ABOUT THIS REPORT

Hospitals play an important role in the health care system, both as institutions that provide medical, surgical, and nursing care around the clock, and as employers, research institutions, and centers to train the health care workforce. According to Centers for Medicare and Medicaid Services reporting, hospital care accounts for over 30% of all health care spending in the United States each year. As Oregon continues its large-scale health care transformation efforts, tracking costs and utilization of hospitals is an important part of monitoring the impact of these efforts.

This report depicts financial and utilization information for Oregon's acute care inpatient hospitals. Nine quarters of data are presented. The report compares the most recent quarter's data with like quarters from previous years. As hospital trends are affected by seasonal variations, more attention should be placed on longer term trends rather than quarter-to-quarter variation.

The data source for this report is Databank. Databank is a database of self-reported financial and utilization information. Hospitals submit Databank data to the Oregon Health Authority on a quarterly basis. This report is not intended to substitute for audited financial statements. A comparison table highlighting some key differences between these data sources may be found in the Appendix.

Currently, Kaiser hospitals do not report financial data to Databank, but they do submit utilization data, and are included in utilization reports.

Kaiser Westside opened for business in August of 2013, and Shriner's Children Hospital moved to DRG status in the beginning of 2013. These facilities may not have past year data available for comparison. There have not been any hospital closures in recent years.

HOSPITAL TYPES

Hospital data are presented in four categories: All hospitals, DRG hospitals, Type A hospitals and Type B hospitals. Definitions, details and a map of their respective locations are displayed below.

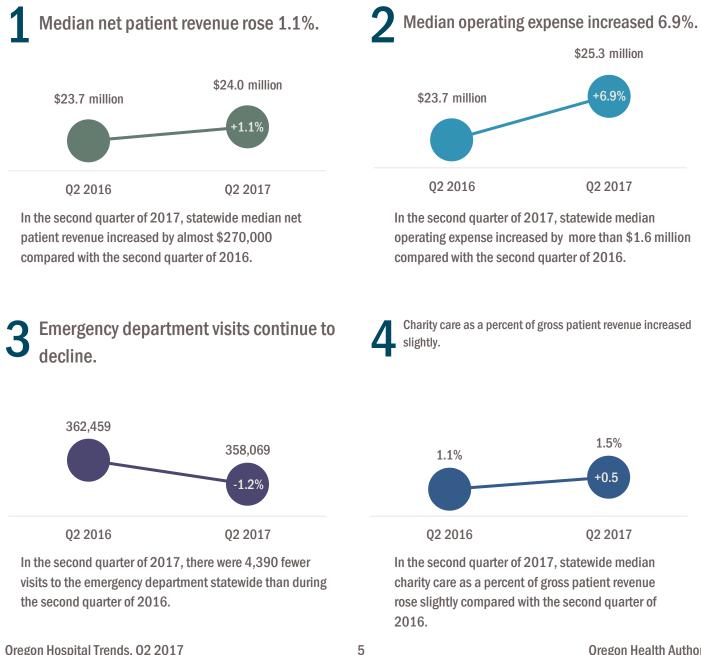

A complete list of all hospitals and their individual performances can be found in the Appendix. Sources: Hospital graphics by Flaticon (www.flaticon.com). State graphic by Alec Dhuse (www.thenounproject.com)

