIQUID FORMULATION MEASUREMENT EQUIVALENTS*

1gallon (gal) = 4 quarts (qt) = 16 cups = 128 fluid ounces (fl. oz.)

1 qt = 2 pints (pt) = 4 cups = 32 fl. oz.

1 cup = 8 fl. oz. = 16 tbsp = 48 teaspoons (tsp)

1 tbsp = 3 tsp

1 tbsp = 0.5 fl. oz.

1 tsp = 0.17 fl. oz.

*If the disinfectant product is a liquid, measure it. If the product is a solid (e.g. powder), weigh it.

DISCLAIMER AND ADDITIONAL INFORMATION

(1) There may be products with older labels which have already been purchased, or are still in the channels of trade. These labels may not have the appropriate heading of “Disinfection” or the correct dilution rates or contact times. Multiple labels for the same product may exist in the marketplace. It is recognized that the virus that causes COVID-19 will not be on any pesticide labels.

(2) There may be additional products not currently included in this list that could possibly meet EPA’s standards for emerging pathogens, but the registrants have not yet submitted the information to EPA necessary for the products to be approved under the emerging pathogen standard. Therefore, the registrants cannot make claims to control COVID-19 in their literature and websites.

(3) It is the user of the disinfectant who is responsible for ensuring that the pesticide is being used in accordance with label directions.
