Mr. Rick Howitt
Financial Reporting Manager
Oregon PERS

Re: GASB 68 Employer Reporting for June 30, 2015 Measurement Date

Dear Rick,

As requested, we prepared the attached exhibits to assist the Oregon Public Employees Retirement System (“PERS” or “the System”) in providing financial reporting information to participating employers using a June 30, 2015 Measurement Date. We understand PERS will provide employers the information needed to fulfill Governmental Accounting Standards Board Statements No. 68 (GASB 68) reporting requirements. Under GASB 68, System financial reporting information using a June 30, 2015 Measurement Date can be used in employer CAFR disclosures for fiscal year-end dates up to June 30, 2016.

The attached exhibits also are intended to assist the System’s auditor in reviewing the development of financial reporting information.

The attached exhibits are:

- Exhibit A: Collective Pension Expense
- Exhibit B: Schedule of Collective Deferred Outflows/(Inflows) of Resources
- Exhibit C: Net Pension Liability/(Asset) by Employer
- Exhibit D: Schedule of Pension Amounts by Employer
- Exhibit E: Proportionate Share – Development of Present Value of Future Normal Cost
- Exhibit F: Proportionate Share – Development of Unfunded Actuarial Liability (UAL)
- Exhibit G: Proportionate Share – Schedule of Employer Allocations
- Exhibit H: Deferred Outflows/(Inflows) for Employer-Specific Adjustments
- Exhibit I: Amortization Schedules for Employer-Specific Deferred Outflows/(Inflows)

Exhibit A shows the development of the System’s “Collective Pension Expense” for the Measurement Period from June 30, 2014 to June 30, 2015. Exhibit B summarizes the deferred amounts relevant to the calculation of the Collective Pension Expense for the Measurement Period. Because PERS is considered a multiple-employer cost-sharing plan under GASB 68, all employers are required to recognize a proportionate share of the Collective Pension Expense. For employers with a June 30 fiscal year-end, this amount will first be recognized with June 30, 2016 financial reporting. (See “Measurement Date and Reporting Date Timing” below.)

This work product was prepared solely for Oregon Public Employees Retirement System for the purposes stated herein, and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work. Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

The actuarial basis used to develop the Collective Pension Expense is identical to that used in preparing System financial reporting information as of June 30, 2015 under GASB 67, as described in our November 25, 2015 letter.

Exhibit C lists each employer's proportionate share of the Net Pension Liability / (Asset) at both the current and prior Measurement Date. The collective Net Pension Liability / (Asset) for the System is shown in the table below, which comes from our November 25, 2015 letter providing GASB 67 results for the System.

| Net Pension Liability (Asset) | Measurement Date | |
|-------------------------------|-----------------------|-----------------------|
| | June 30, 2014 | June 30, 2015 |
| Total pension liability | \$ 63,134,777,979 | \$ 70,665,087,417 |
| Fiduciary net position | <u>65,401,492,664</u> | <u>64,923,626,094</u> |
| Net pension liability (asset) | \$ (2,266,714,685) | \$ 5,741,461,323 |

Note that the sum of the Net Pension Liability / (Asset) allocated to employers on Exhibit C differs slightly from the amounts in the table due to rounding.

Exhibit D summarizes key information needed for GASB 68 reporting by employer. There are 919 employers included on this listing. The exhibit includes each employer's proportionate share of the Net Pension Liability, Collective Pension Expense, and Deferred Outflows and Inflows of Resources. In addition, the exhibit also shows expense and deferred amounts arising due to employer-specific adjustments described in Paragraphs 54 and 55 of GASB 68. These adjustments arise when an employer's proportionate share changes from one Measurement Date to another or when the employer's contributions during the Measurement Period (as reported to us by PERS) differ from the employer's proportionate share of all System contributions during the period. Amounts arising from these two sources of employer adjustments are shown separately on the exhibit.

The information from Exhibit D will be provided in a separate one-page schedule for each listed employer. We understand PERS will distribute the additional schedules to employers.

Exhibits E through G show the development of each employer's proportionate share used in preparing the GASB 68 results. In accordance with the preference stated in GASB 68, this development is intended to represent each employer's estimated share of the projected long-term contribution effort to the System. Because the proportionate share is actuarially determined, it is developed as of the December 31, 2013 Actuarial Valuation Date used to develop the Total Pension Liability for the June 30, 2015 Measurement Date. Employers who were not included in the December 31, 2013 valuation (for example, new employers formed after that date) are included in these exhibits, but will show zero values for all valuation results and are considered to have a 0% proportion as of the June 30, 2015 Measurement Date. There are 83 such employers for the June 30, 2015 Measurement Date.

This work product was prepared solely for Oregon Public Employees Retirement System for the purposes stated herein, and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work. Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

Additional background and rationale for the methodology used to develop the proportionate share is described in a memo provided to PERS in January 2016 and which we understand is posted on the PERS website.

Exhibit H shows the detailed development of the deferred amounts arising during the Measurement Period due to employer-specific adjustments under Paragraphs 54 and 55 of GASB 68.

Exhibit I lists all outstanding deferral bases associated with employer-specific adjustments. This includes amounts arising during the most recent Measurement Period and amounts from prior periods. Each deferral base is identified as either attributable to a change in proportion (paragraph 54) or employer's contributions (paragraph 55). This exhibit provides the detail behind the summary amounts related to employer-specific adjustments shown on Exhibit D.

Measurement Date and Reporting Date Timing

The results contained in the attached exhibits were developed as of a June 30, 2015 Measurement Date, based on an Actuarial Valuation Date of December 31, 2013.

