Project Name: Wildfire Prevention Plan for P.J. Fisher Forest

## **Contact Information**

o Oregon Department of Forestry | Dallas Unit, West Oregon District

0

## **Treatment Location**

- The 99.82 acres are located off Cooper Hollow Road, 5 miles south of Dallas Oregon T8S, R5W, Section 20 NE/NW of the SE. It falls within the low wildfire risk class.
- Starker Forest is across the road from its southwest corner. The south fence line borders a ninety year old neighbor. He leases an unmanaged forest from an absentee owner for livestock. This forest wraps around our property to the east. To the west are 19 acres that are well managed for fire prevention by the two owners. Five of those acres are owned by a 76 year old lady . Our property borders elderly neighbors and one with a chronic health condition.
- An Oregon Forest stewardship plan was developed on this property in 2010 and revised in 2017. This forest is part of the American Tree Farm System initially certified in 2012 and recertified December 2018.

## **Description of Treatment Activities**

- Mitigating wildfire is one of our stewardship plan's main objectives. There is excessive
  fuel on the forest floor from 2021 Ice Storm. Some has been dealt with but there
  remains hardwoods, broken tops and smaller firs on the ground adding to fuel loading.
- There are nine acres of fir trees planted in 2007-2009. We will prune, removing lower limbs that create ladder fuel. Those limbs will then be chipped.
- Use of a tractor and bush hog by landowner to mow tall grass in openings and masticate brush, poison oak and blackberries.
- Firebreak trails for accessibility will be mowed and masticated in unmaintained areas. We prefer to mow rather than mass spraying because it produces greens in the spring and summer to feed wildlife.
- Landowner proposes to backpack spray invasive Himalayan blackberries, scotch broom, Canadian thistles, tansy ragwort and poison oak to keep it in check and eliminate another source of ground fuel.
- Removal of competing vegetation in a three-foot diameter around 200 young trees planted in 2019-2021 to mitigate drought mortality with Power Hedge trimmer.
- Mowing around pole barn and spring to protect our infrastructure. A contractor will
  masticate a 20-foot-wide fire break along the south and east fence lines to prevent fires
  spreading to or from neighboring property.
- Limbing and clearing along south and east fence lines will create fuel breaks. Mowing and limbing along roadsides will create shaded fuel breaks and will protect access.
- To eliminate storm debris, we propose using manual labor to stack limbs in piles and then the use of a tractor with grapple to transfer the debris to burn piles or firewood decks. The removal of downed fir trees will prevent the infestation of fir beetle.
- We plan to mow and keep open the seasonal roads to the two ponds on the property.

  The roads will provide access to water for fire fighters to fill engines. We are looking into

coordination with local ODF and RFD for possible training opportunities for their staff when we burn our slash piles in the fall.

## **Description of Anticipated Benefits**

- Our neighbor to the west has meticulously cut all underbrush on his 14 acres and keeps
  the pasture and grounds mowed short. By removing 2021 ice storm debris from our
  adjacent woods it would benefit and protect both properties from wildfires. There are
  five neighbor homes that could be impacted if a catastrophic fire came to our woods.
  Five of the inhabitants are elderly and one suffers from
- The previous mentioned treatment to prevent wildfires; removing storm debris, pruning, mowing, masticating, chipping and slash burning will eliminate fuels for current and future fires.
- Keeping all roads cleared and mowed firebreaks creates accessibility for fire prevention.
   By creating firebreaks along fence lines it protects us as well as protecting our vulnerable neighbors into the future. It is also fulfilling our fire prevention objective in our Oregon State Forestry Stewardship plan.
- Not far from us on Fishback Hill is a forest that is currently managed under a Western State Grant.
- Our project will utilize some non-traditional products: firewood and wood chips all treatments will be conducted by landowner and family except the contracted mastication of the fence line firebreak.

#### • Timeline

- Winter 2022 1.) Prune reprod, limb up older trees 2.) Gather limbs to chip with 50 HP tractor, grapple and 4" PTO Chipper 3.) Extract, broken tops, tipped hardwoods for slash piles or firewood 4.) Create a fence line firebreak.
- Spring 2022 1.) Continue Winter activities 2.) Spot spray invasive scotch broom, blackberries, Canadian Thistles, tansy and poison oak 3.) Use 50 HP tractor with grapple and Farm winch to pullout and transport dead trees for firewood and move slash to burn piles 4.) Start mowing with 50HP tractor and 60" Bush hog 5.) Cut close to young trees with Stihl power head and string, steel or hedge trimmer
- **Summer 2022 -** 1.) Complete mowing grass and brush 2.) 90% of work with be done with hand tools I.e., shovel, limb saw, backpack sprayer
- Fall 2022 1.) Continue all above tasks 2.) Burn slash 3.) Mow/cut brush
- Winter 2022/2023 1.) limb up older trees 2.) Gather limbs to chip with 50 HP tractor and 4" PTO Chipper 3.) Extract, broken tops, tipped hardwoods for slash piles or firewood 4.) Maintain a fence line firebreak and continue if not completed
- Spring 2023 1.) Continue Winter activities 2.) Spot spray invasive scotch broom, blackberries, Canadian Thistles, tansy and poison oak 3.) Use 50 HP tractor with grapple and farm winch to pullout and transport dead trees for firewood and move slash to burn piles 4.) Start mowing with 50HP tractor and 60" Bush hog 5.) Cut close to young trees with Stihl power head and string, steel or hedge trimmer
