# Dropout Rates in Oregon High Schools 

## 2000-2001

State Summary Report

January 2002

Stan Bunn
State Superintendent of Public Instruction

## Oregon Department of Education

255 Capitol Street NE
Salem, OR 97310-0203

The officially codified and compiled Oregon Administrative Rules are published by the Secretary of State and portions of that published compilation have copyright status. Any O regon Administrative Rules presented on these pages are not the official version of the rules published by the Secretary of State.

It is the policy of the State Board of Education and a priority of the O regon Department of Education that there will be no discrimination or harassment on the grounds of race, color, sex, marital status, religion, national origin, age or disability in any educational programs, activities or employment. Persons having questions about equal opportunity and nondiscrimination should contact the State Superintendent of Public Instruction at the O regon Department of Education.

C omplimentary copies have been distributed to all O regon schools and districts. Additional copies are available from the Department of Education's D ocuments C lerk at 503-378-3600 ext. 4498
Or may be downloaded at
http:// dbi.ode.state.or.us/ dropout.htm
Please share this document with your colleagues!
All or any part of this document may be photocopied for educational purposes without permission from the O regon Department of Education.

## Dear Fellow Oregonians:

Oregonians share a common hope for a highly educated and caring citizenry. Passion for improvement and strong leadership guides the way to this vision. Daily, in schools across Oregon, dedicated parents, skilled teachers and administrators propel this vision from hope to reality. It is in this spirit that public education in Oregon demonstrates commitment to the relentless pursuit of each student's success.

During the past school year, Oregon students have shown steady growth and improvement, due in large part to the efforts of school administrators, teachers and other educators who work alongside parents to help students succeed. The Oregon legislature has also placed preK-16 education among their top issues. This collaboration undergirds Oregon's education improvement efforts.

This report, the10th annual Dropout Rates in Oregon High Schools: 2000-01 State Summary Report points to much progress: a reduction in the state dropout rate for the third consecutive year, a decrease in the African-American and Hispanic dropout rates over the past five years, and increasing attention and leadership to this significant issue in Oregon. However, much remains to be done.

As long as any student in Oregon drops out of school, our work is not done. Children and youth throughout our state require a high quality school system that is responsive to individual needs and interests. In addition, there are a variety of personal and family factors that significantly impact dropout choices, in turn, defining the need for more comprehensive school and community collaboration.

I invite the citizens of Oregon to join the State Board of Education, all school superintendents, principals, teachers and educators across our state in working to eliminate school dropout. Our collective leadership and passion for providing a meaningful and relevant education for each Oregon student is our legacy.

Sincerely,

Stan Bunn

# D ropouts in Oregon Schools Key Findings from the 2000-01 State Summary Report 

O regon Reduces Number of School Dropouts by 16\%

Superintendent Stan Bunn, in concert with Department of Education staff and the State Board of Education, set an ambitious goal for the 2001-03 biennium: to reduce the number of $O$ regon school dropouts by 2,000 students ( $20 \%$ ). During the 2000-01 school year, the number of school dropouts declined by 1,650 students from the 1999-2000 school year, a reduction of $16 \%$ to date.

## State D ropout R ate D eclines for Third C onsecutive Year

- The 2000-01 school year marks the third annual decrease in the statewide dropout rate.
- This year's dropout rate is $5.25 \%$, down from $6.3 \%, 6.6 \%$ and $6.9 \%$ in successive past years.
- 8,713 students were classified as school dropouts during the 2000-01 school year.
- The African-A merican student dropout rate ( $11 \%$ ) and H ispanic student dropout rate $(11.3 \%)$ are more than double the state rate, but both have declined in the last five years.

The State Board of Education and the O regon Department of Education, in partnership with superintendents, administrators, counselors and teachers, are committed to each student's success in eliminating school dropout. Best practices for dropout prevention include relevant and personalized instruction, along with strong relationships between school staff and students that build resiliency against factors that contribute to school dropout.

## Why Students D rop O ut of School

Of the 8,713 school dropouts in the 2000-01 school year five top reasons were cited for dropping out:

1. C redit deficiency-not enough credits to graduate $(1,248)$
2. Lack of parental support for education $(1,210)$
3. Dysfunctional home life (864)
4. W orking more than 15 hours per week (792)
5. Substance abuse (537)

These reasons, now established factors leading to school dropout, suggest a pattern of significant personal and family factors as dominant influences, along with school-related issues, in impacting credit deficiency, school success, and subsequent school dropout.

