

Systems Operations and ITS Section

455 Airport Rd SE, Bldg K, Salem, OR 97301

The System Operations and ITS Section of the Maintenance and Operations Branch provides statewide leadership and coordination for delivery of ODOT's Operations Program. We have broad responsibilities including; setting program goals and measuring their progress, supporting integration of operations concepts into planning documents, providing ITS engineering support for project delivery teams, developing and maintaining operations related software systems, maintaining road side equipment, implementing asset management strategies, and evaluating new technology. Operation of the transportation system requires multi-jurisdictional collaboration, requiring us to work closely with other state and local agencies and some private organizations to achieve our Operations Program goals.

The functions specifically performed by our team include:

ITS Engineering

The ITS engineering team provides specialized design services related to ITS and ITS related traffic structures. It is a centralized design function supporting the region tech centers in delivering projects with an ITS element.

- Provides scoping support and design for the ITS portion of region projects
- ITS, Electrical, and Network/Communications Design
 - Traffic Structure Design
- Perform systems engineering work to comply with federal requirements
 - Develop and maintain statewide standards and statewide price agreement contracts for ITS equipment
 - Evaluate projects
 - Assess new technology for adoption in Oregon

2018 Key Projects:

Mt Hood: US26 & OR35
ITS Project

I-205: Johnson Creek-Glenn Jackson
Bridge Phase 2 Section

Cabbage Hill: I-84: NE OR Snow
Zone Safety Improvements
Project

Traveler Information

Operate, maintain, and enhance ODOT's various outlets for information about the current status of the transportation system.

- Manages TripCheck, 511 and cable TV outlets
- Responds to inquiries from citizens via the TripCheck email box or AskODOT
- Operates a real time data portal that shares agency data with third parties that integrate ODOT data into smart phone apps, web sites, in vehicle systems and other applications that extend the reach of the agency traveler information
- Provides tools for local agencies to share information about local roads through TripCheck and the data portal
- Develop and implement agency processes for gathering traveler information and audit data quality for compliance with Federal requirements

Total TripCheck & 511 Sessions/Visits Per Year

Traffic Incident Management

Provide statewide leadership for implementing safe, quick clearance Traffic Incident Management strategies in Oregon.

- Provides statewide leadership for traffic incident management standards, training and procedures
- Is the agency liaison to other statewide TIM partners including Oregon State Police, Oregon Fire Marshall, Oregon Tow Truck Association, and Oregon Sheriff's Association, and others
- Develop and implement internal TIM training programs
- Coordinate and deliver the national TIM training curriculum for all first responders in Oregon
 - Share best practices and communicate TIM strategies to Oregon first responders through an electronic newsletter, regular posts to a TIM Facebook page, providing support for Region TIM Team meetings, and the annual Oregon TIM Conference

TRANSPORTATION SYSTEM MANAGEMENT ELEMENT & OPERATIONS (TSMO) PROGRAM PERFORMANCE MANAGEMENT PLAN

FEBRUARY 2017

System Operations Performance Measures

Improving the Operations Program through better use of data to make informed decisions.

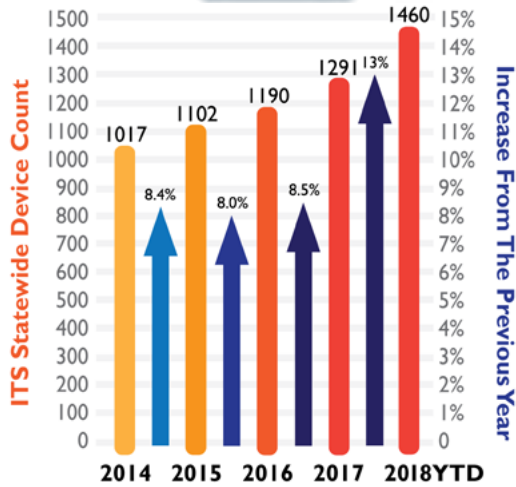

- Develop and maintain reports and dashboards covering six program areas: Traffic Incident Management, Traveler Information, Transportation Operations Center Management, Operations Asset Management, Mobility and Work Management
- Evaluate the effectiveness of operational improvements
- Generate information to help managers make decisions that improve the efficiency of the transportation system through optimizing effectiveness of operations and management strategies, manage transportation assets to extend their life, reduce maintenance costs, and effectively manage program resources

ITS Field Maintenance

Keeping ODOT's ITS assets in good working condition.