EXECUTIVE SUMMARY

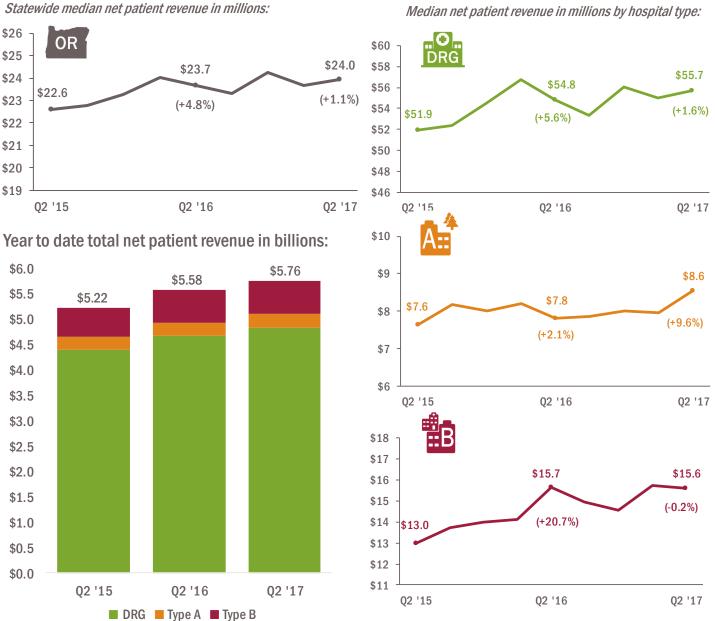

In the second quarter of 2017, median net patient revenue increased 1.1% compared with the second quarter of 2016, while median operating expense increased 6.9%. Expense continued to significantly outpace revenue growth, negatively impacting operating and total margins. Hospitals have collected \$175 million more in net patient revenue year-to-date than during the same period of 2016, while incurring \$317 million more in expenses. Operating margins will continue to fall until cost and revenue growth begin to align more closely.

Patient utilization has leveled off from a time of strong growth in the post ACA environment. Hospital emergency department visits declined 1.2% compared with the second quarter of 2016. Through the first two quarters of 2017 hospitals treated approximately 17,000 fewer patients in the emergency room than during the same period of 2016. Inpatient visits and outpatient surgeries both rose slightly year over year.

Financial Trends NET PATIENT REVENUE

In the second quarter of 2017, statewide median net patient revenue rose by 1.1% compared with the second quarter of 2016. Median net patient revenue increased among DRG and Type A hospitals, by 1.6% and 9.6%, respectively. Net patient revenue fell 0.2% among Type B hospitals during this period. Total year to date net patient revenue for all hospitals increased by almost \$175 million compared with the same period last year. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

Statewide median net patient revenue increased 1.1% when compared with Q2 2016.

Net patient revenue is the amount a hospital expects to receive for services after accounting for contractual allowances to third party payers and for uncompensated care. This includes payments made for providing health care, such as surgeries, emergency services, lab tests, imaging, etc. Net patient revenue is calculated by taking the total amount of money billed for patient care (gross patient revenue) and subtracting uncompensated care and contractual amounts.

Oregon Hospital Trends, Q2 2017 Presented February 2018

Financial Trends OPERATING EXPENSE

In the second quarter of 2017, statewide median operating expense grew 6.9%, and statewide year-to-date total operating expense increased by almost \$317 million compared with the same period of 2016. Median operating expense increased among all three hospital types compared with second quarter of 2016. Type A hospitals experienced the largest relative growth, increasing 13.9%, while relative growth among DRG and Type B hospitals increased 6.6% and 5.5%, respectively. This is the second consecutive quarter in which operating expenses have increased faster than patient revenue among all hospital types, impacting financial performance. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

Statewide median operating expense increased 6.9% when compared with Q2 2016.

Statewide median operating expense in millions: Median operating expense in millions by hospital type: \$28 OR \$25.3 \$58 DRG \$26 \$54.8 \$23.7 \$56 \$24 (+6.9%)\$22.5 \$54 (+6.6%) (+5.3%)\$51.4 \$22 \$52 \$50 \$48.5 (+6.1%)\$20 \$48 \$18 \$46 \$16 \$44 02 '16 Q2 '15 02 '15 Q2 '16 02 '16 02 '16 Year to date total operating expense in billions: \$11 \$10 \$9.4 \$5.91 \$6.0 \$5.59 \$9 \$8.3 \$8.1 \$5.5 (+13.9%)\$5.14 \$8 (+2.1%)\$5.0 \$7 \$4.5 \$6 \$4.0 \$5 \$3.5 02 '15 02 '16 02 '16 \$3.0 \$20 \$2.5 \$18 \$2.0 \$16.6 \$15.7 \$16 \$1.5 \$14.4 (+5.5%) (+9.0%) \$1.0 \$14 \$0.5 \$12 \$0.0 \$10 Q2 '15 Q2 '16 Q2 '17 02 '15 02 '16 02 '16

Operating expense is the sum of all expenses incurred for the purpose of operating a hospital. These include salary and benefit expenses, medical and office supplies, facility and depreciation costs. Expenses are accounted on an accrual basis, meaning it is recorded as the expense occurs, not when the expense is actually paid.