## The Cost of D ropouts In O regon

O regon school dropouts...

- Comprise at least $79 \%$ of the $O$ regon adult prison population at time of incarceration ${ }^{1}$
- Are four times as likely to be covered by the $O$ regon $H$ ealth Plan, as are persons with at least a high school diploma ${ }^{2}$
- Are more than twice as likely to be unemployed than students who graduate ${ }^{3}$
- Are earning $30 \%$ less in wages than students who graduate ${ }^{3}$ ${ }^{1} O$ regon D epartment of C orrections $\quad{ }^{2} O$ regon H ealth Plan $\quad{ }^{3} O$ regon Employment Department

## Executive Summary

This is the tenth annual report on dropouts in O regon schools published by the O regon Department of Education since the report was established by the Legislature in 1991 (ORS 339.505 to 339.520). This report presents information on students who left school from grades 7 through 12 between July 1, 2000, and June 30, 2001. The D epartment summarizes the reports on dropouts in grades 9 through 12 at the school, district, county and state levels. A statistical profile is also included summarizing information on these students.

To compile the information for this report, O regon school districts are required to report to the D epartment of Education students who are identified as dropouts, as defined in statute (O RS 339.505). Briefly, a dropout is a student who withdraws from school without receiving a high school diploma, GED Certificate, or modified diploma, or transferring to another school. A variety of information is provided on each student. This makes it possible to describe dropouts with respect to several characteristics. It is important to understand the common characteristics and the reasons students leave school to develop effective strategies for assuring students stay in school and preparing all students for successful adulthood.

## Leadership for Change

In 1999, the State Board of Education and the O regon Department of Education adopted as a mission the relentless pursuit of success for each student. All projects and initiatives are carefully examined to determine how they contribute to this central mission of the D epartment. In examining the results of the annual statewide drop out rate for the 1999-2000 school year, State Superintendent Stan Bunn, in concert with Department staff and the State Board of Education, determined that while the drop-out rate had declined, the loss of more than 10,000 students per year was unacceptable.

The D epartment set a goal for the 2001-03 biennium of reducing the statewide drop-out rate by 20 percent and presented a policy proposal to the 2001 Legislative Assembly for funding to develop a comprehensive drop out prevention and recovery program. Although the proposal was not funded, legislators encouraged the Department to seek other sources of funding and to pursue dropout prevention strategies to the degree possible within the existing budget.

This report, based on the 2000-01 school year, reflects the leadership of the Department of Education and O regon schools and districts to assure the success of all students by using a variety of strategies to help students stay in school and complete their education. C onsiderable gains have been made at the mid-point of this biennium, with a decline in the statewide dropout rate of approximately one percent. H owever, much work remains to be done. W hile we celebrate the success of the 1,650 additional students who remain in school this year compared to last year, for those students who dropped out and those who are atrisk of dropping out in the future, efforts to bring students back to school and prevent others from leaving must continue.

## 2000-01 Results

The statewide annual dropout rate was 5.25 percent in the 2000-01 school year, a decline from 6.30 percent in 1999-2000. The synthetic four-year dropout rate for 2000-01 was 15.65 percent, down from 18.37 percent in 1999-2000.

## Additional findings include the following:

- Reasons for leaving most often cited include: too far behind in credits to catch up, working more than 15 hours a week, dysfunctional home life, lack of parental support for education, frequent discipline referrals, substance abuse, and pregnant or student parent. O ne or more of these five reasons were cited by 37 percent of all dropouts.
- The rank order and magnitude of the factors influencing the decision to drop out have been much the same in the last four years of dropout reporting. This suggests that these are established factors that affect a student's ability to continue to stay in school.
- The dropout rates for A frican A merican students and Hispanic students are more than double the overall statewide rate, but have steadily declined in the last five years. The H ispanic dropout rate declined by over 1.5 percentage points for the third straight year. The A frican-American dropout rate remained unchanged in the last three years of overall declines.
- A primary characteristic of students who drop out is significant deficiency in credits toward a high school diploma. A mong all dropouts, only 1,617, or about one out of five, were classified as on track to graduation when they dropped out.
- Of the 667 seniors who finished all four years of high school but did not graduate in June 2001, 273 (41 percent) were within two credits of earning their diploma.
- Almost 26 percent of students counted as dropouts for the 2000-01 school year completed the 19992000 school year, but did not return the following fall.
- 0 ver 43 percent of the number of dropouts statewide come from the $M$ etro region (Clackamas, M ultnomah, W ashington counties). Those counties contain $39 \%$ of the total $9-12$ statewide student population.