An employer's Reporting Date under GASB 68 is the employer's fiscal year-end. However, the information reported as of that date can be based on a Measurement Date up to 12 months earlier. There is an additional constraint that the Actuarial Valuation Date can be no more than 30 months prior to the Reporting Date.

For PERS employers with a June 30 fiscal year-end, the information contained in the attached exhibits can be used for a GASB 68 Reporting Date of June 30, 2016, because it satisfies both prongs of the timing requirements: the Measurement Date (June 30, 2015) is no more than 12 months prior to the Reporting Date and the Actuarial Valuation Date (December 31, 2013) is no more than 30 months prior to the Reporting Date.

PERS employers with other than a June 30 fiscal year-end will need to map these results to the appropriate Reporting Date to comply with GASB's timing requirements. For example, an employer with an initial December 31, 2015 Reporting Date should use the results developed at the June 30, 2015 Measurement Date for their initial year of GASB 68 reporting.

Valuation

The December 31, 2013 Actuarial Valuation is used to develop the GASB 67 and GASB 68 financial reporting results for the Tier 1/Tier 2 and OPSRP liabilities as of June 30, 2015. The formal December 31, 2013 Actuarial Valuation report should be referenced for full detail on the data and assumptions used, actuarial methods applied, provisions valued, and other important information regarding the use, applicability, and limitations of actuarial valuation results. Additional information on the actuarial assumptions is included in the 2012 Experience Study report, published September 18, 2013. Differences between the assumptions and plan

Milliman recommends that third parties be aided by their own actuary or other qualified professional when reviewing the Milliman work product.

provisions used for June 30, 2015 Measurement Date calculations compared to those shown in the aforementioned reports are discussed below.

Plan Changes Reflected

The Oregon Supreme Court decision in *Moro v. State of Oregon* (issued on April 30, 2015) occurred after the December 31, 2013 valuation date but affected the plan provisions reflected for financial reporting purposes. The *Moro* decision modified the COLA-related changes of Senate Bills 822 and 861, creating a blended COLA for members who earned service both before and after the effective dates of the legislation.

For GASB 67 and GASB 68, the benefits valued in the Total Pension Liability must be in accordance with the benefit terms legally in effect as of the relevant fiscal year-end for the System. Due to the timing of the Supreme Court decision, this means the COLA change due to *Moro* is reflected in the June 30, 2015 Total Pension Liability, but was not reflected in the June 30, 2014 Total Pension Liability. The increase in the Total Pension Liability resulting from the *Moro* decision, measured as of June 30, 2015, is shown in the attached Exhibit A as the “*Effect of plan changes*” during the measurement period. To reflect the *Moro* decision, we estimated the blended COLA based on creditable service before and after the effective dates of the legislation. This approach is consistent with OAR 459-005-0510, adopted by the PERS Board in September 2015.

Changes Subsequent to the Measurement Date

As described above, GASB 67 and GASB 68 require the Total Pension Liability to be determined based on the benefit terms in effect at the Measurement Date. Any changes to benefit terms that occurs after that date are reflected in amounts reported for the subsequent Measurement Date. However, paragraph 80f of GASB 68 requires employers to briefly describe any changes between the Measurement Date and the employer’s reporting date that are expected to have a significant effect on the employer’s share of the collective Net Pension Liability, along with an estimate of the resulting change, if available.

We are not aware of any changes subsequent to the June 30, 2015 Measurement Date that meet this requirement.

Actuarial Basis

Our analysis and conclusions are based on our understanding of the request and the data, methods, and assumptions described herein. Differences in the data, methods, assumptions, and interpretations of the plan provisions may produce different results.

In preparing these results, we relied, without audit, on information (some oral and some in writing) supplied by the System’s staff. This information includes, but is not limited to, System benefit provisions as defined by statute, member census data, and financial information. We found this information to be reasonably consistent and comparable with information used for

This work product was prepared solely for Oregon Public Employees Retirement System for the purposes stated herein, and may not be appropriate to use for other purposes. other purposes. The valuation results depend on the integrity of this information. If any of this information is inaccurate or incomplete our results may be different and our calculations may need to be revised.

All costs, liabilities, rates of interest, and other factors for the System have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the System and reasonable expectations); and which, in combination, offer a reasonable estimate of anticipated experience affecting the System.

A valuation report is only an estimate of the System's financial condition as of a single date. It can neither predict the System's future condition nor guarantee future financial soundness. Actuarial valuations do not affect the ultimate cost of System benefits, only the timing of System contributions. While the valuation is based on an array of individually reasonable assumptions, other assumption sets may also be reasonable and valuation results based on those assumptions would be different. No one set of assumptions is uniquely correct.

Future actuarial measurements may differ significantly from the current measurements presented in these reports due to such factors as the following: System experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the System's funded status); and changes in System benefit provisions or applicable law. Due to the limited scope of this assignment, we did not perform an analysis of the potential range of future measurements. The Oregon PERS Board has the final decision regarding the appropriateness of the assumptions and adopted them as indicated herein at the September 2013 Board Meeting.

Some of the actuarial computations presented in the valuation report are for purposes of determining contribution rates for System employers. The actuarial computations presented in this letter under GASB Statement No. 68 are for purposes of assisting the System in providing information to participating employers to fulfill financial reporting requirements. The computations prepared for these two purposes may differ as disclosed in our reports. The calculations in the report have been made on a basis consistent with our understanding of the System's funding requirements and goals. The calculations have been made on a basis consistent with our understanding of the System benefit provisions as summarized in the report, and of GASB Statements No. 68. Determinations for purposes other than meeting these requirements may be significantly different from the results contained in this report. Accordingly, additional determinations may be needed for other purposes.