DRG Type A Type B

Financial Trends OPERATING MARGIN

In the second quarter of 2017, statewide median operating margin fell 3.0 percentage points compared with the second quarter of 2016. All three hospital types saw declines in operating margin. DRG hospitals fell by 2.3 percentage points, Type A hospitals by 2.0 percentage points, and Type B hospitals by 2.7 percentage points. Oregon hospitals had \$237.1 million in operating margin in the first two quarters of 2017, a decline of \$138.8 million compared with the same period in 2016. These decreases in operating margin were driven by operating expenses increasing more quickly than net patient revenue. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

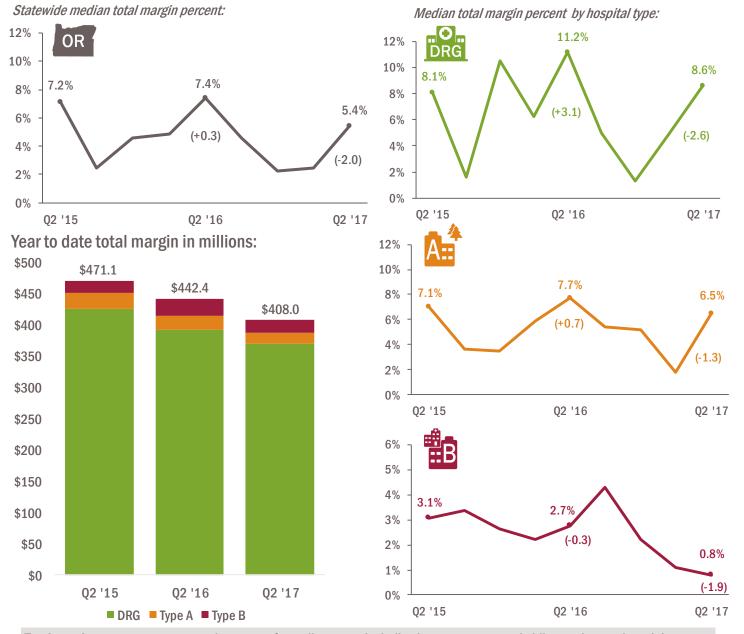

Statewide median operating margin percent fell 3.0 percentage points compared with Q2 2016.

Statewide median operating margin percent: Median operating margin percent by hospital type: 7% 12% 5.7% OR 5.3% 6% 9.2% DRG 10% 8.0% 5% 6.9% 8% 4% (-0.4) 2.3% 3% 6% +1.22% 4% (-3.0) (-2.3) 1% 2% 0% -1% 0% Q2 '16 Q2 '15 Q2 '17 Q2 '15 Q2 '16 Q2 '17 Year to date total operating margin in millions: 5% 3.0% \$433.5 \$450 2.3% 3% 0.2% \$400 1% (-0.8)\$376.0 -1% \$350 (-2.0)-3% \$300 -5% \$237.1 \$250 02 '15 Q2 '16 Q2 '17 \$200 5% 2.6% \$150 3% 2.3% (-0.2)1% \$100 -0.4% -1% \$50 (-2.7)-3% \$0 02 '15 02 '16 02 '17 -5% 02 '15 02 '16 02 '17 ■ DRG ■ Type A ■ Type B

Operating margin is calculated as a ratio of operating revenue minus operating expenses divided by operating revenue. Operating revenue includes net patient revenue as well as revenue from other non-patient hospital services, such as cafeteria sales. Operating expenses are the expenses associated with running a hospital, such as supplies, salaries, rentals, professional fees, and insurance. A positive operating margin means that the hospital is making a profit, while a negative margin means the hospital is operating at a loss.

Financial Trends TOTAL MARGIN

In the second quarter of 2017, statewide median total margin fell 2.0 percentage points compared with the second quarter of 2016. All hospital types experienced drops in total margin. DRG, Type A and Type B hospitals saw their median total margins fall 2.6, 1.3 and 1.9 percentage points, respectively. Year to date total margin decreased by \$34.4 million compared with the first two quarters of 2016. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

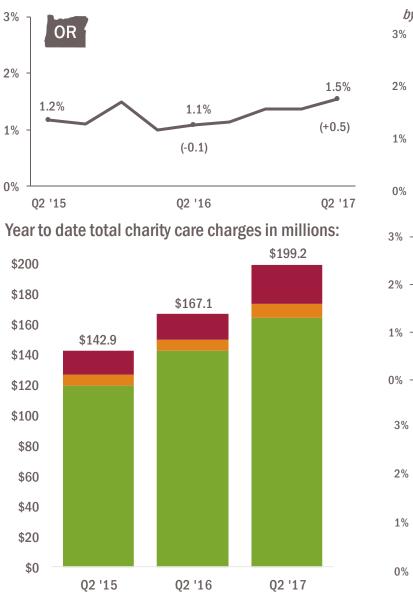

Statewide median total margin percent fell 2.0 percentage points compared with Q2 2016.