## The Faces of O regon D ropouts

W hy is dropping out a problem that we should try to solve? There is ample research that shows dropouts have lower lifetime incomes, higher unemployment rates, higher divorce rates, comprise a majority of the incarcerated population, have more difficulty obtaining credit, all at a cost to themselves and to society. The answer, based on these facts, is that we must prevent students from dropping out in order to avoid social costs. W hile these facts cannot be denied, adopting this rationale for dropout prevention creates an image of the at-risk student as a potential burden we wish to avoid-a potential liability we wish not to incur. There is another way of looking at our at-risk students.

Rather than viewing at-risk students as a potential liability, educators prefer to regard these students as assets who need extra love, respect, and care to fully realize their potential as individuals and as members of society. Schools that have successful dropout prevention activities are doing so on this basis. Dropping out is a human problem, not a technical one. A feeling of community is present in parent-teacher conferences, faculty meetings, and school board meetings, and creates a nurturing atmosphere. Positive achievement rather than preventing failure is a key focus in relentlessly pursuing each student's success.

This dropout report provides the state with a uniform and accurate system of accounting for students who leave school before graduating. The report presents dropout rates for each regular or alternative high school that awards a diploma, and rates for regular elementary, middle, and junior high schools offering grades 7 and 8 . While dropout rates show the relative effectiveness of schools in retaining students, it is the count of students that speaks to the need for dropout prevention. Simply put, rates do not drop out - students do. The number of students directly impacts the level of resources needed to address dropout prevention and retention. A school asking the question, "H ow can we keep students in school?" rather than "H ow do lower our dropout rate?" will find more productive and child-centered answers.

Students do not all drop out at one particular time, but throughout the school year. This annual report cannot assess an ongoing problem in such a way that action can be taken when it is needed in every case. For this reason, the D epartment encourages districts, schools, and interested parties to use the information gathered in this report as a starting point for building their own dropout information system, and to use that system to make periodic reports to administrators, school board members, and the community throughout the school year, with the commitment to assure all students successfully complete high school.

## Who Is A Dropout?

A dropout is a student who withdrew from school and did not graduate or transfer to another school that leads to graduation. Dropouts do not include students who:

- are being home schooled,
- are enrolled in an alternative school or hospital education program,
- are enrolled in a juvenile detention facility,
- are enrolled in a foreign exchange program,
- are temporarily absent because of suspension, a family emergency, or severe health problems that prevent attendance at school,
- received a GED certificate,
- received an adult high school diploma from a community college,
- received a modified diploma, or
- are deceased.

Rules developed by the Department of Education ensure a complete accounting of students who drop out during the school year, as well as students who drop out between school years.

For more information on how dropouts are counted, see the 0 regon Dropout Reporting $M$ anual at http:// dbi.ode.state.or.us/ manuals.htm

Figure 1-Annual Dropout Rates from Grades 9-12 in O regon Public Schools: 1991-92 to 2000-01

Note: Beginning with 1996-97, G ED recipients were not counted as dropouts.

The 2000-01 dropout rate for grades K-12 was 5.25 percent. This is a decrease from the rate of 6.30 percent reported a year earlier. This is the third consecutive annual decrease in the one-year dropout rate. The synthetic four-year dropout rate based on 2000-01 data was 15.67 percent, down from 18.37 percent in 1999-2000.

## Why the Rate W ent D own

The decrease of over one percentage point is the largest one-year decrease in the ten-year history of dropout reporting in $O$ regon. There are two major reasons why this happened.

First, schools are beginning to devote more resources to dropout prevention. Schools that had large decreases in their dropout rate commonly cited two factors that contributed to the decline-increased attention paid by school staff to students having attendance and academic difficulties, and increased alternative education options, both inside and outside the school.