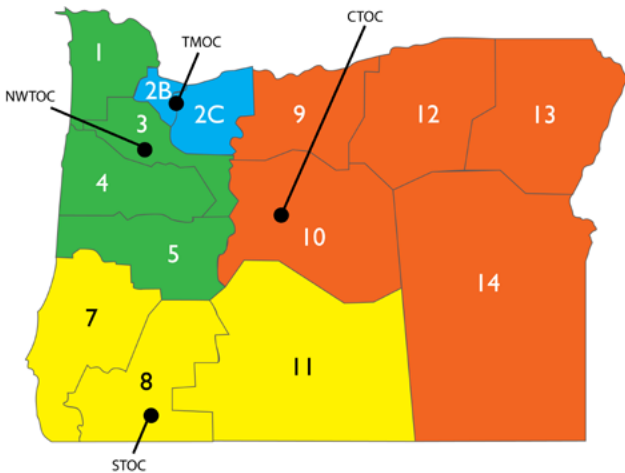

- Maintains over 1,400 ITS devices throughout the state
- Perform scheduled preventative maintenance to keep equipment in good operating condition
- Perform commissioning of new equipment installed through construction projects
- Manage ITS inventory system and ITS/electrical maintenance management system

TOC Operations

Coordinate and ensure effective delivery of TOC services.

- Coordinate the operation of ODOT's four Transportation Operations Centers (TOC) located in Portland, Salem, Bend and Central Point
- Develop and implement standard operating guidelines for TOC services
- Provide training for TOC software
- Gather and prioritize TOC software bugs and enhancement requests
- Gather requirements and perform user acceptance testing for software systems
- Organize and perform tests and drills
- Coordinate and collaborate with OSP and 911 center dispatch services

2017 Statewide Highway Incidents Total

Traffic Systems Services

Provide statewide support for signal maintenance and construction.

- Test new signal cabinets to meet State guidelines and project requirements for both ODOT and local agencies
- Perform commissioning of new or reconstructed traffic signals
- Perform annual inspections on signals and signal cabinets to ensure they are functioning properly
- Perform annual signal asset condition rating
- Provide level 1 and level 2 signal maintenance training
- Manages a storeroom inventory for signal replacement parts
- Test and evaluate new signal technology