Total margin compares revenue and expenses from all sources, including investments, tax subsidies, and operations. It is calculated by dividing all sources of income by all expenses. The total margin includes revenue from sources not related to patient care or hospital operation. Therefore, a hospital with a negative operating margin could still have a positive total margin and be profitable overall despite hospital services operating at a loss.

Financial Trends CHARITY CARE

In the second quarter of 2017, statewide median charity care as a percent of gross patient revenue increased slightly compared with the second quarter of 2016. The spike in the trend line depicted in the fourth quarter of 2015 is due to corrections made by Providence hospitals to their charity care charge amounts. Total charity care charges have grown sharply year over year due primarily to annual increases in gross charges and an expansion in charity care criteria. In late 2015, Oregon hospitals announced a voluntary commitment to provide charity care to patients earning up to 200% of the federal poverty limit. While charity care has increased in recent years, it remains low compared with charity care spending prior to the implementation of the ACA. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

Statewide median charity care as a percent of gross patient revenue grew slightly compared with Q2 2016.

Statewide median charity care as a percent of gross patient revenue:

Median charity care as a percent of gross patient revenue by hospital type:

Charity care includes services that are provided for free or at a reduced cost to eligible patients. Each hospital or health system determines its own criteria for providing charity care based on factors such as income, employment status, or alternative sources of funds. The value of charity care is based on a hospital's full established charges and may be equal to the full charge or any portion of it the hospital elects to provide for free. Charity care is expressed here as percent of gross patient revenue.

Financial Trends BAD DEBT

\$90

\$80

\$70

\$60

\$50

\$40

\$30

\$20

\$10

\$0

\$73.2

In the second quarter of 2017, median bad debt as a percent of gross patient revenue fell slightly among all three hospital types but remained flat at the state level. Total year to date bad debt charges grew by \$1.3 million in the second quarter compared with the same time period last year. Increases in total bad debt can be explained by year over year increases in gross charges. Like charity care, bad debt remains low compared with such spending prior to the implementation of the ACA. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

2%

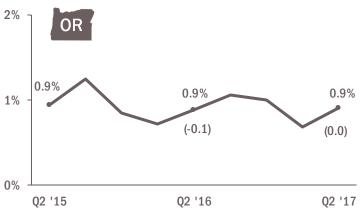

С

Statewide median bad debt percent remained flat compared with Q2 2016.

\$82.1

Q2 '17

Statewide median bad debt as a percent of gross patient revenue:

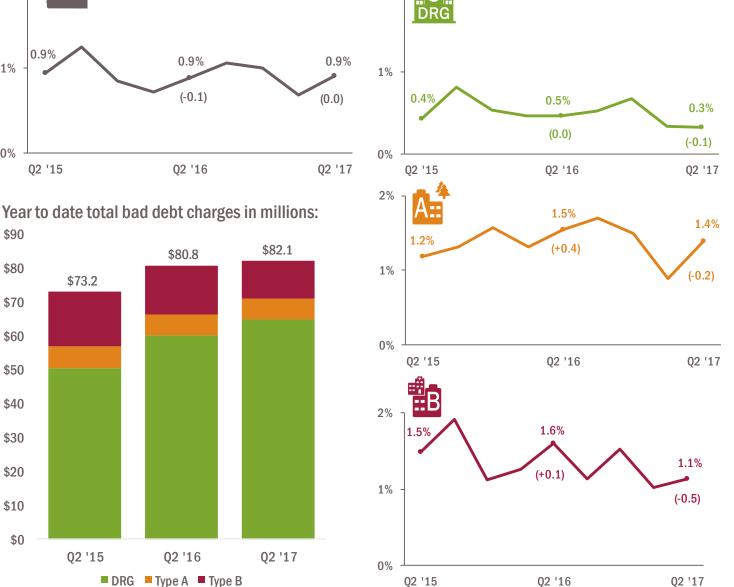

\$80.8

Q2 '16

DRG Type A Type B

Median bad debt as a percent of gross patient revenue by hospital type:

Bad debt occurs when patients do not pay all or part of their bill for services. It is an unpaid bill for care, based on a hospital's full established charges, for which a hospital expects payment but is unable to collect. Bad debt can include unpaid components of the total bill such as co-payments and co-insurance. Like charity care, bad debt is expressed here as a percent of gross patient revenue.