Second, school staff members are devoting more resources to getting the dropout count right. Several schools reported that clerical staff spent more time tracking withdrawn students to find out which school they had transferred to. This reduces the number of transfers erroneously reported as dropouts.

## Race/Ethnicity

Dropout rates for all racial/ ethnic groups declined in 2000-01. The largest decline was seen in the H ispanic dropout rate, which fell to an historic low of 11.3 percent, continuing a steady annual decline in the last three years. This decline is occurring at the same time that H ispanic enrollment is increasing at record levels every year. Schools are realizing the need to prioritize services and opportunities to this growing population. It is no longer practical to disregard the needs of these children as they will become a larger portion of the state's overall classroom.

Schools are taking advantage of leadership and academic programs such as the O regon Hispanic and M igrant Student Leadership Institute, the C esar C havez Leadership C onference, and the efforts of the O regon Council for H ispanic Advancement. In addition, professional development and training opportunities are being offered to help educators and service providers work with this fast growing population.

Figure 2-D ropout R ates by R ace/ Ethnicity, G rades 9-12: 1991-92 to 2000-01

Schools that saw a significant decrease in their H ispanic dropout count include H ood River V alley High School (from 40 Hispanic dropouts to 13), Forest Grove H igh School (43 to 22), U matilla High School (24 to 4), and M cM innville High School (38 to 20), Hillsboro High School (41 to 25), Sunset High School (49 to 34) and Riverside High School (17 to 3).

The dropout rate for white students has gone down each of the last three years, matching the overall decline in the dropout rate. Because so many dropouts are white (70 percent), movement in the overall dropout rate is a reflection of the movement in this racial group. Dropout rates for Asian/ Pacific Islander students have paralleled the downward trend of the statewide dropout rate that occurred in the last three years. The dropout rate for A merican Indian/ Alaskan Native students showed the second year of decline, reversing an upward trend in the two years before that. The dropout rate for A frican-American students has stayed fairly level for the last three years, despite the downward trend in for all the other racial/ ethnic groups. W hile the gap between the state rate and the racial/ ethnic-specific rate is decreasing for three minority groups, it is widening for A frican-A merican students. Additional drop out prevention efforts are needed to reach this group of students.

## Age and Sex

As shown in figure 3, the incidence of dropping out in the secondary grade age groups is greatest at ages 16, 17, and 18. Two-thirds of all dropouts from grades $9-12$ were in that age range. The number of dropouts at ages 15 and 19 , though smaller, is still substantial.

Fewer females ( $3,95345.4 \%$ ) than males ( $4,76054.6 \%$ ) dropped out, which is consistent with findings of each year in the study prior to 2000-01. Even when taking into account that there are more males than females in this age group in the general population, it appears that boys drop out at higher rates than girls.

W hen age and sex are combined, other consistent patterns emerge. M ales and females drop out in about the same numbers through ages 16 , but after that, males drop out in greater numbers than females do. The peak ages for males to drop out are, from highest to lowest, at age 18, 17, and 16. For females, the peak ages are arranged differently-17, 18, and 16. While males aged 15 and 19 tend to drop out in about the same numbers at each age, the number of females age 15 who drop out is much greater than the number who drop out at age 19. This is a consistent pattern for females.

Figure 3-D ropouts by Age and Sex Grades 9-12,: 2000-01

## Region

O regon can be divided into seven regions that are linked by geography and economy. The range of dropout rates by region varies over a narrow band, from 5.8 percent in the $M$ etro region to 3.1 percent in the Southeast region (table 1). The number of dropouts in these two regions is vastly different, however-3,769 in the M etro region, and 179 in the Southeast region.

The M etro region showed the greatest improvement in the number of students dropping out. Almost five hundred fewer students dropped out from that region's schools in 2000-01 than in 1999-2000, and the dropout rate for the region fell from 6.7 percent to 5.8 percent. Still, over 40 percent of the number of dropouts statewide come from this region.

## Timing

A look at dropout counts by month shows definite patterns that are consistent from year to year. A large number of students drop out not during the school year, but over the summer. Almost 26 percent of students counted as dropouts for the 2000-01 school year completed the 1999-2000 school year, but did not return the following fall, and never attended school in 2000-01.