36 traffic signal turn ons completed

814 annual traffic signal inspections

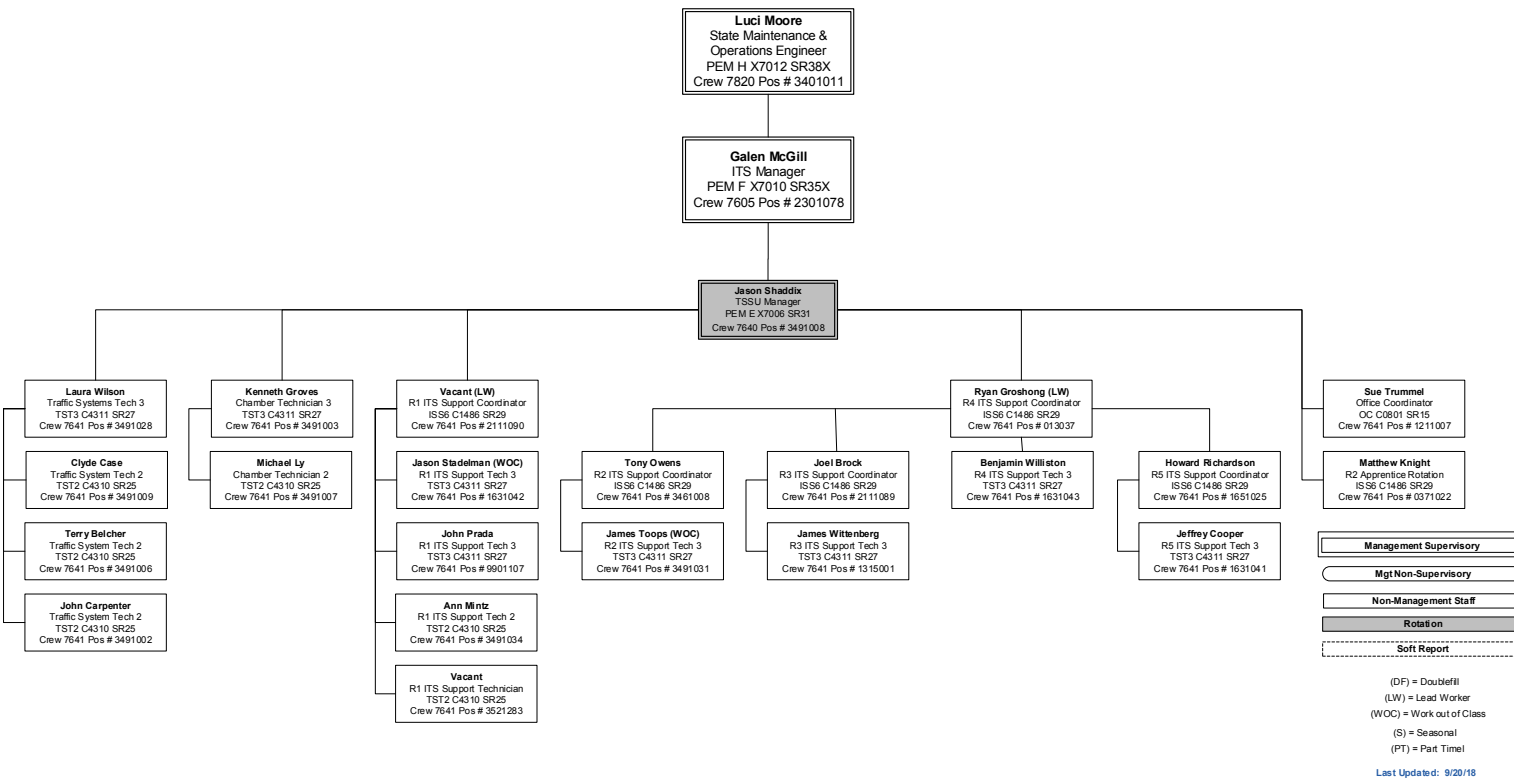

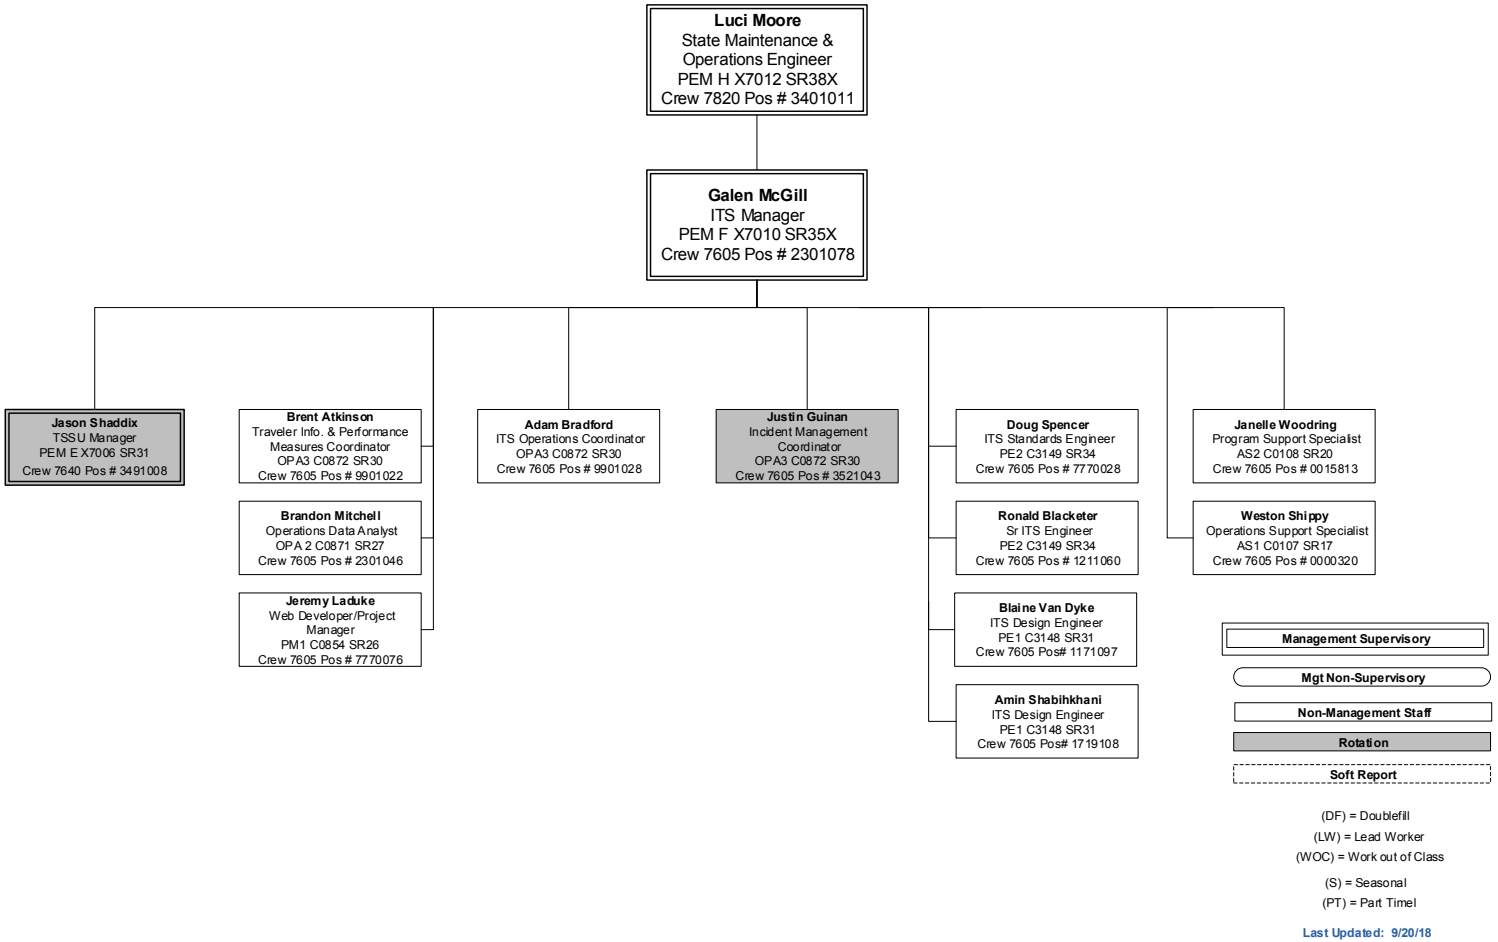

142 external traffic signal inspections

Key Issues

System Operations & ITS Key Issues

- Traffic Systems Services Unit reorganization
 - ITS Tech recruiting challenges (and electricians)
 - Apprenticeship program development
 - TST Class specification update
- New Operations Program Plan (August 2018)
 - Plan implementation
- ITS Feature Growth (~8%/year) & ITS Maintenance staffing
- Connected Vehicle Pilot projects & Preparing for Automated Vehicles
 - Mission Street CV Signal project
 - Real-Time Data portal modernization
 - AV Task Force Road and Infrastructure Design Subcommittee
 - SAE Infrastructure Needs Related to Automated Driving Working Group
- TOC Operations
 - TOC Software (TOCS) – Electrical/ITS Maintenance Management System (Micromain Integration – October 2018
 - Response Plan Software – March 2019
- Traffic Incident Management
 - 3 new dedicated Incident Responders (District 7,8, and 10) through HB 2017.
 - National TIM Training Program
- Assist Management for Operations Program

Transportation Application Development

ITS software projects:

Response Plan System
 TripCheck API
 TOCS/MicroMain Integration
 TLE Modernization/
 Implementation

ITS Central Systems Maintenance

Keeping ODOT's operations software systems functioning effectively 24x7, 365 days per year.

- Monitor and maintain the approximately 44 software systems that monitor road conditions, process data and actively operate the transportation system
- Perform system health monitoring
- Respond to and repair any system failures
- Perform small feature enhancements to existing systems
- Provide asset lifecycle management for ITS servers and network equipment

ITS Software Development

Provide software development services for larger software development of enhancement projects.

- Provide project management and systems engineering services for ITS software projects
- Comply with Office of the State CIO requirements for software projects
- Develop and manage contracts with software vendors