Q2 '15

Financial Trends UNCOMPENSATED CARE

In the second quarter of 2017, statewide median uncompensated care as a percent of gross patient revenue decreased by 0.1 percentage points compared with the second quarter of 2016. Total year to date uncompensated care charges increased to \$281.3 million in the second quarter of 2017. Uncompensated care as a percentage of gross patient revenue remains low while total charges have increased due to year over year increases in gross charges. Like charity care and bad debt, uncompensated care amounts remain low compared with such spending prior to the implementation of the ACA. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

5%

Statewide median uncompensated care fell slightly compared with Q2 2016.

Statewide median uncompensated care as a percent of gross patient revenue:

Q2 '16

Median uncompensated care as a percent of gross

patient revenue by hospital type:

Year to date total uncompensated care charges in millions:

Uncompensated care is the total of charity care and bad debt charges. It measures the total value of care, based on established charges, that a hospital provides without receiving payment. Because it represents care provided without reimbursement, uncompensated care can directly affect revenue and margin numbers.

0%

Q2 '15

Q2 '17

Financial Trends PAYER MIX

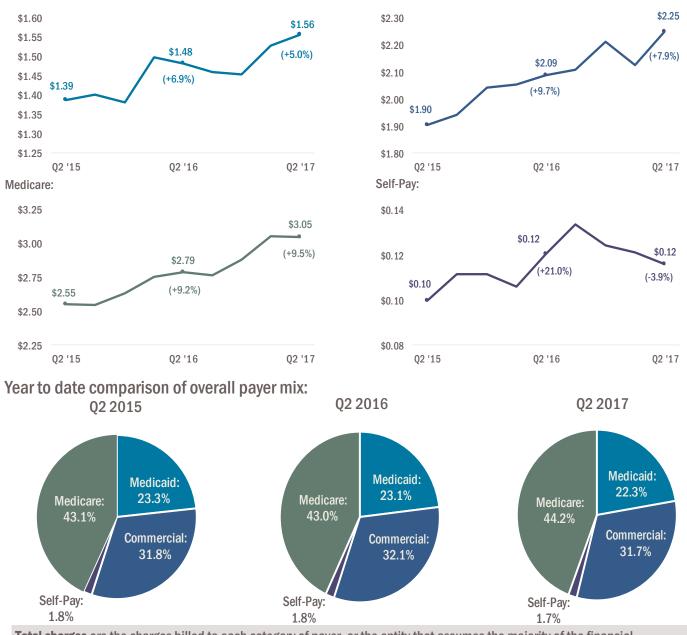

In the second quarter of 2017, gross charges to Medicaid, Medicare and commercial insurers increased compared with the second quarter of 2016, while gross charges to self-payers fell by 3.9%. Medicare saw the largest relative growth, increasing 9.5%, while gross charges to commercial insurers and Medicaid rose 7.9% and 5.0%, respectively. Currently, Kaiser does not report financial data to Databank and is not represented in the figures on this page.

Commercial:

Gross charges to Medicaid, Medicare and Commercial payers increased year over year

compared with 2016.