Figure 4-D ropouts by M onth, Grades 9-12: 2000-01

Dropping out has peaks by month at four distinct times. After the first peak in the summer break, when many students have already carried out their decision to drop out, a small number of students drop out in September. The second peak occurs in O ctober, with fewer students dropping out in N ovember and December. In January the third peak emerges, and the fourth peak occurs in A pril. W hile the reason why these three phases exist is not completely known, it should be noted that the start of each phase follows a break from school-summer vacation, holiday break, and spring break. An official break from attending school, even as brief as one week, might be enough to nudge some students away from school and towards some other activity. January is also the time when first semester examinations are given. Some students may choose to leave school rather than take tests they believe they will do poorly on.

During the 2000-01 school year, the D epartment sent letters to all principals pointing out this trend, and reminding them to monitor the attendance of students immediately following vacation breaks so school officials can intervene if a particular student's attendance begins to be sporadic.

## Credit Deficiency

W hile credit deficiency is not the sole cause or even a necessary cause of a student dropping out, the vast majority of students who drop out are credit deficient. The following analysis shows how many dropouts are credit deficient, how far behind they are, and what kind of students tend to experience credit deficiency.

C redit deficiency is analyzed by assigning a class standing in two ways. First, an expected grade was assigned based on a student's age, assuming a normal school entry age and annual grade promotions. This tracks the student's progress toward graduation at age 18. Second, grade levels are assigned based on the percentage of the required credits the student had upon withdrawal from school (e.g., dropouts with less than 25 percent of the required credits would be classified as 9th graders, those with more than 25 percent but less than 50 percent would be classified as 10th graders, and so on).

Figure 5-N umber of D ropouts by Age and Credits Earned, G rades 9-12: 2000-01

These two assigned grade levels were combined to determine whether a student's class standing by credits earned was the same as or higher than the class standing by age. If so, a student is on track. Students whose grade level by age was higher than their grade level by credits were considered to be credit deficient. Since credit deficiency was examined on an annual basis, all 9th graders were assumed to be on track. No student beyond 12th grade age was considered to be on track.

Among all dropouts, only 1,617, or about one out of five, were classified as on track. After 9th grade, the number of dropouts who were on track is very small. Less than ten percent of the dropouts in grades 10-12 were on track for a high school diploma when they dropped out. O ut of the 667 seniors who finished all four years of high school but did not graduate in June 2001, 273 (41 percent) were within two credits of earning their diploma.

## Statewide Assessment Scores of D ropouts

Students who dropped out in 2000-01 demonstrated lower academic achievement, as measured by the O regon Statewide A ssessment. Of the dropouts who were tested as 10th graders within the last four years (1998-2001), only 27 percent met the CIM standard in reading and literature and only 13 percent met the standard in mathematics. The average scale score was 231 in reading and literature and 227 in mathematics. Scores at these levels would be considered to be meeting the standard in reading and literature for 8th grade students, and below 8th grade performance in mathematics. In comparison to all O regon 10th graders tested in 2001, the average scores for dropouts were at the 24th percentile in reading and literature and the 23 rd percentile in mathematics. Although test results from lower grades were not analyzed, it is likely that for most dropouts the same pattern was present earlier in their schooling.

Figure 6-Percent of Students M eeting CIM Performance Standards

Low academic performance may also contribute to other factors cited by students as reasons for dropping out (e.g., too far behind in credits, could not adjust to the school setting, peer pressure to not achieve, inability to get along with staff). Given the powerful effect of school achievement and related factors on the decision to drop out, one could argue that resources spent on improving student success-well before high school-will pay dividends in a reduced dropout rate.

## Employment

W orking more than 15 hours a week was the third most frequently cited reason for leaving (table 2, page 13). This suggests that availability of jobs might be a contributing factor in Oregon's dropout rate. The chart below displays the relationship between O regon's unemployment rate and the percentage of students who withdraw during their junior or senior years.

The withdrawal percentage is the difference between the number of 11th graders on 0 ctober 1 and the number of graduates of that class two years later, divided by the 0 ctober 1 count. O regon unemployment rates are averaged over the corresponding two years.

Figure 7-R elationship B etween the U nemployment R ate and W ithdrawal D uring the Junior and Senior Years in O regon: 1980 to 2000

The chart suggests that in years when the statewide unemployment rate declines, the junior/ senior year withdrawal rate increases, and conversely, when unemployment increases, a smaller percentage leave school without graduating. The high percentage of students who are September "no shows" might indicate a connection between employment opportunities and dropping out.