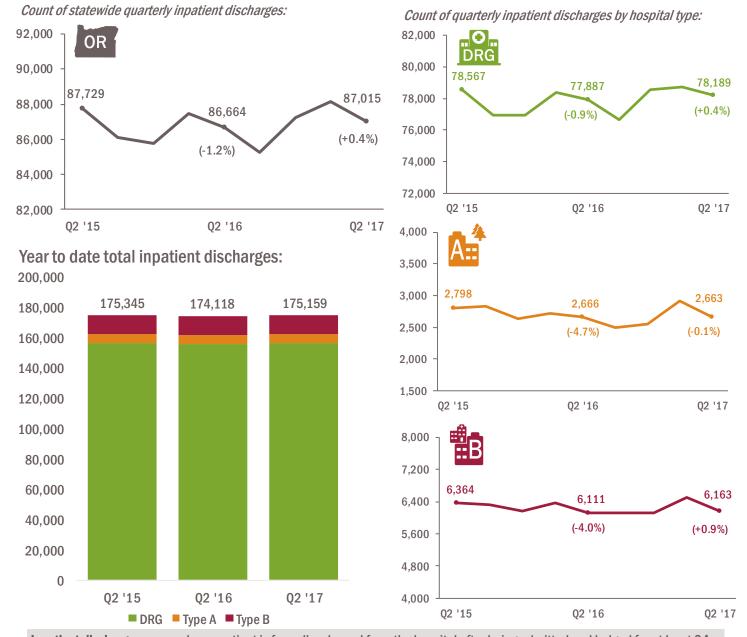

Total statewide patient charges in billions by payer: Medicaid:

Total charges are the charges billed to each category of payer, or the entity that assumes the majority of the financial responsibility for the hospital bill. **Payer mix** is the share of hospital charges attributed to different payers. It is calculated by dividing a payer's total charges by the total charges made to all payers. This report includes four broad payer categories: Medicaid, Medicare, commercial, and self-pay. Since each payer reimburses hospitals at different rates, the payer mix can provide insight into hospitals' larger financial performances.

Utilization Trends INPATIENT DISCHARGES

In the second quarter of 2017, statewide inpatient discharges grew 0.4% compared with the second quarter of 2016. Inpatient discharges increased among DRG and Type B hospitals, by 0.4% and 0.9%, respectively, while remaining relatively flat among Type A hospitals.

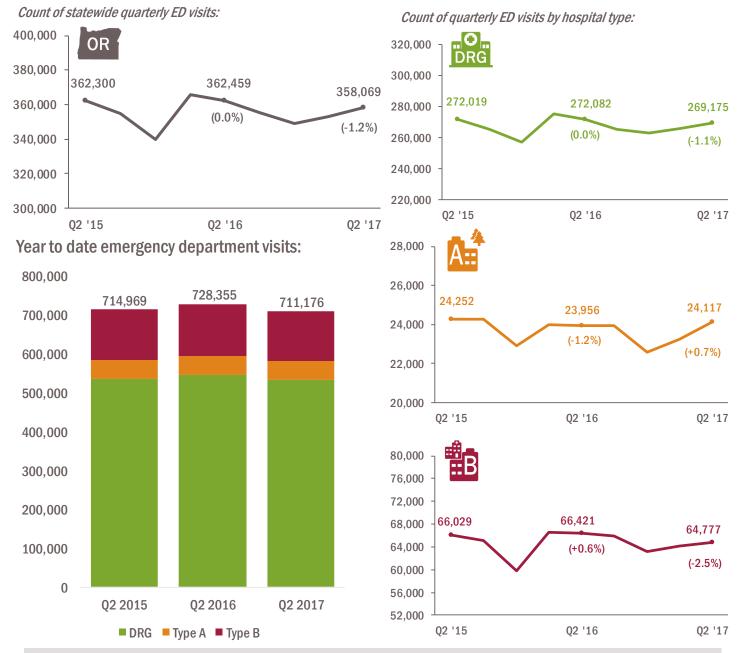

Statewide inpatient discharges grew 0.4% compared with Q2 2016.

Inpatient discharge occurs when a patient is formally released from the hospital after being admitted and lodged for at least 24 hours. This report represents Inpatient Discharges as a count of hospitalizations. It is not a count of unique individuals, however, as a single person can be admitted to the hospital multiple times in a year. Inpatient discharges are acute care only and do not count rehabilitation, long term care or specialized psychiatric care.

Utilization Trends EMERGENCY DEPARTMENT VISITS

In the second quarter of 2017, statewide emergency department visits fell 1.2% compared with the second quarter of 2016. This marks the second consecutive quarter with a year over year drop in statewide emergency department visits. Such a statewide trend has not been observed since the end of 2013. DRG and Type B hospitals saw emergency department utilization fall in the second quarter of 2017 compared with the same quarter in 2016, while emergency department visits increase slightly among Type A hospitals. Decreased utilization of the emergency department is likely a contributing factor to reduced net patient revenue.