In November 1991 the O regon Bureau of Labor and Industries issued a Report of the Child Labor Task Force. The report studied the impact of work on students. Students who worked 15 hours or more per week in jobs not connected to their course of study had lower school performance, attendance and completion rates

## W hy Students D ropped Out

Schools may cite factors that contributed to the student deciding to drop out. From a list of 17 factors, the school can cite as many as apply. Almost one-half of the dropouts, 3,962, cited one factor, and 2,111 dropouts (24 percent) cited more than one.

Students drop out for a variety of reasons, and when surveyed, cite such things as, "Didn't like school," "W as failing school," "C ould not keep up with schoolwork," and "Felt I didn't belong." O regon's dropout data collection took reasons like these and expanded them to try to find factors that influence a student to dropout of school which can be counteracted by a school offering dropout prevention programs, or by changing the way school and program opportunities are presented to students.

The factors are divided into four categories: personal, family, school, and work. The most frequently cited factors were

- too far behind in credits to catch up,
- lack of parental support for education,
- working more than 15 hours a week,
- a dysfunctional home life,
- substance abuse (table 5)

For 35 percent of all dropouts, at least one of these five factors was cited.
The results by school are shown in table A4. D ata for some schools is suppressed to preserve student confidentiality. D ata in table A5 show statewide totals by factor by race, sex, and grade.

The comparison of factors by race (table A5) shows that among white student dropouts, the most prevalent factors were too far behind in credits to catch up, lack of parental support for education, dysfunctional home life, and working more than 15 hours a week.

Among Hispanic dropouts, the most prevalent factors were working more than 15 hours a week, lack of parental support for education, too far behind in credits to catch up, and does not speak English well or at all. Other minority groups did not have enough responses to determine which factors were significant.

There were significant differences between males and females in the reasons indicated. Females more frequently reported having frequent health problems, being needed at home to take care of family members, and pregnant or being a student parent. These are all issues related to family matters. The responses for males were higher in different categories, most notably frequent discipline referrals, substance abuse, and too far behind in credits to catch up.

The rank order and magnitude of the factors reported have been relatively stable in the last three years of dropout reporting. This suggests that these are established factors that affect a student's ability to continue to stay in school, and are areas that schools should examine when developing dropout prevention strategies.

## Table 2-Factors Influencing the Decision to Drop O ut, Grades 9-12: 2000-01

| Factor | Responses |
| :--- | ---: |
| Personal |  |
| Substance abuse | 537 |
| Student felt peer pressure to not achieve, or to leave school | 325 |
| D oes not speak English well or at all | 160 |
| H ealth problems caused frequent absences | 168 |
|  | 1,210 |
| Family | 864 |
| Lack of parental support for education | 469 |
| Dysfunctional home life | 171 |
| Pregnant or student parent | 68 |
| H omeless |  |
| N eeded at home to take care of family members | 792 |
|  | 124 |
| W ork |  |
| W orking more than 15 hours a week | 1,248 |
| Obligations to support family | 503 |
|  | 502 |
| School | 176 |
| Too far behind in credits to catch up | 137 |
| Frequent discipline referrals | 106 |
| C ould not adjust to the school setting-did not "fit in" | 13 |
| Attended three or more high schools |  |
| Did not get along with one or more staff members |  |
| Lack of appropriate alternative education opportunities |  |
| Student felt unsafe at school |  |

## GED

In 1997, the O regon Legislature amended the dropout reporting statute to remove students who earn a GED certificate from dropout status. Beginning with the 1996-97 Dropout Report, GED recipients were not counted as dropouts. In the reports from 1991-92 through 1995-96, students who earned a GED certificate were counted as dropouts. For this reason, the 1996-97 report established a new baseline for comparing dropout rates from year to year.

It is not possible to add back in GED recipients to the years prior to 1996-97, or to convert GED recipients to dropouts in 1996-97 and later years to determine a comparable dropout rate sequence. This is because some students might now be encouraged by their school to earn a GED certificate, where they would not have been earlier lest the student be counted as a dropout in this report.

The number of students earning a GED certificate from a school-sponsored setting has been reported for early leavers since 1993-94 (table 6). In the reporting years before 1996-97, receipt of a GED was supplementary data about a dropout and was probably not reported for every dropout who earned one. The higher counts starting in 1996-97 reflect the incentive for districts to report the number of GED recipients more accurately.

# Table 3-N umber of Schoolaged Children Earning a G ED : 1993-94 to 2000-01 

| Year | Number |
| :--- | :---: |
| $1993-94$ | 298 |
| $1994-95$ | 320 |
| $1995-96$ | 431 |
| $1996-97$ | 1,181 |
| $1997-98$ | 1,459 |
| $1998-99$ | 1,170 |
| $1999-2000$ | 1,417 |
| $2000-01$ | 1,706 |

## Alternative High Schools

Several alternative high schools make dropout reports on their own. O nly the alternative high schools who grant their own diploma are able to do this. These high schools serve students who are at high risk of dropping out or who may have already dropped out once. Because of this, dropout rates must be interpreted differently for alternative high schools than for regular high schools. Alternative high schools making their own report in 2000-01 are reported separately in the table of dropout rates (Table A 1).

Dropout rates for alternative high schools will be necessarily higher than for regular high schools because of the high risk population served in alternative high schools. M aking comparisons of the dropout rates regular high schools with the dropout rates of alternative high schools is therefore not recommended. Making comparisons of dropout rates between alternative high schools is also not recommended because on the different focus each school might have. The best way to evaluate the dropout rate of alternative high schools is to monitor the change in the individual school's dropout rate over time.

In table A 1, alternative schools have been put into a separate section. In all other appendix tables, they are included with the regular schools.

Alternative high schools normally have a much higher turnover than regular high schools do. To make the dropout rate reflect this condition, the denominator in the rate for alternative high schools is net enrollment over the year, rather than 0 ctober 1 membership.

Some districts operate alternative programs that do not draw students from their own high school(s). Students who drop out of these programs are called district dropouts, and are added in at the district level, but are not included in the dropout count of any school. The two districts operating such programs in 2000-01 are Salem-Keizer School District24) (10 district dropouts) and R oseburg School District 4 (56 district dropouts).

## Charter Schools

C harter schools operated for a full year for the first time in 2000-01, and are reporting dropout rates for the first time. Since the secondary level charter schools tend to serve at-risk students, these schools are treated in this report as alternative schools, and thus use net enrollment for their dropout rate denominator, and do not have a synthetic four-year rate calculated for them. Since charter schools are considered to be district schools, charter school dropouts are included in the dropout count and rates of the district that sponsor them.

## Appendix A <br> H ow Dropout Rates are C alculated

## One-Year D ropout Rate

The event dropout rate for regular schools, district, counties, and the state is:

$$
\text { Dropouts (July } 1 \text { - June 30) } \quad=\text { D ropout rate }
$$

M embership (O ctober 1)
For alternative schools and programs, net enrollment is used for the denominator of the dropout rate formula. N et enrollment is taken over the entire school year and is:

$$
E 1+E 2+R 2+R 3+R 5,
$$

W here
E1 = a student enrolling in school for the first time in the U nited States
E2 $=$ a student enrolling in school for the first time in Oregon
R2 = a student who was previously enrolled in another school in this district
R3 = a student who was previously enrolled in another district
R5 = a student who was previously enrolled in a private school

## Synthetic Four-Year R ate

The dropout reporting system collects data on students dropping out in one school year. The data for one year can be displayed as a four-year rate using the following formula.

$$
R=1-\left(1-R_{9}\right)\left(1-R_{10}\right)\left(1-R_{11}\right)\left(1-R_{12}\right) \text {, where }
$$

R =overall dropout rate
$R_{9}=$ dropout rate for 9th grade
$R_{10}=$ dropout rate for 10th grade
$R_{11}=$ dropout rate for 11th grade
$R_{12}=$ dropout rate for 12th grade
The synthetic four-year rate represents the proportion of the ninth-grade class that would drop out prior to completing their fourth year of high school if the current year's data on four classes of students was really four years of data for one class of students.

A school must offer four grades and have over 30 students in each grade in order to have a synthetic fouryear dropout rate calculated for it.