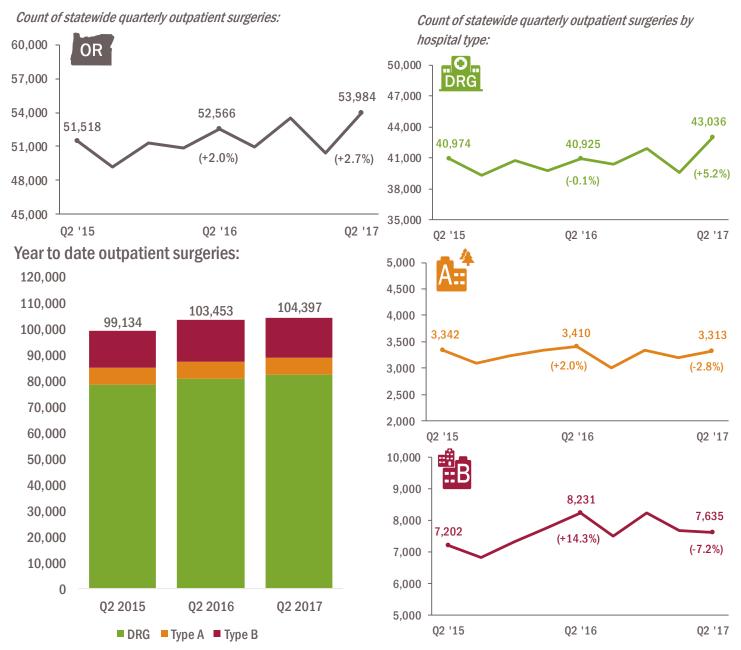

Statewide ED visits decreased 1.2% compared with Q2 2016.

Emergency department visits are reported as the number of visits to a hospital emergency department that do not result in a hospital admission. A person that visits the emergency department and is then admitted is counted as an inpatient discharge. These numbers represent unique visits to the ED, not unique individuals.

Utilization Trends OUTPATIENT SURGERIES

In the second quarter of 2017, statewide outpatient surgeries increased 2.7% compared with the second quarter of 2016. Although outpatient surgeries were up statewide, only DRG hospitals performed more such surgeries this quarter than in the same period last year, reporting a 5.2% increase. Type A and Type B hospitals both saw a year over year drop in the number of outpatient surgeries performed, falling 2.8% and 7.2% respectively.

Statewide outpatient surgeries rose 2.7% compared with Q2 2016.

Outpatient surgeries include surgeries performed at the hospital that do not require an overnight stay. These discharges consist primarily of non-emergency, planned services in which the patient is treated and released in the same day. Outpatient surgery numbers do not include standard lab work, clinic visits or most diagnostic imaging work.

APPENDIX

The following appendix pages contain individual hospital results for the measures included in this report. Data are provided as year to date results through the end of the first quarter for the past five years, from 2013 to 2017.

Kaiser hospitals are not included in financial measures, as Kaiser does not submit financial data for individual hospitals. Some information is not available for Kaiser Westside (as it recently opened), and for Shriner's Children's Hospital (as it recently became a DRG hospital).

As previously described, hospitals in Oregon are divided into three categories based on size and distance to other hospitals. In addition to these categories, designation as either a health district hospital or a critical access hospital can also impact financial and utilization outcomes.

A **health district hospital** is a one that is under the control of a formal health district. In most cases the controlling entity is the local county government. Being a part of a health district allows the hospitals access to additional funds from tax sources to contribute to operations. This access to tax funding allows many hospitals to continue to operate in rural areas when they otherwise could not afford to. Health districts may also provide funding to other types of clinics and providers.

A **critical access hospital** is designated by the Centers for Medicare & Medicaid Services (CMS). This designation impacts the reimbursement the hospital receives from Medicare. There are a number of specific criteria a hospital must meet to be considered a critical access hospital, but in general a hospital must be located in a rural area with limited access to other hospitals. In exchange for providing additional services that the hospital might not otherwise provide due to the cost, Medicare will reimburse the hospital at a higher rate than other hospitals receive for the same services. These services mostly relate to expanded emergency services such as a 24 hour emergency room and ambulance transportation.

In the following pages health district hospitals are indicated with an asterisk (*), critical access hospitals are indicated with the Greek letter Phi (ϕ), and for profit hospitals are indicated with a double apostrophe (").