Example: In 2000-01, students dropped out of School A in this manner:

| Grade | Students | Dropouts | Dropout Rate |
| ---: | :---: | :---: | :---: |
| 9 | 118 | 4 | $3.4 \%$ |
| 10 | 114 | 5 | $4.4 \%$ |
| 11 | 109 | 7 | $6.4 \%$ |
| 12 | 98 | 9 | $9.2 \%$ |
| Total | 439 | 25 |  |

The one-year event dropout rate is $25 \div 439=5.7 \%$
The four-year synthetic dropout rate is:
$\mathrm{R}_{4}=1-(1-.034)(1-.044)(1-.064)(1-.092)$
$\mathrm{R}_{4}=1$ - (.966)(.956)(.936)(.908)
$\mathrm{R}_{4}=1-.785$
$\mathrm{R}_{4}=.215$ (21.5\%)

## Appendix B Oregon Drop Out Reporting and NCES Standards

O regon's dropout reporting procedures have several deviations from the standards developed by the $N$ ational C enter for Education Statistics (NCES), which should be noted. O regon Iaw requires students who earn an adult high school diploma be omitted from dropout counts, while NCES requires that they be counted as dropouts. A lso, N CES says that students who earn a GED certificate independently of K-12 sponsorship must be counted as dropouts, whereas O regon law requires that students earning a GED through any means not be included in dropout counts.

As a result, O regon's dropout rate calculation yields a lower rate than one calculated using NCES standards. O regon is able, however, to gather information in its dropout data collection that allows a smooth conversion to the NCES standard. O regon has thus been certified by NCES as being in full compliance with the NCES dropout reporting standards for uniform and comparable reporting of dropout rates by the states.

A further difference in O regon's dropout data collection that NCES has not yet addressed, is the level at which the data is collected. O regon is one of nine states that collects dropout data at the student level. Remaining states collect dropout data at the school level. The experience of Louisiana, whose rate went from 3.5 percent to 11.6 percent when it converted from school level to student level collection, and anecdotal evidence gained with conversations with O regon school officials, suggests that a student level collection yields a more complete dropout count.

## Appendix C <br> O regon's D ropout Rates: Event Rates, Status R ates, and C ohort Rates

Three types of dropout rates can be calculated: event, status and cohart rates. Each rate tells us something different about drop out characteristics.

An event rate measures the proportion of students who drop out in a single year without graduating from high school. The value of using an event rate is that it measures the extent that educators can keep their students enrolled in school. O regon law requires calculating only an event rate.

A status ratemeasures a group of people in a given age range to see how many are dropouts. This rate shows how many people in that age range might need further training or education. Status rates based on census samples taken in O ctober of every year are published by the national Center For Education Statistics.

A third kind of rate, the cohort rate, starts with a defined set of students, and measures how many of them drop out within a specified time. It shows, for example, among a given group of ninth-graders, how many dropped out over their four-year high school enrollment period.

An event rate measures activity that takes place within a specified time period. A status rate measures the current status of each individual, regardless of when the individual dropped out. A student who drops out in one year will be counted in both the event rate and status rate. If the student remains out of school in the next school year, the student will not be counted again in the event rate, but will still be counted in the status rate.

In addition to the one-year event rate, O regon calculates a synthetic four-year rate using the data from the one-year event rate. It is called a synthetic rate because it is a purely mathematical treatment of dropout data and does not compile data collected over a four-year period. See Appendix A for details on how this rate is calculated and how to interpret it.

The synthetic four-year rate is calculated at the school level only for regular high schools. At the district, county, and state levels, only data from regular high schools are used. Because students in alternative high schools are not enrolling for a four-year program, it is not appropriate to include data from alternative schools in a four-year rate calculation.

Event rates and synthetic four-year rates by school, district, and county for grades 9-12 in 2000-01 are displayed in table A 1.

The source for all tables and figures in this report is data collected electronically either through the Early Leaver web survey or a data submission using a standard message format text file. The data was verified by schools and districts via the Early Leaver V erification web survey.

* Alternative schools and charter schools use net enrollment as a denominator.
(1) Mental health program, juvenile detention facility, substance abuse program, or certified shelter care program.
(2) Synthetic rate based on one year of data. Four-year rates for districts, counties, and the state uses data from regular high schools only.
(3) School had too few students to calculate a four-year rate.
(4) School does not offer four grades.
(5) School is not designed for four years of attendance
